Mr. Griffith himself writes to us: "My park consists of 14,000 acres in the town of Mt. Tabor, and 2,500 acres adjoining in the town of Peru. On it are three lakes, one of seven, another of ten and another of fifteen acres. The lake of fifteen acres (Lake Griffith) is well stocked with trout and the stream running from this lake is also stocked. The lake and eight miles of the stream I have fenced and posted as the laws require in this State. This makes it private fishing and hunting grounds. I also have in Mt. Tabor a fish hatchery of half a million fry capacity, and from this I stock my lake and stream."

Cutting Preserve.

Mr. Frank A. Cutting, under date of May 27, writes:

"The fish and game have been well protected during the past year and a small quantity of brook trout taken, and only six deer killed, three of which were killed by poachers around the ponds in July.

"I was over the preserve last March on snowshoes, and found that the deer were very numerous. Saw two at one time only a short distance from where I stood, and although I was not taking any particular notice of the deer, but was looking at the timber, I saw several, and the woods were completely tracked by the deer. The snow was about 2ft. deep, having settled from about 3 or 4ft. deep by the soft weather, but the deer seemed to have no difficulty in getting about, and instead of being yarded up were roaming about the woods, in consequence of which they seemed to be in fine condition.

"During the whole of the five years since I have protected the property there have not been as many deer killed on my property as there used to be killed in one single year.

"In taking brook trout, I require all trout less than 7in. in length to be put back into the stream, and thus give the smaller fish a chance to increase in size.

"It is very hard to estimate the number of deer on my preserve, which is three miles by four miles, but from the signs I saw last winter and what I saw this summer, I would estimate the number of deer from 300 to 500 on the 8,000 acres.

"The beaver on the brooks are certainly increasing in number. I saw one large birch tree this spring that had been taken down, which was nearly 1ft. in diameter. Found indications the whole length of the brooks of recent work done by them.

"I think that the increase in deer during the past five years has been mainly on private preserves. The new law prohibiting hounding will be a great advantage to the whole Adirondack wilderness, and after a short time deer will be plentiful everywhere.

"One great trouble in the Adirondack region is that there are not a sufficient number of game wardens. The natives, after they do their spring work, are inclined to visit ponds that are frequented by deer and camp at the ponds during the warm weather of June and July, and it is an easy matter then to kill the deer when they come to the water. More will be killed this year at that time than usual on account

of the hounding being taken away, unless there is a careful watch kept and offenders prosecuted to the full extent of the law."

The Mac Intyre Iron Company.

One of the wildest and most beautiful parts of the Adirondacks is included in the 90,000-acre tract belonging to the Mac Intyre Iron Company. The hunting and fishing privileges on this tract were formerly controlled by the Adirondack Club, which was one of the oldest organizations of the kind in the Adirondacks, having been incorporated in 1877. This club, years ago, made an effort to restock the country with moose, but unfortunately its animals died, and the enterprise never had any tangible result.

The Adirondack Club has ceased to exist, but the shooting and fishing rights of the tract have been leased by an association of gentlemen for the season of 1897. Deer are very abundant on the preserve, and a gentleman who went over the ground last winter on snowshoes saw abundant sign. Within its limits are situated Lakes Sanford, Henderson, Colden, Avalanche, and the Preston Ponds. It was in the latter that a record brook trout of 7lbs. 4oz. was taken. This fish was captured by Mr. W. H Lewis, who had hooked a small trout and was reeling it in toward his boat when the small fish was seized by the monster trout, with the result that both were landed. Four and five-pound trout are not uncommon in these waters, and the fishing has long been justly celebrated. Beside the brook trout, rainbow and lake trout and black bass are caught in some of the lakes.

Mr. James Mac Naughton, President of the Mac Intyre Iron Company, informs us that the policy of his company will be as heretofore, to strictly protect the fish and game. So far as it can be done, however, without prejudice to these interests, a welcome will be given to all who love the magnificent scenery of the lakes and mountains. Mr. Mac Naughton states that the accommodations of the preserve are somewhat limited, but whenever there is room tourists will find a cordial greeting for one night from the superintendent, David Hunter, Tahaney, N. Y. Owing to the present paucity of rooms, it seems advisable to make this restriction for one night.

Personally, he has no sympathy with any policy which would exclude the public from a reasonable enjoyment of any part of the magnificent Adirondack region. Of course, so far as fishing and hunting is concerned, there must be restrictions, otherwise the game would speedily disappear.

Adirondack Timber & Mineral Company's Park.

NUMBER FOUR, May 25.—My park contains 30,000 acres, being all of township No. 4 and 6,000 acres of township No. 5, John Brown's tract. I have had control of this land two years. I have not stocked it with any kind of game. When I established the park there were as many deer and grouse as in any part of the Adirondacks, and I think more. I have allowed no hunting with dogs. In addition to the natural increase deer have been driven in from adjacent lands during the hounding season, with the result that deer are now very plentiful in the park. Grouse or partridge have also increased. It is of course difficult to estimate the number of deer now in the park, but I would say that 1,500 would be an approximate number. Trout have increased, especially in the lakes. I have no doubt but that you rejoice with me that hounding and jacking deer is no more, and that right, decency and humanity have triumphed at last.

CHARLES FENTON.

Senator Redfield Proctor.

Senator Proctor, of Vermont, has a shooting box on Lake Pico, in the heart of the Green Mountains. This is one of the most remarkable natural trout lakes in the State, and nestles among forest-clad mountains at an elevation of 1,200ft. above sea level. The lake has its source in a small inlet brook rising on the summit of Pico, and is also spring fed. The trout average from 8 to 10in. in length and rarely exceed ¾lb in weight. The surrounding country is celebrated for its game. Partridge are plenty, and deer are seen daily, the lake being in a famous runway between Killington and the hills west of Deer's Leap. A small area is posted. Senator Proctor does not dignify this place, calling it a preserve. In referring to it he writes:

"My hunting park is in the air, and not where I wish it might be, on the surface of the earth. I have, with others, a little trout fishing place on the mountain in Vermont, but hardly important enough to be worth mentioning in your valuable journal. The deer have been protected in Vermont for seventeen years, but this year October is an open season."

Central Pennsylvania Preserve.

Twenty-four thousand acres of land have been leased by an association of New York and Pennsylvania sportsmen in Central Pennsylvania, for the establishment of a preserve. The tract lies in the eastern part of Center and Clearfield counties, and embraces the Nittany Mountains and the valley of the same name. This is in one of the best shooting sections of the State, and a country noted for scenic attractions. Under date of May 25 one of the members writes:

"Our game preserve is as yet in its infancy, the club having been organized only a month. We have leased about 5,000 acres of farm land for quail, and in the neighborhood of 8,000 acres of wood land for pheasants, all of which we expect to stock. Our trout stream is six miles in length, and will also be well stocked. Our club house will be ample for the accommodation of about fifty members at one and the same time; in fact, it is the intention to make this a sort of summer retreat for members and their friends Tennis and shooting grounds adjoin the club. Contracts for the house and other features have been let, and we hope to be ready for the entertainment of members by the 1st or middle of July."

West Canada Lake.

Mr. J. F. Wendell, Albany, N. Y., writes that the West Canada Lake property has been sold to Mr. O. L. Singer, Buffalo, N. Y.

Bog Lake Camp.

Mr. E. C. Converse, one of the owners of the Bog Lake camp in the Adirondacks, writes:

"As you are probably aware, our camp, which is a close corporation, owned by Mr. Tatum and myself, covers about 6,000 acres contiguous to the Webb Nehasane property. It contains Davis Pond, Cedar Pond, Bog Lake, a portion of Bog River, and nearly all of Mud Lake—that is, all of it lying in Hamilton county.

"The best fishing in the spring of the year is Clear Pond and Bog River. Clear Pond is landlocked, and fed by springs. The fishing there is good during the entire season.

"Besides the native trout, we have planted some 30,000 or 40,000 of brown and rainbow trout.

"The fishing in Bog Lake is also good—with the fly in season, and later with bait or by trolling

"There is no trouble at any time in getting large catches in either Clear Pond or Bog River. In Bog River, of course, the fishing is better in the spring of the year. Besides the trout that we have put in Clear Pond, we have also put several batches in Bog Lake, and as we only catch what we require for eating during the three or four weeks that we are there in August, the fish are very plentiful. One reason is that the feed is particularly good, there being plenty of chubs and shiners.

"As to the game, it is hard to give any estimate. Deer are very plentiful all through our woods. We are very particular to guard our boundary lines from poachers. We haven't hounded for two or three years, and while it is impossible to give any close estimate, I can say that the deer are extremely plentiful. There are spruce and ruffed grouse, cotton-tail rabbits, coons and foxes."

Vilas Preserve.

Mr. E. A. Carpenter writes:

"The Vilas preserve of 35,000 acres in the Adirondacks, is such a primitive wilderness that there is no need of stocking with game or fish.

"The deer are abundant and seem to increase. We have never found deer in the woods that seemed to have died of hunger or disease. We have frequently heard these stories outside in the villages, but they would not bear close investigation. Several such reports were run down, but proved to be idle tales. It is impossible to give even an approximate estimate of the number of deer on our preserve. In favorable weather deer can always be found within a reasonable distance of our camps. Hounding has not been allowed for seven years; we 'jack' and still-hunt. During 1896 we killed double the number of deer still-hunting that we did jacking.

"Our trout are large and plenty; we have fifty-five miles of good streams, and they are fished but little.

"We know of three colonies of beaver in the south part of Franklin county."

Moose Pond Club.

The Moose Pond Club is located near Minerva, Essex county, N. Y. Mr. A. H. Thomas, Secretary-Treasurer, writes as follows:

"Our club owns about 2,000 acres of land, three large ponds and two small ones, club house about 30×40, and kitchen (detached 8ft.) about 20×20, besides open camps and outbuildings. We are also about to build another house.

"We believe we have the best trout fishing in the State. Our trout averaged in May of this year over 1lb. each. We caught something over 250; our record is at the club house, and I have no memoranda.

"Deer are very plentiful. We kill but few. Did not kill one last season.

"We killed quite a large number of partridges. Could get all we wanted in September and October.

"We have stocked our waters with trout, but cannot tell what the result is. We have enough without stocking."

Mr. Thomas adds: "My best records at Moose Pond were on Aug. 3, 1894, when I took twelve trout weighing 30lbs.: see Fishery Commission Report of 1895. July 20, 1895—Six trout in one day, weighing 24lbs., all of which were taken from the woods and brought home for exhibition. No small ones were taken at either catch."

Blooming Grove Park.

"Early in 1870," says a review of the history of the Blooming Grove Park Association written by Charles Hallock and published in the club book, "Fayette S. Giles, a gentleman who had been and still is an enthusiast on the subject of game preserves and forest preservation, conceived the plan of establishing a club for the purpose of carrying out his ideas. The essential requisites for such a club were nearness and accessibility to New York city, lands which were inexpensive and at the same time extensive and in one body, which should be well wooded and have numerous streams and lakes

"He found in Pike county, Pennsylvania, the very kind of a place for which he was seeking. It was on the line of the Erie R. R., only 121 miles from New York, and embraced all the elements as to its natural features, which made it peculiarly well adapted for the purpose.

"At first, alone, he commenced the purchase of the lands, and then, acting with several other gentlemen of New York and Pennsylvania, he caused to be prepared the charter of the Blooming Grove Park Association, as it was subsequently granted by the Legislature of the State of Pennsylvania, on March 23, 1871."

The club met with difficulties in the hard times in 1873 and the years following, and in 1880 had the misfortune to lose the club house by fire.

In 1884, however, the club house was rebuilt, and a new era in the history of Blooming Grove inaugurated.

"Up to 1880 very little had been done toward increasing the fishing in the lakes and streams, except the stocking of lakes Giles, Laura and Belle with bass which had been brought at first from Lake Erie and afterward from St. Lawrence River and Greenwood Lake. Up to that time the cultivation of fish was comparatively in its infancy. Finding that the original idea of making the park a vast game preserve, like those in Germany and Great Britain, was impossible of execution, by reason of the great expense and the lack of interest on the part of the members, the board of directors, after careful investigation as to feasibility and expense, started the fish hatchery, which has been of so much help to the club.

"The early management inclosed a mile square of land with a wire fence and called it the Breeding park, and from various sources obtained a large number of deer, which were placed therein. The land owned by the club and the surrounding country was the natural home of deer, and these, and those imported, have thriven so well that the members have no trouble in killing their quota.

"While it is now twenty five years since the Association came into life, in order to really comprehend the great progress it has made, one has only to look back and, with the knowledge, if he were a member in 1872, or in his imagination, if he were not a member, of just what the lands of the Association were then, make a comparison of the same with the present condition. Where there was hardly a house, now there are several cottages and a club house with all modern appointments, large enough to accommodate 100 guests Where there were no roads, now there are more than twenty-five miles of smooth, well-maintained drives. Where the trout streams had been depleted by constant fishing and the presence of tanbark and sawdust, now the member only has to find fault because, under favorable conditions, he takes his quota of twenty-five fish too quickly. Lakes which had become almost barren of game fish, now readily yield the quota to the fisherman.

"The general plan of the breeding park, as originally laid out, has been maintained. The wire fences have been rebuilt, made higher and stronger; more precautions for protecting the deer have been taken, stricter rules have been made about hunting them, and the result is seen in the great increase in the park. It is impossible to count, or even estimate, the number of deer in our park of a full square mile, but it must reach up into the hundreds."

Such is a fragment of the history of one of the first club game preserves in America. At the present time the Blooming Grove Association owns 17,000 acres of land, and leases upwards of 4,000 more. A good portion of the land is wild and heavily timbered. There are thirty miles of well stocked trout streams on the preserve, and eight lakes extending north and south fully sixteen miles. On the club rolls are the names of 184 active members.

Jerseyfield Preserve.

We are indebted to Capt. Chauncey P. Williams for the following information relative to his preserve in the Adirondacks:

"My preserve, called Jerseyfield (after its largest lake), comprises about 6,000 acres, situated in Herkimer and Hamilton counties. The lakes contain brook trout (*Salvelinus fontinalis*) only. For game, we have only the indigenous species, partridge and red deer, the preserve never having been stocked. There has been very little bird shooting on the preserve within the last few years, but the birds seem to have decreased, for some reason, perhaps from the considerable number of foxes of late in the neighborhood Deer seem to be just about holding their own now. We have never allowed hounding, and whenever there has been a dog in the adjacent woods the deer would all start for our lake at once. As many as five have been seen in the lake in one day during the past hounding seasons. I am in hope, that under the present law prohibiting hounding and also jacking, the deer may increase, although there is no doubt some illegal hunting done by the natives of the nearest settlements. Fishing is generally confined to May and June, and the remainder of the year the trout have a rest. Generally the spring fishing is fairly good, but was not up to the average this year, which seems to have been the case in most places."

Ragged Lake Rod and Gun Club.

Mr. Geo. S. Hier, of Syracuse, N. Y., informs us that he has sold the above-named property to Comptroller Ashbel P. Fitch, of the city of New York.

G Lake Preserve.

We are indebted to Mr. E. Z. Wright for the following particulars relative to the preserve of which he is part owner: G Lake Preserve is situated in Ox Bow Tract, Hamilton county, and comprises 600 acres. The lake covers about 175 acres, it is surrounded by mountains and the land is mainly covered by virgin forest. The ownership is not in a club, but is a joint ownership of four gentlemen. The number that can be admitted to an interest in the preserve is limited to seven in all. There are strict rules as to the preservation of the forest and erection of buildings; no trees are allowed to be cut. Two cottages are built, and the property is in charge of a keeper who is also a State game protector.

G Lake has always been a favorite resort for deer during our ownership of seven years, but few deer have been killed on the lake, but in the township great numbers have been killed each year, mainly by hounding, so that the number of deer frequenting the lake has steadily decreased; but there are still several deer feeding about the margin of the lake this year.

G Lake has always been noted for the size and beauty of its trout; fish food is abundant in the lake, and the trout grow rapidly. Under careful protection the increase is noticeable.

Our membership is so limited that we have no rules as to the taking of fish and game.

The owners are E. Z. Wright and John D. Collins, of Utica, and J. William Black and Edward B. Salmon, of Syracuse.

The "Forest and Stream" Club.

Located under the shadow of Haystack, the highest peak of the Green Mountains in southern Vermont, is the property owned by the Forest and Stream Club. This consists of 560 acres of wood and meadow land, bordering on one edge Haystack Pond, one of the finest and deepest lakes in Vermont, and including in its limits the famous Haystack Spring, from which, as a source, one of the club's trout brooks takes its rise. In all, there are six miles of trout streams, besides several artificial ponds.

The Forest and Stream Club was organized seven years ago under the laws of Vermont, with a capital of $25,000. The purpose of the club is to propagate fish and game and to provide for the healthful recreation of its members. The club house and large annex will comfortably accommodate seventy-five. The members are accustomed to take their wives and families with them, so that the social feature is not the least important side of the club life.

Ozonia Park.

Ozonia Park consists of 1,800 acres in the town of Hopkinton, near the eastern border of St. Lawrence county, N. Y. It is virgin forest, and contains Lake Ozonia, a body of clear, cold water fed by springs in the bottom. Adjoining is the game preserve of Frank Cutting, of Boston, containing over 7,000 acres.

We have stocked the lake with salmon trout, landlocked salmon and German brown trout, and it has long contained small-mouth bass and plenty of perch. Since we have guarded the spawning beds the fish have increased, and we are beginning to catch landlocked salmon, though this is only their fourth year from fingerlings

The deer seem to increase in numbers, and as many as thirty have been seen within an hour on Mr. Cutting's preserve this summer.

F. M. HEATH.

Camp on the Ten-Mile.

ALBANY, N. Y., July 14.—The writer was born in the Adirondacks, and as a boy of twelve to fifteen years old carried the tail end of the surveyor's chain to survey the townships of Kildare No. 9, Riversdale No. 12, St. Lawrence county, and Westerly No 11, Franklin county, N. Y.

During that time (about thirty-six years ago) these townships were more or less covered by hunters' camps, occupied

by men who killed deer for profit and resorted to many devices to catch them, such as cutting soft maple trees, also the birch, for the deer to feed upon when the snow was deep, and setting traps for them It was always a contest among the hunters as to who would kill the most deer and who would get the best price for them when sold. Had this continued the deer in the Adirondacks would have been exterminated to-day, same as the buffalo in the West. Our thanks are due to the game laws that protect the deer.

In my opinion the present game laws have stopped all hunting for profit, and the deer have largely increased. Our game preserve is situate on the St. Regis River, in Township No. 9, Kildare, covering about five and one-half miles of river, in acreage about 1,800, fully twelve miles as the bird flies from any civilization, and off from any thoroughfare. The camp is almost isolated, and the deer to-day are so plenty that it requires very little skill to kill one—and the true sportsman will not kill two if he needs only one.

Our trout fishing is always good. This season I am informed that during May and June the streams were so swollen that few fishermen had success. The writer expects to spend the entire month of August in camp and part of September.

I think the game laws cannot be made too stringent. The penalty for illegal transportation, the law prohibiting any person killing more than two deer, the prohibiting of hounding and jacking, as passed by the last Legislature, are good ones, and if the State of New York would only appoint a sufficient number of game protectors to cover the noble Adirondack wilderness, there need never be fear of the deer being exterminated. HENRY L. SMITH.

Pawtuxet Rod and Gun Club.

It is reported that a number of Washington sportsmen are interested in the proposed game preserve which is to be established near Marlboro by the Pawtuxet Rod and Gun Club The preserve will occupy, it is said, between 12,000 and 15,000 acres. It will be posted, game wardens employed, and the property restocked every spring with North Carolina or Tennessee quail, and golden or bronze Mongolian pheasants. Members of the club, including several Washingtonians, are canvassing the land-owners between Marlboro and Bowie, the line of the railroad and the Pawtuxet River. Those who have been approached are favorable to the scheme and anxious to assist in preventing the utter extermination of game birds in this vicinity. A meeting of the land-owners will be called in a few days and a protective organization formed.

Maple Lake Club.

UTICA, N. Y., July 13.—Maple Lake Club was incorporated July 29, 1892, with a memberseip limited to ten. The lake and grounds are in Wilmurt, Herkimer county, N. Y. The property of the club consists of the lake and about 2,000 acres of woodland, a two-story club house, with five sleeping rooms in the main part, and large club room, dining room, cloak and wash room on the first floor, with an immense fireplace in the club room.

The keeper's quarters are a wing of the house, with four rooms on the first floor and three on the second. We have a large barn, ice house, two boat houses, and eight boats. All the members of the club live in Utica, and prize the property because of its easy access. There are four trains daily on the R., W. & O. R. R., all of which stop at Remsen, which is twenty-one miles from Utica. An hour's ride of nine miles over good roads and through wild scenery brings us to the club house. Brook trout are the only fish in the lake, and the fishing has improved each year since it became the property of the club. We have never stocked the lake, and it is considered one of the best natural breeding grounds in the State. There is good partridge shooting in the fall, and some deer; more deer have been seen there this season than in many years before. The reason for this is that the hounds in that locality have either been killed or kept tied.

The keeper, Anthony Crosway, and his family, live in his part of the club house the entire year. He has some land under cultivation and takes care of club property.

The presence of members of the club is always indicated by a handsome streamer 30ft. long, white, with blue border, and in red letters through the center the words "Maple Lake." It floats from a pole 71ft. high, cut from the forest at the head of Maple Lake.

JOHN CUMMINGS, JR., Sec'y-Treas.

The rules governing club members are as follows:

No member, invited guest, employee or other person visiting the grounds of the club, shall violate any of the laws of the State of New York, for the protection of game and fish. Nor shall any person sell on or off such grounds, or send away to be sold, any game or fish taken on such territory.

Members and their friends will limit their catch of trout to the number or quantity wanted for use at the club house. No member or his friends shall catch trout from Maple Lake to be taken from the club grounds.

Each member shall be allowed to take for himself and friends, not to exceed forty (40) pounds of dressed trout each season, and after each catch, he shall weigh his trout and charge the same to his account in the club fishing book.

Each member shall make a record in club fishing book of the number of fish taken by himself and friends.

Trout caught for use at the club lodge shall be charged proportionately to the accounts of the members present.

No member is allowed to give his keys or an order to fish or hunt on the club grounds to anyone not a member of the club

No person will be entertained at the lodge, or allowed to fish or hunt, unless accompanied by the member of the club extending such invitation.

Every member and party visiting the club grounds and using the club property shall make careful use of the same, and when he departs shall leave the articles he may have used in cleanly condition, and properly stored in the place provided.

Each member shall pay the keeper of the lodge for work done for himself or friends.

The Megantic Fish and Game Corporation.

The Megantic Fish and Game Corporation was organized in Boston in January, 1887, being incorporated under the laws of the State of Maine, Feb. 15, 1887, and obtaining a charter from the Province of Quebec on March 26, 1887.

The club owns and leases a territory comprising 250 square miles, and containing three lakes, twenty ponds, six rivers, eight streams and brooks, and eight bogs.

Besides its club house it has thirty-seven camps (fourteen of which are private), a fish hatchery and a boat house.

The territory controlled is an unbroken wilderness, 3,000ft. above the sea, lying in the northwestern corner of the State of Maine and extending over the border into Canada. In this domain are found moose, caribou, deer, bears and all kinds of smaller game. Partridge are very plenty, and all kinds of waterfowl infest the lakes and ponds.

The waters abound in trout and bass, and landlocked salmon have been successfully introduced for several years, and the members will soon have this added variety of sport.

The club employs a Maine game warden who is also general superintendent of the preserve, and a Canadian warden who also looks after the club's interest over the border.

The number of members in the club at present is 297.

Treasurer L. Dana Chapman writes: "In the ten years we have had possession we have done all possible to enforce the laws of Maine and of Canada, our preserve lying in parts of each of these. We have been stocking one of our larger ponds for the last four years with landlocked salmon, having hatched out some 50,000 eggs, besides putting in about 4,000 yearling fry. The results are just showing, last year the salmon rising readily to the fly, and affording a great deal of sport to the members. We are pleased to grant permits to any of our sportsmen friends, to visit us and share with us in the benefits of our preserve."

Following are the fishing and hunting rules:

FISHING.

SECTION 1. No member shall kill any trout, landlocked salmon, or bass or other game fish, unless he has good reasons to believe that it will be used for food.

SEC. 2. No member of this club shall kill more than fifty trout or fifteen black bass upon the club preserves in any one day.

SEC. 3. No member of this club shall send or carry away from the club premises more than 15lbs. of trout, landlocked salmon or black bass upon any one visit.

SEC. 4. Trout of less than 6in. in length, and landlocked salmon less than 12in. in length, and black bass less than 1lb. in weight, caught in waters owned or leased by this club, shall be carefully returned to the water as soon as caught. If such fish die, it shall be scored against the member taking the same, and he may reclaim it.

SEC. 5. When members are camped together at any of the lakes or streams, they shall not kill more trout than needed to supply the camp, and they shall see that no fish is wasted or thrown away; at such times, also, when fish are plentiful, members are expected to return to the water, as soon as caught, all fish under ½lb., until they have sufficient for their immediate use, when they shall stop fishing altogether.

HUNTING.

SECTION 1. Every member shall vigorously observe and enforce the game and fishery laws of the Province of Quebec and State of Maine.

SEC. 2. Any member found guilty of violating any of the game or fishery laws, or any portion thereof, in their respective territories, shall be subject to expulsion from the club at the first meeting of the directors following such violation, besides paying the lawful penalty to the Province or State in which such violation took place.

SEC. 3. No member of the club shall hunt moose, caribou or deer on the club preserves with dogs, and no dogs (except bird dogs) shall be admitted upon the territory.

SEC. 4. Members shall use every means possible, in hunting deer, to single out bucks and spare the does.

SEC. 5. No member of this club shall shoot more than one moose or caribou or two deer, on the club grounds, upon one or both sides of the international boundary, in any one season; and, where a party are camping together, they shall not shoot more deer than are sufficient to supply them with venison, and they shall carefully observe that no deer are shot and their carcasses, or any portion thereof, wasted or thrown away.

SEC. 6. No member of this club shall shoot more than twenty-five partridges on the club grounds in any one week during the season.

Ampersand and Santa Clara.

ST. REGIS FALLS, N. Y., July 23.—Ampersand Preserve is situated in the southeast corner of Franklin county, and includes all of Townships 26 and 27, except the northeast quarter of 27. It also includes lot 44, Essex county, containing 50,000 acres. The land was put into a preserve in 1892 by Dodge, Meigs & Co., the original owners of the territory. The firm has since emerged into the Santa Clara Lumber Company, who also own and control the Santa Clara Gun Club Preserve of 65,000 acres, situated in Townships Nos. 10, 11, 13, 14 and 17, of Franklin county. Both preserves were instituted at the same time. I find that the fish and game are increasing very fast in both preserves under protection, and as I formerly guided through the same territory I have had a very good chance to note the difference.

The Meigs family have a very fine cottage built on Fallensby Pond, Township 26, in the Ampersand Preserve, noted for its superior lake trout fishing. Ampersand Pond (from which the preserve takes its name) is considered by many people to be the most beautiful lake in the woods.

Seward Mountain, as you will see by looking on the Forest Commission map, is wholly within this preserve. The preserve also includes two of Preston Ponds in the southeast corner of the county. There are a large number of ponds on the preserve that are not shown on the map, a few of which are: Rock, Lilypad, Seward, Mountain, Pickerel, Dawson, Lost, County Line, and many other small ponds too numerous to mention.

We have men stationed at different points on the preserves to see that the laws are enforced. I inclose you a sample of the permits and rules existing on both preserves:

RULES.

No live trees shall be cut for firewood.

No peeling or cutting of trees will be permitted.

The building of fires, except in camp, will not be permitted, and those must be extinguished before breaking camp.

All persons using this permit must conform to the State game and forestry laws.

Any damage occurring from the non-observance of these rules will be charged to the person causing same.

Permits not transferable, and if used by others than those named therein, will be taken up and cancelled.

We have not allowed the killing of does at Ampersand and Fallensby ponds, and are very well pleased with the law that does away with hounding and night hunting.

E. S. BRUCE.

The Adirondack League Club.

The Adirondack League Club has 105,000 acres of land in Hamilton and Herkimer counties, New York, a large portion of which has been preserved from indiscrimirate hunting since the incorporation of the club in 1890. The following extracts from the report of the fish and game committee, dated March 1, 1897, will prove of interest:

It will be remembered that during the year ending March 1, 1896, there were distributed from Combs Brook hatchery 175,000 brook trout fry, and that 17,430 one and two year old brook trout were purchased and planted in January, 1896. During the year ending March 1, 1897, no trout have been purchased, and apparently none need to be purchased hereafter, so long as the hatchery is operated as at present. We can easily hatch and rear more than can be profitably placed in our own waters, and can sell the remainder if it should be considered discreet to do so.

During the past year, the hatchery has produced and distributed 130,425 salmon trout and 139,600 brook trout, a total of 270,000. In comparing this result with that of other years, it should be borne in mind that all of this stocking is with fed fish. No fry, that is fish just hatched, has been put out. The distribution was not begun until the fish were three months old, and this was continued gradually throughout the year. The first plant was made in Little Moose Lake in June, 1896, and the last, of 17,000 yearlings, in Honnedaga Lake in January, 1897.

The feeding and rearing of this great number of trout was made possible by the ingenious plans of an expert, E. M. Robinson, who stayed at the hatchery during April, May and June, and installed a series of half-hogshead tubs out of doors, which, in the manner of their installation, was an entirely novel experiment. These tubs are a much cheaper arrangement than that of ordinary rearing boxes, such as those in the hatchery building; they are capable of indefinite extension; they are somewhat more economical in maintenance, and they produce fully as rapid fish growth, and as low a death rate as the rearing boxes.

The total deaths of trout, from eggs to yearlings, have been 256,000; that is, 526,000 eggs produced 270,000 trout, from three months to one year old, so that the loss during the first year was less than 50 per cent.

Last fall the U. S. Fish Commission offered us 1,000 yearling Swiss Lake trout (*Salmo lemanus*) for experiment and report. Such experiments are not unaccompanied with danger, as we have learned from experience with brown trout; but this offer was finally accepted, and the fish were duly received on Nov. 20, and 921 were put in Green Lake, where they can be observed and cannot get away, and seventy-five went to a retaining pond at the hatchery for closer observation. Only four trout were lost in transportation.

The report of the New York State Fish and Forest Commission for this past season, shows that the seven State hatcheries produced a grand total of 341,660 fed fish, only about 25 per cent. greater number than we have produced in our single hatchery. These seven State hatcheries produced of course, in addition, a large number of trout fry. Your committee finds corroboration in its judgment, in feeding and raising all fish before distributing them, in the announcement of the State Fish Commission, that hereafter the State hatcheries will follow the system we have already adopted at Combs Brook hatchery.

The different lodges report the number of fish caught last season, by members and guests, as follows:

Mountain Lodge, 1,200 brook trout and 427 salmon; Bisby Lodge, 438 brook trout and 666 salmon; Forest Lodge, 775 brook trout and 43 salmon; making a total of 3,529 trout reported, and being materially less than the actual number.

From the same sources we have reports, which are probably quite correct, of the number of deer killed by our members and guests, as follows:

Mountain Lodge, 22; Bisby Lodge, 18; Forest Lodge, 21; total, 61 deer. Of these, 17 were does and 44 were bucks. Three deer were killed by means of jacking on Nicks Lake, contrary to the spirit of the club rules. Unclassified game reported killed are one black duck and one black bear from Bisby Lodge.

Annoyance from trespassing has been slight during the past year. A continuance of the present methods of treating the nuisance will undoubtedly be all that is needed to secure peace. We have caused seven persons to be punished with fines and costs, and in one case with seventeen days' imprisonment. Inasmuch as the costs and one-half the fines recovered are returned to the club, the net expense has been slight.

The total cost for hatchery operation and fish stocking for the past year has been $2,310, but in this total cost is included $525 paid for trout purchased and distributed during the previous year. The cost of fish stocking due to this year is $1,785, and we are thus enabled to determine the fact that the hatching, rearing and distribution of our fed fish has cost us $6.60 per thousand, which is just one-fifth of the cost of fish purchased last year.

A considerable study has been made of the art of putting out young fish under circumstances which will secure the smallest percentage of loss, With young salmon, we apparently have no choice, it being generally accepted that the easy way of setting them free in the deepest water in a lake, is the safest way, as they have then the shortest distance to go to reach their natural food and hiding places among deep water rocks With brook trout the problem is more complicated. They naturally seek the inlet brooks and thrive best in them, although they are continually beset by their enemies—mink, birds and larger fish. None of our lakes have, however, enough room in their inlets for as many brook trout as we want to put out. Last summer an examination was made of the inlets around Little Moose, with the result of making an experiment with one of them, in which was placed a series of low dams or obstructions, by means of logs judiciously bedded in the stream so as to make a succession of pools and riffles. It seems reasonable to suppose that, aside from largely increasing the capacity of small streams for sustaining small trout, this treatment will also better the natural conditions of food and refuge. Eight thousand young trout were put in the stream so obstructed.

The waters of the preserve where stocking has been done now show a marked increase of small speckled trout, and in order to prevent their wholesale destruction, to induce members to let them alone until they become worthy of the rod, the committee recommend that the limit of catching each day be to a number, instead of to a weight of 10lbs. They further recommend that the limit of size be raised from 6in. to 7in. To accomplish this they submit the following

PROPOSED RULE AS TO FISHING.

The limit number which each member may take and kill in one day is as follows: Twenty-one speckled trout or Bisby trout, five salmon trout or landlocked salmon, ten black bass.

Brook trout less than 7in. in length shall not be killed, and in case any such fish is caught or hooked, it shall be immediately released and returned to the waters from which it was taken, without unnecessary injury.

A member may delegate his fishing right or any portion thereof to any one of his family or to his guest. Catches by families or guests shall be charged to the member. No more than the limit of one day's catch shall be taken out of the preserve by any member or guest at one time, and no fish shall be sent out unaccompanied by the owner.

It is also recommended that the killing of loons and gulls be prohibited, and that, in some proper way, the killing of hawks, owls, squirrels and foxes may be encouraged.

Maine's Game Stock.

REED'S CAMPS, Big Machias Lake and Long Lake, Ashland, Me., July 26.—*Editor Forest and Stream:* Much game was seen by two parties who were up in the Machias Lake region. Mr. C. A. Pitman and son, of Haverhill, Mass., were in the woods eight days. Mr. Pitman saw in that time 246 deer and nineteen moose. He saw in one day sixty-five deer and eleven moose. This statement can be proved, as there were three of us in the canoe, Mr. C. A. Pitman, C. C

Petersen and C. G. Reed, both of Ashland. Mr. Pitman got good pictures of most of the moose and part of the deer. The last party has just returned from a trip over a part of the same section, and saw in half a day fifty-two deer and ten moose. They saw in six days nineteen moose, but did not keep a record of the deer seen. Both parties caught all the trout they wanted to eat, and Mr Pitman carried home 35lbs. of good ones. If anyone doubts this statement, they can write to Mr. C. A. Pitman, Haverhill, Mass., or Mr. Robert Bowne, 81 Beaver street, New York. We think that we have as good big game region as can be found in Maine. CHAS. G. REED.

Mr. H W. Van Wagener recently made a trip through the Maine woods, from which he returned with accounts of great numbers of deer seen. We find this in the Kineo *Echo:*

"June 23 Mr. H. W. Van Wagener and wife, of Morristown, N. J., arrived here for a camping-out trip. Their guides, Clarence Morris and James Duff, were in readiness for them, and an immediate start was made for the upper waters of the Penobscot, Lake Caucomogmac, Round Pond, Daggett Pond, Poland Pond and other places being visited during their trip, which lasted twenty-three days. In this time they saw, by actual count, 485 deer and twenty-two moose. They approached very near to many of the animals, getting so close, in the water, to one moose, that Mrs. Van Wagener tapped it several times with her fly rod as it swam ahead of the canoe. Several snap shots were taken, and it is hoped that when developed some good pictures may be had. In one herd of deer alone forty were counted."

IN THE MAINE WOODS.

PROBABLY the most of us in whom is born a love for the streams and woods, have had at some time among our friends, an authority on woodcraft, to whom we could turn for information on every topic connected with hunting and fishing. At least we can all picture such an oracle to ourselves after reading those delightful papers of Col. Mather's, "Men I Have Fished With." Such a one is a certain Dr. R. to all of his friends who delight in the rod and gun; a blending of Port Tyler and Nessmuk, who seem to know by instinct just where the grouse and woodcock are on certain days, and about where the biggest landlocked salmon hide each season in the lake; a true sportsman, and genial, kindly, ideal camp companion. About The Doc, as he is familiarly called, has gradually formed a circle of kindred spirits, who dearly love to drop into his office of an evening to admire his trophies of deer, moose, bear, etc., and discuss the points of a new dog, or the proposed changes of the Maine game laws, or some other topic of common interest to sportsmen. A chosen few, usually three, who have been found worthy, and well qualified as marksmen and campers out, are made supremely happy each year by an invitation to join the Doctor on his November hunt in the Maine woods.

The eighth annual hunt left the Doc's office Nov. 19, '96. All preparations had been diligently made, and the party set out with light hearts, and not a care but to sustain the reputation for great, good luck that had been ours in previous years. This year there were the Doc, Johnnie, Ed, and the Medic. Since the first hunt in the river valley, which was to be our destination, no guide had been employed by this party. It has long been one of Doc's tenets, that for one fairly well versed in woodcraft, the sport is far keener to still hunt alone and to rely on one's-self in the woods, than to be personally conducted.

The first day out was spent in railroad and buckboard travel, and the first night at a sporting ranch kept by one Jim. The next morning Jim's stout horses took us out of sight of the last habitation of man, and later left us on the river bank. A large rowboat, that had been provided for our use, was soon loaded with our duffle and pushed off into the current, with one man at the oars. The remainder of the party set out along the river driver's tote road for the head of Long Falls, six miles down. A brisk, cold wind was blowing up river, but the thin, hard snow under foot was too noisy for successful hunting. At the head of the falls, or more properly rapids, began our portage of a mile, and here we all crossed to take advantage of the better path. Two trips apiece, with a good heavy jack, transferred the outfit (though not so easily as it looks on paper) including Doc's large wooden-shod sled. The use of this sled we afterward found to be well worth its cost of transportation, and all agreed in blessing the wisdom of Doc's foresight in bringing it.

We found Jim's boat at the foot of the falls, a third full of ice, and ferried ourselves and goods over in it, though not without some hard poling in the stiff current. There now remained about two hours of daylight in which to make ourselves comfortable in an old river driver's camp, known to us as "Dew Drop Inn." This camp is not to be seen from the river, but its location was well known to us, having been our headquarters on at least two trips in former years. It was a happy, though somewhat tired, party that sat down to hot coffee and a good meal that first night in camp. This yarn would be too long if it included the stories and jokes of that evening round the camp fire, or a description of the hardness of the river driver's bed, or the beauty of the wooded river banks next morning, when the sun rose and transformed the white hoarfrost-laden trees and branches into mounds and festoons of glistening gems.

After melting the ice out of the boat over a small fire, the impedimenta was piled into it, and the boat pushed off, to sink or swim, in care of the Medic. In order to pass above a distant rock, he pushed vigorously across a shallow, swift current in the river, and the bottom of the too-heavily laden craft grazed the bottom, while she was nearly broadside to the current. Luckily for the success of our expedition, the pebbles under her rolled, and she righted, having gained a couple of pails of water and sustained the loss of a paddle. The remainder of the trip down the quick water and over several miles of dead water, was made without incident, save a momentary glimpse that the Medic caught of some large animal crossing the river half a mile behind him. A landing was made, and all ran back up the river; but no trace could be found, and the general opinion seemed to be that the joke was on the Medic.

The lumberman's camp, which was to be our permanent camp, contained no stove, but was very tight and comfortable. Doc, the resourceful, however, knew of a stove at a camp that had been burned, three and a half miles away, and we at once set out with the sled down the tote road to get it. Our road took us two and a half miles over a good road (comparatively), but when we left the river it ran through bushes and "tea wood,' under fallen trees, and, worse than all, over the logs of a corduroy road that had been afloat, and had settled anywhere but in their original places. However, over this and back to camp the stove came, and many were the good times we had around it in the evenings that followed.

Next morning there was a light fall of snow, and we all set out for Birch-hill in high hope. Without going into details about the deer we jumped without seeing or shooting all failed to score but Doc; he dropped a young buck in his tracks with a .38 bullet through the neck.

Two days later, Johnnie and Doc set out down the river, and at about noon the former found himself not far from the foot of a steep, scantily-wooded ascent, about two miles from camp. He was slowly working his way through a swamp toward the bluff, when he saw about 8in. of a deer's back above a fallen tree-trunk. There was a quick report, followed by a slight struggle behind the blow down. The buck's spine was dislocated, but a second shot ended its suffering. Johnnie now found that he had left his hunting-knife at the camp; but making good use of his penknife he soon had his game cooling and was on his way again. He had ascended the bluff but a short distance when his quick eye caught the movement of what looked like a mule's ear, some distance above him. A moment later a cow moose walked out, and stopped, but without seeing or smelling the hunter. Johnnie was just wishing his camera was at hand, when a second moose came into view. This was a big bull, and called for treatment with some instrument other than a camera.

The first shot, a copper-jacketed bullet driven by smokeless powder, struck the forest monarch just back of the shoulder and passed very near the heart, but produced no apparent effect. Five others followed in quick succession, every one taking effect, when the moose, for the first time, seemed to catch sight of the hunter. For an instant he stood bracing himself, then, with blazing eyes and bristling hair, he gave a hoarse grunt, and lowering his big head plunged down the hill. There was one more chance, and Johnnie took it. Just as the bull jumped he fired again, full at the broad chest, and the bull fell dead, with his great muzzle only 6ft. from the young hunter. Johnnie mechanically threw back the lever of his Marlin, but the magazine was empty. Here in a very few seconds his highest ambition as a hunter was realized, and his last shot had slain the moose in the last moment of time. As he hurried back to camp for his knife, he began to realize this and the closeness of his call. Then, for the first time, he began to get a little excited; but let it be said right here, in total denial of the statements made in the daily papers at the time, that he did not faint. What an absurdity! This young man has hunted ever since he could hold a gun, and has killed more than a dozen deer, and has camped and tramped all through the Spencer and Chain of Ponds regions of Maine, on several trips being alone. It is true it was his first moose, and shot under very trying circumstances, but there was no fainting.

On reaching camp, our hunter found the Medic and Ed, and as we were setting out Doc came in; so all went back to the moose to take photos and help in the lifting. The moose lay in a little hollow, and the united strength of the whole party was required to turn the carcass round. His antlers were rather small, but were symmetrical, and carried five points on a side.

Two days later, Gill and the Captain, members of Doc's party in former years, gave us a genuine and most agreeable surprise by coolly walking into camp, hanging up their rifles, and announcing their intention of spending Thanksgiving with us. Everybody did his best to get them a shot during their short stay, but the snow was too noisy. The nearest they came to it was when the Captain got a fleeting glimpse of a disappearing flag, but only had time to say, "There he goes!"

The dinner served that Thanksgiving Day was unanimously voted a big success. The writer only wishes the items of the following menu could bring to the mind of the reader a correct idea of the gastronomic pleasure we experienced in discussing them:

MENU.

Doe's Head Camp. Maine Woods.
Thanksgiving, Nov. 26, 1896.

DINNER.

Fried Pickerel (in meal). Venison Steak (fat doe).
Grouse Pot Pie (five birds).
Mashed Potatoes. Stewed Tomatoes.
Chow Chow. Green Corn. Worcestershire Sauce.
Dead River Cordial.
Buckwheat Cakes, Maple Syrup.
Mince Pie. Apple Pie. Cheese.
Vin Port. Punch.
Coffee. Cigars.

Gill and the Captain twice deferred their return, stifling all thoughts of "business" and "what would be said" on reaching home. The last postponement was to help us cut a road and drag the moose out to the tote road on the river, a distance of two miles. And right well did we appreciate the lift they gave us.

An invitation was sent out by our departing guests to Roger, who joined us a couple of days later. At about this time Leon shot a huge doe, and the Medic had the good luck to drop the finest buck of the trip in his tracks. After following the buck for a couple of hours he was started, when the top of a small hill intervened between him and the hunter. Upon hearing the buck's whistle the hunter held his .38-72 Winchester on the top of the hill, and after a few seconds the outlines of the buck's ears moved silently up into sight amid the underbrush. The bullet took effect fairly between the eyes. The antlers, though only four-pronged, were unusually large and wide-spreading (20in.).

Doc and Johnnie crossed the river on the ice and found the two-days' old tracks of a bear; but as the temperature had been more than low enough to make any bear seek winter quarters, he was not hunted.

A weasel afforded us much amusement on several occasions. One morning he boldly seized some scraps of meat frozen to a newspaper which was lying near the camp door. This he threw over his back, and holding one edge in his teeth proceeded to back off. All went well till he reached the bushes, when the paper caught, and he showed his engineering skill by turning about and jerking the paper along by little backward jumps. At another time the boys tempted him with meat, to which a string was attached, and enticed him almost within reach; but no one manifested any disposition to seize him, as his whole progress toward us was punctuated and embellished with a marvelous and at the same time cunning exhibition of hisses, snarls and grimaces that might readily be taken for feline profanity.

A more amiable visitor was a flying squirrel that glided softly in at a crevice one evening, and becoming confused by the light (they forage by night and are seldom seen during the day), was caught after a hot chase by Doc, and imprisoned in an empty coffee can, in which we punched some holes. He was set at liberty, however, after twenty-four hours, as his activity at night kept up an annoying rattle of the coffee can.

Ed did some phenomenal shooting, one morning getting his deer for the trip in less than an hour. The score now stood at seven, the swamps and quiet brooks were frozen up for the winter and our stay had been prolonged from two weeks to three. One night when Doc came in from an unusually long tramp and announced that he had found plenty of fresh moose sign there was a general stir of excitement in camp. But the distance from camp was found to be too great for a successful one day's hunt and the end too near for a camping trip there; so, reluctantly, the moose were abandoned to their fate.

All too soon for each of us the day came when we must send out for Jim and his horses to come for us and the game, as the demands of business had become imperative. Doc volunteered to act as messenger, and set out at noon. Toward night it began to snow softly, and the morning of the day on which we must break camp saw the best hunting snow of our stay on the ground. Didn't we want to stay one day more? But it was out of the question now, and we must make haste to pack up and drag two deer out to the road for Jim's team.

Leaving Ed to finish packing up, Johnnie, Roger and the Medic set out for the deer, both being on the road to the settlement. Doc's buck was easily found, frozen stiff, of course, and was soon toted out to the road and left standing on his hind legs, apparently embracing a small tree as high up as he could reach. A couple of miles further on the Medic's blazed trail was found, and followed up our old, hardly traceable logging road for at least a couple more, then through a half mile of the vilest sort of scrambling and crawling up through scrub spruce and cedars. No succession of hard experiences or jolly hunting trips yet to come, will ever quite efface the remembrance of the struggle it cost to haul that buck out, through the thickets, drenching down snow, over logs and through the stiff bushes of the old road. All this took time, and Ed and Jim, after waiting awhile at the end of the blazed trail with the team, organized themselves into a relief party, and met the out-coming trio in time to take a hand in the finish.

There now remained the long, cold ride and walk to Jim's snug camp. This, however, at last came to an end, and a little after dark we drew up before the brightly lighted windows. The supper we stowed away that night would have astonished anyone unused to feeding lumbermen. Next morning the game, seven deer and two moose, was grouped and photographed. The Medic had no such urgent reasons as the other members of the party for terminating the hunt, and as he had shot but one deer, decided to remain with Jim a few days.

The following morning was bright and cold, but the tracking in the recent light snow was excellent. The Medic struck out up the mountain side not far from the camp and found a fresh track at about 8 o'clock. An hour's careful work showed him a buck some fifteen rods off up the mountain, but in good open woods. The first shot, it seems, was a clean miss, but the second, though a little low, threw the buck after a few jumps. As the dragging was all down hill, the game was hung up at Jim's in time for dinner. This rounded out the score to the full legal limit for deer—two each.

At the next semi occasional meeting of the boys in Doc's office, which occurred very soon after all had returned, it was unanimously decided that the trip was one of the jolliest and most successful in the history of the club. GRAPHO.

THE INVASION OF MINNESOTA.

PHILADELPHIA.—*Editor Forest and Stream:* At the risk of boring your readers, I venture again on a subject which is but of trivial importance in its substance; yet such as it is, it is better that it be correct.

In your issue of July 24, Mr. Hough says: "Yet I believe that it was not merely the non-resident sportsman, hoggish or not hoggish, who destroyed much of Minnesota's heritage of game. Her prairie chickens went chiefly into the ice barrels of early market shooters."

I am constrained to believe that Mr. Hough knows something of market shooting as it is practiced at present, but his knowledge of Minnesota is wholly inadequate. First of all, the early market shooters did not use any ice barrels or any ice.

No ice was to be had in the smaller towns, and there many of the necessities of life also were absent. Hardship, poverty and privation were everywhere, as is common in a new country. Things much more important than ice were preforce beyond the means of the people. To attempt its transportation from St. Paul or Minneapolis was not a business proposition to men who were so frequently changing their base of operations and who could, with a certain percentage of loss, get along without it. As soon as the birds were shot, they were drawn as clean as possible, then stuffed with dry hay, a quantity of which was carried in the wagon for that purpose and it also served as a soft bed for the dogs. The market hunters always endeavored to be within twelve or fifteen miles of a railroad. At night, the birds killed during the day were recleaned and stuffed with fresh hay, then sent to the railway for shipment. There was almost invariably a more or less serious deduction from the proceeds for spoiled birds, the market shooter being forced to take the dealer's word as a matter of course.

The day when Minnesota's chickens were destroyed by the car load was before the profession of market shooting had been so perfected with refrigerating adjuncts.

Mr. Hough is also in error on the question of the non-resident sportsman not destroying "Minnesota's heritage of game," a property which, by the way, was not a heritage at all, but was her own in perpetuity from the first. At the time when Minnesota was such a fertile game field, the market shooters were mostly non-residents, and the number of thousands of chickens they killed then seems now incredible. Strange as it may seem to Mr. Hough, who makes a distinction between the sportsman and the market shooter as they relate to Minnesota, a distinction which applies now, but only in an exceedingly limited way then, great numbers of the sportsmen then sold their birds as did the market shooter. It is true, "they did not stay at the business so steadily and so long," but there were innumerable relays of them, so that when one left, or a party left, there were others to take the vacated places. The sportsmen and market shooter had the same purpose and the results of each were the same. The country was worked diligently within

an area which could be successfully tapped by transportation facilities.

This new invasion is but the same old invasion which has been in progress these many years, although we are all prone to consider a thing new when it is new to us. For myself, I may say that the Minnesota "invasion" is no new thing to me, but a long-standing grievance. Possibly I may find consolation in the country of which Mr. Mussey wrote, if it shall be my good fortune to find my way thither this year.

GRUMBLER.

CHICAGO AND THE WEST.

Dangers of the Mountains.

CHICAGO, Ill., July 31.—The dangers of mountain climbing had a sad illustration this week on Mount Rainier, Washington, where, on Tuesday night, Prof. Edgar McClure, of the Oregon State University, lost his life by a fall in the dark while on his way down the mountain. Prof. McClure was in charge of scientific work connected with the ascent of the peak by the well known club of mountaineers, the Mazamas. Some fifty members of the club made the ascent, but Prof. McClure and his smaller party were detached from the main body, all of whom got through safely, so far as actual injury to life and limb was concerned, though not without alarming experiences. The day following the accident to Prof. McClure, H. A. Ainslie and George Rogers, of Portland, Ore., lost the trail on the Cowlitz glacier, and fell some 40ft. into a crevasse. Both were unconscious for a time, Rogers remaining so for some hours after being taken by the rescuers to the camp of the Mazamas. On his way up the mountain on Tuesday William Pierce, of Pendleton, Ore., became confused and lost his head. He had to be abandoned by the party, but was left in safety and later brought down from the peak which had so terrified him. Yet another man, Prof. Brown, of Stanford University, started up alone, became lost and wandered until exhausted, being found later by a search party of six men, who took him to Camp Mazama. The club has never before had such unfortunate experiences, and much of the pleasure of its success in making the ascent of Rainier is lost through the deplorable incidents attendant upon the attempt this year.

Prairie Chickens.

From reports of an early and of course not very satisfactory nature received from different parts of Illinois, I am disposed to think that we shall have chicken shooting of no mean sort in upper Illinois this fall. Around Amboy and Lee Center the birds still nest in some numbers, and if the sooners don't get them all there is sure to be sport of a limited sort this season. Around Anna, near Mt. Pulaski, and in the vicinity of Champaign, there are still some chickens left, so that one can get a sight and a shot now and then, though of course not the full flavor of an old-time shoot on the prairies or stubble.

From Nebraska Mr. W. R. Hall, of Omaha, writes on the whole encouragingly upon the game supply:

"Nebraska is at last waking up to the necessity of game protection," he says, "and numerous game protective clubs are being formed throughout the State. It's a little like locking the stable door after the horse is stolen, but they may save the remnant. I have talked the subject single-handed for years, until I got black in the face and my tongue got cracked, but it did not do much good. Prairie chickens and quail are fairly numerous this year, more so than for some years back, though they never will again be as plentiful as they once were, and if the new clubs can only hold down the market-shooters and sooners until the open season there will be fair sport. I already hear of chickens being killed, and several hotels are reported as serving them, but of this I have only hearsay evidence.

"Ducks and geese will be here in good numbers, as the sloughs and lakes are full of water and there is plenty of feed, but the new game law passed by our fool Legislature makes hunting them well nigh impossible, it being unlawful to seek cover on sandbars, shores of islands or lakes, or to shoot from any form of boat or raft, etc. About the only way I see out of it is to use the airship some of our long-haired citizens saw last spring."

In Minnesota State agent Fullerton has been looking into the prospects of the chicken crop, and he reports it as his belief that there will be more birds this year than for a long time past. He thinks the early rains did not hurt the chickens in the least, and that the later rains did not catch them in time to hurt them. Mr. Fullerton has been traveling all over the State, and thinks he bases his prediction upon fairly accurate premises. He is besieged by letters from outside parties who want to know where they can get good shooting or chickens.

In Iowa also there appears to be confirmation of the earlier belief that the year of 1897 will prove a good one for the prairie chickens. In this once famous State, where the market hunters thought they could shoot forever without exhausting the supply, and where in the earlier days no man would think of eating prairie chicken, because he was surfeited alike with it and the sport of shooting it, the bird within the last decade almost disappeared. Slowly the day of new methods in game law matters is dawning even in Iowa, one of the slowest States in the entire Union in this regard, and now there is hope for better things. Mr. John G Smith, of Algona, long president of the Iowa Association of sportsmen, and one of the greatest factors in the increasing sentiment in favor of game protection, writes me as follows in regard to chickens in his country:

"I have been over county quite a good deal during the last few days, and find that my predictions in regard to the chicken crop have proved true. The season has been very fine, and the old birds hatched and brought up the young birds in fine shape. I was up in the country north of Bancroft yesterday. I saw a great many young birds, and they did not act as if they had ever been disturbed. They are talking of having a coursing match at Bancroft. It would be a very nice place, as there are plenty of 'jacks' and a good place to run the dogs. Ed. Burcher keeps a splendid hotel, and knows how to take care of sportsmen that visit him.

"Our game laws are well observed, and I think that there will be very little shooting before Sept. 1."

Warden's Circular.

State Warden Harry Loveday, of Illinois, has caused to be widely printed in the State press the following call upon the sportsmen of the State to assist him in his work of stopping illegal shooting:

Pursuant to the powers vested in me by His Excellency, Governor Tanner, I Proclaim, in the Name of the People, that the Game Laws of this State must be rigorously and impartially enforced.

I call upon all sportsmen and sportsmen's clubs, within the jurisdiction of the State, to lend me their hearty and unqualified assistance in the furtherance of my efforts.

We have in the Illinois Fish and Game Protective Association (Incorporated) a parent institution fully equipped and able to cope with all questions of magnitude which may require serious attention. It has a giant task before it, but the men who compose its board of managers are determined and resolute. The Association has pledged its untiring support; its law committee is ready to act in my behalf, and has met with such success that I feel confident that the outcome of my labors will be a complete vindication of the law; I repose the utmost confidence in this Association.

I propose that the killing and illicit shipment and sale of game in closed season shall stop. With this object in view, I invoke and earnestly request the assistance of all true men and sportsmen of the State. I ask you to organize in every county that has not already done so, and to send me the names of good men who are willing to undertake the duties of deputy warden. The game law states that it shall be the duty of sheriffs, deputy sheriffs, constables and police officers to enforce the game laws.

In the name of the people of the State I demand that the railroads preclude illegal shipments, whether to the markets of Chicago or elsewhere.

It is your duty to notify me at once of any violation of the game laws. If a letter will not reach me in time, telegraph me. Do not hesitate. I am ready, and will respond day or night. I have sworn to enforce the laws, and I propose to redeem my obligations without fear or favor. Give me your help, and I promise game shall not be seen on our streets out of season.

I believe that a large and increasing majority of our citizens are strictly observing the game laws. The practice of a minority of so-called sportsmen killing game out of season is a shame and disgrace to them and an outrage on law-abiding sportsmen. A strict compliance with the law (as it now stands) by all, means more birds, more sport for all. Therefore, I call the attention of all persons of this State particularly to the killing of prairie chickens before the closed season has expired, namely, Sept 15.

The prohibition of water-fowl shooting before sunrise and after sundown will be a feature of my administration.

Every violator of the law must be dealt with summarily.

The market hunters are warned against further offenses.

Strenuous efforts will be made to enforce the full penalty.

Where fines are uncollectable our recourse is the jail.

H. W. LOVEDAY, State Game Warden.

SCHILLER BUILDING, Chicago, Ill.

Confusion Over Moose Law.

There is considerable confusion over the Minnesota moose law, and parties from that State report that in Minnesota the confusion is worse than anywhere else. The guides around Pine River and the Woman Lake country say that the season opens this fall on Nov. 1. The former law declared a close season till Jan. 1, 1898, but set the legal season for shooting in November. A reliable informant told me the new law made the season ten days, Nov. 1–10, 1898; yet the *Game Laws in Brief*, the only actual authority on game law matters, sets the date on moose as Nov. 5 to Nov. 10, and does not say anything about the year of 1898 This would seem to make moose hunting legal this coming fall for five days in November. Most of the uncertain parties are very liable to give themselves the benefit of all doubts. We need a definite statement as to the date of this open season on moose in Minnesota, and I know of nothing conclusive except that of the *Brief*. It has been the general belief, however, that moose could not be killed in Minnesota until November of 1898.*

Illegal Moose.

Agent Fullerton has lately been complaining over the illegal killing of deer and moose in Itasca county, in which county he said it is next to impossible to make a case stick. He thought illegal moose had been served at hotels there. Now comes D. M Gunn, a hotel keeper in Grand Rapids, Minn., and denies with much indignation that he ever served moose on his tables. He says it isn't good to eat, anyhow. Mr. Gunn is evidently loaded for Mr. Fullerton, for he treats him to a column roast in the Duluth paper from which I take the above facts. He says that Mr. Fullerton is a bold, bad man, with nothing but a newspaper reputation, and charges that more illegal game is killed now than ever before. In these wide accusations I fear Mr. Gunn will find few to agree with him. Mr. Gunn is angry, and he has apparently gone off half-cocked and not hit anything.

How to Handle Indians.

Out in Minnesota they are much troubled with Indians, who shoot and fish for the market at all sorts of seasons and in all sorts of ways. It is very difficult to get any hold on this form of law-breaking, as the Indians have in the courts been held to be exempt under the State laws. When arrested no fine can be collected from them, and as for a term in jail, they like it, as it is their notion of ease and dignity. Agent Fullerton has issued an edict that henceforth any Indian found breaking the laws in public country shall have his outfit taken away from him then and there. This sort of thing the Indian heartily detests. He doesn't mind the jail, and he doesn't understand the fine, but he savvies it a heap when you take away his gun, spear and boat. In short, he succumbs to what has in many other portions of the land been found a most potent way of breaking up poaching methods among men of no great financial means. This, for instance, has always been the method pursued by the Tolleston Club, of Chicago, which has been up against the hardest poaching proposition in America. They simply took away the guns and broke up the boats of the poachers. This was not a legal thing to do, but the club left the other fellow to do the suing. The other fellow usually took it out in threats and regrets, but he didn't chance it there any more. A few Indians minus their guns and nets will do a world of missionary work among their people. If they were shooting to support their people it might be different, but they are shooting to support St. Paul cold storage houses, which is needless. The State Commission has decided to take this same method in dealing with white law breakers who shoot chickens ahead of the season. It has been learned that the country juries will not often convict a man arrested for such illegal shooting, so that the law is left with small terror for the evil doer. If said evil doer has his gun and ammunition taken away from him, he is apt to think it over a while before he buys a new gun and goes out to try it all over again. He has a good chance for a lawsuit for his gun, but, so long as he was caught breaking the law, he doesn't care to go after his lost property. He sits down and gets real mad over it, but he doesn't go kill any more illegal chickens. A large number of special wardens have been appointed in Minnesota this summer to carry on this work of chicken protection on the above lines. This year the Minnesota Commission has $25,000 to work with, this being available Aug. 1. In order to spread this amount as far as possible, the wardens will be laid off during the times when law-breaking is impossible or infrequent.

* There appears to be some circumspect hedging in this paragraph, but Mr. Hough's evident ultimate confidence in the *Brief* is not misplaced.

Sec, 11, Chap. 9, Laws 1891 as amended 1895, provided that moose and caribou should not be taken prior to 1898. But Sec. 15 of Chap. 221, Laws of 1897, as given in the *Brief*, fixes an open season, from Nov. 5 to Nov. 10, in each year, and does not extend the close term to 1898. Also, Sec. 50 of Chap. 221, Laws 1897, provides, "All acts and parts of acts inconsistent with this act are hereby repealed." This repeals the old law, and the moose season for 1897 is therefore as given in the *Brief*.—ED. F. AND S.

Grumbler not Accredited.

It would seem that our good friend Grumbler, whose pessimistic remarks over the Minnesota game supply attracted considerable attention, is not accredited wholly in his own country. The Minneapolis *Journal* quotes from the FOREST AND STREAM in answer to him, and further goes on to say:

"As to the deer, which are said by Grumbler to be rapidly on the route to extinction, residents in the northern forests assert with much deliberation that there never were so many as during the last deer season, and reports from the same region now indicate that there will be no lack of good sport when the next November weather makes itself felt. It is very true that a great many more deer were killed than should have been killed, and that there was practically no check on the hunters except such as was exercised by a small posse of wardens seizing game at central points, but thanks to the immense territory open to the big game in this State, and to the inaccessibility of much of it, there is still a chance to preserve the red deer in good force, provided that some more sane methods than those now in vogue are adopted within a few years."

Mountain Quail in Michigan.

Mr. W. B. Mershon, the high-priced guide of Saginaw, Michigan, writes me in regard to the discovery of another instance of the far-reaching activity of the market man. He says:

"At one of the hotels here within the last few days, a number of times there has appeared on the bill of fare, 'mountain quail.' Upon investigation I find they are California quail, and the landlord says he buys them in Chicago. It is too bad to think that the commercial feature cannot be taken out of the game question. These birds are undoubtedly trapped in New Mexico or Arizona, and it does seem as if there ought to be a way devised for putting a stop to it.

"At Phoenix, Arizona, while there last winter, I learned that up to within a short time the valley quail had been abundant; but of late they have been very hard to find in any quantity on account of the extensive trapping of them. A year ago the hotels were serving ptarmigan; whether they came through Chicago game dealers or not I do not know, but they claimed the birds came from some part of northern Canada."

Threats for Tolleston.

It is said that John B. Clough, contestant for land adjoining the famous and much-mooted Tolleston marsh, was this week making preparations for blowing up the Tolleston dam across the Little Calumet. This would injure the club marsh very much temporarily, but it is difficult to see where it would materially benefit Mr. Clough. At last reports this news is to be classified as interesting if true.

Visitors from Texas.

Mr. and Mrs. E. R. Emery, of Marlin, Tex., are in the North for a visit of some weeks, and have this week gone on up into Wisconsin for a stay at Baraboo, Mr. Emery's former home. Mr. Emery is well known as a good one in the field or at the traps in his country, and on his way North stopped at Kansas City for a look at the pigeon grounds there. From his report I learn that in the neighborhood of Marlin quail are very abundant, and doves are reckoned only by the thousand. Deer and turkeys still are to be had in that favored land, and, all in all, it would seem that life there was much worth living. Mr. Emery says that the sportsmen of his vicinity are alive to the necessity of preserving their game, and the Marlin men have always aided in the work of the State Association at Waco, of which we have heard in the past from time to time. Mrs. Emery has never been in the North before, and enjoys very much her initial experience in the land of business. She is nearly as much of an enthusiast as her husband over sports of the field, and they are partners in many pleasant enterprises out of doors.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Vermont Game Conditions.

SHELDON, Vt., July 29.—*Editor Forest and Stream:* The outlook for good shooting this season in this vicinity is a dismal one, for the long continued rains have destroyed the young ruffed grouse and quail, and have flooded the woodcock breeding grounds. A heavy cloudburst that occurred here the night of the 14th deluged our aviaries and played sad havoc with the young pheasants and chickens.

Rev. Mr. Gelot, of Middleburg, Vt., writes me that the black game released near that place have nested and will likely successfully rear their broods, as there has been less rain in that vicinity.

So far we have not known of a single deer being seen in this vicinity this season.

Foxes are likely to be scarce, as the farmer boys have dug out and destroyed several litters. So our only sport will be rabbit shooting—our big Northern hare will often give the hounds a good run, and on him we shall pin our hopes to supply our demands for field sports this season.

Last season, so far as we could learn, not a single pair of bluebirds nested in this section of the State, the past spring they arrived in goodly numbers, but passed on to more Northern breeding places, with the exception of a single pair that have remained with us. Other song birds are here as usual—the bobolink in increased numbers. The upland plover stopped here to nest, but we have not seen any of the young birds.

STANSTEAD.

Texas Quail.

THE outlook for shooting this fall is very good at present, really better than I expected; as the early part of spring was excessively wet, I feared that the nesting season would be materially interferred with; though the birds will be a little late in getting full-fledged, yet I think they will be in good shape and reasonably plentiful. The quail is our only game bird here, except that during their flight we have quite a number of plover, and I have heard some reports of a few jack snipe.

I note with much pleasure the presence of the usual number of song birds this summer, among which are the mocking bird, orioles, and several of the bunting family, also a family of red birds who have reared a brood of young in a tree in our yard. The English sparrow is fastly increasing, and we now have several large flocks, they are nesting in every available niche.

T. E. W.

A Word to Iowa Farmers.

NEVADA, Ia., July 27.—How many people who are interested in the sport of prairie chicken hunting, have ever given the subject of game laws and their enforcement serious thought?

Do the citizens of Iowa realize that the prairie chicken, one of the finest and most hardy game birds known, will soon become extinct in Iowa, if the game laws, which were intended to protect these grand birds, are not respected and obeyed?

The time was not so long ago, when few of us paid any attention to the game laws. But the fact that these birds, which once inhabited our State by millions, are now to be found only in limited numbers in the central and northwestern parts of Iowa is indisputable evidence that our prairie chickens will soon exist in memory only.

The legislatures of a few States have not only provided laws similar to the Iowa game laws, but have provided officers and funds for the enforcement of the laws. This action has not only proved beneficial to the game, but has in at least one State (Maine) been the means of bringing many thousands of dollars into the State, as thousands of sportsmen from the large eastern cities annually go to Maine to hunt.

While we might not profit so much as Maine by the enforcement of our game laws, certain it is, that should prairie chickens ever again become as numerous in Iowa as they were twenty years ago, many sportsmen from the west and even from "down east" would come to Iowa to hunt, and as a matter of fact, leave a good deal of money in the State. As Iowa has not provided the necessary funds and officers, the only hope for the enforcement of the law, is that the sportsmen may realize the situation and respect the law, and that every farmer and landowner may apply the trespass law to any "sooner" found hunting before the lawful season. The lawful hunting season is, for prairie chickens from Sept. 1 to Dec. 1; for quail from Oct. 1 to Dec. 1. It is to be hoped that every farmer will take advantage of the trespass law to control the "sooner" who persists in hunting out of season. It is a fact well known to those who have made the matter a subject of careful study, that our prairie chickens and quail are the greatest known destroyers of grasshoppers, potato bugs, etc., and therefore are friends of the farmer.

JOHN C. BRIGGS.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

ANGLING NOTES.

Length of Gut.

MY "Angling Notes" have been omitted from this periodical of late, simply because I have been so much from home, and other duties have demanded my attention, that I have had no time to write them. This evening I have for the first time read the article signed by S. Allcock & Co. in the issue of FOREST AND STREAM of May 29. Messrs. Allcock & Co. refer to an article of mine, in which I said that at the London Fishery Exhibition gut was shown, some of the strands being 40in. in length.

That was a statement of fact. Not an opinion, which anyone is at liberty to differ from. Messrs. Allcock & Co. declare: "As to the very long gut, there is nothing made 40in. in length, and such has never been produced, to our knowledge."

Now, is it not possible that Messrs. Allcock & Co. do not know all that is to be known about long gut, and that 40in. gut might be manufactured without their knowledge or consent?

In the *Fishing Gazette* of July 10, published in London, Messrs. Hardy Bros. advertised gut in strands from 30 to 42in. in length, and leaders 3yds. long, made from three strands only of gut. In a letter to the editor of the *Gazette* inclosing samples of leaders, or gut casts, as they call them on the other side, the Messrs. Hardy say: "You will notice the No. 1 is in three strands only, each strand being about 1yd. No. 2 is in four strands. The No. 1 is made from gut 42in.; No. 2 from 30in."

The editor, Mr. Marston, acknowledges the receipt of the leaders, and says the length of the strands is most unusual, but he does not say the gut lengths are any different from what is claimed, so I must assume that there is gut 40in. long, even if Messrs. Allcock & Co. say there is not.

It is quite possible that Mr. Marston will be willing to show Messrs. Allcock & Co. the gut casts if requested to do so, and they can thus add to their knowledge concerning the length of gut that is produced.

Wealth of Fish Food in St. Lawrence River.

About the middle of June I was leaving Montreal one evening by the Delaware & Hudson R. R. The sun was just sinking, possibly it was half an hour high, and as the train approached the Victoria Bridge over the St. Lawrence we ran into a swarm of flies. The flies were so numerous that we shut the car windows to keep them out, and for several miles south of the river I noticed the flies in the failing sunlight on both sides of the track in hordes. "Eel flies," a fellow-passenger called them, but they were one of the caddis flies, which come from the caddis or case worm, a most excellent food for fishes. I was on a train on the Union Pacific R. R., in Wyoming Territory, many years ago, that was stalled by grasshoppers crawling over the rails and becoming crushed to pulp under the wheels, so they revolved without advancing the train, until the passengers assisted the train crew in sanding the rails. If the caddis flies that I saw rising near the St. Lawrence as we came out of Montreal had crawled on the railroad iron instead of flying in the air, they would have stalled all the trains on the Grand Trunk and D. & H. R. R. systems. The flies would have furnished food for an army of fishes, and doubtless the larval forms of these flies do furnish an abundance of food for the fish in the St. Lawrence. About two weeks later I was at Clayton, on the St. Lawrence, and saw on the surface of the water great numbers of dead and dying alewives (locally called "saw-bellies"), and these fish swarm in the water. I could account for their dying only because of the change in the temperature of the water from cold to warm. They are very sensitive to such changes when found in some of our interior lakes, and it is more than likely that this will explain the mortality of the alewife in the St. Lawrence. They must for a good portion of the year furnish an abundance of food to the adult fishes, and they are found from Lake Ontario to Ogdensburgh.

Just two weeks later still I was again on the St. Lawrence, and in a steam yacht went from Clayton to Messina, a distance of about seventy-five miles, and for all that distance there were patches on the water consisting of the larval cases of the May-flies. The flies were at the same time rising every night. The larval skins would in some instances cover half an acre of the surface, having been gathered in a mass by the wind and current. During the ride of seventy-five miles we were never out of sight of a patch, larger or smaller, of the larval skins, and the piers and boat houses, piles, etc., were covered with empty cases. Every night the flies would rise in clouds, and this continues, I was told, for a month. I counted five species of drakes, the big green drake or May-fly being most abundant. The flies plastered the houses, the lamps, and other furniture, and I found them quite abundant in my bed. If any one cared to transplant the May-fly, and I mean the green drake, as it is the largest of the tribe, to furnish fish food where they are not found, they could be obtained very easily along the St. Lawrence. The Fisheries, Game and Forest Commission was examining lands and islands offered for sale to constitute the St. Lawrence River Park, and one day returning to the steamer, after looking over an island, the captain called my attention to animal life in the water. It was late in the afternoon and we approached the boat from the east. Under the boat the sun made a bright strip in the water between the keel and the bottom of the river. In this bright strip could be seen countless numbers of small insects, and by dipping up a tumbler of water they were found to be the small crustacean with one eye, called cyclops. Here was food for very young fish when first taking food through the mouth, and elsewhere food for fishes of a larger growth, all in lavish abundance. Why then is the black bass fishing poorer in the river than it used to be? Simply because for years the bass have been caught during the spawning season. Legally caught, to be sure, but nevertheless they have been caught during the spawning season. I found the water in the river at the bottom, in, say, 15ft. of water, where there was a current, 62½° Fahrenheit, and black bass do not spawn until the water reaches about 65° for a great part of the day. If the black bass are protected until July 1 (a great many bass spawn in the river after July 1; perhaps the most of these spawn after July 1 in such a late year as this), and the limit to the daily catch be enforced, the black bass fishing in the river may be restored to what it used to be. For my part, I cannot see what is done with all the bass exhibited at the hotels by the guests every night, even now with the limit in force of twelve bass to each rod or twenty-four bass to each boat, provided there are two fishermen in the boat. The guests at the hotels were not so numerous when I was there, that they were bulging the sides of the hotels outward, yet the display of bass each night made me wonder what the display would be when the season was at its height, and also what would become of the bass displayed. At a dinner given to the New York Commission by Mr. Boldt at his summer home, Heart Island, the after-dinner speeches referred to the proposed park and to the game laws, fishing, etc. Some of the members of the resident committee contended that June 9 was as late as the season should open, although the Canadian authorities wished the open season to begin June 15. I advocated a close season to extend to July 1, for I found bass with spawn in them on June 16; and it was finally admitted, after dinner and privately, that many bass were taken in July containing spawn. Let the guests fish for other fish until July 1, and permit the bass fishing to recover, and the boatmen will make more to be engaged through July, August and early September, with good fishing that will attract fishermen as it once did, than to fish with indifferent success from June 9, and feel all the time that they are doing injury to the fishing by taking the bass from the river before they have spawned. This matter of a proper open season was all fought out in Lake George. The open season first began July 10, then July 20, and finally Aug. 1, for the water of the lake is very cold, and the bass spawn all through July. The law was Aug. 1 to Dec. 31 for many years, and the lake was recovering from years of taking spawning bass; but this year the law was changed to conform to the general law, and changed by people who apparently have no interest in the fishing, except it be a selfish interest, and the people at the lake who understand why the bass should be protected are indignant about it.

What My Window Screens Catch.

The windows of my library face the Hudson River, which is a quarter of a mile away, and they have at certain seasons fine wire screens in them. When the wind blows from the river in the spring and early summer the screens are apt to catch something of the insect life blown up from the water, and it is quite the regular thing to examine the screens early every morning to see if they have caught anything. On the screens I have found four species of drakes, but never the big green drake or May-fly. I have already described in FOREST AND STREAM how the May flies have performed their final transformation on these screens, and shed the thin, gauzy skin, which, until witnessed, it would seem impossible to shed, for it is a pure film. It is not unusual for the dragon fly to visit the screens; but I had a brand new caller one evening lately, when one of the family exclaimed, "Here is a dobson on the screen; come quick!" Sure enough, it was the fly of the dobson or helgramite (*Corydalus cornutus*), and one of a very few uninjured ones that I have found. Prof. Surface, of Cornell University, was to dine with me that evening, and I assured him that the fly called in his honor; for we had been talking about fish food and water insects for two evenings previous. It is perhaps curious that, much as I have looked for the image of the dobson, I have found comparatively few of them. Since my boyhood days I have been familiar with the larvæ which we call dobson, and have used hundreds for black bass bait. In perfect form it is a night flyer, and the first one I ever saw, aside from preserved specimens, I picked up one morning under a street gas lamp which had a broken glass. Within a day or two after I found a second one; but that was when I was a boy, and I think I have not seen fifty, all told, since, and to have one fly on to the screen was most unusual. But it adds to the list of fish foods that the screens have collected, and I hope that its mate (this is a female) will pay me a visit some evening.

An Irish Pike Fly.

Not long ago my friend Mr. Marston wrote: "I am sending you a pike fly made by Enright & Son, of Castle Connell, and used on Irish waters. It may suit your mascalonge." When I looked at the fly I was satisfied that a pike, mascalonge or any big fish of the tribe would take the fly if they had the opportunity. A gentleman, who is not an angler, was visiting me and saw the fly hanging on a picture frame and asked me if I kept it to frighten children with, and I said no, it was an alligator fly, and he assured me it looked it. The fly is tied on 7-0 double hooks, and has a body of red and green mohair wound with round gold tinsel, the tag is gold and the tail is just a bunch of whole feathers of various colors, and the same may be said of the hackle. The head is, however, its *chef d'œuvre*. Two glass eyes glaring at you from a mass of green plush, back of which stands up the tip of two peacock feathers, with the eyes, for wings, makes the whole thing look like a cross between a gigantic dragon fly and a steam fire engine at work. I am breaking an Irish terrier puppy by the name of Drummond, and until the pup is broken that fly will not be offered to any mascalonge, for a sight of it is enough to put the pup on his good behavior for twenty-four hours, and it is generally understood that an Irish terrier fears nothing that swims, walks or flies.

Mahseer Teeth.

With the pike fly, Mr. Marston sends me a set of Indian mahseer teeth—the big carp, which is called the salmon of India—and it was fitting that the fly and the teeth should cross the ocean in the same box, for they are both in the same class. The teeth are from a fish of 22½lbs. (really a small fish) caught on Washington's Birthday of this year. The largest teeth are ⅝in. long and ⅜in. wide at the base and ⅛in. thick. Very recently I read a newspaper item which said that the mahseer had no teeth, but its powerful jaws would crush an ordinary spoon bait. The person who wrote the original article about the mahseer, from which the item was garbled, probably said that the mahseer had no teeth in its jaws, which is true, but like other carp, it has teeth in its throat, as the examples before me will testify.

What the teeth of a 150lb. mahseer would be like I cannot say, but if they grow in proportion to the fish, judging from these on my desk, they must be several inches long and strong enough in other respects to suggest a gun as the proper instrument to use instead of a gaff at the end of a fight.

"The Book of the Dry Fly."

This is the title of a book recently published in London, of which George A. B. Dewar, Esq., is the author, and the Marquis of Granby, and J. E. Booth, Esq., contributors. On this side of the water we do not practice dry fly fishing to any extent as yet, but it is considered in England the acme of fishing with the fly, and from inquiries which have come to me within a year or two past, I am satisfied that our anglers are becoming interested in it and desire to know about it. Mr. Dewar states the difference between wet and dry fly-fishing very concisely when he says: "Wet and sunk fly-fishing is fishing the stream; dry fly-fishing is fishing the rise." The wet fly fisherman uses three flies and fishes down and across the stream, and the dry fly fisherman used but a single fly and almost always fishes up stream. The dry fly floats on the surface of the water and the wet fly sinks beneath it. The wet fly fisherman fishes the whole stream—the likely places—hoping to find trout feeding that will be tempted to rise to his flies, and the dry fly fisherman follows the stream, and when he discovers a feeding and rising trout he casts his floating fly over the rise. That is as briefly as I can give the difference between the two styles. Of course there are waters for dry fly-fishing and waters for wet fly-fishing, but the author says "the dry fly is never an affectation save when resorted to in the case of the brawling impetuous streams of mountain districts, where it is practically impossible of application."

Furthermore, there are seasons for dry fly-fishing and seasons for the wet fly, and in referring to those seasons, the author uses language which we of this country, no matter what kind of fishers, may ponder over: "The dry fly anglers of April, however, are tending in many places to become as rare as the grouse shooters of midwinter, or the slayers of the hare in March. Only in very forward seasons are trout fit for the creel before May is with us. Sizable trout before then are usually deemed out of condition, a 2-pounder being a hideous creature—lean, lanky and black in hue. In April, too, the trout are usually in only a half educated state; when weak and dazed after their exhausting spawning operations, they will, if on the feed, take a wet fly as soon as a dry one, and prefer a bunch of gaudy hackles and tinsel to a perfect imitation of the natural dun on the water." The seasons in England and America may differ, but what the author says is true of fishing in this country, where, as I believe, the fishing should not open legally before May 1, except on Long Island, and perhaps in a very few other waters, where trout get into condition the last of April.

There is another matter which the author writes about,

and I can sympathize with him most feelingly, and heartily indorse what he says, and more:

"Equally skeptical am I as to the use of giving lessons in casting on paper, and precise injunctions as to how to strike, play, and land the trout when hooked. Probably not one man in a thousand can learn how to cast a line, and how to deal with a trout when hooked—and before hooked—out of a book." I have tried over and over to instruct people how to cast a fly by letter, and I rejoice that one man to my knowledge succeeded in becoming a fly fisherman from such instructions. The book is full of good, healthy advice, and ripe with ideas of value, and should be read by all anglers, even if they never intend to cast a dry fly. If the reader can cast a wet, the book will teach him to cast a dry fly, cocked up, floating on the water, and the book is full of wise maxims: "The dry-fly fisherman never uses more than one fly on his cast at the same time, and never fishes down stream when he can possibly fish up." "The dry-fly fisherman selects a particular fish and endeavors to deceive it, just as a gunner who is anything of a sportsman selects a particular partridge out of a covey and shoots at that bird alone." "The dry-fly angler is not as a general rule a very early bird. He can do nothing without the natural fly, and in my experience there are very few duns or other water flies about until 9 or even 10 o'clock in the morning." But one must read the book in its entirety to get all the meat out of it. The author is a past master of the art, and his work not only instructs but entertains the reader, and altogether it is a book such as any angler or lover of outdoors may read with profit.

It may seem rather ungracious, after reading a book that has afforded me so much pleasure in reading, to refer to an evident slip on the part of the author, who says: "In addition to the fly at the end of the gut called the 'dropper,' there are one or two other flies attached." This may be right; but I have all my life known the end fly as the "stretcher" fly, or point fly, and the "other flies attached" as the droppers. The British "Anglers' Lexicon" says: "Dropper is the name given to each artificial fly depending from the casting line above the terminal or stretcher fly." I would not refer to this matter at all, except that it is the only time I ever found anything in the Lexicon that I looked for.

The "Book of the Dry Fly" is finely illustrated with artificial flies and natural insects, in colors and in black and white, and the plates are remarkably well done; and the mechanical work of the book, which consists of 238 pages, is neat and attractive. The best testimony I can bear is that I have read the book through, and if readers of FOREST AND STREAM could know how many angling books I have on my book shelves that I never read anywhere near through, and never will, they would understand that it is the highest praise I can give it.

The 23½lbs. Salmon on 4½oz. Rod.

In recording the capture, by Wm. Archibald Mitchell, of a 23½lbs. salmon on a rod weighing but 4½oz., I neglected, very strangely, to say that the fish was killed in twenty-seven and a half minutes; and I was in error, so Mr. Mitchell tells me, in saying the reel was a multiplier, as it was a trout click reel. I took the rod in my hand directly after the salmon was killed, but I never turned the reel, although for some reason, after I returned from the river, I assumed it was a multiplying reel.

A. N. CHENEY.

ANGLING IN CANADA.

Editor Forest and Stream:

Notwithstanding a few good salmon scores made in Canada this year, there is no doubt that the season of 1897 has been quite an off year so far as *Salmo salar* is concerned. It is curious that just this season should be that in which so many large trout, some of them record fish, have been taken in the Lake St. John country. This is particularly true of the Tourilli and Triton clubs. The waters of the latter will be fished next month and in September by a large number of anglers from Syracuse and elsewhere in the United States. At the Tourilli Club a number of distinguished anglers are also expected in a few days, including Mr. G. H. Harris, attorney, of Chicago, and probably also Mr. Carter Harrison. The lakes and rivers of this club have already afforded splendid sport this year to many of its American membership. Mr. J. B. McHarg, Jr., the professional fly manufacturer of Rome, N. Y., has recently visited the Fifth Falls of the Mistassini and also the Grande Décharge after ouananiche, and has much enjoyed his outing, being enraptured with the country and its scenery, and especially those about the discharge of Lake St. John. Among other recent visitors to the Fifth Falls of the Mistassini have been Mr. E. J. Myers, of New York, and friends. The month of August should record the taking of many of the large trout and ouananiche for which Lac Tschotagama is noted. The lake may be reached either from the Grande Décharge or by way of the Peribonea, or the ascent may be made by one route and the return by another. To do the trip leisurely a week or ten days should be taken. Very large pike and ouananiche are now being caught by trolling off the Island House on the westerly side of Lake St. John. I have received inquiries about the fly-fishing for ouananiche in the Metabetchouan, but would not advise a visit to these pools before the middle of August. With the return of cooler nights, the plague of flies in our northern woods is already largely diminishing.

Mr. David Blanchard, and Mr. Walter Brackett, of Boston, are still on the Ste. Marguerite River, where sport has been exceedingly poor this year. Mr. Blanchard was on the river for three weeks without catching a fish. Then he killed eight in a week. Mr. Brackett's score is only about a dozen, and he was also three weeks without a fish. Mr. Russell, of Detroit, has not yet taken one at all, and Mr. Plumb only a single salmon. Messrs. G. T. Lyons, of Oswego, and A. L. Barney, of New York, passed through here on their way home yesterday. Mr. Barney killed but seven fish. Mr. Lyons, in five weeks, only took ten, though last year his score was fifty-two. Not only has the season been against the salmon, but all the anglers on the Marguerite complain bitterly of the illegal netting of the Saguenay below the mouth of that river. Some of the offenders have been detected, a few nets have been seized, and ten prosecutions have been entered upon. It is sincerely to be hoped that prompt measures will be taken by the Government to put down this poaching.

E. T. D. CHAMBERS.

QUEBEC, July 30.

FISH AS A FOOD SUPPLY.

DELAWARE COUNTY FISH AND GAME PROTECTIVE ASSOCIATION, Chester, Pa., June 8.—*Editor Forest and Stream:* Having been a close observer of the legislation asked for throughout the different States in the interest of fish protection, I have invariably noticed that the opposition base their attacks upon such measures principally from the word "sportsman." Why this should be I cannot understand; but it appears that in respect to fish legislation as with many other worthy objects, one word kills the whole business.

A judge was once given some advice by an admiring friend, who said: "Always make your decisions clear and to the point, but do not give any reasons." This would have been very valuable in the past to the promoters of fish protective legislation, had they foreseen that their motives would be misconstrued.

The question of fish protection, while only in its infancy, must, and will be in the near future, one of the foremost questions that will confront our State and national legislative bodies, and the cause will be from a purely food standpoint. This fact has never been so clearly illustrated to me as in the past year, and my observations have been fully demonstrated in the surroundings of my own home.

Why should a family starve which lives in a town surrounded by the Delaware River, three beautiful creeks, and numerous ponds and lakes, where an abundance of food could and should be furnished free of cost for their maintenance? Why should a great State like Pennsylvania maintain four hatcheries, at an expense of $30,000 per year, to propagate and furnish fish free of cost to our waters, and then permit some no-account person to seine them out in a night, carry the fish around the next morning and ask the people to pay 10 to 20 cents per pound for them? The whole business is wrong from beginning to end. No commercial fishing should be permitted in the inland streams. These streams should be kept intact, and their product used entirely for the benefit of our citizens who need the product of these streams in time of distress.

Experience has taught me that a person can secure enough food for himself from day to day with a hook and line in well protected streams. It was not many years ago, when a person could go to one of our creeks and secure more fish with a hook and line in one hour than they can now, working a hauling seine all day. The cause for this condition of affairs is fully understood by our citizens, and yet they failed to raise a hand in protest.

We have now taken up the question of fish protection by an organized effort throughout our county, and we claim that we should have the unanimous support of every man, woman and child in the county, not because some few of us will enjoy a few hours sport on the banks of one of our streams, but while we are laying the foundation for sport we are laying a foundation for a valuable food supply, to be enjoyed by the generations to come if our methods can be carried out. If a man is starving, and too lazy to go to the stream and get his supply of food, he is too lazy to eat and should starve.

The question from a charitable standpoint, of using the waters of our commonwealth for the supply of food to the needy, is being more forcibly illustrated every year, and must command the attention of our people in a more serious light than they have heretofore looked at it. I am of the opinion that if the word "sport" had been kept out of all legislation asked for, and the question argued from a food standpoint, considerably more progress would have been made, and at the same time the sportsman's ambition would have been satisfied in every detail. It is an undisputed fact that the progress made in the advancement of fish protection has been from the labor of the sportsman, but the general public, and the persons who hold the balance of power that elect our representatives, do not view the situation in that light, but refuse to give credit where credit is due. This always makes the representative believe that his head is at stake if he supports any measures that will in any way bridle the destructive methods of this class of people, who never look beyond the surface of things. We have a sample case in Pennsylvania, where a representative was defeated for reelection by supporting a measure that effected the eel fishermen along the Susquehanna.

Knowing these facts to be true, an effort should be made by all associations and persons interested in the protection of fish, to place the facts plainly before the people, and educate them if necessary into the necessity of protecting our fish from a food standpoint. This could be esily done through the newspaper and other circulating mediums, whose columns are always open for anything that is for the advancement of the public good. The space devoted to this question by our local papers is very noticeable now. One year ago the people of our town did not know what fish protection was, but since the papers have taken the matter up it is common talk on the street.

I could never understand why fish protective legislation never has the support of commercial fishermen. Of all persons who should be interested, it certainly is those people. They are to-day robbing themselves of their business here in Chester. For example, ten or twelve years ago sturgeon fishing was their chief industry. At that time they fished with 15in. mesh nets, and would not think of taking a sturgeon from the water that weighed less than 75 to 100lbs. But by degress they reduced the mesh of their nets, until now they use 5 and 6in. meshes. To day the only sturgeon caught are the little mamooses, weighing from 1 to 5lbs. I claim that if these men had had a warden constantly watching them for the past ten years their sturgeon industry would be in a thriving condition to-day. Only a few days ago I read in one of the Philadelphia papers that the sturgeon fishermen in the lower part of New Jersey have awakened to the fact that their industry has vanished, and have resolved to petition the State and national commissions to artificially propagate and distribute sturgeon in the same manner as they do shad. They want the product of their business furnished by the State, and if you would ask them for $1 per year to maintain the hatchery they would wink the other eye.

Thousands of young fish are destroyed every day in the Delaware River by the shore-nets used for the catching of carp. If you were ever watching some of these men taking up their nets, you would notice that the young fish unfit for use go on the bank and die. They could throw them 10ft. to the bank, but could not throw them 3ft. on the other side to the water. And yet, a few men of this character hold the Legislature of our State in defiance. The fish bill passed by the last Legislature was a great improvement over the old laws, but is still lacking of considerable means that would enable us to more successfully handle the persons who ruthlessly destroy our fish. It is a very hard matter to secure and frame laws for a stream like the Delaware, where it is the boundary line for three or four States, and it appears to me that the only successful way would be for Congress to make the laws to govern such streams.

I hope the question of food supply will be more prominent among fish protectionists in the future, as the question from that basis is bound to demand the approval of all good citizens, both rich and poor.

W. LEVIS BURK.

SOME QUEER CATCHES.

NEAR the town of Somerset, Pa., is a small stream known as "The East Fork of Cox's Creek;" there are other small streams, but the one named is the only one with which the present narrative has to do.

In this stream, about a mile from town, is an old dam, now known as "Kantner's dam," which, like all such structures situated near small towns, within the writer's knowledge, serves as a swimming hole and fishing place for the boys and young men of the town, and occasionally on Kantner's dam some adventurous youngster launches a rude boat of his own construction, and, as the boys put it, "has lots of fun."

Twelve years ago, or thereabouts, be the same more or less, the "carp craze" struck this community, and a number of gentlemen erected ponds for their keeping, fondly believing that they could thus have excellent table fish for the mere reaching for them. They found out their delusion later, but with that I am not now concerned.

During the heavy rains of the year of 1889, the year of the Johnstown flood, many of these ponds were swept away, and the carp contained in them carried into the East Fork of Cox's Creek above Kantner's dam, and they have there thriven to such an extent that the creek both above and below the dam, and the dam itself, are literally alive with carp—German carp, leather carp, and all sorts and sizes and sexes of carp, in lavish abundance and native ugliness. The boys go and fish for them, and catch them, and, I believe, eat them.

A certain young attorney and his cousin, "nameless here forevermore," are great carp fishermen; indeed, certain persons whisper that, did the attorney devote as much time to fishing for clients as he does to fishing for carp, he would be better off. But you know, "people will talk." Some time during the afternoon of Monday July 5, 1897, these cousins departed for Kantner's dam to fish for carp. I know not of their going, but about 9 o'clock at night I saw them return. They were carrying lanterns, rods, fish, and the attorney was proudly lugging along a huge muskrat, and to the writer he said:

"It had got pretty dark. I couldn't see my float. Had not had much luck, and was beginning to feel sleepy, when suddenly I felt something. My reel began to sing, there was a considerable commotiom, and I called to my cousin I've got a big one this time. I played him for all that I knew for about a half an hour; but what excited my curiosity was that during the whole time I never caught sight of the thing, though I never dreamed of its being anything but a fish, and yet I didn't think it was a carp. At last I got it out and 'twas a muskrat, though I didn't know that until my cousin told me, for, strange as it may seem to you, I think that I was never before close to one of the creatures."

"Why did you bring it home, and what are you going to do with it?"

"O, I brought it home to show the boy at our house: and then I think I'll skin it for the hide."

"Better get some one to skin it for you. I wouldn't have the smell of the thing on my clothes or person for any money; but I hate musk."

"I don't know whether I'll skin it or not," was the reply; "maybe I'll throw it away."

A few days afterwards I met the attorney's cousin, and the cousin said: "It was my fault that he brought the thing home. I wanted people to see that he actually had caught a muskrat with rod, hook and line, and besides, I persuaded him that it was good to eat, told him it was delicious, and he believed it. He didn't bring the thing home to show to the boy, he fully intended to eat it, but after he got it home and smelled it, and looked at its tail, he got sick and carried it out into the garden and buried it, and he says he can't bear any musk perfume since."

"Tell me," said I, "did that rat actually bite at the hook?"

"No, it didn't. The hook caught it accidentally in the ham of its left hind leg, and it couldn't get loose. This is the truth, but he's been telling everybody that it came and bit at a small carp on his hook, and that it was hooked in the mouth. But you'd find the wound in the ham of its left hind leg. Now tell me, however, did you ever hear before of anyone's catching a muskrat in a stream with rod, hook and line?"

"I certainly never did." And now, Mr. Editor, what say you and my other "brethren of the angle?"

AMATEUR.

While fishing from a boat for bass on one of the pretty little lakes of Sussex county, N. J., last month with my chum, Falbow, we had a very amusing experience.

After casting with frogs for some time with fair success, F. allowed his bait to settle for a few moments. Turning to me, he remarked that although something was on his line he could not make out what it was, but would wait until the frog was swallowed before striking; so after a few anxious moments the strike was made, but from all outward appearances the bottom was hooked.

I was just about to rally him a little, when the supposed bottom started to move out. The line was carefully reeled in until there rose above water the immense back of a snapping turtle, and a whopper, which had swallowed frog, hook and a good part of the leader, his huge head and blinking eyes looking defiance. Here, then, was some fun, and the little 5½oz. rod would be tested to its utmost.

We carefully worked the boat toward shore, and the turtle followed willingly enough. Upon landing, Falbow, who was anxious to make a record with the little rod, endeavored to get the turtle on shore, but the strain was too much on the rod, so laying it aside, he grasped the line and hauled in to land. I stood in the boat and tried as hard as I could to turn the prize over with a heavy oar, but without success. At this stage of the game the turtle evidently thought it about time to interfere, so raising his front foot, which was as large as a good-sized human hand, he took hold of the leader, snapped it and hustled for deep water, taking frog and hook with him.

HORTZ.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

THE WALLKILL RIVER.

Editor Forest and Stream:

I have read with regret the communication of Mr. John Wilkin in your issue of this week, in which he criticises the very delightful article of Mr. Fred Mather, relating to the Rev. Henry L. Ziegenfuss as one of the persons that he has fished with, partly because this communication contains more serious errors than the article by Mr. Mather, and also because Mr. Wilkin charges Mr. Mather with making statements which are not contained in his article, apparently for the purpose of refuting them.

It is true that Mr. Mather is in error in stating that the Wallkill River rises in Ulster county, as in fact it rises in the State of New Jersey, but it is incorrect that this river runs through Orange county until it empties into the Hudson, as alleged by Mr. Wilkin. The fact is that the Wallkill River runs through both Orange and Ulster counties, and finally joins the Rondout Creek a mile or two above Rondout, and empties into the Hudson River.

Mr. Mather does not state anywhere in his article that he was to meet Mr. Ziegenfuss at Zach Du Bois's Hotel at New Paltz, as alleged by Mr. Wilkin, although he was in error in claiming that the fish taken from the Wallkill were trout, and yet this mistake is quite pardonable where a person is writing from memory in regard to occurrences which took place many years ago, especially when the fish were taken with the fly.

The Wallkill rises in Sussex county in the State of New Jersey, and runs through what are called the drowned lands lying near or on the border line between New Jersey and the State of New York, and the discharge from these lands is so deliberate that the river rarely suffers from drought, and as a rule is full of water during the entire summer.

One or more of the tributaries of this stream abound in trout, but for many years there have been very few if any trout in the river itself.

Years ago it abounded in pike or pickerel, and about thirty years ago some of the people residing along the stream raised a fund by private contribution, and had it stocked with small-mouthed bass, with the usual result that the pike or pickerel have largely been destroyed.

These waters abound to-day in small-mouthed black bass, many of which have attained a weight of 3 or 4lbs., pike or pickerel, rock bass, strawberry bass, and also whinfish, which abound particularly in the lower portion of the stream.

For many years the angler's home or retreat on this stream was the house of Zach Du Bois, situated about three miles south of New Paltz, on the west side of the stream, and which has often been visited by almost every angler in this vicinity. Mr. Du Bois died two or three years ago at an advanced age.

The Rev. Mr. Ziegenfuss, during his whole life in this city, was a constant visitor at this place, and it was here that he and Mr. Mather tested their skill in taking black bass with the fly, which was one of the favorite sports of Mr. Ziegenfuss.

The Wallkill River has no superior in the State of New York as a black bass stream, and it has probably furnished more sport in the way of taking bass with a fly than any stream of equal size in the State, but it has unfortunately been depleted during many years in the past by certain special provisions in our fish and game law, which, until recently, has allowed the use of nets or fykes in this stream during certain periods, and this largely through the efforts of the persons in our Legislature representing the district in which these waters are situated, and who have openly stated that unless these privileges were granted they would, if possible, defeat all amendments to the fish and game law, and this determined effort to permit fishing with nets or fykes in the Wallkill River has, for many years, largely prevented the passage of laws throughout the State restricting fishing with nets in other waters.

I have also read with regret the statement by Mr. Wilkin that a large number of bass have been placed in the stream this year, as it is hardly possible that these fish will not contain large-mouthed as well as small-mouthed bass, and if large-mouthed bass are now introduced into the stream it will be practically ruined.

If the statement by Mr. Wilkin that over 600,000 pike-perch have been placed in the stream is correct, it is enough to say that the Wallkill is not at all adapted to these fish, and that the result will be the same as in all other like waters throughout the State, and that is that they will never be heard from any further. Many thousands of pike-perch were placed some years ago in some of the waters of this county which were as deep and as well adapted to them as the Wallkill, and every one perished. J. S. VAN CLEEF.

POUGHKEEPSIE, July 30.

No, Mr. Wilkin, I did not mean another Wallkill, although I shortened the stream to an alarming extent by making it rise in Ulster county, thereby depriving many farmers of their water privileges. A look at the map tells me that you are correct in having the stream bubble up in New Jersey. I also acknowledge that I wrote "trout" in the last paragraph in my sketch of Mr. Ziegenfuss, when I should have written "black bass," and I am glad to have attention called to it. But, having acknowledged to two errors, I must stop there and insist that it was at Zach—not Hank—Du Bois's where we stopped.

I do not know Hank Du Bois, but I'd know Zach's hide if I met it in a tanyard. According to Mr. Wilkin, Hank kept a hotel at New Paltz. In a letter from the late Mr. Ziegenfuss, he says: "Four miles south of New Paltz, near Zach Du Bois's house—where all true anglers find a welcome and get lots of dirt mixed with food and drink—is a dam. It is low and broken," etc. The rest of the letter I quoted in the sketch.

Having settled this weighty question, and backed it up by showing the original letter to the editor of FOREST AND STREAM, I wish to pay my respects to Mr. Wilkin's remark that he "enjoys 'Men I Have Fished With' very much, although they are nearly all dead or 'has beens.'" My dear boy! Turn to FOREST AND STREAM of July 24, page 71, and under the head of "But Some are Fishing Still," you will not only find that Col. Raymond, whose sketch was No. VIII. of the series, sent me a 25lb. salmon of his own take this season, but that there are other live corks bobbing about on the millpond, although I began fishing fifty-seven years ago; and in trying to arrange my companions in chronological order I have really not got within a quarter of a century of to-day, although some skipping was necessary. I haven't touched many living men yet, nor have I sketched the men I have fished with in Germany and Switzerland.

I really hope that Mr. Wilkin will continue to fish until he finds a good "fishin' hole," and will then invite me to have a whack at it with him for a companion; and we will agree to let the Wallkill flow on forever, like Tennyson's "Brook," while we fish down its banks where every prospet pleases and only Zach Du Bois's coffee is vile. FRED MATHER.

NEW ENGLAND FISHING.

BOSTON, July 31.—Considerable has been said of late concerning the hunting and fishing clubs of northern Aroostook county, Maine, and it seems that not more than half has yet been told. The country is new; opened to the possibility of being reached in the ordinary vacation of a busy man by the Bangor & Aroostook and Canadian Pacific railways. The waters are truly virgin to sportsmen. Mr. Henry S. Fisher, with his friend, Mr. Mitten, were at Spider Lake last season, on their hunting trip, and had great sport. This lake is at the headquarters of the Allagash. A. J. Spearen's camps, at that lake, are reached either by way of Oxbow, Bangor & Aroostook Ry., or by way of Moosehead. The same guide has just written Mr. Fisher a letter concerning a new camp that he has opened on Musquecook Lake, one of the same chain as Spider Lake. Here the fishing is explained to be remarkable, with 3 and 4lb. trout at almost every cast. This season, Mr. Spearen writes that the fishing has been the greatest ever known. Big game is seen almost every day. Masardis, Me., will carry a letter to Spearen, and readers of FOREST AND STREAM in search of lakes and forests that have not been spoiled by sportsmen and tourists will be likely to come pretty near their desires in northern Aroostook county, Maine.

A party of school boys have got into trouble in the Maine forests. Game Warden Pollard and Guide Clarence Morris recently went up to Cauconagonoc Lake, where a party of fourteen students and some of their teachers were in camp. Near the head of the lake they came upon a bear feeding upon the carcass of a cow moose. The ears and feet had been cut off and the body evidently sunk in the lake, but evidently it had risen and floated ashore. Satisfied that the boys knew something about the shooting, the warden put the whole of them under arrest. Two of the boys came forward and acknowledged the shooting. They had tied nine stones to the body, after cutting off the ears and legs, to keep it in the bottom of the lake. The two boys were brought out to Kineo and arraigned before Judge Durgin, of the Municipal Court. Willis E. Parsons appeared for the boys, and the case of the State was represented by Game Commissioner L. G. Carlton. Mr. Parsons announced that his clients would waive examination, pleading not guilty. Continuance was asked for, as neither side had had time to prepare for trial. The court required bonds in the sum of $500 for each of the boys, which were furnished promptly.

The penalty for killing a moose out of season is four months' imprisonment, and it is stated that the boys who, when they went into the woods had not much respect for the Maine game laws, now feel their position keenly. When the wardens first visited the camp of the students they found no less than seventeen Winchester rifles, which were promptly confiscated, so that there is little chance that more shooting will be done. The party was in charge of A. S. Gregg Clark. To my mind, the only pity is that the teacher in charge of the boys cannot be made to suffer double imprisonment along with the boys.

Reports of almost phenomenal catches of trout continue to come in from the Maine waters. C. B. Stevens is in Boston again. He was one of the first to be off for Rangeley, when the ice left. This year the landlocked salmon did not favor his lure so much as last year, when he was champion of that region. He soon left Rangeley and went down to his beautiful Camp Vive Vale, in the Narrow Richardson Lake. There he made a record of eleven trout, the united weight of which was 48lbs. This is his "record breaker" for the season, though he made other records.

L. O. Crane, now at Round Mountain Lake, writes Mr. Hemmingway of a remarkable catch of brook trout. He started in one day, going up from the camps till he came to the Little Alder and fished down to the buckboard road, about a mile and a half. He used only one fly and no leader. The stream was literally alive with trout. He took 117, and remarks that if he had had on three flies and a leader he could easily have taken 1,000. Three fellows fished the stream further up about the same time, with a record of about three times as many as Mr. Crane took. Mr. Crane is a man who would put the great majority of his catch back into the water, saving only a few of the larger for the table. But as to the other men who fished the Little Alder, I am not as certain; but let us hope that they had the good of the future enough at heart to return a lot of small trout, that could not be used, back into the water. Anglers should remember that fishing in Maine is being tremendously drawn upon, and never worse than this year. Even the stream fishing has held out till August, when usually a few weeds in May and June finishes it. The abundance of rain has kept the streams all up to the best fishing pitch. Another season is coming, and if all of the trout are destroyed this year because circumstances have favored the anglers, where are we to look for sport with rod and reel? SPECIAL.

Hawk, Fish and Line.

MR. LEONARD HULIT wrote to us recently of an osprey taking a fish with hook and line attached. This note, of a similar bit of bird life, comes to us from a correspondent who writes from Blue Ridge Inn, at Snicker's Gap, Va., where they make special provision for black bass fishermen; (the post office is Round Hill, Va.):

Two gentlemen, while fishing in the Shenandoah River a short distance below Castleman's Ferry, one evening last week, saw a fishhawk dart for a fish. After a short fight the hawk secured the fish and flew slowly by the boat from which the parties were fishing, carrying the fish in its claws, the fish having a line of about 4 or 5ft. in length dangling from its mouth. Upon inquiring, it was learned that a bait fisherman had lost several small pieces of line near the place where the hawk caught the fish. E. C. D.

Weakfish Near New York.

PRINCES BAY, Staten Island, N. Y. July 31.—During the past week weakfish have made their appearance in these waters. Parties stopping at J. Smith's Beach House have taken from ten to thirty-five most every day, although the water is very muddy. The fish are all of good size. A. L. H.

CAMPING IN THE WHITE HILLS.

FAR up under the shadows of New Hampshire's Granite Hills, where the noon-day sun scarcely tinges the cool trout streams, and fanned by the gentle zephyrs, as they come sighing through the tree tops over the woodland's brow resembling the music of a thousand harps, stands a rustic camp, the former abode of three "lone fishermen."

This spot, hastily selected by us because of its easy access, has proved that there are yet many advantages offered the "camping out" tourist within the borders of the Granite State. We left the railroad at the old town of Canaan, and traveled overland one day, directly toward the Franconia range. From the moment we left the shaded streets of Canaan, the variegated coloring of the ever-shifting panorama of the landscape was beyond description. Our road, locally known as the River Road, ran first along the banks of Indian River, then through shady woods, by limpid waters, and skirting green meadows, passing on into the heart of the hills.

Here the tinkling of distant cow bells, and the musical notes of the wood thrush, accompanied by the lengthening shadows from the majestic mountains on every side like the drawing of a gigantic curtain over the scene, preludes the approach of night. Selecting the best location obtainable, we "staked out our claim," and made preparation for our first night in the open air.

It is a natural impulse that moves us to say "lone fishermen," prompted by the experience of our first night in camp. Being accustomed to lie in bed and count the heavy foot-falls of late pedestrians on the sidewalk, or listen to the rumble of the electrics for an hour or so preparatory to slumber, it is not unnatural that we should conform slowly to the rurul custom of being lulled to sleep by the plaintive notes of the whip-poor-will, so weirdly wafted on the cool night air over the forest-crowned hills.

After breakfast we all set out for the swiftly running waters of the mountain streams in the vicinity. As we desired to make a light day of it at first, we returned to camp early, having captured seventy-five handsome trout.

The three remaining days we divided our time about equally between trouting, taking views and exploring.

Many deer tracks were observed in the mud, some of them appearing quite fresh, as if made early in the morning. One wildcat crossed not a great way from camp.

Many little incidents occurred, to be remembered and referred to always with pleasure in connection with any mention of the trip.

The next day we broke camp, and returned by way of Canaan to pick up again the thread of active life, all agreeing that our brief sojourn among the green meadows and pine-scented forests of Dorchester had forged some of the brightest links in our chain of recollection.

With a record of 341 phenomenally large trout which graced our baskets during the trip, and with an extra coat of tan on our cheeks, we bid you adieu till next season.

LE ROY SMART.

NEW HAMPSHIRE, July 16.

Was Once a Boy Himself.

CHARLESTOWN, N. H., July 31.—The continual downpour of July has kept all our brooks brimfull and overflowing, and augurs well for the success of our trout planting of the last two seasons. In one case, where the small spring brook is very near the house of one of our farmer friends who takes an interest in the matter, he reports seeing quite a number of good-sized trout as the result of last year's plant, and we may hope for some sport next spring.

"That reminds me," in FOREST AND STREAM of the 24th, your correspondent, Mount Tom, accuses 'a gentleman writing from Charlestown, N. H.," of using the expression, "those cursed boys." Now, as I know of no other correspondent from this village but myself, I protest against the quotation! "I deny the allegation, and defy the alligator!"

I have spoken of the devastation of our brooks by "the small boys and the city sportsman," who will basket everything that is big enough to bite, if only 2in. long, and that is what has depopulated our streams. The trout are not allowed to grow big enough to spawn, and thus reproduce the stock! I never cursed the boys, for when I was ten or twelve years old myself, and knew no better, I caught fingerlings myself, and used my middle finger as a gauge, for I often hooked them shorter than that, with all the parr markings on them. In those days I used a very small hook, 10 or 12, and also used gut, which none of the other boys did, and consequently I always beat the crowd, but I also hooked many fish which were too small even for my standard, and which I returned to the water. In later years, while still a bait fisherman, I learned better, and went up to a No. 1 or 1-0 hook, with as much worm as I could string on, a single No. 2 shot at the top of the gut to steady the line against the wind or among the rushes, and went for the "big fellows," and was successful again.

Of course I enjoy fly-fishing above all other branches of the art, but in our mountain brooks it is a simple impossibility. Now the rod has to be thrust under an overhanging alder; now the bait must be dropped through a hole the size of your hat in the overluxurious grass of a meadow, where the water, perhaps 1ft. wide and 3ft. deep, is gently gurgling away out of sight, and here the shot comes in play; or perhaps you come to a compound tangle of drift and branches over a deep hole, where you are sure there is a good trout, but have to shorten up your line to 3ft. to get your hook in the water at all, and depend on a quick strike and a straight pull to get it out again, with a trout attached to it.

Kingfisher gave some capital descriptions of this mode of fishing, a year or two ago.

Thanks to Awahsoose for his kind recollections in this week's FOREST AND STREAM. I reciprocate his good wishes.

VON W.

Chicago Fly-Casting Club.

CHICAGO, Ill., July 31.—*Editor Forest and Stream:* I send you score of our contest of to-day:

	Long distance fly, feet.	Distance and accuracy, per cent.	Accuracy and delicacy, per cent.	Bait-casting, per cent.
W. H. Babcock	76	..	83 1/6	..
I. H. Bellows	82	78 3/8	82 1/6	86 1/6
L. F. Crosby	..	67 1/2	..	78
B. W. Goodsell	85	90 7/8	81	84 2/6

G. W. Strell	58	..	68	..

Holders of medals: Long distance fly, F. N. Peet; distance and accuracy, B. W. Goodsell; accuracy and delicacy, F. N. Peet; bait-casting, G. A. Murrell.

New Jersey Coast Fishing.

ASBURY PARK, N. J., July 30.—Good catches of bass have been the order of affairs the past ten days in this vicinity. The prevailing high, easterly winds and high seas have sent the bass shoreward, and every tide has given some results, and some exceptionally fine fish have been taken. Howard Guyer, of Philadelphia, leads in point of weight. Early Wednesday morning he landed through the tumultuous surf a magnificent specimen weighing precisely 30lbs Few people realize what the killing of a monster bass means in a boiling surf; the least error and all is lost; a steady hand and cool head are indispensable, as well as the most perfect tackle.

L. P. Streeter, of Morristown, N J , whose success with the drumfish I made mention of in FOREST AND STREAM early in the season, had an experience last evening he will not soon forget. He landed a particularly game 16lb bass, from our pier, and on his way home stopped at an adjoining drug store for a glass of soda, leaving his fish and tackle outside, when some vandal appropriated his catch. It is perfectly safe to say that a madder man than Streeter would be hard to find.

The culmination of pound fishermen's arrogance was reached last week. Three lads, fishing in the ocean with hook and line near one of the nets, were set upon and beaten by Capt. Yarnall, their boat set adrift and the boys thrown in the pound boats, and after having their clothing badly torn, unceremoniously thrown upon the beach after receiving the threat that in future if caught they would be more severely dealt with. Public indignation was at once aroused, and the outcome of the matter is the arrest of the pugnacious captain, and his being placed under bonds for his appearance before the higher court at the October term.

Barnegat Bay is most prolific of fish life. Never has fishing been better than the present season, and never have I taken or seen finer conditioned fish Striped bass are being taken at all suitable points, and weakfish are very abundant. Night fishing gives by far the best results, and to the man who is willing to give up his night's rest the best of sport is assured, providing he is familiar with grounds and methods. It may seem like direct contradiction to established custom, but my advice to all is avoid the channels for night fishing, particularly during flood tide. Weakfish always seek the shoals and flats at night in search of food, and at that time, being on the feed, they take the hook freely, and in shallow water they make the grandest of battles.

LEONARD HULIT.

The Ontario Fishing Season.

BELLEVILLE, Ont., July 29.—Fishing in the Bay of Quinte and the waters adjacent is now about at its best. Bass are taking the bait freely in bay and river, and maskinonge have struck at Mosquito Bay, their favorite habitat in the months of August and September. The following items, culled from the local papers during the week, tell the story:

Messrs. James H. McGuire and Thomas Gay caught nine splendid bass near the bay bridge on Saturday afternoon.

John Hurst and William Keeliher caught four maskinonge in Muscoota Bay on Saturday. The fish weighed 41, 9, 14 and 8lbs. respectively. The 41-pounder was one of the handsomest specimens ever caught around Belleville.

Several fishing parties in the neighborhood of the wreck off Point Ann and on the Middle Ground off Northport have been quite successful the past few days.

Mr. J. S. McKeown returned on Monday afternoon from a two weeks' canoe trip through a chain of lakes extending north of Crow Lake. One of his party caught a 20lb. gray trout during the trip.

Bass fishing is good at present at the mouth of the river. Every evening there are from ten to fifteen boats anchored there, and nearly all of them got good strings. Two boys on Monday afternoon took twelve good-sized bass from the channel made by the dredge. There were over fifty caught altogether there yesterday,

During the last few days rain has put a stop to fishing.

I ought to have mentioned that the winners of the Forest and Stream Club's prize for largest catch of bass in their first competition, namely, Major Carswell and Mr. Wm. Ormond, are aged seventy-six and seventy-five years, respectively. R. S. B.

Black Bass Fly-Fishing in New England.

A CORRESPONDENT asks respecting fly-fishing for black bass in New England waters in September and October. Will the fish rise to the fly in those months? We would be glad to have some of the experiences of our readers on this point. Von W, writes from Charlestown, N. H., in answer to the query: "I have never been up at Sunapee in September, but some of my young friends who have tell me that the fly is of no use at that season. The bass get into deep water in August, and long line fishing with live bait, smelt or minnow is necessary."

Commissioner Henry O. Stanley, of Maine, writes: "September and October are not considered good months for black bass fly-fishing in New England. The fish are now mostly in deep water, and no good fly-fishing can be had for any kind of fish when they lie in deep water. That has been my experience for all kinds of fish. You will occasionally find a few bass about the shores in September if not warm, but none in October to amount to anything. If I wanted to catch bass in Maine in September and October, I should not expect any good catches with flies."

Bass Fishing in the Adirondacks.

SARANAC CLUB HOUSE, Bartlett Carry, Franklin County, N. Y., July 27.—The abundance of bass in the mountains this year is a pleasant surprise to the sportsmen Trout for the time being are neglected, bass fishing being all the rage. Monday of this week Wm. Bloodgood and Benj. Douglass, Jr., of New York, still-fishing and with fly on Raquette River, caught over forty bass, weighing about 30lbs.; the largest weighing from 3 to 3½lbs., all caught with a light fly-rod of 5oz. Tuesday, E. V. Z. Lane and friend caught seventy-six weighing nearly 50lbs. Heretofore bass have been very scarce in the Raquette River.

SARANAC CLUB MEMBER.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach at the atestly Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

Minnesota Muscallonge.

CHICAGO, Ill., July 31.—Dick Merrill is just back from Kabekona Camp on Woman Lake, Minnesota, and is satisfied, though by a narrow majority. He and his brother, F. F. Merrill, of Milwaukee, fished ten days before they had a single strike from 'lunge, they being too late in the season for the sport at its best. They met a good deal of rain also, which detracted from their pleasure. On the eleventh day Dick had his first and only strike, and landed after a half hour's fight a fine 'lunge of 32lbs., which he thinks breaks the record of the camp for the year. The fish was 53in. long and in poor flesh or it would have scaled heavier. Dick says that one fish repaid him for the trip. Of bass and wall-eyes he and his brother caught any number, and on one day they hooked and landed forty-seven pickerel, in each case killing the pickerel. He thinks they killed 250 pickerel during the trip. The orders from headquarters at the camp are to destroy all pickerel, as they are so thick as to constitute a nuisance to anglers.

At Kabekona Camp, during their stay, Mr. Gage and his son Jack, of Kansas City, had rather mixed luck. The boy hooked and lost three 'lunge, one of which was later found dead with the spoon in its gills. This fish weighed 27lbs. In a little lake which these two discovered, which had not been fished by anyone so far as known, Jack caught on one day sixty-three black bass. While pulling in one of these fish, a bass weighing some 3lbs., a large fish of some sort, probably a 'lunge, made a rush and struck the bass, cutting it in two.

Mr. H. G. McCartney, owner of Kabekona Camp, has caught one 'lunge weighing 23lbs. Dick Merrill thinks the fishing country thus newly opened up is all that could be asked, and he is much interested also in the moose news of which he got track. A large moose was killed by an Indian near Kabekona Camp during his stay there.

From the South.

Mr. Thos. B. Allen, of Memphis, this week stopped at Chicago on his way to the Mackinaw Island country, in search of rest and fish. He will probably stop at Grayling and have a day or so on the Au Sable after trout, and if he is lucky he may get his grayling. Mr. Allen comes with letters from Mr. Tom Devine, of Memphis, who was to have been in Chicago himself last week, but didn't arrive.

South Peninsula and the Grayling Days.

Mr. W. B. Mershon, of Saginaw, advises me that the trout are not all gone yet from the club stream at Kinne Creek, and says that some of the members have lately been having fine success. "Some of the boys have been up to Kinne Creek, lately," he writes, "and had excellent success. Morley got about sixty, one day about a week ago, and they were nice fish, and Grandfather Brown had hold of one down in the fallen timber toward the lower end of the stream that was an old whopper. He worked with him two or three minutes, but he finally got away. They all unite in saying it was a fish of over 2lbs."

Mr. Mershon, in taking up again the ever plesant reminiscences of the grayling, says that he has just had a letter from his old fishing companion, Mr. Wm. F. Dermont, once manager of the sawmill at the town of Wingleton, where the Pere Marquette Club now holds undisputed sway. Mr. Dermont cannot be consoled over the passing of the grayling, and recalls the good old times when he and Mr. Mershon used to run the Little Manistee with a boat and take a fine basket of fish without the least trouble in the world. Mr. Dermont is now at Trout Creek, upper peninsula; but he says they have no such streams there as those of the lower peninsula, and does not think the fish fight so well as they used to in the old days in the lower country. In speaking of their trips together, Mr. Mershon thus describes the manner in which they did their angling:

"We used to go up on the night train, stay over night with him, and the next morning he would take us on a logging train about eight miles. Then we would be driven by one of the teams from the lumber camp to the river. Those days we could not get in there with a luxurious private car, consequently we would camp out. Sometimes it would happen, though, that we wanted but a single day's fishing, but usually we stayed one or two nights, carrying along a good, big chunk of ice. After we had commenced the day's fishing the teamster and the cook would break camp; that is, if we happened to have a cook, though generally your humble servant fried the sausages. At any rate, we had a long stretch of river to fish, and would move the camp down stream three or four miles during the day. The Little Manistee was then literally alive with grayling, and the catches made were tremendous. I never have taken one larger than 1¾lbs., but have heard tell of 2-pounders, but I do not believe they existed. Guessing on the weight of a fish is not accurate, and I believe most of the 2lbs.-and-over grayling were guessed at.

"It was with Mr. Dermont that I first fished a wadable trout stream with a boat. He looked upon the project with considerable disfavor, but long before night he expressed his delight with the innovation. What fishing that was! Such grayling fishing never will be seen again."

Good Advice from the Commission.

Mr. Nat. H. Cohen, president of the Illinois Fish Commission, has issued the following sensible and temperate address to the fishermen in the neighborhood of Peoria:

"To Whom it May Concern: I would like to call the attention of the public to the fact that some people are misconstruing the intention of the Fish Commission. Its object is to replenish the streams and rivers of the State, and make them as bountiful of fish as they were in their primitive condition.

"The only way that purpose can be accomplished is for the people not to violate the law and assist the Commissioners instead of censuring them. There have been numerous violations in this part of the State, such as seining, dynamite, trapping and wing-netting. The law strictly specifies that no seine, net, trap, or any other device except hook and line shall be used in any of the streams or rivers of the State of Illinois except in rivers used for navigation.

"If the violations should continue as they have been, in the next ten years the streams will be completely depleted. The Commission hopes that all law-abiding citizens will do what they can to assist us in protecting the fish interests of the State, as we intend to carry out the law and prosecute all cases to their full extent. Respectfully yours,

"NAT. H. COHEN,
"President Illinois Fish Commission."

Some Wisconsin Records.

Mr. W. W. Nash, of Ottawa, Ill., writes from Camp Franklin, Trout Lake, Wis., to friends at home:

"Here is a copy of our log book: Thursday, 15th, 1½ hours' fishing late P. M., 18 pike averaging 2 to 3lbs. Friday, 16th, 2 hours A. M., 42 pike averaging 2 to 3lbs. Friday P. M., Charles Taylor and Nash in Canoe Lake, 65 black bass averaging 1 to 3lbs. A. H. Taylor and Lynch, in White Sand Lake, 68 pike and 2 bass 2 to 3½lbs. Saturday, 17th, Lynch, C. P. Taylor and Nash, 2½ hours A. M., 40 pike 2 to 3lbs.; P. M., Lynch and Nash in Canoe Lake, 3½ hours, 70 bass 1 to 3lbs. C. P. and A. H. Taylor, in White Sand Lake, 1 hour, 18 pike and 2 bass 2 to 3lbs. Sunday, 18th, A. M., C. P. Taylor, Nash and Lynch, 3 hours in Canoe Lake, 33 bass, making a total of 186 pike and 174 bass for 3½ days, fishing 3 to 5 hours per day." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A PARISIAN INTERPRETATION OF FLY-FISHING.

(*Translated for* FOREST AND STREAM *from the Paris Figaro.*)

AT this time of the year persons walking along the bank of a river may remark upon the surface the sudden aparition of a strange-looking insect, which is neither a worm nor a libellu id. It is an indescribable little creature, floating along with the current for a second or two, and then suddenly, as if touched by the wand of a fairy, transformed into a beautiful fly with a golden corset and diaphanous wings that glitter in the sunlight. The metamorphosis is no sooner finished than the beauty flies up into the air.

This is the insect that is called the May fly. Before coming up to the light, it remains in the bottom of the water in an obscure shell formed in the sand, for about two or perhaps three years. During all that time it is simply a hideous larva, and, when it becomes a fly, it has only two days to enjoy life, wandering about, breathing the perfume of the flowers, sporting in the sunbeams, feasting and enjoying the manifold pleasures of its brief existence. At the close of the second day it drops dying upon the water, from which it came, and is carried away by the current, until it disappears in the jaws of a trout.

Now, this little fly is lucky indeed if it does not succumb in the first few seconds of its short and triumphant career, because it has many enemies, among them the swallow, the water hen and also the trout The fish watches for it during the second or two that it remains upon the water tossing off its old clothes and donning its gala costume. When these little creatures appear in great numbers upon the surface of the water, the trout have a glorious time. So have the anglers. It is not necessary to offer the trout the natural fly: an imitation serves the purpose. The trout attack the artificial fly with as much ardor as they display when rising to the real insect. The difficulty is to present to the fish the artificial fly in the proper manner.

Fly-fishing is splendid sport. We know that it is cultivated in Great Britain, but in France, up to within a comparatively recent date, it was the amusement of a select few. Now, however, it is becoming more fashionable, and the adepts in the art are becoming more and more numerous, especially in the upper circles. As a matter of fact, it is a refined sport, not less elegant, and certainly much more intellectual than hunting and pigeon shooting. It is artistic even in the material which it requires. The fishing rod of the fly-caster is itself a work of art in its apparent simplicity. To give to it all the desired qualities, strength, elasticity, resistance, lightness, nicety, facility in the joining and disjoining, it requires the greatest care of the most skillful workmen. To compare it to the other fishing rods would be like comparing a chokebore full choke to one of our old-time muzzleloaders The reel which ornaments the butt is an ingenious piece of mechanism. The long line that is unrolled from it is made of fine silk. To this is attached a casting line or leader, as it is sometimes called, made of several lengths of fine gut carefully knotted and forming a single thread precisely the length of the rod itself. To tone down the whiteness of the gut and at the same time preserve its transparency, some anglers steep it in a hot cup of green tea This gives it an extremely faint but indelible stain, which renders it almost invisible in the water. The hook is an extremely small affair made of the finest steel, and the artificial bait, or rather the fly, which is worked upon it, is a marvel of delicacy.

There is nothing repulsive in this sort of fishing. There is no nasty worm to manipulate, and no unfortunate minnow to impale alive upon the hook. The trout fisher selects his artificial flies according to the months and the weather. These flies are made of the finest kind of feathers and silk of artistic shades. Moreover, the fish that the angler pursues is the most beautiful and the most active of all the fishes in our rivers and streams.

As one can see, this sort of fishing is the sport of a gentleman. It is an active kind of fishing, always interesting and fertile in emotions. One doesn't have to wait for the fish or watch a cork. The fisherman, like a hunter, walks along in search of his game. When the trout rises to the fly and is hooked, a series of skillful maneuvers becomes necessary to overcome, without violence, the energetic resistance of the fish. The trout is a shy creature, but at the same time when hooked it makes a bold fight.

Fly casting, even in a light breeze, is somewhat like an exploit in fencing. It is often necessary to send the fly a long distance to a precise point, where it must fall upon the water as delicately as a living insect. This requires great dexterity, which is only attained by practice. Fly fishing for trout is difficult, and its difficulty forms one of its attractions for the genuine sportsman. Moreover, its surroundings are charming, consisting as they do of beautiful valleys, picturesque rivers, sparkling waters that murmur while bounding among moss-covered rocks, or forming little cascades that seem constantly to be playing with diamonds and pearls. It is especially to this kind of sport that the expression of Alphonse Karr can be applied: "One of the advantages of fishing is that if the play is not exciting, it is saved by the scenery."

Camp-Fire Flickerings.

"That reminds me."

"What are we Here For?"

SOME two or three years ago a party of anglers, including a minister as one of their number, were fishing in the North woods, and when Sunday came the question arose whether the party other than the minister should not refrain from fishing, out of respect to his feelings.

One of the party, however, made bold to ask him whether he thought that it was wicked to fish on Sunday, and he declined to express any opinion, on the ground that he was there as an angler and not by virtue of his calling, and that every person must act according to the dictates of his own conscience. He referred, however, to the following incident which had occurred not long before within his personal knowledge.

A man and woman called at the house of a minister for the purpose of being married. After going through the preliminary part of the service, the minister asked the usual question, "Do you, John, take this woman to be your lawful, wedded wife?" This was met by the rejoinder, "What in thunder do you suppose I came here for?"

The party other than the minister went fishing, while he remained at home with ample opportunity for rest and meditation. J. S. VAN C.

Times of Timidity.

I LIVE on the banks of the beautiful and noble Connecticut River, about six miles from its mouth. Formerly it was a great place for ducks, rail and snipe, but constant shooting has done them up so that now one has to go to some other place to find good shooting.

Years ago there were many good shots here. Among them was one whom now the boys call Popy A. He was good-hearted, genial and jolly, and all that goes to make a tip-top companion on a cruise, a good fisherman and boatman. Usually he had a yacht, and was always ready to give his friends a good time. He came to me one November and proposed that we should take a 30ft. sloop, go to the mouth of the river and try the ducks for a week. It was just what I wanted. Just below the Shore Line bridge a channel puts in and leads down inside the meadow, coming out on the Sound nearly a mile east of the river. We decided to make our harbor in this channel, as it was nearer where we expected to do our shooting. We went in at high water, near night, and anchored, as we supposed, in midchannel, but the tide was on the meadows and fooled us. The wind soon came out northwest, ebb tide made, and the yacht swung to her anchor all right, so we turned in.

There was more room on the captain's side of cabin, so we piled all our extra coats, bedding, etc., alongside the center case and some on top. About midnight I was suddenly thrown from the locker to the floor, and it was done quickly, too. I had no time to think what could be the matter, for I heard Pop sing out, "Help me out of this!" I struck a light and found that all the dunnage had gone to leeward and had covered Pop, so he could not help himself. I helped him out and then we investigated, and found that the yacht had swung so near the meadows that her keel had caught on the bank, and when the tide had fallen away she had fallen over—off shore, of course—and was on her beam ends—keel still in the mud. We were afraid that when the tide rose she would not lift quickly enough to keep afloat, but though the water came almost to the top of the cockpit rail, she finally came up all right. While we were waiting I asked Pop, "Were you ever so frightened before?"

"Yes, twice. Once at mouth of Lord's Cove; I was waiting just inside the running ice for a shot at whistlers and sheldrakes. I saw drifting down the river a cake of ice with a large hair seal on it He would dive once in a while and I suppose went to the bottom for fish. I wished I could get a shot at him. When about abreast of me—about two gun-shots off—he took another dive. I was all ready in case he came up near enough. Presently I heard a slight noise, and turned my head aft; and do you believe it, he had swum inshore and came up close to the stern of the boat, so near he could look in. I was just on the point of jumping overboard and going ashore, when he disappeared as quickly and quietly as he came."

"When was the other time you felt timid?"

Pop's face laughed all around his mouth, I had put it so mildly.

"That was when I was hauling my duck boat across Eley's meadow to the creek. It was a hard pull, with decoys, gun and ammunition. I was about half-way, and had sat down to rest, when I noticed that one of a large herd of cattle was coming my way. I looked again and saw it was a big bull, and he evidently meant business. I knew he would overtake me if I ran, so I turned over my boat and crawled under. The bull seemed surprised that I had disappeared, and after sniffing around a spell went off. I waited until he was nearly up with the cattle, and then started again. But that old critter was no fool; he had his eye on me, and I had hardly started before he came on the run. To do my best, I couldn't make the creek, so under the boat I went again. This time the bull was mad. He bellowed and pawed, and tore up the sod around the boat with his horns, and I was holding down the boat all I could. But he got tired after a while, and went so far away that this time I launched my boat, and you may be sure I was happy."

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

SCHOOLING THE DOG.—VIII.

THE trainer, when walking about, or when going shooting or crossing unfavorable ground, or walking along the highway or crossing through towns or passing near houses, etc., will find constantly recurring occasion for bringing his dog to heel. Or he may simply desire that his dog should cease work, or, if not working, that he should not be running lawlessly about. He is both kept under control and prevented from doing mischief by making him walk at heel.

"Heel" is the order most used to command the dog to desist from further effort and walk behind his teacher. Prompt and constant obedience to this order is so essential to the proper control and management of the dog at certain times that special pains should be taken to teach it thoroughly. Simple as is the act required, and the ease with which it can be taught, few dogs are properly trained in it. The dog either comes in reluctantly after the order is bawled out to him a greater or less number of times, and when he at last is at heel, if the trainer takes his eyes off him a moment the dog takes a cast to the rear and begins hunting behind his trainer; or he loafs and dawdles, paying visits to vagrant curs, or noses and potters about, searching for bones or garbage. Or, if he has none of these faults, he may press forward first on one side of his trainer then the other, hampering his movements and necessitating constant watching lest he break away. At field trials, where one would expect to see training in its greatest perfection, even in its most minute details, it is rare indeed that a dog is broken to go at heel properly. Most handlers lead their dogs on chain till they are ordered to cast them off, and immediately put them on chain when the heat is ended, and not infrequently there is much difficulty in calling them in and getting them under control so that the chain can be put on them. The proper obedience to the command, "Heel!" is not established till the dog will come promptly to heel when he is so ordered, remaining there quietly and reliably till he receives the order or signal to go on, and all this whether the eye of the trainer is on him or not. Restraining the dog at heel serves also to rest him during the day's work without any lessening of the day's sport, for there will be many times when the trainer or shooter will be passing through unfavorable or barren ground where searching for game would be wasted effort; and it also serves to protect him from the attacks of vicious curs which he otherwise would be forced to repel, with all the consequent exposure to injury and loss of his services from it. Or, if there is no fight, the restraint of being at heel prevents him from frittering away his time with idle curs, or making predatory raids for food in such houses along the route as are left with unguarded doors. Obedience and restraint, enforced in a useful manner, furthermore serve to preserve the general discipline by preventing him acquiring the vagrant habits which he otherwise will when out with his trainer with no purpose of seeking game. When without restraint, dogs become slow in responding to commands, acquire a slovenly style, and obey reluctantly or sulkily. If the dog becomes heedless or disobedient in one branch of his work or training, the fault is sure to appear in all other branches Good discipline is established and maintained only by a minute care in enforcing the observance of orders, even in the most minute details. If the trainer permits disobedience in some things and is exacting in others, or if he is stringent part of the time and lax the rest of the time, he will find that the dog will observe the opportunities thus presented for disobedience, and take such as may be to his liking. When he can ignore his trainer and pursue his own pleasure, he will do so; for, though he likes his trainer, he likes better yet to do as he pleases and to seek his diversions without any interference or meddling.

Nothing but the most implicit obedience should be accepted. Momentary sneaking away from heel, holding interviews with vagrant curs, seeking toothsome bones, making friends with strangers, or frightening cats and chickens, etc., should always be checked and corrected either by a word of rebuke or punishment, accordingly as the degree of the offense or disposition of the pupil may indicate. No indolent feeling on the part of the trainer should dull his proper attention to the correction of his pupil's faults. It is a mistake to wink at little faults, or to think that one or two little acts of disobedience do not matter. Resolving to be more exacting next time does not help this time, and next time is much the same as all other times; for it matters not whether the trainer becomes indolent and trains in a slipshod manner, or whether he permits several faults to pass unnoticed and then gives the pupil a severe beating when he becomes exasperated, the true way is still the same. Correct every fault the moment it appears. Without an observance of special attention to teaching details and correcting all errors, the puppy will never be properly taught to obey the order, "Heel!" or any other order.

The first lessons in teaching the dog to heel may be given in the yard, or when exercising in the field, or when he is being exercised afield. It is better to lead him with a cord which is attached to his collar. Hold the cord in the left hand, a whip in the right. At first he will go anywhere rather than behind his trainer, and may exhibit some obstinacy and resistance if his inclination is thwarted. While walking along, give the command "Heel," at the same time pull him to the rear with the cord. If he attempts then to go ahead of the teacher, he should be given a smart cut or two with the whip till he returns to his place. The trainer walks along calmly the while, and any attempt of the dog to lag behind or to forge ahead is at once corrected. If he is resolutely obstinate and resistent, a spike collar should be put on him; then if he lags behind, sags in the collar in a refusal to go at all, or struggles to break away, a pull on the collar will break his resistance, and bring him in place at once. If he attempts to forge ahead, an admonition from the whip will make him retreat to his place in the rear. At every correction the command should be repeated, so that he will learn to associate it with an instant cessation of his own inclinations and the taking his place behind his trainer and walking there till further orders. No more punishment should be inflicted than is really needed, and above all, the trainer in this branch as in all others should preserve his good temper, calm exterior and deliberation of manner. The regular repetition and thorough attention to detail should be relied on to teach the accomplishment thoroughly, rather than violence, long lessons and hurry.

After a time, longer or shorter, according to the disposition and intelligence of the dog, he will go quite steadily at heel while the cord is used to check him, but when it is removed he immediately will attempt to take liberties, either leaving heel entirely or taking every possible liberty. Then he must be taught that no liberties are tolerated. If he dawdles behind, he should immediately be compelled to come to his proper position. If he stops and idles with every passing cur, punish him for it. Nothing short of coming to his place forthwith when ordered, and remaining there and only there till he is ordered to leave it, should be tolerated or permitted. After a time the discipline will be so firmly fixed that it is habitual, and whether the trainer is afoot, on horseback or in a carriage, the dog will follow at heel reliably and cheerfully to command.

When working two dogs, the ability to keep one dog at heel is a material advantage in many ways; it affords the opportunity to rest one dog while the other one is at work; it is a means of keeping one dog in restraint while the other one is roading or drawing, for two dogs from jealousy or rivalry sometimes hurry on a trail or become excited, and flush the birds in consequence.

When a dog is to be worked with other dogs, it is well to teach him to go on by speaking his name. He soon learns that his name serves to call to him to go on. In this manner, a trainer can take two or more dogs thus trained and send out any one he wishes to send by calling to it by name. Thus he can take all his dogs out if he desires to do so, even if there be a dozen, and handle them all with perfect ease. However, the trainer should never attempt to teach two dogs at the same time the lesson to heel. It should be first thoroughly inculcated before any attempt is made to control two at once.

By restraining the dog from engaging in outside frivolities, he in time learns to alertly concentrate his attention on his master's affairs, carries himself in a confident, spirited manner, and discriminates to a nicety between what is correct and what is not. In short, there is quite as much difference between the bearing and purpose of the properly trained dog and untrained one as there is between the dashing military officer and a wandering tramp.

Manitoba Field Trials Club.

WINNIPEG, July 19.—*Editor Forest and Stream:* The Manitoba Field Trials Club's All-Age Stake will close on Aug. 15, instead of the 1st, as originally advertised; also, should there be any owners of dogs who have missed the opportunity of sending their dogs to Manitoba by any of the following handlers: J. B. Stoddard, G. R. Richards or D. E. Rose, to compete in the above stake, and are still desirous of doing so, they can do so by expressing (prepaid) to G. B. Borradaile, Winnipeg, Man., when they will be forwarded on to the handler chosen without any further traveling expense to the owner.

I have pleasure in mailing to you for publication the attached list, showing entries made in the eleventh annual Derby of the Manitoba Field Trials Club, which closed on the 12th inst., and which numbers 37, made up of 25 setters and 12 pointers.

POINTERS.

LADY OF HESSEN—Tobasco Kennels' w. l. and tkd. bitch (Hessen Boy—Lady of Rush).

BOY OF HESSEN—Tobasco Kennels' w., b. and tkd. dog (Hessen Boy—Lady of Rush).

FURY—Del Monte Kennels' b. and w. bitch (Tick Boy—Topsy's Kent).

TICK BOY, JR.—Del Monte Kennels'

GIOVANNA—T. A. Montgomery's l. and w. bitch (Ightfield Lonsdale—Ightfield Bunty).

DOCTOR TASSIE—Wm. Elliott's l. and w. dog (Hal Pointer—Kent's Star).

SAM'S BOW—Dr. J. R. Daniels's l. and w. dog (Plain Sam—Dolly D. II.).

SHOT—W. W. McMillan's l. and w. dog (Shot—Floss).

CHISHOLM—R. J. Myers' l. and w. dog (Von Gull—Croxie).

TEXTER—J. B. Stoddard's b. and w. dog (Tick Boy—Beauty).

BEAUTY B.—J. B. Stoddard's b. and w. bitch (Tick Boy—Beauty).

HEMP S.—C. T. Eastham's b. and w. dog (Von Gull—Smith's Tray).

SETTERS.

HURSTBOURNE JOE—Tobasco Kennels' b., w. and t. bitch (Tony Boy—Bonnie Bell II.).

TOBASCO BUTTERFLY—Tobasco Kennels' l. and w. bitch (Antonio—Minnie I.).

NIMROD II.—E. W. Lowry's o. and b. dog (Nimrod E.—Sibyl S.).

——.—C. P. Mingst's b., w. and t. bitch (Antonio—Columbia).

MINNIE'S GIRL—Del Monte Kennels' o. and w. bitch (Antonio—Minnie I.).

LIBERTY—Del Monte Kennels' b., w. and t. bitch (Sam T.—Gath's Dora).

LIGHTFOOT—Del Monte Kennels' w. and b. bitch (Sam T.—Gath's Dora).

COUNT EDWARD—W. R. Kerr's b., w. and t. dog (Count Eric—Ann).

SAM T. II.—G. W. Richard's b., w. and t. dog (Sam T.—Belle Gladstone).

VAL'S MARK—E. McKenny's b., w. and t. dog (Val Lit—Lam Sing).

VAL'S ROCK—E. McKenny's b. and w. dog (Val Lit—Lam Sing).

VAL'S DEXTER—E. McKenny's b., w. and t. dog (Val Lit—Lam Sing).

VAL'S HISTORY CHIEF—E. McKenny's b. and w. dog (Val Lit—Lam Sing).

SING'S MAID OF THE MIST—E. McKenny's b. and w. bitch (Val Lit—Lam Sing).

ALICE K.—L. C. Bacon's b., w. and t. bitch (Anto Gladstone—Speckle Gown).

MISS MISCHIEF—R. Bingham's b., w. and t. bitch (Dash Antonio—Pattie).

DON ANTONIO—J. B. Biskee's b., w. and t. dog (Antonio—Nellie).

TONY'S HOPE—J. B. Biskee's b., w. and t. dog (Antonio—Nellie Hope).

SPOT McA.—J. J. Odum's b., w. and t. dog (Tony Boy—Blue).

PEARL R.—Dr. M. F. Rogers's b., w. and t. bitch (Sam's Gross—Donnathery).

JESSIE C.—Dr. G. Chisholm's b., w. and t. bitch (Barney—Kate).

NELLIE M.—J. T. Mayfield's (agent) b., w. and t. bitch (Marie's Sport—West Wind).

DRUID BOY—G. W. Hull's b., w. and t. dog (Cincinnatus—Daisy Blackface).

——— —Jubilee Kennels' b., w. and t. bitch (Rustic M.—Laura B.).

LARRY—F. W. Scott's o. and w. dog (Larry Noble—Angela).

G. B. BORRADAILE.

POINTS AND FLUSHES.

The drawing of the Northwestern Field Trials Club's champion stake, to be run on Sept 7, takes place the evening before the start. This stake is open to all dogs which have won a first or second place in any field trial. There are no fees; everything is free. The winner has the trophy, a beautiful cup, and the club's engrossed and illuminated diploma.

Entry blanks of the M. V. G. and F. P. Association's All-Age stake can be obtained of the Association's secretary, Mr. S. B. Cummings, 113 Wood street, Pittsburg, Pa.

Investigation of Rabies.

The following circular letter has been sent out by Secretary Vredenburgh, and as there is an earnest purpose to give the subject full investigation, those having any substantial information can assist the committee materially by communicating with them.

"Referring to the recent order of the Board of Agriculture of Great Britain, directed against the importation of American dogs into England, and in view of the numerous sensational newspaper articles concerning rabies, the American Kennel Club has appointed the following committee to investigate and report upon the existence of rabies in America.

"Committee—Edward Brooks, chairman, vice-president American Kennel Club, A. P. Vredenburgh, secretary, secretary American Kennel Club; Dr. Rush S. Huidekoper, New York, Professor of Anatomy and Surgery, New York College of Veterinary Surgeons; Dr. T. G. Sherwood, New York, M.R.C.V.S.; Dr. Austin Peters, Boston, B.S., D.V.S., M.R.C.V.S.; Dr. Harold C. Ernst, Boston, Professor of Bacteriology, Harvard University; Dr. Leonard Pearson, Philadelphia, State Veterinarian of Pennsylvania, Professor of Practice of Medicine, Veterinary Department, University of Pennsylvania; Dr. Charles W. Dulles, Philadelphia; Dr. Richard Price, St. Paul; Dr. J. C. Robert, Agricultural College, Mississippi; Dr. Wesley Mills, Montreal, Canada, Professor of Physiology, School of Comparative Medicine, McGill University, Montreal.

"You are respectfully requested to answer the following questions and forward reply at your earliest convenience:

"In New England: To Dr. Austin Peters, Commonwealth Building, Boston, Mass.

"In New York and New Jersey: To Dr. R. S. Huidekoper, No. 154 East Fifty-seventh street, New York city.

"In the Middle States: To Dr. Leonard Pearson, University of Pennsylvania, Philadelphia, Pa.

"In the Western States: To Dr. Richard Price, No. 167 West Fourth street, St. Paul, Minn.

"In the Southern States: To Dr. J. C. Robert, Agricultural College, Mississippi.

"In Canada: To Dr. Wesley Mills, McGill University, Montreal, Canada.

"The reports made by the above committee, as a result of the investigations made by its several members, will be referred to a sub-committee to edit.

"I. Does rabies (hydrophobia) exist in your neighborhood?

"II. If so, to what extent, and when was it first known to have appeared?

"III. What is the extent of your canine population, and what breed of dogs predominate?

"IV. In what animals has rabies most frequently occurred?

"V. Please give history, as full as possible, of individual cases, and of enzootics of rabies, with your opinion as to the source from which it came.

"VI. In reporting cases, please give the diagnostic symptoms, the result of autopsy or experimental verification, and the relative proportion of furious and mute cases.

"VII. To what extent have human beings been bitten, and how many cases have developed the disease?

"VIII. Please classify your report into: (A) Origin and number of cases before 1887. (B) Number of cases within the last ten years. (C) Number of cases since January, 1896.

"Please answer in full not later than Aug. 31."

The Continental Field Trials Club's Minnesota Derby.

PITTSBURGH, Pa., July 29.—*Editor Forest and Stream:* Enclosed is entries for the Minnesota Derby (amateur) of the Continental Field Trials Club to be held at Brown's Valley, Traverse county, Minnesota, on Aug. 25:

ALICE K.—Dr. L. C. Bacon's b., w. and t. English setter bitch (Anto Gladstone—Speckle Gown).

QUEEN ESTHER S.—S. A. Smart's b., w. and t. English setter bitch (Young Llewellyn Hurd—Sally Kreiger).

BIRD—F. A. Bush's l. and w. pointer bitch (Donfis Hel—Bassett's Bird).

BAG DU BANG—David Cratte's l. and w. pointer dog (James Corbett—Lou Brackett).

SPOKANE BELL—David Cratte's l. and w. pointer bitch (James Corbett—Lou Brackett).

JACK—J. E. Mills's red Irish setter dog (Sleck—I Forgot).

MATT QUAY—Dr. J. D. Henning's black pointer dog (Gem Beauford—Nellie Bang III.). W. S. BELL.

Wheeling.

"Cycling Knowledge."

A HANDY little compilation of information useful to bicycle riders is "Cycling Knowledge," from the press of Gibbs Bros. & Moran, New York. The facts, receipts and suggestions embodied in its 135 pages are taken chiefly from the cycling press, and much of the matter has a familiar sound; but to the amateur it will prove both interesting and valuable.

Here is a sample of the information: "To renovate the enamel on your bicycle, wash it with a large, soft linen cloth and lukewarm water. Dry it thoroughly with a soft cloth, and afterward polish it with a solution of beeswax dissolved in spirits of turpentine. Never use a brush, hot water or soap. * * *

"After you have cleaned your wheel and your hands are soiled, pour about a tablespoonful of pure white lard oil into the palm of one hand, rub the hands thoroughly with it, and then wipe off with a dry cloth. Rewash the hands with good soap and water, and your hands will be white and clean and free from any smell whatever."

Zimmerman's hints on racing from their general interest are worth reprinting.

There is a right and wrong way of sitting on a wheel in racing. No matter how much natural ability for racing a man may have it can be improved and advanced by a proper seat. Years of experience have taught me that this position can be figured out with almost mathematical accuracy. One must follow the laws of logic and measurement and not his own feelings as to comfort and correctness.

In the first place, a man should be seated directly over the pedals, or as nearly so as possible. By this means a direct downward drive is permitted and more power can be put into the leg movements. If seated far back the direction of the legs is in a curve, and, as every one knows, this is not the shortest distance between two points. The whole object of pedaling is to move the pedals from the highest position to the lowest in the shortest time. To accomplish this one must be directly over the motive power. In the latter position one can also gain the body power, which adds just so much more to the speed.

The proper angle for the arms is well inclined, so that the "lift" comes in as well as up. Many men permit the elbows to drop outward and lose all the power of the grip with the exception of the wrists and forearms. In the correct method the back and shoulders are brought into use and the lifting power is accordingly doubled. As the leg is driven down the pull with the arms is given, and the result is what is termed in racing parlance "the jump."

The jump is used in sprinting, and by means of it a good man can ride away from his competitors before his escape is known. Every possible muscle should be used—the back and shoulders to help the arms and the whole body to increase the leg drive.

It is my opinion that no other exercise in the world will put a man in better physical condition than bicycle racing. It rapidly takes off superfluous flesh and hardens the muscles so as to enable them to endure almost any strain. It is a good test to find the perfect man, for all weaknesses are soon brought to the surface. A blemish or unhealthy organ cannot stand the strain.

Racing also affects a man's temperament and teaches him to hold a proper estimate of his powers. I have oftentimes, when riding alone, grown enthusiastic over my chances. I felt that I was fairly cutting the wind, but in the race I was forced to take second place. Don't become conceited over a few fast trials. Go right on training and get as much extra speed as you can. In the race you will probably need it.

Every man, of course, has his "off day," when, try as he may, speed escapes him. Don't become discouraged, but put it down to human nature. The temperament which keeps as even as possible and does not worry over the ups and downs of training, will usually be the most successful. I don't mean by that that a phlegmatic man makes the best racer. On the contrary, a man of a nervous disposition who can concentrate all his energy quickly, will more often cross the finish first.

In training, one should begin by preparatory work of a light nature, and gradually increase it. Road riding is the best possible means for taking off fat tissues and hardening one's muscles. The roughness of the riding quickly accustoms the muscles to the exercise, and the uneven grades soon produce perspiration.

Upon returning to quarters, be sure to have a good rubdown. Nothing will keep the muscles more supple and pliant than this, and the whole body feels the beneficial result in a general freshness. Of course, every trainer has his pet lotion or ointment. Its ingredients are a profound secret, and its effect magical. As for myself, I always use alcohol of a high grade, as I have found it to be the cleanest. If sore or stiff, it might be well to mix a little arnica with it

When it is found that you are in fairly good condition, track work can be commenced, but it should be done very gingerly at first—I should say, in the morning five miles in about fifteen minutes, and as far in the afternoon. After a week it might be well to gradually increase the work, sprinting the last quarter in the afternoon. A man is always stronger in the afternoon, and his muscles more supple. The last week before the race should be confined to comparatively slow work, giving most of your attention to sprints. In all contests of to-day the sprint is the decisive point of the race.

In training, a man oftentimes becomes disgruntled and sick of the whole business. At any rate, my own experience proved that there is a certain sameness in circling a track, eating the same food and seeing the same scenery and faces day after day. Men need as much change as possible, and a successful trainer is he who can furnish amusement and interest enough to make his men forget the hardships of training. Very often, however, this dissatisfied feeling—an attack of "blues," it might be called—is simply the forerunner of perfect condition. It is the change from the life of easy habits to regular, healthful rules that brings on this training "measles." When once over the dividing line the feeling is one of exhilaration and strength.

The dietary of a racer should be as broad as possible, and still avoid any ill effects. First of all, give up smoking. Nothing will injure one's wind like tobacco, and, as bicycle racing needs all that property one can procure, it doesn't do to lose any of it. My advice would be to avoid all food of a starchy nature, and any that has been found to disagree. The more freedom that can be allowed with safety, the better. Take as little in the liquid line as possible. A mug of ale after a hard spin will not do any harm if you are in fit condition, but always remember that it is not necessary unless you are well down in weight or feel a bit overtrained. So many men abuse this privilege that the safer plan is not to use it.

In riding races there seems much discussion as to the proper gear. In my judgment, this question depends entirely on a man's natural ability. If he can sprint to any extent, a low gear is preferable. I always race with a seventy gear, and find I can more quickly get up speed with it. On the other hand a man like Michael, who depends upon pacing, needs a high gear. Every man must to a certain extent figure out his gear for himself, and often will have to try two or three before finding one that suits.

The rules to follow in a race vary to such a degree that no fixed plan can be followed. It is usually well to study your opponents and decide in your own mind who is likely to be your contestant. This is the man you should watch and follow, at the same time not allowing a man to creep away and win.

The start of a race, contrary to expectations, is the most exciting. It is like standing under fire, and every bit of nervous excitement seems concentrated in the few minutes before pistol fire. Once the start is made, your natural coolness comes back, your mind acts clearly, and aside from the determination to win, there is no difference from the usual practice.

General Rules (L. A. W.).

ANNOUNCEMENT.

Through its racing board, the League of American Wheelmen exercises jurisdiction over all cycle competition and record trials on tracks within the United States of America, and each and every person who shall in any way be concerned or employed therein, as well as all race promoters (clubs, associations or individuals) shall be governed by the following rules of said board.

SUSPENSIONS.

1. Any rider willfully competing at races not held under the rules of the board, or rules approved by the board, or who shall enter or attempt to enter an event which, by reason of his status or time record, he is not privileged to enter, or who shall compete at or in any way participate in a race meeting or event not officially sanctioned by the board, or who shall otherwise offend against any of the rules of the board, shall be liable to suspension for such a length of time as the racing board may determine.

2. Riders are notified that to compete against any rider who has been suspended will render them liable to the same penalty.

3. Any rider under suspension who shall enter or compete in any race in public or for a prize shall be liable to further suspension for such contempt of rules at the discretion of the National Racing Board.

Bicycle Tax in Chicago.

AUG. 1 is the date of the beginning of the new bicycle régime in the city of Chicago. The Council passed the ordinance, the mayor approved it, and now the collectors will at least try to enforce it. It costs $1 a year to own a wheel in Chicago now, and if all the riders pay the tax the city will have dollars to burn. There is much protest at this special tax, and there will be rebellion, but as yet no test cases are on hand. Other vehicles are also taxed. We may yet hear of the taxing of guns and sewing machines separately. If we have a council we must have money. E. H.

Dress Guard Lacing.

COMPLAINTS are often made by women riders that the dress guard lacing of the rear wheel often breaks and becomes detached, and requires constant attention. Different colored cords are used for this lacing, but they do not stand the wear. The cord is liable to break from rough usage, and will certainly wear away at the eye-holes of the mud guards. A good substitute for this cord is thin, insulated wire, which is both pliable and strong, and able to stand the rust and hard usage. It is in every respect more serviceable than cord, and does not detract at all from the appearance of the wheel.

J. E.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

Copies of the FOREST AND STREAM *race report blanks, for recording and reporting races, will be sent to all clubs requesting them.*

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co., 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

AUGUST.

7. Cor. Marblehead, open, Massachusetts Bay.
7. Buffalo, club, Lake Erie.
S 7. Hempstead Harbor Club, annual, classes 43ft. and under
M 7. Corinthian, off Marblehead.
7. Queen City, 22ft. class, Toronto, Lake Ontario.
7. Beverly, 3d cham., Wenaumet, Buzzard's Bay.
7. Wollaston, ladies' day, Boston Harbor.
7. Cohasset, club, 15-footers, 10th cham., Cohasset.
7. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
7. Fox Lake, club, Island Fox Lake, Ill
7-8. Winthrop, cruise to Marblehead, Winthrop, Boston Harbor.
7-14. Cor. San Francisco, summer cruise, San Francisco.
7. Royal Nova Scotia, knockabout class, Halifax.
10. Winthrop, evening race, Boston Harbor.
11. Taunton, ladies' day, Taunton, Mass.
12. Miramich, Stewart pennant, Oak Point race.
M 13. East Gloucester, Gloucester Harbor.
M 14. Squam, Annisquam.
S 14. Horseshoe Harbor, club, annual, classes 36ft. and under.
14. Cor. Marblehead, 2d cham., Massachusetts Bay.
14. Brooklyn, special, New York Bay.
14. Queen City, 16ft. class, Toronto, Lake Ontario.
14. Winthrop, 2d cham., Winthrop, Boston Harbor.
14. Beverly, 4th cham., Wenaumet, Buzzard's Bay.
14. Cohasset, club, 15-footers, 11th cham., Cohassett.
14. Wollaston, cup, Boston Harbor.
14. Fox Lake, club, East side, Fox Lake, Ill.
14. Royal Nova Scotia, open, handicap, Halifax.
14-21. Roy. St. Lawrence, 20ft. class, Seawanhaka cup races, Dorval, Lake St Louis.
M 17. American, Newburyport.
S 18. American, special, classes 43ft. and under.
19. Winthrop, cruise to Weymouth, Winthrop, Boston Harbor.
M 19-20-21 Quincy, series, Hull Bay, Boston Harbor.
S 21. Huguenot, annual, classes 43ft. and under.
21. Roy. Canadian, 27ft., 22ft. and skiff classes, Toronto, Lake Ontario.
21. Roy. St. Lawrence, club, all classes, Dorval, Lake St. Louis.
21. Beverly, A. M., Van Rensselaer cup, Marion, Buzzard's Bay.
P. M., 2d open.
21. Taunton, 1st cham., Taunton, Mass.
21. Cohasset, club, 15-footers, 12th cham., Cohasset.
21. Queen City, 20ft. class, Toronto, Lake Ontario.
21. Royal Nova Scotia, knockabout class, Halifax.
21. Burgess, 3d cham., Marblehead, Mass Bay.
23. Absequan, open, Atlantic City, Thoroughfare.
23. Rhode Island, annual open, Pawtuxet, Narragansett Bay.
24. Minnetonka, Interlake races, Lake Minnetonka.
25. Fall River, open, Mount Hope Bay.
S 25. Corinthian Fleet, special, 51, 30 and 20ft. classes.
M 26. Duxbury, Plymouth Bay.
26. Taunton, open, Taunton, Mass.
M 27. Kingston, Plymouth Bay.
28. Cor. Marblehead, 3d cham., Massachusetts Bay.
28. Buffalo, 27ft. and smaller classes, Lake Erie.
28. Gravesend Bay, cruise, New York Bay.
28. Brooklyn, special, New York Bay.
M 28. Plymouth, Plymouth Bay.
28. Queen City, 27ft. class, Toronto, Lake Ontario.
28. Cohasset, club, 15-footers, 13th cham., Cohasset.
28. Royal Nova Scotia, open, handicap, Halifax.
28. 3d cham., Winthrop, Boston Harbor.
S 28. Huntington, annual, classes 51ft. and under.
28-29. Cor., San Francisco, cruise, McNear's, San Francisco.
M 30. Cape Cod, Provincetown Harbor.
M 31. Wellfleet, Wellfleet Harbor.

SEPTEMBER.

1. Royal Nova Scotia, open, handicap, Halifax.
M 2-3-4. Duxbury, Davenport cup, special races for second class, Plymouth Bay
4-5-6. Buffalo, cruise, Lake Erie.
S 4. Seawanhaka Cor., fall race. schooners and 43, 36, 25, 20 and 15ft. classes.
M 4. Savin Hill, Savin Hill, Boston Harbor.
4. Burgess. club, Marblehead, Massachusetts Bay.
4. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
4. American, 2d club, Newburyport.
4. Beverly, 4th open sweeps, Wenaumet, Buzzard's Bay.
4 Cohasset, club, 15-footers, 14th cham., Cohasset.
4-5 Cor. San Francisco, outside cruise, Drake's Bay, San Francisco
4. Larchmont, 51ft. and smaller classes, Larchmont, Long Island, Sound.
4. Royal Nova Scotia, knockabout class, Halifax.
6. Larchmont, fall regatta, all classes, Larchmont, Long Island Sound.
6. New York, Y. R. A. annual, New York Bay.
6. Fall River, club, Mount Hope Bay.
6. Cor, Marblehead, cruise, Massachusetts Bay.
6. Gravesend Bay, special, New York Bay.
6. Pacific, annual. San Francisco Bay.
M 6. Lynn, Lynn Bay.
S 6. Norwalk, annual, all classes of catboats
6. Cohasset, club, 15-footers, 15th cham., Cohasset.
6. Taunton, 2d cham., Taunton. Mass.
6. Beverly, 3d open, Wenaumet, Buzzard's Bay.
6. American, sweepstakes, skiffs, Newburyport.
7. Roy. Canadian, Prince of Wales' cup, all classes, Toronto, Lake Ontario.
7. Absequan, Cricket and 15ft. classes, Atlantic City, Absecon Bay.
9. Miramichi, Watt cup, Newcastle, N. B.
9. Cor, San Francisco, interclub regatta, San Francisco,
10. Taunton, ladies' day, Taunton, Mass.
M 11. Chelsea, Boston Harbor.
M 11. Y. R. A. rendezvous, Hull, Boston Harbor.
S 11. Riverside. fall race, 43, 36, 30 and 25ft. classes, and 30 and 25ft. classes of cabin catboats.
11. Winthrop, club, Winthrop, Boston Harbor.
11. Roy. Canadian, skiff class, Toronto, Lake Ontario.
11. Beverly, 5th cham., Wenaumet, Buzzard's Bay.
11. Burgoss, cham., sail-off, Marblehead, Mass. Bay.
11. Columbia, annual, open, Chicago, Lake Michigan.
11. Larchmont, schooners (Larchmont cup) and smaller classes, Larchmont, Long Island Sound.
11-12. Cor. San Francisco, cruise, Marin Islands, San Francisco.
S 18. American, fall regatta for all classes.
18 Queen City, 22ft. class, Toronto, Lake Ontario.
21. Absequan, open, Atlantic City.
25-26. Cor. San Francisco, cruise, Dillon's Point, San Francisco.
25. Buffalo, closing cruise, Lake Erie.
25. American, closing race, Newburyport.

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Franc sco.

THE annual cruise of the New York Y. C., which began on Monday with the rendezvous at Glen Cove and the race for the commodore's cups, is notable for the length of the course mapped out, from New York to Bar Harbor, and for the very large amount of money expended in prizes. If we are not greatly mistaken after a careful survey of the outlook, it will also be remarkable for the lack of racing yachts and yacht racing.

With a full appreciation of the spirit which has prompted Com. Morgan and his fellow officers and associates to plan such an elaborate enterprise and to provide most liberally the means to carry it out, we cannot overlook the plain fact that the present season is most inopportune for such a special display, and that the result, from a racing standpoint, can scarcely be other than a failure.

So far as prizes go, the list is a remarkable one, exceeding in value anything of the kind ever undertaken in this country. The details of the cruise have been arranged with great care; special tugs have been provided, and everything has been done that can be foreseen to make the races successful. The weak point in the whole enterprise is the racing fleet itself, which was never smaller than at the present time.

In the schooner division there are two yachts which will divide all the prizes between them, save in the case of accident or a bald fluke: out of the comparatively small list of schooners which will race, Colonia and Emerald may safely be counted upon to lead the fleet, with a wide gap between second and third.

In the single-stick division there are more racing yachts, but of such diversity of class that any close and interesting racing is impossible. Under any ordinary conditions Vigilant and Navahoe, by virtue of size, are likely to lead the fleet, with big allowances to the other smaller yachts. Between these two, with no certain knowledge of just how each will be rigged and handled, it is as yet a question whether the racing will be interesting or all one-sided; Vigilant, for one thing, has just shipped her old racing boom and mainsail, while Navahoe, we understand, is under more or less of a cruising rig.

After this pair come Queen Mab, in the 70ft. class; Wasp, in the 60ft. class; and Syce, in the 51ft. class; three fast boats, but of such difference in class and types that they cannot make a satisfactory contest.

The other yachts of both rigs that may be induced to follow the steam yachts and the few racing yachts over the Shoals are hardly to be counted on as really in the racing. There was a time when an occasional breezy day gave a chance to the cruisers, semi-cruisers and ex-cruisers and allowed them to win a pot from the racing cracks, but this is no longer the case; in the event of a blow, Colonia, Emerald or Vigilant is quite as able and much faster than any of the cruising division.

As a marine pageant that part of the cruise from Glen Cove to Newport is likely to prove a great success, the club can and will muster a magnificent fleet of yachts under its burgee. For the big steam yachts the cruise promises to be an ideal one, the way from East Chop to Owl's Head, that under even ordinarily unfavorable conditions may try the hearts of the sailing contingent, is only a pleasant day's run for such steam yachts as Corsair, Sovereign, Margarita II., Marietta III., Almy, Electra and Varuna.

Of fetes and fireworks there will be no lack, either at Newport or Bar Harbor, the stage accessories in this respect are likely to be as nearly perfect as possible. When it comes to actual racing the probabilities are that the results will in every way justify the statement made by the club's special committee last winter, that the *premier* yacht club of America is not a racing club.

THE results of the recent racing of the Lake Y. R. A. on Lake Ontario are not particularly gratifying to yachtsmen on the south side of the lake and the St. Lawrence, as it is plainly evident that the Canadian yachtsmen are each year leaving their New York associates further astern. There was a time, when, though much younger, the yachting interests of Oswego and the other ports on the New York shore of the lake rivaled those of Toronto and the other Canadian ports; the New York yachtsmen were from the first active in establishing and building up the Lake Y. R. A. and in striving for the honors at the annual lake races. Of late years, however, Oswego and Rochester have dropped out to a great extent from the racing, and this must inevitably be followed by a lack of interest in the affairs of the Association.

In Canada, in spite of hard times and other drawbacks, much the same as those experienced in this country, the racing fleet at least holds its own from year to year with an increase in prosperous seasons; new yacht clubs have grown up at different points, and the annual races of the Association are creditably supported both in a financial way and in the matter of entries. This year the races were all in Canadian ports, Kingston, Cobourg, Toronto, Hamilton and Niagara, and the fleet was exclusively Canadian, not an Oswego yacht was present, and Rochester sent but one, a 22-footer. As far as money goes, there is, as there always has been, more on the new York than on the Canadian side of the lake, there are still some good yachts, and there might easily be more; the one thing lacking seems to be a sporting spirit. With plenty of this on the part of the New York yachtsmen, there is no reason why they should not once more prove worthy rivals of their Canadian neighbors.

THE mishap to the machinery of the steam yacht Alcedo II. gave New York yachtsmen a chance to see this new craft, the first attempt of a young American designer, before she makes her appearance in foreign waters. This latest addition to the "protected cruiser" fleet is modeled after the English rather than the usual Dutch-American steam yacht, but at a very respectful distance. Truth compels us to say that in appearance she compares very poorly with such British yachts as Cleopatra-Sapphire-Penelope, Semiramide-Margarita-Narada, Hermione and Ituna. One striking feature is that her topsides are badly disfigured by a clumsy arrangement of bars, braces and pipes projecting some distance from the side by way of channels for both fore and main shrouds. There should be no necessity and there is no excuse for such a lubberly contraption.

The New York Y. C. Cruise.

THE fleet of the New York Y. C. met on Monday morning at the usual rendezvous, Glen Cove, L. I., there being present the following yachts:

Schooners—Amorita, Ariel, Colonia, Emerald, Fenella, Fortuna, Hildegarde, Intrepid, Iroquois, Elsemarie, Marguerite, Montauk, Quissetta, Sachem, Shamrock, Varuna, Viator, Viking.

Sloops—Carmita, Como, Eclipse, Gloriana, Gossoon, Huron, Jessica, Katrina, Liris, Mineola, Minerva, Navahoe, Norota, Queen Mab, Sayonara, Syce, Thistle, Vigilant, Wasp.

Steamers—Albatross, Allegra, Almy, Althea, Auquilo, Calypso, Claymore, Clermont, Corsair, Duquesne, Electra, Embia, Giralda, Halcyon, Helvetia, Hiawatha, Hildegarde, Hermione, Intrepid, Ituna, Katrina, Linta, Marietta, Marion, Naroda, Nydia, Oneida, Oneonta, Orienta, Parthenia, Penelope, Sagamore, Satanella, Scythian, Vision, Vergana, Wachusett, Wadena.

The race for the Commodore's cups was declared off, after waiting until 3:30 P. M. for a breeze, and the fleet proceeded to Huntington Harbor.

The owners of the following yachts have notified Fleet Captain J. Beavor Webb that they will accompany the flagship to Bar Harbor:

SCHOONERS.

Racing No.	Name.	Owner.
B 13	Montauk	Vice-Com. Ledyard.
C 2	Ariel	Stephen W. Palmer.
B 5	Colonia	C. A. Postley.
B 7	Emerald	J. R. Maxwell.
B 21	Viking	James D. Smith.
B 20	Varuna	Rives and Sturgis.
B 3	Alert	C. A. Griscom.
B 9	Fortuna	Henry S. Hovey.
A 7	Intrepid	C. Oliver Iselin.
B 16	Sachem	John G. Moore.
C 8	Iroquois	H. C Rouse
A 16	Hildegarde	George W. Weld.

CUTTERS, SLOOPS AND YAWLS

H 4	Huron	Edward S. Hatch.
J 20	Mineola	Rear-Com. Belmont.
K 34	Syce	F. M. Hoyt.
H 5	Queen Mab	N. L. Francis.
G 11	Vigilant	Percy Chubb.
G 8	Navahoe	R. P. Carroll.
	Como	S. V. R. Cruger.
K 47	Kestral	J. D. Mills.
J 14	Gloriana	J. M. Lasell.
K 18	Jessica	J. G. Agar.
K 23	Minerva	J. E. Fletcher.
J 24	Sayonara	J. M. Woodbury.
J 60	Wasp	H. F. Lippitt.

STEAM YACHTS.

Almy	Frederic Gallatin.
Beatrice	Robert Goelet.
Clara	W J. Matheson.
Clermont	A Van Santvoord.
Electra	Elbridge T. Gerry.
Hermione	Gen S. Thomas.
Hildegarde	B M. Whitlock.
Intrepid	Lloyd Phœnix.
Marietta	H. B. Moore.
Narada	Harry Walters.
Sagamore	J. H. Hanan.
Satanella	E. W. Bliss.
Toinette	Robert D. Evans.
Ballymena	J. N. Brown
Althea	Charles Sooysmith.
Claymore	J. B Edson
Oneonta	G. K. Clarke, Jr.
Parthenia	A. Hart McKee.
Penelope	H E. Converse.
Scythian	Miss De Forest Day.
Varuna	Eugene Higgins.
Vergana	F. H. Benedict.

Seamanship and Navigation up to Date.

From the Sun.

"I HAD a lofely time yesterday, sailin' mit a dog boat on Canarsie Bay," said the Sinker Man when Sarsaparilla Reilly entered the little restaurant on Park row. "Relly, really, it's yet more nice as ridin' on Coney's Island shoot der shutter, 'cause you don't get so nervousness at tall. If I vould be a rich man I vould a sailor boat buy mit der money as fore I buy something else. You don't need to push it at tall, und you don't got do something vhat makes you tired vhen you sail. You shust let out der boom mit der rope vhat is tied to der tail oof der boat und der vind blows der sail against der vater und you spin right along mitout stoppin'. Only if you vant to go round on a carpet tack so dat you'll git to vindvard, den you must turn der handle. Vhen you vish to turn der boat in der vay vhat you ain't goin', den you pull der handle yet a little more to der starboard, which is not on der side vhat you are sittin' if der left is right vhile you're facing der front of der ship."

"What are yer talkin' about?" asked Reilly, "ye've been shootin' off there about dogboats and handle bars and wheels Were yer bicycling?"

"No," said Sinkers, "I vere sailin' mit a sailboat; und you'd be quite astonishment to see vhat I know about dot sailor business. Ve had a man along, but he shust talked orders und I did the sailin'."

"So you think you're a sailor?"

"Vhy not? I learned it in not a day," said Sinkers.

"Yer c'u'dn't," said Reilly; "it tuk me siven years sailin' th' seas afore I knew what a gained day was."

"A vhat?" asked Sinkers.

"A gained day," answered Reilly. "Yer see, a ship sailin' eastward meets th' sun in his daily course, and in th' circumnavigation av the globe th' sun will have crossed over the ship's meridgin once more oftener than if th' vessel had remained stationary; so ye see, Sinkers, that an easterly circumnavigation gains a day. On th' other hand, a ship sailin' westward runs away from th' sun in makin' th' trip, an' in th' circumnavigation av th' globe th' sun will have got over the ship's meridgin once less oftener than if she had remained where she was. Then th' date is fixed up by addin' or substraction one day av th' month on crossin' th' meridgin av 180 degrees. Now dyer see?"

"How is dot again?" remarked Sinkers. "When der ship's circusnavimgatin' oof der globe sails to der yest vhile climbin' der moon ——"

"No," interrupted Reilly, "the moon's not in it. She bosses th' tide."

"Oh, I know dot," said Sinkers. "Vhen der tide's full der moon gets high und den der doctors say dot crazy peoples gets insane."

"Go back to your ship," said Reilly; "I'm satisfied now that yer don't know the difference betwixt a flyin' jib and a fog whistle. Supposin' Oi was a captain an' you was a common sailor wid th' rest ov th' sailormen, an' Oi saw a storum approachin', an' shouted, 'For'ard there! Show a leg!' What would you do, Sinkers?"

"I would rush around and pull up my sailor trousers," answered the sailorman.

"Naw," said Reilly; "whin a captain shouts, 'Show a leg!' he means for th' lads to hurry up an' git a move on thim—for th' crew to hurry."

"Vell, give me an easier one," said Sinkers.

"Suppose I said, 'Git up there on th' Flemish horse an' stow the tops'il.' Then what w'u'd yer do?"

"Have ve got a horse on der boat now?" asked Sinkers. "Is our ship a cattle boat?"

"You must have sailed in a Dutch galliot wid puddin'-shaped ribs," said Reilly.

"Now you're commencin' again," said Sinkers. "Vhat's der use of fightin' vhen ve are friends; let old boats be old boats und ve'll sail togedder. Vhat?"

"We will," said Reilly; and they went to take Custom House measurements in Red Jerry's.

Indian Harbor Y. C. Annual Regatta.

GREENWICH—LONG ISLAND SOUND

Saturday, July 31.

SOUND Y. R. U. RULES

THE Indian Harbor Y. C. sailed its annual regatta on July 31 in good weather, but with only a medium fleet of starters. A fresh west wind brought trouble to several yachts, Sirene and Montauk each losing her mast. When the leaders had completed the first round, the markboat at the line was missing, having blown some distance away. Before it could be replaced, Acushla came up and found nothing to turn; Vorant II., a long distance astern, was finally timed as rounding ahead of Acushla, and the latter declined to sail the second round, afterward filing a protest. The times of the rounds were:

First round:

Vorant	3 03 00	Brant	3 26 40
Musme	3 04 10	Colleen	3 29 57
Acushla	3 05 10	Bubble	3 31 10
Fidelio	3 06 55	Yola	3 32 31
Sirene	3 18 31	Willie	3 34 12
Shark	3 18 29	Paprika	3 35 47
P K Pigeon	3 21 32	Minnetonka	3 44 00
Punch	3 25 00		

Second round. Finish:

Fidelio	3 06 55	Brant	5 19 45
Musme	4 46 53	Punch	5 20 29
Shark	4 54 41	Yola	5 28 24
P K Pigeon	5 12 37	Willie	5 28 33
Colleen	5 17 30	Minnetonka	5 36 55

The final times were:

	Length.	Elapsed.	Corrected.
SLOOPS—60FT. CLASS.			
Daphne, C. T. Willis	55.20	Withdrew.	
SLOOPS—36FT. CLASS.			
Vorant II., G. G. Tyson		4 46 06	4 46 05
Acushla, H. W. Hanan	34.08	Withdrew.	
SLOOPS—30FT CLASS.			
Musme, J. M. Macdonough	30.00	3 31 32	3 31 32
YAWL CLASS.			
Fidelio, J. K. Tod	33.46	1 51 55	1 51 55
SLOOPS—20FT. CLASS.			
Shark, Rouse & Hoyt	19.96	3 29 41	3 29 41
Eos, W. I. Sanger	20.00	Withdrew.	
Montauk, G. G. Tyson	20.00	Disabled.	
SLOOPS—15FT. CLASS			
Yola, Mallory Bros	15.00	3 58 24	3 58 24
Paprika, E. A. Stevens	15.00	Withdrew.	
OPEN CATBOATS—25FT. CLASS			
Sirene, Doremus & Outwater	25.00	Disabled.	
Osprey, C. H. Holmes	23.33	Withdrew.	
Colleen, P. H. Jackson	22.18	3 52 30	3 47 13
Brant, J. C. Varvin	21.20	3 54 45	3 47 20
P. K. Pigeon, Deady & Harrington	20.92	3 47 37	3 47 37
Bubble, C. Guion, II	20.89	4 11 34	4 03 26
Punch, M. H. Clark	20.50	3 55 29	3 46 29
OPEN CATBOATS—20FT. CLASS.			
Willie, Smith Bros.	19.98	3 58 33	3 58 29
Gosbird, R. H. Nevins	18.40	Withdrew.	
Minnetonka, A. B Alley	19.85	4 06 55	4 06 33
Louie Bell, J. Williams	14.09	Withdrew.	

P. K. Pigeon was disqualified for carrying a professional. The protest of Acushla has not been decided.

"Underweigh."

THERE is so little warrant for the use of the term "underweigh" that one is at a loss to understand the tenacity with which writers and even experienced yachtsmen and seamen cling to it. It is not only incorrect, but there is no occasion whatever for its use, the proper term, "underway," answering every purpose and leaving no question of doubt as to the exact meaning. The London *Field* has at times discussed the question, but takes it up again in a recent issue, as follows:

"Underway" or "underweigh" is still exercising the nautical mind in the columns of the *Times*, but the learned commentators on the terms do not seem able to understand what "weigh" really means as a nautical term. One writer suggests that underweigh is a survival of an old term, but we remember coming across a book on seamanship in very quaint language, published in the reign of Queen Elizabeth, in which "underway" only occurs; and Hutchinson (master mariner), in his "Practical Seamanship" (1795), uses the term underway, and "underweigh" is not to be found in the book. This also applies to William Falconer's "Marine Dictionary" (1759) and Gower's "Seamanship" (1808), Admiral Sir George Nare's "Seamanship" (sixth edition, 1882). Dana, in his "Seaman's Manual" (1841), never mentions underweigh, but always underway, and Dana, the author of "Two Years Before the Mast" can be taken as an unimpeachable authority. In the Queen's Regulation and Admiralty Instructions underway is always used, so also in the Merchant Shipping Acts. It should also be noted that Admiral De Horsey, in his well-known writings on nautical matters, always uses the term underway. Admiral Smyth, in his "Sailor's Word Book" (1867), somewhat qualifies his interpretation of underway as follows: "A ship is underway when beginning to move under canvas after her anchor is started; some have written this improperly underweigh. A ship is underweigh when she has weighed her anchor; as soon as she gathers way she is underway." But this mode of using the two terms would be very confusing, and it would be more simple and definite in meaning to say the ship is weighing anchor or the ship has weighed anchor. Of course, for brevity, anchor could be omitted, but it is quite meaningless to say a ship is underweigh, and the term should be struck out of the nautical vocabulary. How it ever got into it we do not know, but it is certainly not a survival of the terms used by mariners ages ago. The curious thing is that very few, excepting officers of the Royal Navy, ever write underweigh, and the latter probably got hold of it from their crammers. At any rate, naval officers should be guided by the Admiralty instructions and the custom of practical seamen.

Beverly Y. C. 250th Regatta.

WENAUMET—BUZZARD'S BAY.

Saturday, July 24.

THE 250th regatta of the Beverley Y. C. was sailed off the club house on July 24, in a four-reef S.W. blow, though two boats out of entries, and the two best, were disabled before the start. Royal Blue's mast was split, and the new mast had not arrived. Opossum collided with an outside sloop before the start, and broke her boom, Mr. Emmons misjudging the distance between the two boats.

In the cruising class, Robin Hood led by 10m. She is the best boat in a strong breeze. Micaboo's mast split, and she had to withdraw. Robin Hood's hollow mast is braced inside, and is tho only one of Lawley's hollow masts that is good. Edith did so poorly that she gave up, but in the eyes of the judges she was tied up and trimmed so flat that she had no chance.

In second class cats, Thordis has got back into the class by cutting several inches off her stem; she won by 6m. over Anonyma. The latter boat, in a strong breeze, can beat her to windward, but Thordis wins on the run home.

Melro and Nobska were having their usual nip-and-tuck fight, when Nobska's new boom broke in the middle. Melro was protested for shifting ballast. The regatta committee will investigate this and act promptly, as soon as a witness —now absent—returns.

In the fourth class cats, Howard sailed beautifully; Elsa and Cinch, made a very close race, Elsa making a little the best actual time, but Cinch beating her on allowance.

In the fourth class sloops, Heiress had a walkover, though four boats entered and three started, Opossum's broken boom keeping her out.

Capelin and Bluefish did very poorly.

The judges were: A. S. Hardy, David Rice and W. L. Jeffries.

First prizes were won by Robin Hood, Thordis, Howard, Heiress and Imp.

As Thordis was not sailed by a member, the following boats scored 1 for championship: Robin Hood, Anonyma, Howard, Heiress and Imp.

Mariposa, Elsa and Hebe take seconds, and score ½ for pennants.

	Length.	Elapsed.	Corrected.
CRUISING CLASS.			
Robin Hood, C. H. Jones	21.04	2 13 29	2 13 29
Mirapoga, R. W. Downer	21.00	2 23 41	2 22 41
Kantaka, Alfred Winsor	21.00	2 24 43	2 24 13
Edith, C. M Baker	21.00	Withdrew.	
Micabo, J. R. & C. C. Harding	21.00	Broke mast.	
SECOND CLASS—CATS.			
Thordis, T. B. Wales	26.00	2 12 35	2 00 05
Anonyma, Vice-Com. Dabney	24.09	2 20 30	2 06 48
Mist, G. H. Lyman	25.01	2 21 01	2 07 45
Bernice, J. G. Young, Jr.	25.05	2 21 41	2 08 48
May King, D. L. Whittemore	25.09	Broke boom.

FIFTH CLASS—CATS.			
Imp, Geo. B Dabney	14.05	1 19 22	1 03 45
Hebe, John Parkinson, Jr.	14.09	1 20 45	1 05 00
Vif, A. Winsor, Jr.	14.04	1 27 20	1 11 11
Lara, A. C. Howland	15.00	. . . .	. . . .

Lara and Coquette hail from Monument Beach; all the others belong to the B. Y. C.

Royal St. Lawrence Y. C.

DURING the present week the Royal St. Lawrence Y. C. will hold its trial races for the selection of a defending yacht to meet the representative of the Seawanhaka Corinthian Y. C. in the final races of Aug. 14 and following days. The results of the very thorough racing of the local fleet have established the superiority of Mr. Duggan's boat, Avoca, over all the others, though leaving it still an open question between her and the new Glencairn II. The trial races are open to all yachts of Canadian design and build, and it is as yet uncertain how many and how good boats may turn up from other Canadian clubs, but none of the outside boats have been able to profit by any such system of hard and continuous trial and improvement as has developed the speed of Avoca, Glenowen and Glencairn II., and it is probable that one of the Duggan boats will be chosen, with Messrs. Duggan and Shearwood to sail her.

On Monday, July 22, a special race was sailed between Glenowen and Glencairn II., starting in a light S.E. wind, which soon shifted to S.W. Glenowen was away with a slight lead and held it to the Valois Buoy, with wind ahead. On the next leg she increased it a little, but off the wind, under spinakers, Glencairn caught her, and finally won by a few seconds:

	Start.	Finish.
Glencairn II	5 59 47	6 45 05
Glenowen	5 59 45	6 45 35

The tenth and last race of the Ross series was sailed on July 24 in a fresh and puffy N.E. wind, starting at 3:40, with Glencairn II. over with the gun, followed by Rogue, Glenowen, Millie and Islander, Maida being handicapped after fouling her peak halyard. On the reach to the Valois Buoy, Glencairn led easily and rounded the buoy first; Glenowen came up in second place, but would not jibe, and Rogue turned inside her, the two touched as they jibed together, and Glenowen also touched the buoy with her boom. They ran across to the Channel Buoy and beat home, the first round being timed:

Glencairn II	4 13 35	Millie	4 17 20
Rogue	4 14 20	Islander	4 17 40
Glenowen	4 16 15		

Maida withdrew after parting her forestay and springing her mast.

On the second round Glenowen lost her mast, the times being:

Glencairn II	4 46 30	Islander	4 53 20
Rogue	4 49 45	Millie	4 53 40

The principal incident of the third round was a foul near the finish between Millie and Islander; the final times were:

Glencairn II	5 20 20	Millie	5 31 30
Rogue	5 25 20	Islander	5 31 31

Pending the decision of four protests, the points were not computed. On the same day a race of the 15-footers was sailed, the times being:

	Start.	1st round.	2d round.
Titania	3 45 00	4 25 20	5 06 07
Anita	3 45 00	4 25 35	5 07 45
Viva	3 45 00	4 26 15	5 08 10

Momo and Al-Anka were shipped last week to the Spalding-St. Lawrence shops at Ogdensburgh for final overhauling, after which they were shipped down the St. Lawrence to Lake St. Louis, where they arrived early this week. They will be sailed as much as possible against each other on the Royal St. Lawrence Y. C. courses; it is practically decided that Momo will be the challenging boat, but Al-Anka will be used to work her up.

The Royal St. Lawrence Y. C. has issued the following circular:

The match races for the Seawanhaka International Challenge Cup will be sailed on Lake St. Louis during the week commencing Aug. 14, 1897.

This is the first time the defense of an international challenge cup has been entrusted to Canadian yachtsmen, and it is necessary that the contest be carried through with courtesy and a high sense of fair play alike to the challenger and the defender.

The Royal St. Lawrence Y. C., in preparing for these races, feel that upon it and the city of Montreal, which it directly represents, depends in this respect the honor of Canada, and that in particular they should give the representatives of the Seawanhaka Corinthian Y. C. such a welcome and fair field for contest as that club extended to Glencairn I. and her crew last year. More it cannot do. The duty of arranging and carrying on the contest in a sportsmanlike and honorable manner is one which the club gladly assumes, but to secure an uncrowded course the coöperation of all the spectators is necessary. Otherwise what should be a cause of national honor and means of international good feeling, may become a cause of disputes of the most regretable description. It is only necessary to refer to the unfortunate discussions attending the more recent America's Cup races to convince all how serious a matter this is.

The R. St. L. Y. C. therefore appeals to the companies controlling steamers; to the masters of all steamers plying on the waters of Lake St. Louis; to the citizens of Montreal in general, and to those in particular who will be upon the water during the day of the race, to assist it in arranging for a perfectly clear course. The club, on its part, will endeavor so to arrange matters that ample opportunity to see every detail of the contest will be provided for all, but to achieve this, a few simple rules must be rigidly adhered to by the attending fleet. The race committee has prepared diagrams showing the waters that may be occupied by the spectators without interfering with the racers, and have further arranged to have a cordon of patrol boats to indicate these limits.

All are earnestly requested to give the club in this matter their sincere and hearty support.

J. C. C. ALMON,
Hon. Secretary Sailing Committee.

The trial races will be sailed under the following special conditions:

1. The yacht selected to defend the cup shall be the one which, in the judgment of the sailing committee, shall be the best adapted therefor, and not necessarily a winner of the majority of the trial races. Additional races may be ordered by the committee between such contestants as they desire.

2. The owner of each yacht entered for the trial races must have his boat ready for measurement at the Royal St. Lawrence Y. C. station at least one day (exclusive of Sunday) before the first trial race.

3. Each yacht must carry a racing number fastened securely to each side of the mainsail, which number may be obtained from the secretary of the sailing committee.

4. In the event of the race being postponed or ordered to be resailed, it will be sailed at as early a day as practicable.

The committee desires to state definitely and particularly that the measurers will enforce the measuring rules strictly in accordance with the letter thereof, and no question of doubt will be decided in favor of the boat.

The Lake Y. R. A. Circuit, 1897.

FOR several seasons past the annual races of the Lake Y. R. A. of Lake Ontario have been held about the western end of the lake at Toronto, Hamilton and Charlotte, points comparatively near each other as compared with the length of the lake. This year a return has been made to the old plan of a circuit of the lake, as has been so successfully done in the early years of the Association. The programme, as finally arranged after several changes, was to start at Kingston, Ontario, on Monday, July 19, the yachts from the various lake ports coming to a rendezvous there on Sunday. The first race taking place on Monday, the fleet would have ample time to reach Cobourg for a race on July 23, proceeding to Toronto for a race on July 27, then to Hamilton on July 29 and sailing the last race at Niagara on July 31.

The fleet at Kingston on the morning of the first race was disappointingly small, including Vivia, G. N. Gooderham, Toronto; Dinah, S. E. Malloch, Hamilton; Norma, F. Strange, Kingston; Mirage, D. Stevens, Toronto; Nautilus, W. Coad, Oswego; Kestrel, W. J. Brigger, Hamilton; Geisha, W. C. Kent; Hustler, A. F. Macnee; Chickadee, H. Cunningham, Kingston; Pedro, Perry & Miller, Charlotte, N. Y.; Widgeon, L. Kennedy, Toronto; Wanita, H. Cartwright, Kingston.

The race was sailed in a very light wind, being called at the end of the first round. The winner in the 27ft. class, Kestrel, is a new fin-keel, built at Hamilton. After the race she was purchased by Dr. Black, of the Kingston Y. C., who raced her through the remainder of the circuit. Another new yacht is the 22-footer Pedro, designed and built by Miller Bros., of Rochester; in spite of her small size, she has made the long voyage around the lake and taken part in the races.

The Kingston Y. C., though the youngest on the lake and only admitted last fall to the Association, has worked very hard to make the local regatta a success and to entertain the visiting yachtsmen. The result, with so few present, has been a disappointment; but Com. Strange and the other members of the club have not been discouraged, but are planning for a similar visit next year. The club has proposed a meet, with four days of racing, at Kingston, good prizes being offered.

The fleet had three days in which to cover the hundred or so of miles to Cobourg, and with an east wind this distance was easily covered. By Friday morning the fleet was increased by the addition of Aggie, Zelma, Majel, Vision, Alert, Hiawatha, Nadia and Sylvia. During the night of July 22 a westerly gale kicked up a bad sea and drove the fleet into the east pier of the harbor; next morning there was sea and wind in plenty. The yachts carried double reefs and several came to grief, Vivia starting a leak and Alert leaking very badly, both withdrawing. A number of the yachts failed to find the Lake Buoy. The little Pedro sailed the entire course in safety.

The storm continued over Sunday, with heavy seas and high winds from different quarters. The fleet reached Toronto and found there Priscilla, schr., of Cleveland, and Onward, slp., of Rochester. Priscilla was to sail against Oriole on July 27, the Toronto race, but on Tuesday morning the weather was so bad that the steamer could not set the marks, and none of the yachtsmen were disposed to tempt the angry lake. After a meeting of the race committee it was decided to postpone the regatta to the Civic holiday, Monday, Aug. 2, the remainder of the circuit to be carried out meanwhile.

The race at Hamilton was held under the auspices of the Royal Hamilton Y. C., on July 29. In spite of occasional showers, the conditions were satisfactory, except for the shifting of the wind. The course was to be 5 miles to windward or leeward and return, but it was impossible, with the wind along the shore in the morning, to lay off more than 2½ miles to leeward, so the number of rounds was increased. After the first round a shift of wind made a reach both ways. Kestrel, Mirage and Hiawatha crossed the line at the start in the wrong direction and were disqualified. Eva, now of Sandusky, was as successful as ever in her old port. Pedro was beaten by the two local 23-footers, Rosemary and Koko. Priscilla and Oriole started in a private match for a silk flag, but the wind fell light and the former gave up, the race being called at the end of the first round.

FIRST RACE—KINGSTON, ONT.

Monday, July 19.

COURSE: Two sides of a triangle and back to starting buoy. Weather fine. Wind light and fluky. Distance, 10 miles:

	Start.	Finish.	Elapsed.	Corrected.
37FT. CLASS				
Dinah	10 20 00	1 28 38	3 08 38	3 08 38
Vivia	10 20 00	1 33 30	3 13 30	3 13 30
Norna	10 20 00	Did not finish.		
27FT. CLASS				
Kestrel	10 40 00	2 10 00	3 30 00	3 30 00
Mirage	10 40 00	2 22 37	3 42 37	3 42 37
Nautilus	10 40 00	2 26 08	3 46 08	3 43 54
Geisha	10 40 00	2 43 30	4 03 30	4 03 30
Chickadee	10 40 00	2 58 15	4 18 15	4 12 29
22FT. CLASS.				
Pedro	10 50 00	2 45 30	3 55 30	3 55 30
Widgeon	10 50 00	3 19 30	4 29 30	4 29 30
Wanita	10 50 00	Did not finish.		

Winners—37ft class: Dinah first, Vivia second; 27ft. class: Kestrel first, Mirage second, Nautilus third; 22ft. class: Pedro first, Widgeon second.

Regatta Committee—Com. Strange, Dr. Curtis, H. W. Richardson, Lieut.-Col. Drury, Capt. T. Donnelly, D. A. Black, B. W. Folger, Jr., W. D. Hart. Starter and timekeeper, W. Q. Phillips.

SECOND RACE—COBOURG, ONT.

Friday, July 23.

Courses: Triangle on Lake Ontario. Weather cloudy, with rain squalls. Wind strong and squally, S.W. Distance, 10 miles.

	Start.	Finish.	Elapsed.	Corrected.
42FT. CLASS—TWO ROUNDS.				
Zelma	10 15 00	2 04 15	. . . .	. . . .
Aggie	10 15 00	Did not finish.		
37FT. CLASS—TWO ROUNDS.				
Dinah	10 20 00	2 28 15	. . . .	. . . .
Vivia	10 30 00	Did not finish.		
Vision	10 30 00	Did not finish.		
32FT. CLASS—ONE ROUND.				
Norma	10 40 00	1 29 20	2 49 30	2 48 38
Nadia	10 40 00	1 39 35	2 59 35	2 59 35
Alert	10 40 00	Did not finish.		
Nancy	10 40 00	Did not finish.		
27FT. CLASS—ONE ROUND.				
Kestrel	10 50 00	1 27 50	. . . .	. . . .
Hiawatha	10 50 00	1 33 25	. . . .	. . . .
Sylvia	10 50 00	1 56 30	. . . .	. . . .
Mirage	10 50 00	Did not finish.		
Wona	10 50 00	Did not finish.		
22FT. CLASS—ONE ROUND.				
Pedro	11 00 00	2 10 45	Sailed over.	

Winners—42ft class: Zelma first; 37ft. class: Dinah first, Vision second; 32ft. class: Norma first, Nadia second; 27ft. class: Kestrel first, Hiawatha second, Sylvia third; 22ft. class: Pedro first.

Regatta Committee—William Black, W. W. Hooey, J. P. Field, William Burnet. Judge, starter and timekeeper, W. Q. Phillips, associate officer.

The 30-Footers at Newport.

ON July 27 a very good race of the 30-footers was sailed over the Brigantine Ledge course in a strong east wind, the times being:

	Finish.	Elapsed.
Vaquero III, H. B. Duryea	5 22 20	2 12 30
Esperanza, A. S Van Winkle	5 22 57	2 12 57
Dorothy II., H. P. Whitney	5 26 05	2 16 05
Hera, R. N. Ellis	5 27 20	2 17 20
Wa Wa, J A. Stillman	5 27 42	2 17 42
Veda, C. Vanderbilt, Jr.	Did not finish.	

On July 28 a race took place for a cup presented by H. B. Duryea, Vaquero not starting, while Veda was at Bristol for repairs. The Brigantine Ledge course was again sailed in a fresh east wind, all carrying single reefs at the start, though Wa Wa and Esperanza shook out early in the race. Esperanza led the way out, with Wa Wa second, but the latter, with Mr. Duryea on board with her owner, finally won by a few seconds. The times were:

	Finish.	Elapsed.
Wa Wa, J A. Stillman	5 57 45	2 42 45
Esperanza, A. S. Van Winkle	5 57 49	2 42 49
Dorothy II., H P. Whitney	5 58 48	2 43 48
Hera, R. N Ellis	5 59 30	2 44 30

On July 29 a sweepstakes race was sailed in a fresh north wind, the times being:

	Finish.	Elapsed.
Vaquero III., H B. Duryea	5 47 17	2 50 17
Wa Wa, J. A. Stillman	5 49 30	2 52 30
Hera, R N. Ellis	5 51 30	2 54 30
Esperanza, A. S. Van Winkle	5 53 45	2 56 45
Veda, C. Vanderbilt, Jr.	5 56 10	2 59 10

Veda had been overhauled and fitted with new mast, but the hard luck that has followed her for some time still stuck by her, and she went on the rocks off Rose Island, fortunately coming off without damage.

On July 30 a sweepstakes race was sailed over the Dyer's Island course, the times being:

	Finish.	Elapsed.
Wa Wa, J. A. Stillman	4 58 16	1 43 16
Vaquero III., H B. Duryea	4 58 22	1 43 22
Hera, R. N Ellis	4 54 15	1 44 15
Esperanza, A. S. Van Winkle	4 54 25	1 44 25
Veda, C. Vanderbilt, Jr.	4 55 10	1 45 10
Puck, E. D. Morgan	4 56 12	1 46 12

On July 31 a sweepstakes was sailed in a light S.W. wind, the times being:

	Finish.	Elapsed.
Dorothy II., H. P. Whitney	6 26 40	1 46 40
Hera, R. N. Ellis	6 27 05	1 47 05
Veda, C. Vanderbilt, Jr	6 29 08	1 49 08
Vaquero III., H. B. Duryea	6 29 39	1 49 39

Canadians Picking a Defender.

MONTREAL, Aug. 2.—The trial races to decide the question as to what yacht shall defend the Seawanhaka Corinthian Challenge cup began to day. The course is that of the Royal St. Lawrence Y. C. The boats entered were five in number:

Bonshaw—Captain, Amillus Jarvis; crew, J. S. McMurray and T. McMurrich.

Glencairn II.—Captain, Herrick Duggan; crew, F. Spearwood and A. Paton.

Avoca—Captain, H. K. Wickstead; crew, Arthur Hamilton and H. Eadie.

Millie—Captain, V. Pelletier; crew, A. H. Hersey and F. W. Gross.

Glenowen—Captain, S. Davidson; crew, L. Davidson and White.

The course was a triangular one, running one mile from Pointe Claire, then a mile and a quarter toward shore and return. The start in the first race was made in the following order: Millie, Avoca, Bonshaw, Glencairn II., and Glenowen.

The breeze soon began to fail, and the race not being finished within the time limit, it was declared off. The times at the finish were:

Glewowen	1 31 35	Glencairn II	1 36 12
Bonshaw	1 35 38	Millie	1 41 02
Avoca	1 36 09		

Hobe Sound Y. C.

HOBE SOUND, FLA.

Monday, July 26.

THE Hobe Sound Y. C. sailed the second of their prize series of races on Monday, July 26. The wind was light from the S.E., and the time for the five miles of windward and leeward work was fair. The yachts got away well together and finished not very far apart. Time allowance cut a big figure, the winners in both classes winning out on it. The line was crossed in the following order: Wenonah, Francis, Sprogie, Gull and Wanda. The last three had a luffing match at the line, which resulted in Gull taking the weather gauge and holding it to the lower buoy. On the run down to the line Wanda ran away from the fleet, the first round being completed as follows:

Wanda	0 34 39	Francis	0 42 24
Sprogie	0 39 24	Wenonah	0 47 02
Gull	0 33 34		

The wind died out a bit on the second round, but Wenonah seemed to hold it longer than the rest of the fleet, and materially bettered her position. Gull was well in the lead of Sprogie when she stuck her board in the mud, missed stays, fell astern, and was unable to recover the loss. Francis distinguished herself by running aground on the slightest provocation, she being hung up no less than five times during the two rounds. The time for the second round was:

Wenonah	0 49 25	Sprogie	0 51 55
Wanda	0 51 10	Francis	0 56 45
Gull	0 51 55		

The result:

FIRST CLASS.

	Elapsed.	Corrected.
Wenonah	1 36 2	1 23 19
Wanda	1 25 49	1 25 49
Sprogie	1 31 19	1 31 19
Gull	1 31 29	1 31 29
Francis	1 39 09	1 32 21

SECOND CLASS.

Juanita	1 00 50	0 54 02
Lorraine	0 54 03	0 54 03
Guenn	1 48 45	1 41 57

H. D. MCVEAN, Purser.

Fete Day at Newport, R. I.

THE annual fête and illumination of the harbor of Newport, R. I., will be held this year on Aug. 4. The following warships of the North Atlantic squadron will arrive at Newport previous to the fête: The flagship New York, battleships Indiana, Maine, Massachusetts, Texas and Brooklyn; the monitor Puritan and tender, Fern, which, with the battleship Iowa and the torpedo boats already at Newport, will make the largest gathering of the new navy ever seen in New England.

The crews of sailors and marines from these ships, joined by the Fort Adams' troops, the naval reserves of Rhode Island, and the local military, will, on the afternoon of Aug. 4, participate in one of the most unique and imposing street parades ever witnessed in Newport, or in fact any of the Eastern cities.

The electrical effects from the warships in the evening will be magnificent, including, as they probably will, the display made by the New York at Kiel, and that made by the Brooklyn in honor of Queen Victoria at the recent jubilee.

Fête day at Newport will doubtless always hereafter be recognized as a feature of that delightful resort. It was conceived in honor of the visit of the New York Y. C. on its annual summer cruise, and still celebrates that event, the fleet this year being due to rendezvous at Newport commencing with the early afternoon of Aug. 4. The first illumination of the harbor occurred three years ago, and was quite modest in its proportions. Last year a more elaborate undertaking was consummated, which attracted thousands of visitors from outside of the city.

It is expected that Pain's Fireworks Co. will have charge of the pyrotechnical display this year.

The night illumination of the splendid harbor, and the marine parade will be, as it was last year, inspiring and magnificent beyond all power of description.

Yacht Reporting Up to Date.

A CORRESPONDENT kindly sends us the following:

Curtis E. Crane's new yacht was launched early Saturday afternoon, and after another week or ten days in the artisan's care will be ready for use.

This is the largest yacht on the Eastern Shore. It is 55ft. long, 16ft. beam and 6ft. 4in. deep in the cabin, which is 20ft. long, and will be arranged to quarter a dozen people comfortably.

The launching was quite an event, and as the vessel glided smoothly and gracefully into the water she was heartily cheered by many present. As she left the ways Mrs. Crane broke a bottle of wine over the prow and named her Josephine, in honor of Mr. Crane's mother.

The Josephine is built after Mr. Crane's own ideas, and along the lines of no model. J. Oliver Duke had charge of the mechanical part of the work. It is a yawl-rigged yacht, with solid log bottom and sides, on the order of a canoe. The construction of the hull required twenty-one pine logs. No log was shorter than 20ft., and some measured 50ft. They were from 18in. to 4ft. in diameter. The bottom is a hollow, convex one, something like that of a keel boat. Its designer expects it to move along better because of this. There is another peculiarity in the shape of an overhanging stern. It is a centerboard yacht, and if used as a freighter would have a carrying capacity of about forty tons. It draws 3½ft. in ballast.

This yacht is built for pleasure entirely, and will be fitted up for the comfort and convenience of those on board.

The following gems were inflicted on a Western paper by its New York correspondent:

If the Emperor William comes over here with his Meteor to take us by surprise he will not find us napping. There have been fifteen new yachts built this year, and, while not all are quite up to the Meteor's size, every one could give her a good race. One of them is built to race the Colonia, a former holder of the Cup, and stands a good chance of winning.

The reason for the activity in yachting circles can be based, first, upon the coming struggle for the Corinthian cup. This was taken away last season by the Montreal contestant, but will be challenged this year. A fleet of fifteen yachts belonging to members of the Seawanhaka Y. C. began racing on Decoration Day to decide which shall give the challenge. The cup, which cost $800, may come back here after the Montreal contest.

A fine new yacht is the Quisetta, built by W. H. Harris, of Orange, N. J., a member of the famous Larchmont Club. It was constructed at Newburgh-on-the-Hudson, and is maintained at the cost of $1,000 per month. It is a small yacht, not over 85ft., and has a steel hull. It was built specially to beat W. Gould Brokaw's Amorita. When in full running order, with a full crew and its owner aboard, it is estimated that the cost of running will not be less than $10,000 for a season of five months.

* * * * * * * * *

The sails alone cost in the neighborhood of $4,000. They are of that delicate whiteness which is so difficult to obtain, because the secret of the bleach is held and preserved by a few very high-priced sail makers. Ratsey, sail maker to H. R. H. Albert Edward, has a secret process by which he gives his sail cloth a white shade so delicate and clear as to dazzle the eyes, like electric light.

W. Hoyt, of Stamford, Conn., has recently received from Fife, of England, a new cutter, which he has named the Circe. Fife has made several American yachts, and is the only English yacht builder who can rival the Herreshoffs.

A magnificent new steam yacht built this year is the property of Harrison B. Moore, a railroad magnate. It is the fastest steam yacht in the world, and its name is the Marietta. Its contract building price was $100,000, and when entirely completed it will probably cost half as much more. Its speed is twenty-three miles an hour, and it has a length of 174ft.

These yachts are all on the water now and enjoying the yachting season, which is at its height. They are run at tremendous expense, and are "kept up" in a marvelous manner.

Each day the men scrub the decks and whiten them with lemon juice, and as soon as touched by the spray they are rubbed down again. The finest yachts are cleaned morning and night by rubbing with the cut surface of a lemon, and for each scrub a box of lemons is consumed.

Kestrel.

AFTER numerous delays owing to the continued bad weather, the new Fife cutter Kestrel has at last been launched at Wood's yard, City Island. The yacht had been on the ways outside the shop for nearly two weeks, but the rain interfered with necessary work; and even after this was completed, it was not considered safe to put her over on the unprotected beach while a gale was blowing. As it is, while she will accompany the fleet of the New York Y. C. on the cruise, it will be a month at least before she is in any condition for racing; especially against old boats, or Syce, the latter having been afloat for over three months.

While Syce and Kestrel are of the same measurement, 51ft. racing length, and both are up-to-date in design and construction, there is one material difference between them; with a close similarity of form and of other dimensions, Syce is built to the full draft limit of 10ft. 3in., while Kestrel draws but 9ft.

The owner of Syce, F. M. Hoyt, of Stamford, Conn., is a young racing yachtsman who has raced very successfully for two seasons in the 43-footer Norota, and who, in ordering a new yacht from the same designers for a larger class, with racing as the first object, planned to get the most that the class limits allow.

The owner of Kestrel, Mr. J. B. Mills, of New York and Bristol is not a racing man, though his Fife 30-footer Infanta sailed a few races under his ownership. In replacing her with a new and larger Fife boat, less attention was paid to speed than to all-around excellence, the object being a craft of the fast cruiser order rather than an out-and-out racer. In addition to the difference of draft, which means 15in. in the depth of lead keel, Kestrel is less cut away in her sheer plan and has the usual raking sternpost and yacht rudder instead of the short sternpost and balanced rudder of Syce.

The dimensions of Kestrel are:

Length over all	65ft.
L.W.L.	43ft. 6in.
Beam	12ft. 2in.
Draft	9ft.
Sail area	3,400sq. ft.

The sheer plan shows a fairly long fore overhang with the modern convex sweep to the stem, curving into a deep hollow under the mast and running down to a straight and nearly level keel about 16ft. long. From the after end of the keel the sternpost rises, with a rake of 45°, the tuck being immersed; the counter is long and clean, with the usual Fife finish at the archboard. The midship section shows a strong hollow below, an S curve shaped so as to give a maximum of space above the floor line with a minimum of displacement below, the result being a fin keel. The fin is built up of oak, but at its thinnest part is only about 11in. through, widening out until the bulb is about 20in. through. This bulb, which contains 10.5 tons of lead, is carefully shaped, with full end forward and a stirrup section, the bottom being flat and the corners well rounded off. In Syce the entire bottom of the keel is flat, the sides joining it at right angles with square edges.

The frame of the yacht is a beautiful piece of woodwork, the keel is only about 18ft. long, but a heavy oak stick of varying shape from end to end. The curves of the stem and counter call for a careful shaping and joining of the many members. The timbers are all of steamed oak, sided about 2¼in. and moulded from 2½ to 2in., spaced 12in.; the partner frames being 3×2in. The main clamp is 3×3½in. amidships, and there are two bilge clamps on each side, each 2×2½in. at middle of length and tapering to the ends. The partner beams are 3¼×3¼in. The frame is strengthened by steel plate floors and gussets and a steel deck beam crosses the cabin, but very little metal is used in the construction.

The planking is single below the flat of the floor, 1⅜in., but on the bilge and top sides it is double, the inner skin, of ½in. white cedar, laid diagonally, and the outer, of ¾in. mahogany, laid fore and aft. The plankseer and bulwarks are of mahogany and the deck is of 1¼in. white pine, tapered from the middle to the ends.

The deck is a very handsome piece of work, the sides have a fair sweep from stemhead to the archboard, the entire sternpiece being fashioned from a single piece of mahogany. The fittings are specially neat and shipshape, and well placed. The main cleats are of a new pattern, a brass base with two hollow uprights, the horn of the cleat being of *lignum vitæ*, about 15in. long, held by the two uprights, through which it passes. The running part of the runner leads through a light standing block of sheet-iron on the plankseer and the tackle is led along forward to an eyebolt, lying directly on the deck with the fall leading aft.

The forecastle is very long and quite roomy and airy. At the after end is an icebox, on the port side, with shelves beside it, on the starboard side is the galley, with shelves; there are the usual lockers, forward in the eaves is the crew's w. c., and four hammock cots are slung.

The main saloon is finished in butternut and mahogany, with transom and buffet on each side. There is full headroom under the companion and skylight, but the steel deck beam already mentioned divides the cabin into two parts in an inconvenient way. The entrance is directly into this saloon.

The steerage has on the port side a set of shelves, and on the starboard side a a toilet room and w. c. Abaft this is a good ladies' cabin.

As compared with Syce, the accommodations are considerably more cramped in a fore and aft direction, and there is not the same room below. This is in part due to the lessened length, 1ft. 6in. shorter than Syce; but it is largely compensated for by the amount of space abaft the ladies' cabin. The whole length of the long after overhang is available for stowage of sails, etc, and the fore end of this space, where it is entered from the deck, is very capacious. While the cabins compare unfavorably with those of Syce, when it comes to the stowage of the numerous stores and other articles that must be carried even on a racing cruise, the advantage is the other way.

The cockpit is only about 2ft. ×4ft., just enough for the feet of those on deck; but enough of the surrounding deck is inclosed within the limits of a 6in. mahogany coaming to make very comfortable seats about this limited space. The yacht steers with a short steel tiller.

The rig is modern in all of its details, and the sails were made by Lapthorne & Ratsey.

In this yacht, as in Syce, Mr. Frank Wood has most faithfully carried out the wishes of the designer as expressed in the specifications, and has turned out a very perfect piece of yacht building; in fact, these two yachts are the best of their kind yet built in this country.

YACHTING NEWS NOTES.

Yampa, schr., R. S. Palmer, arrived at Kiel from Petersburgh on July 29, and sailed next day for Southampton.

The special regatta of the Stamford Y. C., set for July 28, was postponed indefinitely on account of the heavy gale of that date.

Alga, steam yacht, better known as Veto, long owned by the late George Law, was sold at auction on July 27 by Mr. Law's executors. She was purchased by Clarence M. Busch, of Pittsburg, Pa., owner of the steam yacht Nada, for $12,900.

Hildegarde, schr., George W. Weld, arrived at New York on July 31, in tow from her builder's yard at Wilmington, Del., and at once docked at the Erie Basin for painting and cleaning up. The yacht has just been delivered to her owner, who will use her on the New York Y. C. cruise. The builders, Messrs. Harlan & Hollingsworth, have shown commendable energy in completing the yacht within the very short time that has elapsed since the contract was signed.

We have received the first annual supplement to Lloyd's Yacht Register, containing a number of additions, up to June 19, to the main volume.

On July 19 the steam yachts Enquirer and Pathfinder started from Chicago to race to Milwaukee for a $200 cup. The two ran very evenly until off Waukegan, when Pathfinder gave up. Enquirer is owned by W. J. Connors, of Buffalo, and Pathfinder by F. W. Morgan, of Chicago.

Hermione, steam yacht, was in collision with the steamer City of Troy on the Hudson River on the night of July 28, losing her headgear and damaging her stem, bulwarks and figurehead. She went at once to the Erie Basin Drydocks, where repairs were hurriedly made in order that she might be ready for the cruise on Aug. 2.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N. 21st St., Phila., Pa.

The A. C. A. Meet.

ON Friday of this week the eighteenth annual meet of the American Canoe Association will open on the old camp ground on Grindstone Island, facing Eel Bay. Com. MacKendrick expects to be on the ground by the first of the week, and to have everything in order for those who may come in ahead of the formal date of opening. All the usual arrangements for transportation, mess, etc., have been carried out, and in view of the general satisfaction with the management last year at the same place, there is every assurance of further improvement this year. Mr. D. McElveney, of Albany, who ran the mess last year, and also in 1895, again has charge, and will provide meals at the regular price, $1 per day. By giving three days notice to Mr. H. C. Morse, chairman of the camp-site committee, tents, camp chairs, cots and tables may be rented, thus saving all trouble and expense of transportation. The new year book of the Association is a very creditable production, especially as Com. MacKendrick and Sec'y-Treas. Blake, who have had charge of it, are new men at this work. It is illustrated by a number of half-tone photos of camp views. A new feature is a very full list of names of members who are ready to furnish cruising information relating to various localities. The greater portion of the United States and Canada is covered in this list, which will be of great service to cruisers.

CANOE NEWS NOTES.

THE New York C. C. has just published its year book for 1897, containing the constitution of the club, list of members, 100 in all, with 13 honorary members, the rules for its international cup, and other similar matter.

The new year book of the Humber Yawl Club, of Hull, Eng., is just out, and is quite as artistic and interesting as its predecessors. The title page shows a unique and striking design by Albert Strange, of Scarborough, Eng., owner of the canoe yawl Cherub. Mr. Strange also contributes a sketch in black and white, a scene in Blakeney Harbor. There are several reproductions of collections of photos taken by members on the Holland cruise and about the Humber and Hornsea Mere. Mr. George F. Holmes, the mate, contributes some of his clever pen sketches, as usual, showing different episodes of yawl cruising. Two designs are given: one of a 20ft. ×6ft. 4in. canoe yacht, Birdie, a powerful and able centerboard craft, and one of the two 15ft. canoe yawls, Viking and Violet, built by J. Akesta for H. Wallis and G. W. Hind. The club has a membership of seventy-five, including several ladies. The list of races and cruises for the past season, including the Holland cruise, shows a commendable amount of interest in both branches of the sport.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Velocity of a Falling Bullet.

Highlands, N. C.—I notice a reply to P McC. in Forest and Stream June 12, which is one frequently made, as to the velocity of a ball fired directly upward, on its return to the ground. It is easily demonstrable that the return of the ball will be made in the same time and with the same velocity as the upward flight of it. For the upward force is exerted to overcome gravity, and when the ball stops the upward force is exhausted. Now it is clear if we say the upward force is x and the return force is y; x must be equal to y, or if not where has the force expended gone to. The resistance of the air is the same both ways, that is clear. Hence, if a ball fired directly upward should fall on the head of the shooter, the wound inflicted would be equal to the direct effect of the ball discharged point blank. Further, what stops the ball? Clearly the resistance of the air and the force of gravity. Now, the ball in its upward flight has overcome both these and neutralized them. Immediately the influence of these is exerted on the ball and it descends, and as the resistance of the air is equal both ways the gravity must cause the ball to fall with the same force and in the same time as it ascended; or, in other words, the upward impulse being equal to the force of gravity, this must be equal to the descending impulse, and both impulses are then equal, the resistance of the air being equal both ways. H. Stewart.

[Our correspondent errs in an important particular. The resistance of the air lessens the velocity of the bullet both ascending and descending. This is, perhaps, best illustrated by a practical example. The extreme vertical range of the .30cal. army rifle is given as about 2,000yds., and the muzzle velocity of its bullet as 2,000ft. per second. Assume that the bullet has been fired vertically upward, and having reached a height of 2,000yds., begins to fall. The first second of its fall (leaving out of account the resistance of the air) it drops with a velocity of a little more than 32ft. per second, the second second with a velocity of 64+feet per second, the third with a velocity of 96+feet per second, and so on. To reach the earth at this rate would require something over 19 seconds $\left(t=\frac{\sqrt{H}}{\frac{1}{2}g}=\frac{\sqrt{6,000}}{16}\right)$. But as the force of gravity only increases the velocity of its fall, the fixed amount of 32+ft. per second, at the end of 19 seconds or at the moment of impact with the earth, its velocity would only be 608ft. per second (v=gt.=32×19). As a matter of fact, it started with a velocity of 2,000ft. per second, so we see that the velocity of the bullet on striking the earth cannot be compared with its initial velocity. To put it in another way, it would require 62½ seconds' time for a falling body acted upon by gravity alone to attain a velocity of 2,000ft. per second $\left(t=\frac{v}{g}=\frac{2,000}{32}\right)$ and this would necessitate its being dropped from an elevation of nearly twelve miles, a distance extravagantly in excess of the vertical range of any small-bore projectile—($H.=\frac{1}{2}gt^2=16\times3,906$)]

In both cases the figures for the velocity of the falling bullet are obtained without taking into account the resistance of the air, which would, of course, tend to reduce the velocity, so that the actual disparity between the upward and downward flight would be still greater than appears

Our correspondent's contention would be correct only if the bullet were fired in a vacuum. In that case, the bullet, starting with a velocity of 2,000ft. per second, would attain a vertical elevation of nearly twelve miles, and return to the earth with exactly the same velocity with which it started.

Trap-Shooting.

FIXTURES.

Aug. 13.—Rochester, N. Y.—Tournament of the Rochester Rod and Gun Club Targets.

Aug 14—Rochester, N. Y.—Elliott-Glover match for the Kansas City *Star* cup. Also all-day shoot at live birds, under the management of Sim Glover.

Aug. 18-19.—Warsaw, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—Warren, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y

Aug. 24-25—Buffalo, N. Y.—Tournament of the Bison Gun Club. Targets C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

Aug. 25-26.—Montpelier, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club. $200 ddded money.

Aug. 26-27.—Waterloo, Ont.—Tournament of the Ontario Rod and Gun Club League. W J Marshall, Sec'y-Treas.

Aug. 31-Sept. 2.—Sutton, Neb.—Tournament of the Sutton Gun Club. $150 added money, as well as merchandise prizes. E E. Hairgrove, Sec'y.

Sept 6.—Meriden, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 6—Marion, N. J—Annual Labor Day tournament of the Endeavor Gun Club. A. R Strader, Sec'y.

Sept 7-10.—Detroit. Mich.—Jack Parker's annual tournament.

Sept 14-16—Kansas City, Mo—Tournament of the Schmelzer Arms Co. Merchandise and amateurs

Sept. 14-16—Des Moines, Ia.—Tournament of the Capital Gun Club. S. C. Quimby, Sec'y.

Sept. 15-16.—Portsmouth, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—Indianapolis, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—Passaic, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. W. H. Huck, Sec'y, Rutherford, N. J.

Oct. 6-8.—Newburgh, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—Greensburg, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Fulford's letter to "Charlie and Mac," which appeared in our issue of July 31, has attracted attention to a subject that has been in evidence very much this season: we refer to that of professionals at trap-shooting tournaments. It is a fact that there have been more "professionals barred" and "open to amateurs only" tournaments this season than at any other period in the history of trap-shooting. It is also a fact that it has been harder to draw a crowd, even with $500 added money, than at any time since added money became a feature at tournaments. We do not think the professional shooter is altogether to blame for the lack of patronage; no doubt he scares some shooters away, but there are several other causes, chief of which are the multiplicity of gun clubs, the large number of tournaments held every season, and the ease with which any shooter can now get all the shooting he wants close around his home It is also an expensive thing to go to a tournament, and times are such that fat pocketbooks are a scarcity.

Tom Keller is off again. He doesn't get into New York and have a chance to go the rounds of his acquaintances before he blows out again, and we don't see him again until he happens to be wafted in once more All of which means that Tom is a hustler; that the King Powder Company and the Peters Cartridge Company know it; and that Tom has lots of friends up here who want to see him oftener than they get a chance to do nowadays. No doubt he'll be back by Sept 28, the date of the New Jersey State Sportsmen's Association's tournament A Jersey shoot without Tee Kay would be like a julep without "the weeds."

H. P. Collins was in the city on Monday of this week, *en route* for the Lewiston Interstate shoot. He was to pick up U. M. C. Thomas on the midnight train at Bridgeport, and the pair were going through to Lewiston together. "Du Pont" Collins reported business good and work quite numerous to satisfy all his wants. On his return from Lewiston he will make a ten day's trip to the South and hopes to be back in time for the Montpelier shoot in the end of August.

The ten-men team race between the Eureka and Garfield gun clubs of Chicago, shot on July 24, was a very close affair. The Eurekas won by 7 targets, scoring 217 to 210, each team shooting at 250 targets. The Eurekas' average was 86.8, a decidedly high team average; the Garfields made an average of 84, an average for a ten men team that is not to be despised.

The date for the fifth tournament of the Pennsylvania and Ohio Border Gun League has been changed from Aug 19 to Aug. 12, a week earlier than was intended. The tournament will be held as announced—at Warren, O., under the auspices of the Warren Gun Club.

The programme for the Montpelier, Vt., Interstate Association's tournament, Aug. 25-26, is now ready for distribution, and can be had on application to the secretary of the club, Mr. George B. Walton. The programme calls for ten events on the first day, five at 15 targets, and five at 20 targets each. All the 20-target events are at known angles, and all the 15-target events, except the first one, event No. 1, are at unknown angles; No. 1 is at known angles. The events run alternately, a 15 and then a 20. The club adds $90 on this day, $8 to each 15-target event, and $10 to each 20-target event. The entrances are as usual, $1.50 and $2. On the second day the first nine events on the programme are precisely the same as on the first day. The same amount of added money is also apportioned to each purse. The tenth event is a handicap affair, 25 to 23 targets, known angles, $2.50 entrance, with $30 added to the purse. This makes a total of $110 added money on the second day. The Rose system of dividing purses will be adhered to, but the ratio points are 5, 4, 3 and 2, there being four moneys in every event Guns and ammunition should be sent in care of H. A. Fiske, Montpelier, Vt. There will also be, of course, plenty of shells for sale on the grounds. The shooting grounds are very easy of access, being only ten minutes' ride from the hotels, of which four are spoken highly of in the programme: the Pavilion, Montpelier House, Exchange and Union House. The proprietors of each of these houses are members of the local gun club, and will do their level best to make things comfortable for their guests.

So Fred Gilbert has once more wrested the target championship title from Rolla Heikes. When Fred first won it at the Guttenberg race track in May of last year, he practically took away from Rolla the title which had been conceded to him in the past. On that occasion Fred shot well, and his victory, meeting as he did the cream of the talent in open competition, was well deserved and thoroughly popular. Then came the individual contest of Aug. 20, 1896, and Rolla once more regained the title after a close and exciting match all through, from start to finish. And now comes Fred's phenomenal score of 142 out 150, an average of 94.6. This average is a remarkable one even when made under the usual conditions of unknown angles; but on this occasion it was made on 50 targets, unknown angles; 50 targets, expert rule, one man up, the five traps down; and 25 pairs. A man who can make 94½ per cent. at this mixed style of shooting is indeed worthy of the title of champion. In the blaze of Gilbert's glory we must not lose sight of the fact that Rolla made a great average, too. His percentage of 90.6 is a great big percentage. Last year he won with a lower average, and his two targets lost right at the end of the match of July 31 last, his 148th and 150th (as per score, which appears elsewhere), look as if Rolla might have improved his average had the match been closer. It was the battle of the giants, and there is yet the rubber game to be played.

We are always glad to give advance notices of tournaments, and to make notes of the prominent points in the programmes for such shoots. To enable us to do this, however, we must have the programmes mailed to us in plenty of time for the notes to get before the readers of Drivers and Twisters at least a few days prior to the shoot. The programme for the annual tournament of the Central Gun Club, of Duluth, Minn., July 28-29, was one of those which arrived too late. This is always a good shoot, and the management this year seemed confident that the annual shoot of 1897 would be no disgrace to its predecessors. It was "to be a strictly amateur shoot, with professionals barred." Notes in the programme stated that: "Manufacturers' agents, who wish to show their guns or ammunition, will be welcome to shoot in all events for the price of the targets only." Another note, one that is very seldom seen in a programme, was the following: "If a shooter fails to cock his gun, or neglects to push up the safety, it shall be a 'no bird.' But no shooter shall refuse a bird because of a difficult height or angle, provided it be a fair bird." We scarcely agree with the "no bang, no bird" rule for tournaments; for club shoots, outside of badge or medal contests, we favor it, for there are lots of beginners who forget their safety and do a whole lot of unusual things.

A couple of New Yorkers and a few Peekskill and Newburgh, N Y., shooters took a day off on Saturday last, July 31, and went up to visit Neaf Apgar at his new home, Pine Point Club Hotel, Orange Lake, near Newburgh. Neaf has a magautrap going whenever necessary, and Darby can pump her to beat the band. But Capt. Money found the background, all sky and water practically, just to his liking; out of the last 143 he shot at, he lost just three targets. His load was 3drs of E. C. No. 1, in both Smokeless and Leader shells. The Leader load was what is known to the boys as "Rolla Heikes's load." What with fishing, shooting and boat racing, and with such trifles as frog catching and snake hunting thrown in every day, Neaf is now far more like the typical boniface than he was when he left New York He actually weighs in the neighborhood of 150lbs., and is red-faced at that.

Arrangements of the tournament of the New Jersey State Sportsmen's Association are being pushed along rapidly, there being no time to waste between now and the dates of the shoot, Sept. 28-Oct. 1. Jerseymen and others will find that it will be quite easy to get to the Clifton race track, Passaic, N. J., as the Erie Railroad will stop several convenient trains right at the entrance to the track. The programme will be an attractive one, both for natives and for strangers to the soil Those who want to compete for the valuable merchandise prizes in the State events, and who are not yet members of the Association, or members of a club that is a member of that body, had better send in their applications for membership right away to W. H. Huck, secretary of the Association, Rutherford, N. J. Club dues are only $1 per year, with a membership fee of $2. For individual members the membership fee and annual dues are $1 each.

We understand that we are betraying no secret when we state that M. Herrington leaves for the Yukon in a very few days indeed. M. W-A Herrington has become such a standing dish at local tournaments and club shoots of late years, that future gatherings of the same kind will, for some time to come, seem unseasoned to the taste. This departure of Mr. Herrington for the gold fields will be news to most of our readers; it was a surprise to ourselves. He will carry with him many good wishes for his success in the new field he has chosen for his work; in all seriousness we wish him a merry Christmas and a very happy New Year.

We met Irby Bennet on Monday morning last in V. L. & D's new store, three doors above Irby's usual resting place, the Winchester Repeating Arms Company's store 312 Broadway. Irby was a little "distrait," (he chose that word himself) owing to the fact that he could not manage to arrange his business matters so as to get to Lewiston this week. He intends to get up to Montpelier, however, and will make one of the "all water-route" party from New York on the evening of Aug. 23. He gave us news of Tom Divine, telling us that Mr. Divine was in the dumps. We would suggest that Mr. Divine comes once more to the North, and joins the party to the land of maple sugar.

On Tuesday, Aug 17, the Brooklyn Gun Club will hold a shoot at its grounds, Liberty avenue and Enfield street, at the terminus of the Kings County Elevated road in Brooklyn. The main event will be a shoot for a gold watch, a handicap affair, $2.50 entrance, 30 targets per man, unknown angles, with an allowance of extra targets to shoot at. Shooting will commence promptly at 1 P. M., the handicap event being started at 2 sharp. No regular programme will be gotten out, but other events will be made up to suit the shooters present.

Paul R Litzke writes to us from Little Rock, Ark., as follows: "Mr. George Clements, of Pine Bluff, has challenged Mr. H. Conner, of Little Rock, to shoot a match for the individual State target championship trophy now held by him, and has posted a forfeit of $10, as the conditions prescribe, with Mr E. A. Howell, treasurer of the Arkansas State Sportsmen's Association. The conditions of the contest are 50 single targets, unknown angles, challenger to put up $10 against the trophy; winner to take trophy and money, loser to pay for targets."

Energy and popularity go a long way toward making a shoot a success. Look at the Emerald Gun Club's merchandise live-bird shoot at Dexter Park, L. I., on July 9. Conditions: 7 live birds, $4, including price of birds, class shooting, merchandise prizes; forty-six prizes and forty-nine entries! And everybody seemed to enjoy the day's sport, particularly Dr. G. V. Hudson, one of the prime movers in the shoot, who shot at 24 birds during the day and never missed one of them Ferd Van Dyke also scored everything in sight, running 27 without a miss.

J. S. S. Remsen, of Brooklyn, N. Y, is just now taking a rest and a fish on the shores of Lake Champlain. He writes to a friend in the city that he will be on hand at the coming contest for the Recreation cup, Aug. 11, on the grounds of the Bergen County Gun Club, of Hackensack, N. J. Remsen has two wins for the cup, and so has F. Sinnock, of Newark, N. J. As there are only three more shoots for the cup it becomes imperative for both these shooters to be on hand on each and every occasion.

Daniel J Bradley, the hero of the Bradley-Murphy match at Carteret in January, 1896, made a great record at Elkwood Park on Monday, Aug. 2. He scored 95 out of 100 in his match with Dr. Gagnon, running his last 47 straight. He then took part in two miss-and-outs, running another 20 straight, making the great total of 67 without a miss The birds were not a fast lot, but the score is a great one under any conditions. Dr. Gagnon scored 84, but at one time he had a run of 35 straight.

The Sutton, Neb., Gun Club will hold a three days' shoot, Aug. 31-Sept. 2. There will be several fine hammerless guns offered for competition, in addition to several other valuable merchandise prizes, while the club will also add $150 in cash to the purses.

The committee who has in charge the getting out of the programme for the tournament of the New Jersey State Sportsmen's Association is working hard at it, and will have the programme ready for distribution by the first week of September. The dates are Sept. 28-Oct. 1, and the tournament will be held at the Clifton racetrack, Passaic.

In the shoot of the Michigan Trap-Shooters' League, held July 27-28 at Bay City, Mich., Jack Parker won the general average prize. P C. Wood, who also hails from Detroit, was second. Tom Graham, Wm. Thompson and Joe Marks were third, fourth and fifth, respectively.

Now that the rainy spell is over, we can look for more target shooting around New York. The fact that two or three men are away after bay birds, doesn't make much difference around here; there's always enough on hand to make up a squad or two, and pretty hot squads at that.

Aug. 2. Edward Banks.

Messrs. Heikes and Gilbert.

Dayton, O., July 31.—Rolla O. Heikes, of this city, and Fred Gilbert, of Spirit Lake, Ia., shot their match here to-day for the target championship of the United States and the cup emblematic of the championship. The cup was donated by the American E. C. Powder Company in May, 1896, at the company's tournament at Guttenburg, N. J., and was then won by Gilbert in open competition. He held the cup until Aug. 20 of the same year, when Heikes defeated him at Watson's Park, Chicago. On that occasion the scores were 48 to 47 on the unknown angles, 45 to 44 expert rules, and 40 to 39 on the doubles, a total of 133 to 130.

To-day's match resulted in a win for Gilbert by the wonderful score of 142 to 136. The totals were respectively: Gilbert, unknown angles, 48; expert rules, 48; doubles, 46. Heikes, unknown angles, 47; expert rules, 44; doubles, 45.

Dr. L. C. Adams was selected judge by Mr. Heikes; Ralph Trimble judge by Mr. Gilbert; Frank Alkire, referee; Capt. Ashley Brown, official scorer.

THE RACE FOR THE CHAMPIONSHIP.

At least 400 spectators witnessed the match, and grew enthusiastic in their applause as the exciting race progressed. On the unknown angles Gilbert obtained a strong lead, breaking 38 straight before making a skip. Heikes commenced with a loss of 3 out of his first 20, finishing strongly with 30 straight. This gave Gilbert a lead of one break only. Then came the 50 targets, expert rules. Gilbert lost his 2d target, and then made the remarkable run of 44 straight before he lost another, finishing his 50 with a score of 48. Heikes dropped 5 out of his first 25, but broke 24 out of the last series, going out with 44. Gilbert thus had a commanding lead of 5 breaks, with 25 pairs to be shot at. At this style of shooting both shot very strongly. Out of his first 11 pairs, Gilbert lost one target, his 6th, the 2d bird in the pair from Nos. 2 and 4 traps. After breaking 21 out of 22, he lost both targets in his 12th pair (Nos. 2 and 4 traps). He ran 8 pairs straight next, going out with 46 out of 50. Heikes lost only 5 targets out of his 50, making runs of 8, 7 and 4 pairs clean. It will be noticed that Heikes lost the 2d target in each of his last two pairs.

Conditions: 50 targets, unknown angles, 50 targets, expert rules, one man up; 25 pairs, known angles, A. S. A. rules:

Unknown angles:

SWEEPSTAKE SHOOTING.

The programme for the day opened at 8 A. M., in Fairview Park, with a 20-target race. Eight 20-target events were shot during the day, each being $2.50 entrance, five moneys. The first seven events were shot prior to the championship event. Scores:

George F. Stevens, Sec'y-Treas.

The Elliott-Glover Match.

Last week we published Glover's acceptance of Elliott's challenge for the Kansas City *Star* cup, and also Budd's acceptance of Elliott's challenge for the Du Pont trophy. Curiously enough both men named the same date and the same hour—Aug 14, 2 P. M.—but the places chosen were widely different. Glover naturally enough named Rochester, N. Y., but Budd chose Eau Claire, Wis. Receiving the above acceptances shortly before going to press, it was impossible to find out what was going to be done about the clashing of dates.

We learn now that Elliott will take up Glover's case on Aug. 14, and will be in Rochester in plenty of time to shoot the match. To fill out the day, Glover will have other events at live birds arranged to suit shooters who may be on hand to see the match. The Rochester Rod and Gun Club will hold a target tournament on the day prior to the match. It has arranged a programme of eleven events, of 10, 15, 20 and 25 targets, with entrance fees at the usual rate of 10 cents per target. There will be four moneys in every event, the purses being divided 35, 30, 20 and 10 per cent.

Bison Gun Club.

Buffalo, N. Y., July 30.—The winners in this week's regular medal shoot of the Bison Gun Club were Bauman, 333 and Wrench. Scores:

Messrs. Elliott and Budd.

Clear Lake, Ia., July 21.—*Editor Forest and Stream:* Mr. J. A. R. Elliott has notified me that he could not meet me on Aug. 14 at Eau Claire, Wis., and shoot our match for Du Pont trophy owing to his having to meet Mr. Sim Glover at Rochester, N. Y., same date, in a contest for Kansas City *Star* cup. I will now name Aug. 28, at 2 P.M., as time, and Eau Claire Gun Club grounds, Eau Claire, Wis., as place for our contest, and trust this may be satisfactory to Mr. Elliott. C. W. Budd.

The Indian Wolf Shoot.

In our last issue we gave the story of the Indian Wolf shoot at Clear Lake, Ia., July 20-23, from the pen of our correspondent, Hawkeye. Owing to our distance from the scene of this great pow-wow, and the exigencies of the Great White Father's mail service, we were somewhat lucky to have been able to do even as much as that.

We showed how Buffalo Hump (Frank Parmelee) landed first average for the shoot with an average of 90.5 for 600 targets shot at. Next to him came Bald Eagle and Heap Talk, two mighty chieftains, the possessors of many scalps, with an average of 89 6 each. (For purposes of identification by those who know them not under the above appellations, we would state that the chiefs referred to are respectively, Rolla O. Heikes and Fred Gilbert). Chris. Gottlieb, a white man, and a very white man, too, who hails from Elliottstown, better known perhaps as Kansas City, Mo., won fourth honors with a general average of 88.1. Behind him, in order of merit, came Wipestick (Chan Powers), Moonface (Charlie Grimm), Long Talk (Tom Marshall, the hero of this year's Grand American Handicap), Dago Chief (Charlie Budd), No Talk (Geo. Loomis), Eddie Bingham and Kibby. It will thus be seen that out of the eleven who shot through the entire programme, only three were not members of the famous band of Indians who fathered this shoot.

We propose now to review the work of the shooters in detail, giving each day's scores as made, placing the shooters in order of merit.

First Day, July 20.

The programme to-day, as on each of the three target days, consisted of ten 20-target events, entrance $2.50, targets included, $15 added to each purse, five moneys.

There must have been something strange in the flight of the targets or in the background, for at the start things were very much mixed up. Gilson was high in No. 1 with 18, four 17s dividing second money. With five moneys, this let in the 14s, and made Tom Marshall and Corey glad. In No. 2 there were two straights, but in Nos. 3 and 4, 19 was high. In the matter of straights, Heikes was high with 3, Gottlieb had 2, and so had Parmelee, who bunched his in Nos. 6 and 7. Gilbert, Grim and Valentine each made a straight.

Parmelee was high to-day with 183 out of 200, an average of 91.5. He shot a very steady gait, seldom making anything like a break. Heikes was second with 181, an average of 90.5; he began rather badly with 17 and 16 in Nos. 1 and 2, respectively. His scores for the day show up rather curiously for such a steady and reliable shot; his last six scores were 17, 20, 17, 20, 17, 20! Gottlieb, Powers and Grimm, finished in order named.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Ave.

Second Day, July 21.

If there was something curious about the scores of the first day, what must be said of those of to-day? Only four straights were made; Gilbert and Parmelee each made one in No. 5, and Gottlieb and Loomis each scored a straight in No. 7. In No. 3, 18 was high, but in all the rest of the events first money went to the 19s. In Nos. 1, 2, 4, 6, 8 and 9, there were only two 19s for first money; but in No. 10, with only 25 entries, eight 19s and three 18s showed up for first and second moneys.

Fred Gilbert landed in first place to-day, with just 90 per cent. for his 200 targets. He began rather weakly with 15 in No. 1, and 16 in No. 3, but picked up and went to the front. Parmelee was second on the list with 88 per cent., or 24 targets lost out of 200 shot at. His scores show three 15s, in Nos. 1, 6 and 7, a total of only 45 breaks out of 60 shot at. In the other seven events he broke 131 out of 140! Gottlieb, who also started off poorly with a 16 and 15 in Nos. 1 and 2, respectively, was third for the day, two breaks ahead of Heikes, who made a 19, six 18s, and a 17, 15 and 14. In Nos. 7, 8 and 9 he lost just 16 targets; at the end of No. 6 he was high man for the day, with 11 losses out of 120 shot at. Altogether, the scores to-day, without any actual knowledge of the circumstances under which they were made, such as wind, light, etc., are remarkably low for the quality of the shooters engaged in cracking the targets.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

Third Day, July 22.

It was easier shooting on this day, judging from the high averages made. Five men made better than 90 per cent., and a whole raft of straights—fifteen of them—were chalked up on the blackboard. Powers was high with 15 lost targets out of 200 shot at—an average of 92.5. His position as first on the list was not due to any large number of straight scores, for he only made one, and that was in No. 3 event; but he shot a very strong gait all through, making three 19s and six 18s. Two of his 19s were good ones, made just at the right time, for they netted him second money alone in Nos. 2 and 4. Heikes was second with one break less than Powers, while Parmelee and Gilbert came along neck and neck for third and fourth places, only one break separating them from Heikes. Gilbert's scores are interesting: He started off with a loss of 10 targets out of his first 40 shot at; then he braced up with a 19, following it with three consecutive 20s, then two 19s, and lastly, two 18s; out of his last 160 targets he broke just 153—an average of 95.6. Gottlieb was fifth with 181 breaks; he made a straight in Nos. 1, 3 and 4, falling down to 15 out of 20 in No. 2; he also had another 15 out of 20 marked up against him in No. 7.

The 15 straights were divided up as follows: Gilbert and Gottlieb 3 each; Heikes, Parmelee and Marshall 2 each; Powers, Budd and Henshaw 1 each. With so many straight scores, nineteen won first money in only two events on this day—Nos 7 and 8. In Nos. 6 and 10, Gilbert and Parmelee, respectively, took first money alone on 20 straight.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

Fourth Day, July 23.

This was live-bird day, and the scene was changed from Grand View to the camp grounds near the Oaks Hotel. The event of the day, of course, was the 25-bird race, $25 entrance, birds included, $50 added, four moneys, with a cut glass lemonade set donated by E. S. Rice, of Chicago, agent for Du Pont and Hazard powders.

It was Heap Talk's lemonade set and first money, for he went out with 24 out of 25, losing his 16th bird. This 16th round was fatal also to Charlie Budd's straight score; both he and Gilbert were straight up to that round, but Charlie's bird managed to get away, and as he lost his 21st and 24th, 23 out of 25 was the best the Dago Chief could boast of. Chan Powers, Frank Parmelee and E. A. Leach divided second money on 23 each; George Loomis, Tom Marshall and Budd dividing third money on 22. Grimm had the good fortune to be alone in the 21 hole, taking 10 per cent. of the purse.

The birds must have been a good lot, as the average for the 365 shot at in this event was only just a fraction over 80 per cent., 294 kills out of 365 shot at being a larger proportion of ciphers than one generally sees on summer birds. Below are the scores in detail:

Fred Gilbert	2122112221222212012221222	—24
E A Leach	2222202212112022222222222	—23
C M Powers	2111121222110121022211222	—23
F S Parmelee	2201222221222222101222222	—23
G W Loomis	1122010121122210212222121	—22
T A Marshall	2022222222202220222221222	—22
C W Budd	2212212221222220222102101	—22

Fulford and Philanthropy.

New York, July 31.—*Editor Forest and Stream:* As a trap-shooter I was much interested in Mr. Fulford's criticism of the sayings of Messrs. Willard and McMurchy, published in your issue of to-day's date. He says: "Now I contend that professionalism has not hurt trap-shooting at all; it has helped it in the way of introducing better guns, loads and methods in shooting. * * * That professional shooters are not responsible is proven by the fact that strictly amateur shoots are not as well patronized as open shoots."

That there was a benefit conferred by the professional shooter at a certain period of transition from the muzzleloader to the breechloader, when the trap-shooters at large knew but little about the more improved arm, does not admit of argument. There were many kinds and qualities of the breechloader, some cheap and worthless, others high-priced but faulty in mechanism, etc., so that the professional—salaried or otherwise—really did a material service to the public in educating it on guns. Later there was a similar service rendered in the experimental stages of nitro powders and the gradual disuse of black powder at the traps and the use of nitro powder instead. There was then something to learn and something to teach. But the number of teachers multiplied out of all ratio to the number of pupils. There may be too many wolves infesting a country for the number of sheep. The sheep might stand a reasonable amount of killing and still increase in numbers, but if the wolves killed faster than the sheep could produce, their numbers must naturally decrease. Some wolves thus may do little harm, but there mustn't be too many.

That trap-shooting has flourished is not due to the professional. He was but a coincident feature of it—not a cause. Had the old system—wherein the professional and all others met on a dead level—been still in use, there would have been little trap shooting to-day. That the *ultra* professionals are feared and looked upon as detrimental to the sport, is shown by the multiplicity of systems which have been devised and tried for the purpose of handicapping them or to improve the chances of the non-professional. The new systems inspired new hopes and further trials on the part of the amateurs. If they couldn't shake off the professional, they at least wished to minimize his wolfish appetite. But to-day the professional has no new principle to teach; no great and new features to demonstrate; nothing but the trade rivalry of manufacturers whose goods are well-known, and have been well-known for years. The teaching and the philanthropy are fictions of the trap world. In the old days there were some wolves. But is to-day not better than "the good old times" just because there are more wolves now than then?

Let us concede that professionalism has done some good—yes, a great deal of good. Has it not also done some harm? The unholy alliances made to scoop all the money at a tournament, the lowering of the diversion by making it a wolfish industry instead of a wholesome sport, etc., have done much to harm it.

The reason that the amateur tournaments are not the perfect successes that the open shoots are, is that they rarely have large purses; they do not encourage the real amateur, that is, the expert or good shots who are not professionals. There is a common belief that the term "amateur" is synonymous with unskillfulness, and that in an amateur shoot the unskillful shot is preferred. If tournament committees would endeavor to be accurate in their expression of tournament conditions, and say that professionals are barred, instead of saying a shoot for amateurs, then the shooting world would know precisely what they meant. When they say a tournament is for amateurs only, the shooters at large do not know precisely who are amateurs and who are not, and there are so many in the "are or are not" class that, rather than meet a possible rejection, they stay away entirely.

However good and useful the professional shooter may have been in promoting trap-shooting in the past, it is not a logical consequence that he will always be so. He is not the same that he was in the past, for he has increased in skill and numbers and business knowledge. He is not only individually skillful; he is an organizer. As a wolf, he is a big wolf, but when it is to the interests of his brother wolves, he knows how to train with the pack.

The pretense of teaching is a sham at this late day. The special knowledge of the professionals of a decade or two ago is the common knowledge to-day of the trap world. Indeed, a shooter can go into any hardware or sporting goods store and get any advice, or load ready made for targets, pigeons, game birds or wildfowl. Every locality has its trap-shooting club whose members have all the knowledge of guns, loads, etc., that is necessary.

This plea of philanthropy is touching. Mr. Fulford is a professional, and as such he would argumentatively present only what was to his own advantage. He does not admit any harm at all from professionalism. Who would expect that he would? But what does he teach? He works for a salary and shoots for money. Very well, he has a right to do so, but he has no right to say that he is doing it to benefit the public. He is benefiting himself.

There never was but one system devised which checked the rapacity of the wolves for the lambs, and that was the Rose system. They could not combine to scoop all the money. They could not drop for place, for the moment a man dropped into a vacant place the system adjusted his share with mathematical accuracy on a fixed ratio, and he had only his part as fixed by that ratio. It gave all a fair chance for sport. who "kicked?" It was the professional. He forgot about his devotion as a teacher, and howled a hoarse wolf howl for the money. The "good old times" may have been what they were, but all time when it is the present time stands on its own merits. Because there were some wolves in "the good old times," it does not follow as a sequence that the wolves made the good times then or that more wolves would make times better now. And it does not follow as a sequence that a wolf, being accused of wolfishness, is the best judge of his own case. When the wolf says to the lamb, "Come to me, pretty lamb, I love you," it is time for the pretty lamb to do some thinking.

A. Lamb.

Western Traps.

EUREKA VS. GARFIELD.

July 24.—The ten-men team race between the Eureka Gun Club and the Garfield Gun Club was held to-day on the grounds of the Eureka Club. The contest was a close one, the home team winning by a margin of 7 targets only. The scores were good. On the side of the Eurekas there were five 23s and three 22s; for the Garfields there was one 24 (Kuss, who missed his last target), three 23s and five 20s.

Taking the teams as they shot, and dividing them off into squads of six, three from each team, the first squad was Dr. Hiller, Goodrich and Cunningham for the Eurekas; Fehrman, Fish and Edgar for the Garfields. In this squad the Eurekas gained a lead of 4 targets with 64 to 60. The second squad was Lamphere, Antoine and Wright for the Eurekas; Bowers, Von Lengerke and Patterson for the Garfields. In this squad the Eurekas added 3 more targets to their lead, scoring 63 to 60. The next squad was Lord, Stannard and Glover for the Eurekas; Neal, Kuss and Conley for the Gerfields. In this squad the Eurekas gained another target, making their total lead 8 targets. The Eureka trio scored 68 to 67 by their opponents, the whole squad only losing 15 targets out of the 150 shot at, an average of 90 per cent. The anchor men were Steck for the Eurekas and Dr. Shaw for the Garfields; the Doctor scored 23 against Stecks 22, reducing the Eurekas' winning lead to 7, as stated above. Scores were as below:

Eureka Gun Club.

Helliman	13	..	11	..	4	Clark	..	..	8	8	..
Levi	12	..	7	11	4						

No. 3 was shot with gun below elbow until the target was in the air; No. 4 was reversed order, and No. 5 at pairs. f

Sec.

The Uxbridge Tournament.

Uxbridge, Mass., July 24.—The tournament of the Uxbridge Gun Club and a terrific thunderstorm were jointly and severally pulled off on the club's grounds to-day. For over an hour the guns were silent, and the members of the four contesting teams present looked out on a fiercer contest raging above. The afternoon was very dark, and coupled with the wind and rain prevented any favorable scores being made in the different events.

Forty-one gunners were present and took a crack at some of the sweepstakes. Over 4,000 targets were thrown from our three-trap system. One hundred and fifty shooters and visitors sat down to a clam dinner served on the club grounds. Emory P. Burbank, of the Uxbridge Gun Club, made 88.1 per cent., it being the highest individual average of the day's shoot.

The miss and-out prizes were awarded as follows: First, Kenerson, ruby ring; second, Walls, $5; third, Whitin, $5; fourth, Link, 500 Squires' hand-loaded shells; fifth, Burbank, 150 Blue Ribbon loaded shells; sixth, Card, 100 W-A loaded shells; seventh, Smith, $2; eighth, Hammond, cut cotton cloth; ninth, Provo, 3lbs. Gold Dust powder; tenth, Rawson, *Outing* for one year; eleventh, Dudley, *Recreation* for one year; twelfth, Corey, *Amateur Sportsman* for one year; thirteenth, Root, pneumatic recoil pad.

In the team race Worcester took first place, Uxbridge second, Providence third, and Woonsocket fourth. The team race was at 40 targets per man, eight men to a team:

Worcester Sportsmen's Club: Knowlton 34, Link 34, Walls 31, McClellan 29, Russell 29, Kennerson 27, Knowles 25, Parker 20—229

Uxbridge Gun Club: Burbank 35, Ford 30, Noyes 30, Day 20, Whitin 29, Johnson 26, Rawson 22, Mansfield 18—220.

Providence Gun Club: Corey 35, Sheldon 31, Green 27, Hammond 27, Whitaker 26, Smith 26, Root 25, Arnold 7—204.

Woonsocket Gun Club: Banfill 31, Whipple 28, Darling 24, Card 23, Barber 22, Seagrave 22, Mills 21, Cahoon 20—191.

The scores in the sweepstake events were as below, three of the programme events having to be cut out owing to the stoppage due to rain and to the large number of shooters in attendance.

Events:	1	2	3	4	5	6	7	8	9			
Targets:	10	15	15	15	10	15	15	20	20

G. F. Day, Sec'y.

Catchpole Gun Club.

Wolcott, N. Y., July 23.—The first midsummer tournament of the Catchpole Gun Club was held to-day, and was a very successful shoot. The weather was fine for shooting, with the exception of heavy showers about midday, but as preparations were made in the shape of canvas for protection to shooters from the hot sun, it answered to keep off the rain, and the traps were kept busy throughout the day.

Shooting commenced promptly at 9:45 A M upon the arrival of the first trains from east and west, which brought several shooters. The following were from Rochester, N. Y.: Dr. Weller, Byer, Lane, Borst, McCord and others; also Messrs. Wagner and Hunter, from the Hunter Arms Co., Fulton, N. Y.; the Zwilling Bros., from Lyons, N. Y.; Wayte and Ingersoll, from Sterling, and scores of others from Wayne and adjoining counties. Mr. L. V. Byer, of Rochester, was high man for the day, closely followed by Messrs. Lane and Weller, from the same city. Below we give the totals for the day, the programme consisting of twelve events, all of which were finished

In the merchandise event, No 9, the prizes consisted of sixteen valuable prizes given by the business men of our town. In this event there were twenty-four entries. The prizes were given to the highest scores, high guns having first choice, and so on.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
L V Byer	165	146	88.4	Cosad	100	68	68
C Lane	165	144	87.2	Rich	100	65	65
Dr Weller	166	143	86.6	Foster	95	65	68.4
Hunter	165	138	83.6	Vance	65	36	55.3
Wagner	165	137	83	Gillett	60	47	78.3
McCord	165	137	83	Ingersoll	55	37	67.2
Tassell	165	131	79.4	Barker	50	38	76
Wayte	165	129	78.1	Uncle Ben	50	33	66
Wride	165	123	74.5	Fowler	40	25	62.5
Seaman	150	107	71.3	De Witt	35	27	88.1
Carey	135	83	62.9	Egnor	25	21	84
Wadsworth	125	68	54.4	Smith	20	13	65
W Zwilling	115	94	81.7	Hopkins	20	11	55
F Zwilling	115	93	80.8	Fink	20	10	50
Borst	115	89	77 3	Hill	20	8	40

Guns used were: L. C. Smith 17, Parker 4, Ithaca 3, Lefever 3, Winchester 2, Francotte 1.

E. A. Wadsworth, Sec'y.

Missoula Rod and Gun Club.

Missoula, Mont., July 25.—Inclosed please find scores made by our club at a practice shoot held July 21, and at our regular weekly shoot held to-day. You will notice that the attendance is dwindling down somewhat. The fishing in the streams around us proves too strong a temptation for many, and I expect that when the bird season opens on the 15th of next month that our shooting at bluerocks will be about over, though there will be a tournament held in Spokane in October, and some of our club intend going, so no doubt we will have some practice shoots before that time.

July 21.—Twenty-five targets, unknown angles: W. E. Graham 20, J. Forbes 16, R. A. Eddy 15 (out of 20), T F. McLeod 11.

Ten targets, unknown angles: Graham 8, Forbes 7, McLeod 5, Dr. Mills 1.

July 25.—Medal shoot, 25 targets, unknown angles:

R A Eddy.....0011101111100111011110111—13
Dr Mills.....0000000100000000000000000— 1
T T McLeod.....1001110100111001110100011O- 13
E C Mix.....1111011010101110110100111—17

R. A. Eddy wins the gold medal and E C. Mix the silver medal.

In a practice event at 10 singles scores were: R. E. Rodgers 8, Eddy and Mix 5, McLeod 4, Mills 2.

W. E. Graham, Sec'y.

Sandwich Gun Club.

Sandwich, Mass., July 24.—The following scores were made at our weekly club shoot. We have quite a good membership to our club, but it is hard to get them together in the hot weather. Our trap throws the pigeons over 85yds., therefore the shooting is never easy on our grounds. Conditions were 30 bluerocks per man, unknown angles:

W R Procter.....000000000001011000000111000101— 8
G O Arnold.....0010000001101111011000000000101—11
A E Hoxie.....0000000010000100001000010000010— 5
G H Haines.....1111100 0110111111110111111111—25

George H. Haines, Sec'y.

Michigan Trap-Shooters' League.

Bay City, Mich., July 28.—The two days' tournament of the Michigan Trap-Shooters' League was brought to a close this evening. The shoot has been a successful one, the attendance being decidedly good.

On the first day the wind blew nearly a gale, while the skies were dull and heavy. The Bay City team, composed of Shearer, Merrill and Bush, won the team race with 62 out of 75. Thompson, of Jackson, won the E. C. cup, this making his second win in succession.

To-day the attendance was quite as good as that which graced yesterday's shoot. Special interest was taken in the medal contests. Wood, of Detroit, won the medal for experts; Joe Marks, of the same city, won the semi expert medal; the medal for the amateur class was tied for by Shearer and Merrill. On the shoot-off Shearer won by 22 to 15. Wood, of Detroit, in addition to the expert medal, also captured the King Powder Co.'s trophy with 24 out of 25. For the Bay City Gun Club's trophy, Parker and Merrill tied on 23 out of 25; on the shoot off Parker won with the score of 23 to 20. Below are the scores:

First Day, July 27.

In the table below all the events are at 15 targets each, unknown angles:

Events:	1	2	3	4	6	7	9	10	Events:	1	2	3	4	6	7	9	10

No. 5 was a three men team race, open to teams of Michigan gun clubs only. Scores were:

Bay City Team: Merrill 21, Shearer 21, Bush 20; total 62.
Detroit Team; Parker 22, Wood 17, Mercer 21; total 60.
Detroit Team No. 2: Graham 21, Marks 22, Brady 12; total 55.
Saginaw Team No. 1: Wilnite 20, Breck 18, Krogman 17; total 55.
Bay City Team No. 2: Flues 20, Neville 19, Bousfield 15; total 54.
Jackson Team: Watts 15, Cowell 16, Thompson 21; total 52
Saginaw Team No. 2: Carpenter 19, Bliss 17, Bastian 12; total 48.
Saginaw Team No. 3: Mercer 15, Scutter 15, Lidow 15; Total 45.

No. 8 was the 50-target race for the E. C. powder cup. The scores in this event were:

Graham 45, Merrill 41, Parker 39, Cotter 43, Shearer 42, Bousfield 41, Mercer 32, Wood 45, Marks 45, Neville 41, Thompson 46, Bush 40, Clarkson 31, Wolf 31, Breck 43, Brady 44, Krogman 33, Wilhite 44, Brown 18.

Second Day, July 28.

All events, the scores of which appear in the table given below, were at 15 targets, unknown angles:

Events:	1	2	3	4	6	7	8	10	Events:	1	2	3	4	6	7	8	10
Graham	13	14	15	12	11	13	12	14	Watts	11	13	13	13	..	10	8	6

Clarkson	10	10	10	8	..	7	11	9	Baum	..	..	..	..	..	..	8	..
Neville	9	12	13	11	..	10	10	12	Seed	..	..	..	..	..	..	..	2
Cowell	10	11	8	8	..	12	9	9	Ambroose	..	..	..	..	..	..	..	9

No. 5 was the contest for the class medals. Scores:

Experts: Graham 22, Parker 20, Cotter 22, Thompson 8, Bush 22, Wood 23, Harris 15.

Semi-experts: Carpenter 20, Marks 21.

Amateurs: Shearer 20, Brady 12, Neville 18, Merrill 20, Bousfield 14, Mercer 17, Wilhite 19, Baum 16, Hunt 11, Willis 19. In tie Shearer won by 22 to 15.

No. 9 was the contest for the King Powder Company's trophy, handicap, 25 to 30 targets: Graham 22, Parker 22, Cotter 19, Thompson 17, Merrill 22, Bousfield 7, Mercer 16, Wood 24, Bush 20, Marks 14, Clarkson 15, Neville 18, Cowell 20, Seed 15, Jackson 10, Brady 19, Willis 17, Harris 22, Breck 20, Krogman 21, Ambrose 13.

No. 11 was the shoot for the Bay City Gun Club's trophy, handicap, 25 to 30 targets: Graham 18, Parker 23, Cotter 22, Thompson 16, Merrill 23, Bousfield 13, Wood 22, Bush 22, Clarkson 17, Neville 21, Brady 17, Krogman 20, Ambrose 17. In tie Parker won by 23 to 20 from Merrill.

DETROIT.

[The scores furnished are probably incomplete, the totals of Squad 1 in No. 4 on the first day, and the scores of the Clarkson Merrill squad in No. 5 on the second day being apparently missing. F. and S.]

ON LONG ISLAND.

THE EMERALDS' MERCHANDISE SHOOT.

July 29.—The Emerald Gun Club's effort at a live-bird shoot for merchandise prizes was a decided success. The event was brought off at Dexter Park, L. I., this afternoon, and the number of entries reached forty-nine. The conditions were: 7 live birds, $1, including price of birds, class shooting; 12-gauge guns, 28yds. rise; 10 gauges at 30yds. The weather was very pleasant, the day being the first really fine day for at least two weeks. The birds were a moderate lot of flyers, and there was no wind at all to help them. The prizes were divided into classes, and all ties were decided by lot, thus doing away with a lengthy and tedious (as well as expensive) shoot off

This sort of a shoot was a novelty in this part of the country, and as a producer of an enjoyable day's sport is a hard one to beat. The Emerald Gun Club deserves great credit for its enterprise. To Dr. Hudson, Louis Shortemeier, Eugene Doeinck, John Banzer and others is due the smoothness with which the shoot moved along. The scores were:

No. 1, $1 entrance: Thomas Short 7, J. B. Hood 7, Dr. George V. Hudson 7, Fred Pfaender 7, George Piercy 7, Eugene Doeinck 7, Thos. H. Keller 7, W. Fred Quimby 7, Henry Otten 7, Frank Place 7, Theodore Leuthesser 7, Chris M. Meyer 7, Chas. Steutzle 7, Ferdinand Van Dyke 7, L. H Fogarty 6, Wm. Joerger 6, Chas. Steffens 6, F. S. Meade 6, Emil Steffens 6, Henry Koegel 6, Daniel Valenti 6, John H. Voss 6, Wm. Amend 6, Capt. A. W. Money 6, John Hainhorst 6, John Woefel 5, Fred Trostel 5, Dr. Wm. A. Littlefield 5, John H Moore 5, Dr. Wm. Richter 6, Jacob Fisher 5, John P. Dannefelser 5, R. F. Bisbee 5, John Schlicht 5, Chas Lang 5, Henry J. Bookman 5, Joseph Banger 4, Wm. Hughes 4, Emil Weiss 4, Thomas F. Cody 4, Moses McGuinness 4, Otto Brown 4, Henry Mühs 3, Henry Seaman 3, Bernard Amend 3, J. Raymond 2, J. A. H. Dressel 2, George K. Smith 1, Thomas Plunkitt 0.

No. 2, $1, miss and-out, all 28yds. rise, 50yds boundary: Chris. Meyer 8, Capt. Money 8, Van Dyke 8, Leutheuser 8, Piercy 6, Koegel 6, McGuinness 6, Hood 6, Trostel 4, Keller 3, Quimby 2, Seaman 2, Hainhorst 2, Dr. Littlefield 1, Charles Steffens 1. Purse divided.

No. 3, same: Chris. Meyer 12, Capt. Money 12, Quimby 12, Van Dyke 12, Leutheuser 5, Piercy 4, Charles Steffens 3, Koegel 2, Dr. Littlefield 2, Hainhorst 1.

No. 4, same: Quimby 5, Charles Steffens 5, Leutheuser 5, Piercy 4, Capt. Money 3, Koegel 2, Hainhorst 2.

Missouri State Amateur Association.

Little Rock, Ark., July 30.—As predicted in the columns of Forest and Stream several weeks ago, the anticipations of the members of the Missouri State Amateur Association were realized, the attendance at their seventh annual tournament, which was held at Paris, Mo., July 27 to 29, being all that could be desired; the tournament was a success in every particular. The entries in a number of events exceeded forty.

The best individual shooting was done by F. M. Faurote, of Dallas, Tex.; on the last two days especially he did some very excellent shooting, scoring respectively 118 and 117 out of 120 on each of these days, losing just 5 targets out of 240 in the regular programme events.

The trophy contests are always a feature of these shoots, and, as usual were conducive of spirited contests. The live-bird championship medal was again won by Wilmot, of Lexington, which makes the third consecutive win for him. This is a 10-bird event, but he had to kill 20 straight to dispose of those in the tie with him. The other event was the two-men team race for the L. C. Smith trophy. This also brought about a hot contest. The holders, Wilmot and Bates, and Minefee and Greene tied on a score of 47 out of 50. The tie was shot off at 20 targets each, or 40 per team. This resulted in a win for Minefee and Greene by a score of 37 to 35. Minefee and Greene are none other than that clever pair of young shooters from Richmond, Davis and McDonald.

This was an amateur shoot, but the class was an extremely hot one. With such good ones as Sexton, Gottlieb, Faurote, Cornett and Erhardt present, the game was plenty hard enough. The next tournament will be held at Palmyra, Mo.

Paul R. Litzke.

Answers to Correspondents.

No notice taken of anonymous communications

F. E. W., Petty, Texas.—(1) What is the unit of measure used in designating the bore of rifles, for instance $^{22}/_{100}$ths for a 22-caliber, etc. (2). What is the unit of measure used to designate the bore of shotguns? (3). What scale of measure (or weight) is used in powder measures for shotguns? Ans.—(1). The caliber of a rifle is its diameter expressed in decimals of an inch; thus, a .32 caliber is one which is $^{32}/_{100}$ths in diameter. (2). The bore of a shotgun is expressed by a number corresponding to the number of round leaden balls, fitting the bore, which would weigh 1lb. (3). It is an arbitrary measure, corresponding to no other scale.

A. L., Kineo, Me.—My pointer dog is covered with small red blotches on his legs and belly, which cause him to scratch himself about all of the time. He also looks sore around his eyes and ears. The hair is coming out wherever the blotches are. Appetite is good. 1 What has he got? 2. Would it affect children to be near him? Please prescribe. Ans. 1. Mange. Well rub all over him every other day for two weeks the following:

Sublimed sulphur.....1lb.
Oil of tar.....2oz.
Kerosene.....10oz.
Lard oil.....4 pints.

Mix together. 2. No; it would be well not to allow them to handle him much until he is rubbed with the dressing.

H. C. S., Piedmont, W. Va.—I have a pointer which had a slight touch of distemper some six months ago, and this left him with a nervous twitch in right shoulder which I think is St. Vitas's dance in mild form. I thought I had it under control some two or three times, but it seems as though I cannot master it. Dog is perfectly healthy, good coat, etc I put him through a course of strychnine, then Fowler's solution and iron, and now, for about two weeks, I have been giving the following tablets: R Reduced Iron 1gr., Acid Arsenious $^{1}/_{100}$gr, Strychnine $^{1}/_{60}$gr. I started with one tablet three times a day, and am now giving him three tablets three times a day. The dog is of the lumbering Spanish stock. He is just one year old and weighs about 65 to 75lbs Ans.—It is incurable. The twitching will probably become less as the dog becomes stronger. Try Galianism.

F. A. R., Huntington.—1. I am a showman. I have several fine dogs (5), but the baby and best one I own is sick and not able to do his part, so I have had to lay off this season. He is nine months old, a fox terrier. When called upon, he stretches before he will do anything; is covered with a breaking out, scratching continually until the blood starts; will bite himself until I make him stop. The hair is coming out very badly; quite large lumps appear after he scratches. I found in one of your papers June 30, '94, the following: Mag. sulph. pot. carb., sod. carb. Wash in crcolin twice a week. Shall use the above until you answer. I keep all my dogs separate in cages. I find they do better and mind far better. 2. Can you recommend a good book treating on diseases of dogs? Ans 1. Treat for worms. Well rub all over the dog every other day the following:

Sublimed sulphur.....8oz.
Pot. bicarb.....4drs.
Creosote.....4drs.
Kerosene.....5oz.
Lard oil.....2 pints.

Mix together. Give morning and evening a compound sulphur tablet. 2. "Nursing vs. Dosing," price $1. We can furnish it.

PUBLISHERS' DEPARTMENT.

Yellowstone Park.

A COMPLETE TOUR VIA THE PENNSYLVANIA R. R.

The Yellowstone National Park is unquestionably the most interesting region on the globe, for within it is displayed the greatest collection of nature's manifold wonders. Indeed, this mountain bound plateau, high up on the summit of the everlasting Rockies, is a veritable playground for the world's giant forces. To stand and gaze upon them in all their marvelous manifestations, the great geyser upheavals, the fierce steam blasts, the terrible leap of the river, and the awful cañon, is a revelation—an experience to be had at no other point on the earth.

The personally-conducted tour of the Pennsylvania R. R. Co., which leaves New York on Sept. 2, affords the most satisfactory means of visiting this wonderland and viewing its marvelous features. Tourists will travel by special train of Pullman smoking, dining, sleeping, and observation cars in each direction. Eight days will be spent in the Park. Stops will also be made, returning, at St. Paul and Chicago. The round-trip rate $235 from New York, Philadelphia, Baltimore and Washington, $230 from Pittsburg—covers all necessary expenses.

For detailed itineraries and full information, apply to ticket agents, Tourist Agent, 1196 Broadway, New York, or address Geo. W. Boyd, Ass't Gen'l Pass. Agent, Broad Street Station, Philadelphia.—*Adv*

The Shortest Route to Nashville.

The shortest route to Nashville, Tenn., where Tennessee's Centennial Exposition is now in full swing, is via the Norfolk & Western Railway. This popular road to the South offers a choice of three routes:

Route No. 1.—By the famous and beautiful Shenandoah Valley route via Luray Caverns, Grottoes, Natural Bridge, Roanoke, Bristol, Knoxville, Chickamauga—Chattanooga Natural Military Park and Lookout Mountain.

Route No. 2.—By steamer to Old Point Comfort or Norfolk, thence all rail via Petersburg, Lynchburg, Roanoke, Bristol, Knoxville, Chickamauga—Chattanooga National Military Park and Lookout Mountain.

Route No. 3.—Going via Route No. 2 and returning via Route No. 1, or vice versa.

These routes offer the very best opportunity to visit Nashville and the best, most historic and picturesque part of the South at the same time.

For descriptive matter, excursion rates, further information or tickets, address J. E. Prindle, New York Passenger Agent, 387 Broadway, New York.—*Adv.*

Through Buffet Parlor Car between New York and Cape May.

The Pennsylvania Railroad Company announces that, beginning Tuesday, July 27, from New York, and Wednesday, July 28, from Cape May, a through Pullman buffet parlor car will be placed in service between New York and Cape May daily except Sunday. This car will be attached to train leaving New York, West Twenty-third street station, at 12:55 P. M.; Desbrosses and Cortlandt streets, 1:00 P. M., stopping at Newark, Elizabeth, Rahway, New Brunswick, Trenton, Bordentown and Burlington. Returning car will be attached to train leaving Cape May at 7:00 A. M., making same stops.—*Adv.*

The Almanacs Need Mending.

Banksville, N. Y., July 19.—*Editor Forest and Stream:* I have a copy of your *Game Laws in Brief* indexed to May 10, 1897. In your book you say that gray squirrels can be killed from Oct. 15 to Feb. 15. Now, all the farmers up here and all the almanacs say and read that Dec. 31 is the last day on which you can shoot gray squirrels and rabbits. Please tell me if the law is off until Feb. 15 this coming season, and oblige.

W. A. W.

[The *Brief* is correct; the farmers are wrong. The almanacs need mending.]

G. A. R. Encampment, Buffalo.

HALF RATES VIA PENNSYLVANIA R. R.

For the national encampment of the Grand Army of the Republic, at Buffalo, Aug. 23 the Pennsylvania R. R. Co. will sell special tickets from all points on its system to Buffalo and return at the rate of a single fare for the round trip. These tickets will be sold and will be good going on Aug. 21 to 23, and good to return not earlier than Aug. 24 nor later than Aug. 31, 1897.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 14, 1897.

VOL. XLVIX.—No. 7. No. 346 BROADWAY, NEW YORK.

Any fool can destroy trees. They cannot run away; and if they could, they would still be destroyed—chased and hunted down as long as fun or a dollar could be got out of their bark hides, branching horns, or magnificent bole backbones. Few that fell trees plant them; nor would planting avail much toward getting back anything like the noble primeval forests. During a man's life only saplings can be grown, in the place of the old trees—tens of centuries old—that have been destroyed. It took more than three thousand years to make some of the trees in these Western woods—trees that are still standing in perfect strength and beauty, waving and singing in the mighty forests of the Sierra. Through all the wonderful, eventful centuries since Christ's time—and long before that—God has cared for these trees, saved them from drought, disease, avalanches, and a thousand straining, leveling tempests and floods; but he cannot save them from fools—only Uncle Sam can do that.

John Muir in August Atlantic.

THE PRAIRIE CHICKEN—PAST, PRESENT AND FUTURE.

NOTWITHSTANDING the enormous destruction of the prairie chicken by man and nature, it preserves its existence and numbers to an astonishing extent. This is due partly to its wonderful prolificness, partly to its vigorous, hardy nature, and adaptiveness to widely different conditions of climate, food supply and habitat, and partly to the adventitious circumstance of the great grain fields, which are consequent to man's domicile throughout the birds' habitat, and the attendant furnishing of a food supply in greater abundance and certainty. These general conditions prevail, although in certain sections, large and small, the incursions of sportsmen from the other States, in addition to destruction caused by local sportsmen, has resulted in partial or total extermination in such localities.

In the older and more densely settled and thoroughly tilled region of the chicken's habitat—as Indiana, Illinois, Kentucky, Missouri, Arkansas and Louisiana—it remains in greatly reduced numbers or is found not at all, though years ago it was abundant. Thus on the eastern and southeastern parts of its habitat, man's proximity, at first an advantage, became at last a disadvantage. The first settlers were mostly tillers of the soil or hunters of big game, both pursuits alike entered into seriously as a means of existence. A limited agriculture was not harmful to the country as a chicken country, and was of immense advantage in affording an assured supply of food. But settlement made possible the coming of the army of sportsmen who liked the shooting for the wholesomeness of the sport, and there was a host of them in the older country eastward to the Atlantic Ocean. Later, in certain sections, the conditions of habitat were unfavorable for the chicken, due to the circumstance of an agriculture so extended that no sufficient area of wild ground was left for it to range and hide in. These unfavorable conditions—the exposure to so much destruction from excessive shooting and the disadvantageous changes in its habitat resulting from the tilling of all the available surface—were so serious that they brought about its partial or total extermination in such localities.

Besides what is caused by man, there is the added destruction caused by unfavorable weather conditions. Its home being largely in the great prairie regions whose surface is relatively flat and treeless, the bird is exposed to the full inclemency of the weather. Sometimes nearly all the birds of a vast section may be destroyed in the hatching season from this cause. A heavy rain falling faster than the flat ground can absorb it, or faster than the gentle watershed can drain it off, clogged as it is by the rank growths of prairie vegetation, overflows the nests, spoiling the eggs or drowning the young chicks. An extremely cold rain, one more befitting early April then the hatching season, is also unfavorable, and more or less destructive according to its severity. However, as such rainfall is nearly always in an area relatively small as compared with the vast whole of the chicken's range, and as there are always some ridges or higher stretches of ground which are above the overflow or protected from it, a total destruction of the young birds in such a section is almost impossible. With the covies preserved by the higher ground, and the influx of birds from the more favored surrounding area, taking possession of the unoccupied places, the losses from storms will in a year or two be made good if no extremely bad weather again intervenes and works destruction.

The eastern part of the great prairie region which extends irregularly through a broad belt from the Gulf of Mexico northward into British America, is more thoroughly cultivated and domiciled, and more exposed to the ravages of the army of shooters who reside there, and thence eastward to the Atlantic Coast. Agriculture each year encroaches more and more on the wild prairie land, thus destroying the best equilibrium of food supply and habitat. When such conditions pass a certain point, and excessive destruction of the birds and unfavorable habitat prevail, their numbers will be greatly reduced or wholly exterminated. In the less thickly settled places, as near British America, where the bird now finds abundance of food and wild prairie, the land will be thoroughly settled in time and devoted to extensive agriculture, when the same conditions which worked the chicken's destruction in the older sections will be repeated again in the new. There yet remains a vast tract of country in Minnesota, Dakota and Manitoba, where the favoring conditions of mixed grain-bearing land and wild prairie exist, thus affording the needed food supply, range and cover. No doubt, as the years pass, and with them come a denser population, this will necessitate the taking up of the wild land for agriculture, and the same conditions which have been so destructive to the chicken in Kentucky, Arkansas and Minnesota, and parts of Illinois and Indiana and some other States, will again be in force. We may expect then the same destructive results.

Fortunately, as the Southern range of the chicken was injured by agriculture and its numbers lessened from excessive shooting, the opening up of a new wheat country in the North, far into Canada, the great grain fields stringing irregularly throughout this area, afforded the bird a new and better habitat with food in abundance. The shooters in this new country were few in numbers, comparatively; the population was small and scattered, and yet the numbers of vast grain fields made food for the grouse constantly abundant.

As man extended his agriculture further and further, the chicken followed on, so that what it has lost in the South in suitable habitat and numbers, it has more than gained in the North. Various local conditions may affect the general rule; the presence of a great number of sportsmen in one town results in the shooting off of all the birds in that vicinity; or the birds in a certain locality may suffer from the ready convenience with which the district can be reached by shooters from the large cities. Or the situation may be affected by the local changing of crops, differing from those of preceding years, which sometimes takes place in a section, as, instead of wheat, barley and flax, the farmers may grow corn and oats; and this change would force many birds to seek a more favorable section.

If agriculture monopolizes the land, the bird becomes wilder, and when disturbed takes longer flights to such cover as may be available, seeing safety in tree claims or timber, though naturally it is strictly a bird of the prairie. This device may save it a few times, but often serves to bring quicker destruction, for the shooters take stands around the cover and send one of their number in with a dog; he either shoots the bird as he would a ruffed grouse or drives it out to the guns on the outside, where almost certain death awaits it.

In the warmth of summer the bird is easily killed, for then it is tender, slow of flight and tame. When the nights are frosty, and the stiff fall winds set in—about the latter part of August—it becomes heavily feathered, strong of wing and wild. If much shot at then it becomes wilder still, and rises at long ranges or out of shot entirely. When the yet colder weather sets in, as in the middle of September, the birds in a small section will all join together in a pack, and still later many of the smaller packs may join together in one large pack, so that the birds of a certain area of several square miles may thus be packed together.

They do not migrate in the true sense of migrating, though they may remove many miles from their regular resort to seek the protection of timber, or valleys for protection in severe winter weather.

The southern part of the great prairie region, as Texas, Louisiana, Arkansas, Missouri, Nebraska, Iowa, Indiana, Illinois, is in the midst of a denser population, which extends far east and west. The railroads make it easily accessible from New York, Boston, Cincinnati, St. Louis, Chicago, Louisville, New Orleans and other centers. As the population increases to the northward in like manner, it is but a question of time till the population shall be equally dense and the prairie all tilled, thus making unfavorable conditions of habitat. With the greater population the causes of extermination will be in force to the northward as they had previously been to the southward. The same agencies which effected its partial or total destruction in Kentucky, southern Illinois, Louisiana, Missouri and Indiana, will in the North have like effects.

But a new factor could be introduced to avert the growing destruction, that is the game preserve. Areas could be secured of sufficient scope to include both the summer and winter home of the bird, boundaries which could be easily determined by local observers; and from a reasonable effort at protection good results would be certain to follow. This is applying for the preservation of the chicken the same precautions and measures which are used to insure the preservation of quail and ducks in other sections. As wealth has increased in the prairie region a leisure class has sprung up, and there is now a local contingent of shooters in every section. To save the chicken, some measures must be taken to preserve it by individuals. The State laws are inadequate, because they are but weakly enforced or practically not at all. The habitat of the chicken is encroached upon more and more each year by agriculture, manufacture and domicil. Local shooting and non-resident shooting are gradually but surely diminishing the numbers of the chicken throughout a large region. If the private preserve does not interpose, the causes which produced extermination or scarcity in parts of its southern habitat, will have like effects in the northern part.

THE KLONDIKE.

MR. J. B. BURNHAM, of the FOREST AND STREAM staff, who left New York on Aug. 6 bound for the Klondike, goes to Alaska with a special commission from this journal to investigate and report upon all subjects within its field, from Indians and wild duck eggs to mighty moose and living mammoths. Mr. Burnham is possessed of enterprise pluck and endurance. He has a keen eye to see, a ready intelligence to comprehend, and a graphic pen to record. We promise a rich treat in store for those who shall have the privilege of reading his Alaskan letters.

The extremely interesting paper from the pen of Mr. C. H. Townsend, of the United States Fish Commission, gives beyond question the solution of the Alaskan live mammoth problem, if indeed the fanciful story may be said ever to have attained the dignity of a problem. We print to-day the portrait of the progenitor of the entire herd of living mammoths, who have careered and cavorted through the icy wastes in the imagination of Eskimos and newspaper scribes; and very lively and terrific creatures have they been, to have descended from this one solitary and innocuous "restored" and "stuffed" specimen in a Rochester museum.

The prevailing interest in Alaska has prompted a wide reading of Mr. Charles Hallock's "Our New Alaska," issued from the press of the Forest and Stream Publishing Co. Its information is very complete, and the descriptive chapters are in Mr. Hallock's best vein.

Some one has set a-going at Tarpon Springs, Fla., a warm weather fake mill, and it is running on full time. Among the ingenious lies sent out for the consumption of associated press agency readers, three afford interesting specimens of newspaper natural history. First came the tale of a party of hunters encamped near Tarpon Springs, who ventured into the pine woods unarmed, and were set upon by a drove of wild razor-back hogs; one man was killed, the rest barely escaped. This was followed by a harrowing account of a family, father, mother and two babes, driving in a buggy, who were set upon by a catamount and badly done up. Then came a circumstantial story of a woman rowing in a boat, attacked by water moccasins and rattlesnakes, from which she escaped only after most of her clothing had been stripped off by the infuriated monsters. These tales are pure, unadulterated, fabricless and baseless lies, as we have ascertained through the offices of our correspondent, Tarpon. The man who invented them doubtless had his reward in demonstrating that no story is too silly to find its place in the daily press.

The Sportsman Tourist.

MUSKOKA WANDERINGS.—I.

The Wanderer's Journey Into the Far North and Return.

What care I for books, and the learned looks
Of scholars both young and old?
Give me shady nooks and the running brooks,
And the glorious sunshine gold
That floods the heart, makes the warm blood start,
Throbbing loudly in every vein,
Till the body is part of God's highest art,
And is straightway born again.

One bright August afternoon I stood with my good friend Donald on Muskoka wharf, and for the second time gazed on the island-dotted waters of our beautiful Muskoka lakes. Full of anticipation was I of halcyon days to come for wood and field, river, lake and stream, the stable rocks, and changing heavens, were to me the very breath of life, and made deep impressions on my receptive nature. Donald, more than I, had the soul of the seer and mystic, and saw many strange things, and listened to many voices, unheard by the careless steamer tourist.

By the wharf floated our graceful canoe, fit conveyance for those seeking to draw closer to the benign bosom of mother nature, and to listen to the beatings of her mighty heart. A mute farewell to everyday life and we were afloat, the canoe leaping beneath us to long drawn rhythmic strokes as with quickened heart and deepened breath we pushed forward into the southern stretches of Lake Muskoka.

Here, indeed, the eye is not attracted by pictures of sensuous beauty, but the mind can find food for reflection none the less, for, spreading out on all sides are the crude elements, which further north are combined to form those exquisite scenic gems, which, in their varied sameness, form Muskoka's charm.

Here rock meets the eye gray, brown or lichen-tinted, rugged and tip-tilted or spread in flattened waterworn masses till it seems as though the Titans, who laid the foundations of the earth, had thrown down here the fragments of their unused material, leaving it to the changing seasons, the summer sun, the biting frost, the wearing of many waters and the touch of Wabun* and Keewaydin† to work over the rugged refuse heap into a thing of beauty. In the rocks, as we slip through the narrows, we see in the sparkling mica, quartz and granite, the relics of primeval fires; there on the mainland tall, gaunt, leafless pines stand as monuments to the passage of recent devastating flames. Yet from the chastened fire-tried earth has sprung a gracious second growth of oak and maple, beech and birch, nature's proud response to the touch of affliction. Thus, feeling these things rather than thinking them, we glide on mile after mile past islet and rock, scraggy wood and barren hills, till twilight's veil and sunset glory throw a tenderer shadow of poesy over the passing landscape.

As the stars begin to twinkle through the tawny glow of the dying day the white tower of Beaumaris peeps through the trees of a rocky point, and we know that soon our long paddle will be at an end and friendly voices welcome us back to well remembered scenes. A bugle's clear and ringing note cuts the air, and simultaneously our paddles flashed with greater vigor as we caught the well known signal; then a shout, a quick flash of oars, a waving of hats and handkerchiefs, a babble of voices in greeting, and we found ourselves in tow of one friendly craft while others hovered round in escort.

Round the end of beautiful Keewaydin we swung, between its woody isle and the rocky heights of Point Kaye on the north. Then, when all was still, and the idle chatter hushed, one stood up and blew a soft, clear bugle call toward the sleeping woods. A dryad heard it and in tender accents repeated the sweet notes. The spirit of the rocks across the water took up the challenge and in more strident tones hurled back the refrain, only to be re-echoed by a chorus of nymphs, dryads, nereids and water sprites, who whispered it to one another till the notes died away in the faintest, sweetest harmony, like the fairy music pure-hearted innocence alone may hear.

Donald lay back in the canoe with a rapt light in his eyes, which was to me the sign that already the quieter voices of nature were penetrating his ears. When at last the sounds faded into nothing, he said in a hushed voice: "Portia compared a good deal in this naughty world to the shining of a candle; I say it is like that bugle blast which finds an echo in many hearts, and awakes in them harmonies which may re-echo far beyond the reach of the little life which first stood for truth and right."

That night we slept beneath a friendly roof, but the trees rustled against the windows and the chipmunks chattered on the shingles, and so we were content.

Afterward followed many golden days, during which we traversed tortuous waterways and broad and sunny reaches, camping by night beside the lapping waters of the lakes or in the silent woods, where an unseen river sang all night the cradle song of the forest. We tarried but little near the tourist haunts, yet here and there met familiar faces or renewed old acquaintances. Now, a greeting would come from some rustic wharf scarce jutting from the rocky marge of a little green clad isle, forming a leafy background to a splash of red tam or jersey and waving white handkerchiefs; then again, a hail from a passing steamer, a smile, an answering salute, and solitude once more.

Near Fair Venetia in Lake Rosseau is a little isle I will not name, but pleasant people lived there, and Donald at least needs no printed page to keep its memory green.

There were we made welcome, and there met a "nut-brown maiden" whose name indeed I knew by heart, for had not Donald day by day uttered its music in my ears?

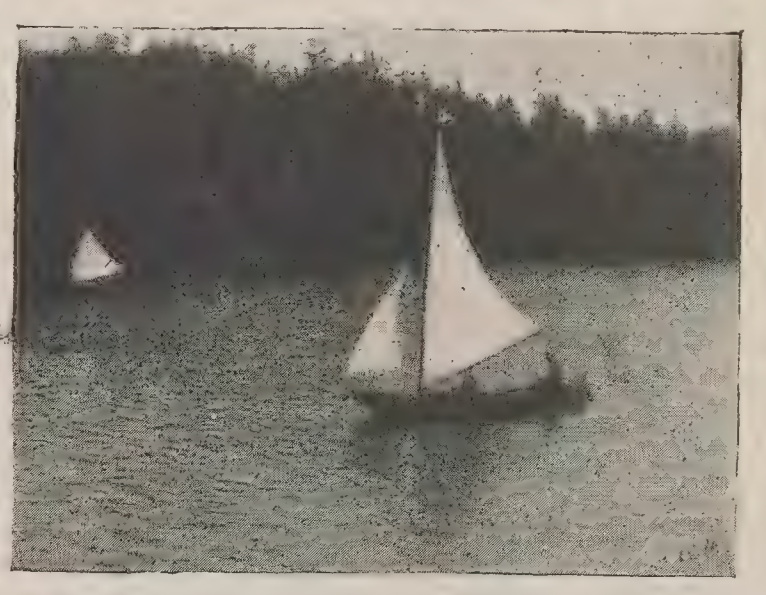
By day the little archipelago of Venetia formed a charming picture with its miniature isles and tinted cottages, but night, and one above all others, seemed its chiefest glory. I lay that evening on a little bluff fragrant with sun-dried cranberry and wintergreen, when Donald and the maiden joined me, moved as I by the spell of beauty to sit and gaze at a masterpiece of the great Artist of the Universe.

In front of us spread the lake, dark, rippleless and profound, lit only with the swarming images of the stars, which twinkled aloft with their softest summer radiance. No sound broke the stillness save the never altogether silent buzz of insect life and that deeper, quieter sound of the working of life forces in tree and plant, which seems to be felt rather than caught by our dull sense of hearing.

Humanity spoke to us only through the twinkling yellow lights which began to shine on point and islet all about us, but God seemed to speak to the heart as though all things were but the emanations of his Divine Spirit.

The maiden first broke the stillness with a question that loosed Donald's tongue to speak his inmost thoughts. "Do you not feel lonely being so much alone in the woods and among the islands with so few to talk to?" "Lonely! No. I have so much to see and think of, and so many voices to whisper wonderful things to me, that I could not be lonely. Are there not tall pines to sigh to me the aspirations that made them climb so high toward heaven when Shawondasee* stirs their boughs, and to shout to me their struggles and their battle cry when fierce Keewaydin sweeps across the land? Are there not oaks to tell me how they thrust their sturdy limbs to right and left and broadened and grew till they became a very inspiration of rugged strength and grandeur? Is there not the gentler rustle of the maple to speak to me of grace and beauty? Does not the quivering birch fill night and day with its tender chatter? Ferns, flowers, shrubs, trees, all have a life story to tell, and all can say something worth the hearing if we will but listen. There is a charm in nature that is distinctly grateful to one tired of looking at the jarring units of humanity and trying to guess

BALA FALLS.



at the great meaning and end of it all. Among men I, the unit, am too tragically concerned in the tiny eddies of the stream of events to catch more than a puzzled glimpse of the great sweep of the river.

"Here, as with the eyes of omnipotence, I can survey the mighty unfolding of organic nature from moneron to man, from the lowest cryptogam to the daisy and dahlia.

"Here at least I can understand and admire the designs of the great Originator, and so find courage and strength to take my part in the daily evolution of the moral and spiritual life of humanity toward the unknown end. Here, and here alone, can I see perfection—the plant perfect after its kind, and the animal perfect after its kind; so that as I gaze and the spell of the forest sinks into me, I dream of the golden age yet to come, when man shall walk the earth perfect in the Divine sight, needing but the dissolution of his mortal frame to fit him for the larger life of Eternity."

The maiden looked at him with a light in her eyes that told me someone else was beginning to understand Donald as I thought I alone could do.

Quiet fell again upon us, and from above Vega, Altair, Arcturus, in their vastness looked down upon the puny inhabitants

THE INDIAN RIVER.

of one of the least of the worlds of the universe, and calmly ignored the little affairs of their brief lives; yet there seemed in them an inspiration to look up and ever up, to know and live the best in this earthly life, and to hope for fuller life in an eternity beyond.

The next day we said *auf wiedersehn* to fair Venetia, and, with many backward glances, plied our glancing paddles toward Port Sandfield, set like a sentinel between Rosseau and Joseph.

Sandfield past, tortuous, island-studded Lake Joseph opened up before us, and two days and nights we explored its beauties as far north as beautiful Craigie Lea.

Sunshine and cloud, winter and summer, work and play, each is but a preparation for the enjoyment of the other, and, like true rovers, when the sky above us changed its smile into a frown we were ready to greet the change with cheerful front.

Elsinore was just abeam that afternoon, when a gathering blackness creeping up over the southwestern sky suddenly eclipsed the sun and threw a chill shadow over land and lake. Whitish-gray scud was flying beneath the blackness, and the ominous dropping of the northerly breeze warned us to seek a place of safety till the coming storm had passed.

On Elsinore's shore we landed, and from beneath the shelter of a rock watched the blotting out of the heavens and the awed expectancy of the silent earth. Now, before our eyes, was enacted the great settlement of accounts between earth and sky. Day after day had wind and sun stolen the moisture from land and water and borne it aloft in triumph to the clouds, and day after day had gone with it the fettered lightning of the earth; but now, in pouring rain, in lashing hail, in scourging wind and steely jags of fire, was paid the debt of the powers of the air to the great earth spirit, the mighty voice of the thunder rolling round the throne of the storm king proclaimed to all men, thus and so, must be paid by all the dues of nature.

Then passed on its awful circuit the court of the storm king, and again the sun poured out and lit with a wintry gleam the diamond-sprinkled emerald of Arma and Laurie to the south. The sunshine spread, and as the sun emerged from its vapory shroud a glorious arc of prismatic color flashed into view against the background of cloud in the east, the Bifrost bridge of the Norse, across which the souls of the brave passed to Asgard, the shadowy city of the gods beyond. The storm was over and we went our way, seeing on either hand the visible thanksgiving of nature for the gracious rain, and hearing again the chirping of the birds now emerging from their temporary shelter.

From Craigie Lea by easy stages we returned to Lake Muskoka, passing all the well-known places on the way without a glance of regret, saving only the fairy land of Venetia.

Down the graceful curves of the Indian River we swung past Port Carling with its little lock forming a loop round the rapids with their timber dam and slide, between tangled wooded banks where flamed the cardinal lobelia, over pale green shallows and deep dark channels; here through a tiny lake bordered with rushes and lily pads, then on past a little fertile farm, forming with its tender green and cultivated freshness a grateful contrast to the brown and rugged rock and wild tangle of the trees, and out by the curve of Horseshoe Island into the dark waters of Lake Muskoka, a long-legged crane sweeping out before us toward the western mainland where a solitary maple already glowed in gold and red against the sombre evergreens.

Near Keewaydin was the hospitable roof beneath which we were to spend the next few nights, making it headquarters for short expeditions to Bala Falls, Milford Bay, Brandy Lake, and other places near at hand.

That the "maiden" was also a fellow-guest was a coincidence that I will not attempt to explain, but as a consequence I often found myself dispossessed of my accustomed place in our little canoe and compelled to seek other companionship in our Lake Muskoka experiences.

J. Edw. Maybee.

[To be concluded.]

† The northwest wind.

* The south wind.

THE CHESTNUT RIDGE

And Along Its Foot.—IV.

The name Conemaugh is said to mean "otter creek." I should not have suspected this, for I have never heard of an otter in the Conemaugh. Dr. Jackson, writing forty years ago, says that the otter "is occasionally found on the mountain, but is rare in Pennsylvania, and fast disappearing on account of its valuable fur." I should think the passing of the otter in Pennsylvania was now an accomplished fact. The largest tributary of the Conemaugh is the Loyalhanna, which flows into it at Saltsburg, twenty six miles above the confluence of the river with the Allegheny. The lower Conemaugh—that is, from its junction with the Loyalhauna to its mouth—is called the Kiskiminetas—a name which is said to mean "make daylight"—an exclamation uttered at some time by an Indian brave who was impatient to be on the march. Loyalhanna is said to mean "middle stream." These are the meanings of these words as I find them in my friend S. G. Boyd's excellent book on "Indian Local Names." The Loyalhanna was so called because the old Indian trading-path between the forks of the Ohio and Raystown, now Bedford, in Pennsylvania, crossed this stream at the point where Ligonier now stands, which was just half-way between the two places. The next largest affluents of the Conemaugh are the Stony Creek, which joins it at Johnstown, and the Blacklick, which comes in about two miles below Blairsville. Who was the first white man to explore the Conemaugh Valley I have not been able to learn. By the middle of the last century the river was a well-known stream, and one of the most traveled Indian trails from the foot of the mountains westward, followed more or less closely the line of this river. This road was traveled by Croghan, Weiser, Post, and others in going to and from the Indian country on the Ohio.

Settlements were made in the valley of the Conemaugh before the end of the last century, though they could not have been numerous. Maclay, the surveyor, in coming up the river in the year 1790, thinks it worth remarking in his journal, that shortly after entering the mouth of the Kiskiminetas he "saw two white men on the river in a canoe." It must have been an unexpected sight. Again, under date of Friday, Aug. 20, he says: "We had this day been attempting to procure some fresh provisions on our way up, from the inhabitants along the river, and had been unsuccessful." From his journal we learn that one Samuel Hay lived a little way below the mouth of the Loyalhanna, that Colonel William Perry lived a short distance above the mouth of that creek, and that one Dennison had a mill eight miles up the same stream. He mentions also that above the Pack Saddle one David Ingard lived, and near the mouth of the Stony Creek was another settler, Daniel La Vere, "who," says Maclay, "received us with an open countenance," however that was.

From this time forward settlements were constantly made. Johnstown, which may be regarded as the metropolis of this valley, was settled by Joseph Johns about 1791. The cabins of pioneer settlers were soon to be seen at closer intervals along the course of the stream. Of one of these early comers I must be permitted to tell a story.

'Twas sixty years since. No railroad then ran along the bank of the Conemaugh, and no steam whistle awoke the echoes among the hills. The canal, which for years served its purpose, and has long since almost faded from the recollection of men, was then a new enterprise, and in the first flush of its fame. A number of thriving villages had sprung up along the line of the canal, with occasional houses between. A few houses were also built on the opposite side of the river, and one of these was occupied by old Zack Upson. It was a mere cabin of round logs, the roof of clapboards, which were held in place by slender poles extending from end to end of the house. The chimney was of sticks well covered with a coating of clay, and the top surmounted by a flour barrel with both ends out by way of a chimney pot. The whole architecture was of the primitive kind, which is remembered by a few of the oldest inhabitants. The house

stood on the hillside a mile below Blairsville, in a small clearing that had been made more by a windfall at some time than by the axe of any settler.

It was a very suitable residence, however, for Zack Upson, proverbially the laziest man in the river valley. He had no family, but lived all alone except for his dog Bounce—a sad misnomer by the way, for there was scarcely a dog in the world that manifested so little disposition to "bounce" as he. The creature was likely a good enough cur originally, but living so long with Zack Upson he had grown to be about as lazy and good-for-nothing as his master. There was not much trouble for a man to live in those days in the manner in which Upson lived. The woods were full of game and the river of fish, and as there were then no game laws Zack could shoulder his rifle or get out his rod and live wherever he choose and procure all the game or fish he could use. By disposing of a part of the proceeds of the day's hunting or fishing in the neighboring village or to the crews of passing canal boats, he was able to supply himself with ammunition and such other articles as the forests and streams did not furnish. But though too lazy to work, like most lazy people, he had a great desire to be rich. He hoarded every penny he could spare and gloated over it as if it had been a diamond of Golconda. Fifty times a day he would say to himself: "Oh, I wish somebody would die and leave me some money." As he had not a relative or friend anywhere any better off than himself, this was a very absurd as well as a very wicked wish.

One beautiful spring morning Zack took his fishing pole and tackle down to the river. It was a perfect day. The sun shone warm, and the fresh buds and half-grown leaves were tender and green. A soft, delicate haze lingered over the surface of the water; profound quiet reigned along the hillsides, broken only by the cheerful voices of the birds. A lover of nature would have rejoiced amid all this beauty and sweetness. But Zack Upson was as unconscious of it all as his old dog Bounce. Zack set his pole, and then reclining in an easy attitude prepared to wait for a bite.

"O, I wish somebody would die and leave me some money," he sighed for the twentieth time that morning. Casting his eyes down along the river, he saw a man a quarter of a mile away, walking along the edge of the water. It was a very rare thing to see anybody down there, and Zack regarded him attentively as he approached. When he had come near, Zack saw that he was an old man and that he stooped very much as he walked. "How d'ye do?" he said to Zack, when he came up. "How are ye?" replied Zack. "It's a fine mornin'." "Yes," groaned the old man, as he attempted to shift a great bundle that he had strapped upon his back. "You seem to be tired," said Zack. "Won't you sit down a while and rest?"

"No," replied the old man, groaning again, "I can't stop. You'd be tired, too," said he, "if you had to carry this dreadful burden." "Have you carried it long?" asked Zack. "For more than thirty years," replied the old man. "Thirty years!" cried Zack, "that's a long time. "Yes, it is," replied the other, as he again painfully tried to shift the bundle.

"Let me help you," said Zack, and he laid hold of the heavy package. But he instantly sprang away with a loud cry. "It's hot!" he exclaimed. "Yes, red-hot," said the old man, with a dreadful look of pain on his face. "What is it?" cried Zack. "Gold!" exclaimed the old man, "gold, that I got by wishing somebody would die and leave me some money."

Zack Upson stayed to hear no more, but rushed from the spot toward his cabin, with Bounce at his heels. From his cabin door he looked down, but he could see nothing of the old man.

"You must have been dreaming," some people replied, when he related the circumstance. "No, I was not dreaming," Zack would stoutly maintain; "besides, Bounce saw him as well as I." Anyhow, it did Zack Upson good. He never again wished that anybody would die and leave him a fortune. It made an impression on his mind that was never effaced. He left his cabin on the hillside, went into the town to live, and by his industry and good habits became a good citizen. As to the truth of the story there can be no doubt, as the hill on whose side Zack's cabin stood is there yet.

The rivers of a country are scarcely less noticeable features in its topography than are its mountains, and seem to appeal more to the imagination than the latter. At least, the poets celebrate the streams much more frequently than the mountains. Perhaps these gentle beings are the best gauges of human sentiment. Without aspiring to a place among them, I shall try my hand to the extent of a dozen lines or so commemorative of my native stream:

Thy wooded hills, fair Conemaugh,
  Still overlook the quiet pool,
As, when escaped the master's law,
  We hurried from the village school;
And all forgot the bitter rule
  Of task and book in boyish glee;
E'en terrors of the dunce's stool
  Were lost when we caught sight of thee.

Thy wooded hills, fair Conemaugh,
  I oft revisit in my dream;
Again I see, as erst I saw,
  The silver current of thy stream;
Again the tiny ripples gleam,
  Where, breaking o'er the pebbly bar,
The crystal wave reflects the beam
  And sparkles as the midnight star.

These lines are not copyrighted, and I commend them to the compilers of our school "Readers" and books of poetical gems.

T. J. CHAPMAN.

PITTSBURG, Pa.

An Angling Bishop.

WE read that Bishop Dudley (Episcopal), of Kentucky, when he was hunting and fishing recently, made the acquaintance of an old mountaineer, who took a great fancy to him without suspecting that he was a bishop. When the bishop was about to go home he invited the old man to come to Louisville to hear him preach. "Preach? Whut, you preach? Kin you preach ez well ez you kin shoot an' fish?" "Better. No joke. Come Sunday with your best clothes, and I'll give you a front pew." The old chap was there right up in front, and remained until the bitter end, after which he hurried forward to shake the bishop's hand. "Parson," he cried warmly, "I don't know a great deal about your creeds an' dogmatics, but I've riz and sot with you every time!"—*The Outlook.*

SHEEP AND SNOWSHOES.—VIII.

A Winter Hunt on the Summit of the Rockies.

Au Large.

OUR big wind storm was followed by a sudden and wonderful change in the temperature of the air. We had met a Chinook wind, this taking the place of the cold fury of the wind which had harried us during the previous twenty-four hours. At the falling of the warmer wind the air was left bright and cheerful, and the mountains came into view distinctly. Schultz prophesied bad snowshoeing, and rightly too, as we learned, for the penetratting breath of the Chinook seemed to turn the snow half to water, so that it stuck to the webs most annoyingly, and made it necessary to carry a stick with which to rap continually at the bows. Under such conditions, the shoer does not travel with ease, and the fretting over the snowballs beneath the broad of his foot gives him as much wear and tear as twice the miles of distance. It is only the old snow-shoer, who is out all the time, and who accepts all things as part of the day's work, who can keep his equanimity while his toes are pinched with a soggy but unyielding ridge of snow, and his heels are tilted with a like bump of ice behind.

It was relief to get out of the lodge, and it was not late in the morning before we were well scattered, going out over the country *au large*, as the voyageurs say, with a view to finding what was ahead of us and around us. McChesney and O-to-kò-mi went up the mountains again to see if they could find the much-delayed sheep, which was needful in that quarter. Billy Jackson had set his heart on catching one of those big cats which were eating up the carcass of my sheep. Schultz and I were beginning to think it might be necessary to move further up into the Two Medicine country before McChesney got his sheep, so we went directly up the valley to the falls of the creek, in search of a way over the creek and up the mountain beyond it to the headwaters country, where, according to all accounts, the chances were better for both sheep and goats. We made our way up through the level country, heavily timbered, which lay between us and the falls of the Two Medicine, and before noon stood at the foot of this singular cataract, one of the most remarkable ones I have ever seen, especially during the winter, at which season it is most beautiful.

There are strung along the Two Medicine Creek, during its journey through the mountains, four deep and clear lakes, any one of which would be enough to fill the eye of either an artist or an angler. The largest of these lakes is the lowest one, and it was upon this lowest lake that we were encamped. Three miles or so above is the second lake, and this one is perhaps 200ft. or more higher than the one below. Between the two lakes there runs a vast ridge of rock, making a giant dam across the narrow valley and fencing back the foot of Rising Wolf Mountains. The Two Medicine Creek does not jump over this great causeway, or at least it does not do so now, though once it may have done so. It has dug at the top and back of this dam so diligently that at last it has bored it entirely through. The whole stream appears upon the lower side of the dyke emerging from a round and cavernous opening in the face of the rocky wall, some 50ft., perhaps, above the surface of the great pool, into which it plunges in a broken, glittering mass of shattered waters, shining as though some great hand continually cast forth a stream of crushed prismatic glass. The brilliant picture, at the time we saw it, had a striking frame of ice and snow. Heavy masses of snow covered the whole top of the great ridge, and shrouded the black pines and made a setting for the great, deep trout pool at the foot of the falls—one of the finest of the trout pools of the Rockies; for thus far the trout may come, and no further, though there are those who mention a tradition of the skeleton of a great fish found on the shore of the lake above.

Schultz and I stood for a long time admiring the wonderful view at the falls, and at length went on with our undertaking to find a trail up the country. To the right of the falls the rocks rose up abruptly, but with something of mountain faith we imagined we could get up there somehow, so we tried it. We zigzagged up the face of the slope till we were far above the level of the falls, but then saw yet another ridge above us, which we followed until we were directly above the big pool, which boiled far down below us. Here the going got so steep that we had to evade the front before us—where a slip meant a long slide and a wet ending—and sought a side passage out of our troubles. But, though we crawled, and squirmed, and worked our way about by means of hanging on to the boughs of the trees which covered our slippery slope, we finally had to give it up, though we had found long ago that it would be impossible for a man with a pack to get half-way up the ridge in that direction; so that all thought of making camp above there was cut off for the time. It is always disappointing to fail to climb a hill when you want to, so we were much disgusted at being obliged to slide down this place after putting in a couple of hours trying to get over it. There was no alternative for us, however, and, therefore, we started on down the creek, breaking trail in snow which was very deep and heavy, and looking all the time for a place to ford or bridge the creek which cut us off from the hunting country above. We saw a number of trees which had fallen part way across the creek, and figured that if we were forced to do so, we might, perhaps, manage to get over; but we found no very promising place for a loaded party to make a crossing. About the only thing we did was to discover that an otter was making the Two Medicine Creek his home for the time. This fact was evident by the deep drag he had made through a snowdrift dividing two stretches of open water. Here he had evidently traveled across several times, and once more we regretted the fact that we had brought in no steeltraps with us on this trip—in which we were remiss, for we could have taken considerable fur if we had gone at trapping in the right way.

Assembly.

Schultz and I got back to the lodge in the middle of the afternoon and joined Billy Jackson, who announced that he had set two snares for the cats up on the mountain, and that he was perfectly sure we would have fresh cat in less than forty-eight hours. He said that he had often known the lynx to be trapped in this way by the Crees in the wooded country of the far North. He said no one up there ever thought of bothering about a better trap than a snare to catch a lynx, so he felt sure we were due to have a lynx hung up sure before long. He said the cats, lions, or whatever it was, had fairly torn the whole country up about the sheep carcass; and that one of these cats had evidently been scared away that morning by McChesney and O-to-kò-mi, who had passed up the mountain not far from there. Billy also said that he thought McChesney had got his sheep, for he had heard two shots fired that morning, further up in the mountains above the place where we had killed the first ram.

Hunter Powell had this day gotten back from below, and as he was disposed to go out fishing I joined him, and we got a few trout, one very good one of nearly 2lbs., which I reserved for baking in the ashes that night. On the lake we met a strange white man, who said he was fishing too, that his name was Riley, that he lived at Midvale, and was up in that county living with old John Monroe and his wife. He said Monroe had just come up to his camp again from his ranch in the country below, and that maybe we would see him before long. Sure enough, we finally made out a couple of mounted figures coming up the lake on the ice, and saw that it was John and Madame Monroe. They had along about a half-dozen assorted dogs, and we met them at camp just in time to see a variegated dog fight, in which our dog Shep figured with results not always uniformly satisfactory to himself. We now had quite a big party in camp, and according to lodge etiquette it devolved upon us to get out something to eat. I forget how many suppers we had that night, but I was in every one of them; and so far as I remember, I was just as hungry at the last as at the first.

We were all eating one of these suppers, along about an hour after sunset, when we heard the shuffle of shoes outside, and knew that McChesney and O-to-kò-mi were back. We had worried a good deal about their being out so long, and argued that it was unlikely they had made a kill or they would have been in earlier. This proved to be corsect. McChesney said that he had had one shot at a very fair ram that morning on the mountain side, not over a mile from the place where I had killed my ram. The sheep was standing at really about 125yds., though he thought it was further. He set his Lyman sight for what he thought was the right distance, but overshot; then, as he began to turn down the rear sight to the correct elevation, O-to-kò-mi fired at the ram, which was just turning away, and he also missed, the ram going on up over the mountain in about two jumps. This made them both feel very bad, but they kept on up the cañon and saw a whole horizon full of high, thin peaks and deep cañons, a good-looking game country, but they did not put up any other game within range. They had a very trying day's work of climbing.

We all began to feel badly about McChesney's hard luck, for he had been having plenty of hard work after his sheep and had not yet come up to it. In fact, we began to think that the game was now so stirred up in our neighborhood that it was going to be necessary to make a move, getting up to the upper Two Medicine Lake in some way or other on a short side hunt. O-to-kò-mi was silent and hungry, as usual, and he had nothing to say until he had eaten a-plenty. All hands joined the late-comers in eating supper, and I believe this was nearly the last supper we ate that night. Poor Schultz was cooked to a plum frazzle, and we made an awful hole in the beans and sheep. McChesney was not cheerful over his luck, but still was disposed to resent any imputation as to the virtue of his umbrella, declaring that if he had brought it into camp instead of leaving it at the agency, he would surely have killed a ram before this. In the further talk regarding hoodoos, it was generally agreed, John and Madame Monroe concurring, that it was Pah-kuk-kus himself, and no lynx, which was tearing up things upon the mountain side above us and raising all the trouble in general.

Around the Lodge Fire.

Around the lodge fire that evening we had a long and interesting council upon the topics of the chase. John Monroe proved to be very much of a character, and we learned that he was all over the wilder parts of the big North before many white men had come into the region. He was with the Hudson Bay Co. in the old times, and was as familiar with the Peace River country as with the Two Medicine. As John had been a trapper in the old times himself, he gave me some points upon making deadfalls. Everything, he showed me, was done by rule. Thus, the spindles for a marten trap should be the height of a hand for the upright, the length of a span and a hand for the bait stick. In making a lynx snare, as he showed us in the ashes about the lodge fire, one should follow the instructions given to the old Hudson Bay trappers; the noose should be hung just at the height of the lower part of a man's knee-cap above the ground.

"Gee!" said Billy, "that's hard on me, old man. I've left my loops only about 4 or 5in. over the snow, in my lynx snares. Do you suppose they'll catch him?"

"Oh, dat's bad, dat's werry bad," said the old man, mournfully. "I esplain somet'ing to you. S'pose dat cat he come, fin' yo'r essnare hang low down, like dat (making the picture in the ashes); he put his foot t'roo de essnare, and claw at de bait. You get-a him so, by foot, and he eat off string, you get-a him, no. But s'pose you have hole up high, so, about by my knee, here, dis cat, he goin' poke hees hade in t'roo hole, not poke hees feet. You ketch-a heem by neck, so—choke him quick, he die soon, you get-a heem, yas, ah-hum!"

As Billy and I had spent considerable time in twisting up cords for the lynx snares, we were rather cast down by this information from the old man, but Billy, with characteristic cheerfulness, said he reckoned we'd have a cat in the morning, anyhow. "A link is the worst fool on feet," said he. "You can't drive that cat away from that bait up there till it has picked the bones. We'll get him sure."

John Monroe said we were in a good game country where we were, but that it was probably better a little further up the Two Medicine, where we knew there were goats as well as sheep. He said that he knew where he could get a moose whenever he wanted it, up in that direction, and that he had already killed one moose that winter, as well as one elk. He told us that as to bear country, we could ask no better if we could only stay until the bears came out. He himself had killed a number of grizzlies right in the country where we were camped

ting two not more than a quarter of a mile from where his lodge now was pitched. One of the grizzlies he killed in the dark, near a sawmill, where it had stampeded the whole sawmill outfit. This bear was shot at very close range, as it reared up before the old man in the dark. He struck it in the breast and killed it at the first shot. As a bear hunter, it was generally agreed the old man was a corker, and on this even Madame Monroe, who at times was wont to scoff at John's ability to carry a pack or hustle wood, concurred cheerfully and not without a certain pride. So we drew John out on the bear fight question, and he told us stories of the old days, such as the New York *Sun* would reject as lies, but which were really true.

Killed a Grizzly with Bow and Arrow.

"It was long ago," said John, in his polyglot language of Cree, Piegan, French and English, "long ago in the 'h'ole time,'" when he and a Crow Indian and a half-breed were going south into the Snake country to "trade for hosses." (It was likely such trade implied very little consideration). As they came down into a little flat valley, they saw a big animal of some sort ahead of them, and at first thought it was a buffalo bull. They wanted some meat, and yet they dared not use a rifle, for in this sort of horse trading it seems you don't want to let the other fellow know you are trading. John and his friends agreed that it would be best to kill the animal with the bow and arrow, and as John was the best hand with that weapon he was chosen for the work. He went but a little way forward when he found that his buffalo was a big grizzly, which did not seem to care much whether he went away or not. John concluded he would kill him anyhow, so he cut loose from horseback and put an arrow into the bear's ribs. The bear promptly came after him at full speed. (It needs the old man's description, gestures and all, to show the bear running, with red mouth open, his head going up and down, his paws swinging pigeon-toed as he ran.) The horse, of course, went off at speed, but run as it would, it could not shake off the grizzly, which closed up till it was fairly at the tail of the horse. John told how the bear struck and bit at the horse, and how the horse kicked it again and again—"boh-boh-bah"—landing full with its hoofs on the bear's ribs and making it bawl each time, but not stopping it. In the course of the kicking the saddle girth broke and the saddle started off the horse's back, but this did not unseat the plainsman, who kicked it free and sat the horse bareback, pulling up his legs to evade the jaws of the bear, and all the time riding as hard as he could to get away. It seems that even in this desperate situation he did not lose his nerve or forget his purpose, but plied his bow and arrows as often as he could—we may imagine with what effect upon a beast we dread even when we have the best of rifles. At last the pony got clear of the bear and lined out a course for the high timber, but the bear did not quit. It came alongside yet again, running with its mouth open and growling. As it came up into sight from behind, the bareback hunter turned and drove an arrow deep into its neck. Then, as he showed us in all the sign talk possible, and all the eloquence of his four or five languages, the bear stumbled and fell forward, and the butt of the arrow, striking upon the ground, drove the shaft clear on up, deep into the bear's chest, so that it was killed as it lay and never got up again.

This story old John told us with no vainglory at all, and in the most matter of fact way, and I have no doubt whatever of the truth of it. A wilder hunting story than this it would be hard to find; or a wilder picture than this man, mounted bareback, armed with so slight a weapon as the bow, yet winning in a fight with the most dangerous beast of this whole continent. There were men in those days.

We plied old John with questions about the old days and old hunting methods, and he was willing to talk out of his wide and vivid history. Some things I remember he told of; how once, in the old bow and arrow days, when the Kootenai Indians hunted deer, wrapped in a buck's hide so that they could approach their game more closely, a mountain lion sprang upon one of them and killed him at once with a bite through the neck. John Monroe thought this was the only case he had ever known where the mountain lion had attacked a man, and this was because of the disguise as a deer. Asked if he had ever heard a mountain lion scream, he was doubtful. (Yet Major Steell said that he had in Canada heard the panther scream, and knew it to be unmistakably the panther. Joe Kearney, a guide we had later, also said that the panther certainly did at times scream. "In the running season every animal has some way of attracting its mate," said Kearney. "Now there ain't many lions to the square mile, and they have to find each other. To do this they have a call, and a mighty loud one too, at times.")

While we were speaking of the game resources of the fine hunting region in which we now were, Schultz began to talk of goats, of which he had seen a great many killed. He said that this usually slow and stupid animal has a certain courage and daring of its own quite out of keeping with its ordinary appearance. He said that a goat when hard pressed by dogs, or when wounded, will nearly always deliberately commit suicide rather than lie down and wait for its fate. He related an incident to this effect out of his own experience some years ago, at the upper end of Red Eagle Mountain. He was watching some hunters on the mountain at some distance, and saw through his glass that a goat was crippled, and that it was being crowded hard toward the edge of a cliff, the cut face of which is at least 700ft. in sheer height. As he watched the retreating goat, he saw it turn deliberately to this precipice and as deliberately jump off. It fell whirling over and over, and Schultz could hear plainly, even where he sat, the sickening impact of its body at the foot of the cliff, where it was literally broken into bits. He said there could be no possible doubt of the suicidal intent of the animal, which preferred that death to capture.

Billy's Horse-Thief Story.

During our session around the lodge fire that night we had all told stories, before we had finished our last supper, and before old John and Madame and Riley had gone home to their own lodge below us on the lake; but Billy Jackson had pleaded rheumatism, and was doctoring his back more than he was talking. "I'm payin' for too many saddle-blanket nights in the old times," said Billy, groaning; and in this he was at the truth very closely, for the life of hardship and exposure lived by the actual old-time plainsmen rarely left them free of rheumatism or something else of constitutional trouble later in life. But after we had dug my big trout out of the ashes and brewed an extra pot of tea (which, of course, did not count as a supper at all, but only as a sort of after-theater bite) we prevailed upon Billy to tell us a story, and he did, going for it back to his scouting days with the army, of which we always loved to hear him talk.

"This was in March, 1877—just twenty years ago—" said Billy, "and I was with Gen. Miles at that time, near the mouth of the Tongue River, not far from where Miles City now is. We had been losing a good many United States horses, and Miles came to me and said that he wanted this horse-thieving broken up. He said we would have to get the horse-thieves, at any cost and any risk.

"We had just had five head of horses stolen, and among these were two horses of my own. We thought it was a fellow by the name of Heenan who had taken the stock, and we knew, too, that Heenan was a bad man to go against. But I was young and full of conceit, and I allowed I could take Heenan—or any other man—especially as he had stolen a couple of horses from me. So I said I reckoned I could get him, all right, and Gen. Miles told me to take all the outfit I wanted; so I started out with Sergt. Burns and Deputy Marshal Tom Murray, and five privates and an ambulance. These things I didn't need, but I sort of had to take them along, under the circumstances.

"We traveled along about eighty miles, to a place near the mouth of the Big Horn, and here we found a party of wolfers, who had two of the horses, which they said had been sold to them by a man who went on across country.

"Of course, the ambulance was now a good way behind; so we struck on pretty much alone, going on about twenty miles to a place on the Yellowstone known as Pompey's Pillar, where Yankee Jim then had a sort of trading place on an island, where he was wolfing and trapping. Here Yankee Jim told me that Heenan had gone on through there, and that he was now no doubt holed up about twenty miles further on north, at a sort of tough, cut-throat ranch, a kind of whisky-trading place, near Baker's Battle-ground—where the Piegans were rounded up in the winter time and killed, in 1872, by Gen. Baker, you know. Murray didn't want to go on any further just then, and I was told that the best thing I could do was to stay away from Heenan, and wait for my ambulance and privates to get there. But I knew you couldn't catch a horse thief with an ambulance, and, as I said, I was pretty young and full of conceit, so I allowed I'd just go on alone and get Heenan all by myself, with nobody to divide credit with. Yankee Jim didn't say much, except 'You'd better not.'

"Well, I made on off up there alone, like a fool, and finally I got there; and down by the corral blamed if I didn't see one of the horses, a buckskin, one of my own horses, that I wanted mighty bad. So I ties up and goes up to the house, allowing I'd get in quick and easy and work a surprise. Of course I had my six-shooter ready.

"Well, there was a surprise all right; but it didn't work just the way I had figured it out. I pushed the door open and stepped in quick. When I got in I heard a fellow speak to me, rather quiet like, saying, 'What do you want, Billy?' And there was Heenan, a-squattin' down in the corner opposite the door, with a sort of smile on his face and a-lookin' right square through the sights of a big needle gun, which he had trained for about the center of my stomach.

"I sort of passed the time of day with Heenan then, but he said that was all right. I told him frankly that I was after the horses I saw out at the corral, and he told me, quietly, 'Well, you won't git 'em.' Well, I said to him, a fellow had to take the worst of it once in a while, and I saw I was at the wrong end of the play. Heenan told me to drop my revolver belt on the floor, and just to oblige him I did it. Then I said I didn't see any use having hard feelings, and asked him to come up and have a drink, all the time watching him for a chance at him. There was a sort of bar there, where they handed out the whisky. Heenan allowed he didn't need any whisky, but asked me to step up, while he kept me covered with his rifle, and have a drink with myself, which I did, having come a good way in the cold. I saw there was no way in the world to get out of this, for he had me dead to rights, and the only wonder I had was that he hadn't hammered me long ago. ("To hammer," in plains talk, means "to shoot, to kill.")

"Finally Heenan seemed to conclude that I hadn't any more guns, so he stood his own gun up in the corner, keeping it handy and out of my way. Then he said, 'Billy, I've got nothing against you. Now, you go on back the way you come. You ain't goin' to git no horses. You promise me not to follow me any further and I'll give you your own horse; I don't want to take it from you.'

"'I can't promise not to follow you, Heenan,' said I, 'for if I didn't follow you I might as well throw up my job.'

"'Well, you don't want to git too close,' said Heenan, 'for if you do I won't let you off this way again.' He said all this as cool and easy, just the way he spoke to me when I stepped through the door. He was the coolest acting man I ever did see.

"Well, anyhow, the upshot of it was that I agreed to stop back till Heenan got a good start across country, and he took my horse along with him, so that he had four horses now that he was getting away with.

"I dropped back to Yankee Jim's, and had to tell how I had got rounded up; but then Burns said that he'd stay with me, and we resolved to go ahead with our hunt, waiting first for the rest of our outfit to come up.

"We trailed Heenan fifty or sixty miles, over to the Crow Agency. Here we heard he was in the lodge of Bravo, one of the chiefs. Naturally we were pretty careful, for we knew it meant fight if we jumped Heenan now. But we hung around the agency for over a day, and we couldn't find our man. At last an Indian told us that he had seen a man and four horses crossing what is called the Countryman's Bottoms, taking the wagon trail by the way of White Beaver. We allowed this must be Heenan, and we figured he'd be going into Carpenter's ranch. We knew of an Indian trail going over the divide to the same place by a good deal quicker way, so we all lit out and got over that way, just one night ahead of Heenan.

"The next morning we were all sitting in Carpenter's ranch, eating breakfast, about 9 o'clock, when we saw a man coming up the trail, and we saw it was Heenan. We had our horses all unsaddled, but we didn't stop to saddle up or to finish breakfast. We just piled out on horseback, barebacked, and lit out for Heenan. Heenan ran up a side hill a little way and got down behind a pile of rocks, and there he pulled down on us, but didn't fire. I supposed he was waiting for us to get close in, but I allowed the only way to get this man was to rush him, and not wait till he shot us all, so on we went, hard as we could go, closing in on him. He kept pointing that old rifle at us, but she didn't go off, and in a moment it was too late and we had him.

"'That you, Billy?' he said, quietly. 'I'll remember this.'

"I asked him why he hadn't shot, and he showed me that his rifle had been wet, and the wood had swelled so the hammer would not go down. 'I'd a' got you first, if it hadn't been for that,' he said, quiet like. And I reckon he would, too.

"Well, we took Heenan over to Bozeman, and finally he was taken over to Virginia City and bound over for trial. The last thing he said to me was: "We'll meet again, Billy.' And so we did.

"When I got back to the regiment I was ordered off on the Nez Percé business, notifying the 7th Regiment that they were going to be needed for the Clark's Fork fight. It happened that way that I did not appear when Heenan's case came up for trial, and he was turned loose after all, unpunished. I expect he felt pretty sore at me, on the whole, but we didn't have time in those days to figure on such things very much. We had to take our medicine when the time came, you know.

"Three years later than this I was out of the army, and was doing a little Indian trading on my own hook; and another fellow and I had taken a wagon load of robes to Dutch Louis' place on the Yellowstone, about seven miles above the old Corral trading post, and about thirty-seven miles above the mouth of the Musselshell. We stopped here to spend the night, and in the evening we were out in front of the house, when we heard some one, away up the river, singing away as hard as he could, the voice echoing far away in the bluffs. We soon found the singer was in a boat, and that he was coming down stream. I kept watch up the river, and by and by saw the boat, with two men in it, coming around the bend and pulling in for our landing. I stepped down to meet the boat, not knowing who it was in it; but just as I reached out to take hold of the bow of the boat and ease her up as she came to the bank, the man in the stern sat up straighter and spoke out. 'Hand me that rifle, quick, Charlie!' he said, reaching out for the gun, which was forward in the boat from him. Of course I had on my own six-shooter, for, as I have said, a man had to eat and pray with his six-shooter on in those days. So I jerked out my gun and said, 'No, Charlie, don't you do it; don't you hand him that rifle at all.' So Charlie didn't, and it's a good thing for everybody all around he didn't get to. It was my friend Heenan who was in the stern of the boat. I don't suppose he wanted to get me, nor nothing!

"Well, I talked it all over with Heenan the best I could, and explained to him that I had had to go on after him as a scout, but that I had no grudge against him at all as a man. Heenan was full as a lord right then, and he had thirty gallons of whisky on board his boat, being bound to meet the steamboat which was expected up river about then, and allowing he would trade some with the Indians for robes at the Corral post. I watched Heenan pretty close, of course, but after a while he seemed willing to let it go at that, and the last I saw of him he was going on down the river, still pretty happy and singing again, as if he harbored no malice against any one in the world. I have never seen him from that day to this, nor ever heard of him again. One of the curious recollections I have of this little affair is the echo of Heenan's voice, which sounded so far off and so clear, as he was coming down the river in the evening, before we saw him.

"I probably never will see Heenan again now. Since that time the old trading posts have gone, the Indians have gone, the army has gone, and I expect by this time Heenan has gone too, with the past and the old times. But he certainly was a cool one."

Natural History.

THE ALASKA LIVE-MAMMOTH STORY.

How we enlightened the Bering Straits Eskimos on the subject of the mammoth is an old story now, and my only excuse for bringing it up again is that it throws light on the origin of certain romances about the existence of the mammoth in Alaska.

I have recently been furnished with a number of newspaper clippings relating to the existence of the mammoth in various parts of that territory. They represent but a small proportion of the live-mammoth stories that have been printed in the last two or three years. Some of them are told in a few lines only, while others are illustrated and occupy the whole page. They relate, for the most part, to mammoths said to have been seen by Stick Indians, about five years ago, on the headwaters of White River.

This region is only about a hundred miles from the mining camps on the Yukon, where there are a couple of thousand miners and frontiersmen who are idle a good part of the year, but who are not sufficiently interested in mammoths to go out and bring one in.

Most of the pictures accompanying these stories are fairly good representations of the mammoth, the tusks in some being inserted upside down, while others have both jaws decorated with a combination of elephant and walrus tusks that is truly remarkable. The most elaborate article purports to be an interview with an Alaskan trader, with whom I happen to be well acquainted, and who is certainly not responsible for any such yarn.

The articles are pretty much in the same strain. A reporter in San Francisco, or Chicago, or New York, appears to have interviewed a traveler from Alaska, who has seen a trader, who has seen a native, who has seen a mammoth and made a drawing of it. This part of the story is generally brief, the bulk of it consisting of the reporter's interview with some local geological oracle, to whom he has hopefully referred the matter for confirmation, but who seldom says more than that mammoth bones are abundant in Alaska. The reporter is, however, enamoured of the idea and works it up to make it look as plausible as possible.

The period covered by these articles is rather longer than that required to wear out the average hoax, but its length can be explained by the fact that the natives know how to draw the mammoth.

Twelve years ago I accompanied the United States revenue cutter Corwin commanded by Capt. Healy, on a voyage to the Arctic. We waited a few days in the neighborhood of Bering Straits for the pack ice to recede somewhat, and on July 1 the bow of the Corwin, being protected by an ice breaker, pushed slowly through the heavy drift ice and entered Kotzebue Sound. Here it was the intention to land parties for the purpose of exploring the Kowak and Noatak, two of the large rivers flowing into the Sound. Both were unknown, except for a reconnaissance of the lower course of the Kowak, which had been made the year before. The conditions being found favorable, the exploring parties set out on July 2, my own, on what proved to be a two months' journey to the headwaters of the Kowak and back to Kotzebue Sound. At Cape Prince of Wales, in Bering Straits, where we anchored for a time before entering the Arctic, the natives brought on board the ship some tusks and bones of the mammoth for barter. When questioned as to the character of the animal that produced them, they said it was a creature much larger than a reindeer—the only animal they found available for comparison—and they took great interest in pointing out to us, from the bones at hand, how large it must have been. They were questioned particularly as to its existence and replied promptly that they were all dead. A text-book on geology was brought out, containing a picture of the skeleton of the mammoth, which the natives at once recognized, and they delightedly compared the bones and tusks on the deck with those shown in the picture.

The decks were swarming with natives, and the appearance of the book was followed by voluble and prolonged discussion. One native got the book down on the deck, and lying almost on top of it, laboriously copied the picture, a task he was not unequal to, as any one knows who is familiar with Eskimo picture writing on ivory.

Having served an apprenticeship in the Ward Museum of Natural History, at Rochester, where several restorations of the mammoth were constructed, I felt that I was prepared to speak with some authority on its personal appearance; and I furnished the Eskimo artist with a rough sketch of the animal as it appeared in life. The sketch, which was highly appreciated by the recipient, was taken ashore when the natives left, along with such new ideas on mammoths as they might have assimilated during their visit to the ship, where the officers had taken pains to instruct them. This incident is related in a report published in a Congressional document, entitled "The Arctic Cruise of the Corwin in 1885."

I have reasons for believing these unfortunate pictures to have begotten a numerous and persistent progeny, that have become dispersed in a natural manner, and finally modified by their environment. The Innuits are great gadabouts; they have sledges and dogs, and can make the longest winter trips. In summer, when the mossy tundra lands become impassably boggy, they take to the rivers. We found their summer fishing camps from the Arctic coast well inland toward the sources of the Kowak, where they were using birch-bark canoes, as well as the sealskin boats they manufacture along the coast.

Although the sled is laid aside in summer, the Eskimo dog continues to work in harness. We saw the natives about Selawik Lake traveling in large skin boats (*Omiaks*) towed by dogs moving along the beaches, like so many canal mules. They do a great deal of traveling from village to village for purposes of trade, and it is likely that much of their wandering is caused by a desire for entertainment, for they are a lively and sociable people.

Every summer there is a great gathering of Innuits at Kotzebue Sound, where a general exchange of Eskimo commodities takes place, and where they meet the Bering Straits natives, who trade with the Chuckchees, of the Siberian side. Alaskan furs in general are exchanged for large numbers of skins of the Siberian domesticated reindeer, which forms one of the principal articles of clothing among the Alaskan Eskimo.

In August, 1885, there were more than 1,000 natives gathered at Hotham Inlet, and I was told that the gatherings frequently numbered over 2,000. Such gatherings mean large delegations from all the villages of the region; perhaps all of the coast villages north of the Yukon.

I make special mention of their facilities for traveling, and their trading habits, to show that the chances for the dissemination of new ideas among them are good.

We made many camps along the Kowak during the two months we lived with the Innuits, and were always on the best of terms with them. They enjoyed visiting us, and there were many long talks around our camp fires, where, in the enjoyment of our biscuit and tobacco, they told us of the big game and the fishes; of life in the long winter; of the bones of the mammoth; of their social life and beliefs, and a thousand other things. Their talk was interwoven with not a few legends, for they indulge in romances and tell some impressive tales.

It was a summer of talk for ourselves as well as the people, for they are great questioners. They wanted to know how many days' journey it was to California, where all the ships they see come from. They wanted to know how long it took to make a whale ship or a rifle; if the winter was as long with us as with them; if seals and reindeer were as plenty; if the wild geese came to us when they left them. And so it came to pass that we were explaining things as well as they.

I woke up one night, or rather day, for we had no night to speak of, and in the twilight of the midnight hour, when the sun was on the horizon, found Lieut. Cantwell explaining to our two native interpreters what the world was like. He had a bucket for a globe, and was tracing the Kowak River on one side and California on the other. He told them that it was round, for he had been around it on a ship, which they in their thirst for knowledge were not disposed to doubt. His globe was minus a continent or two, but complete enough for his purpose, and long after he retired the two natives could be heard discussing the tracings on the bucket.

On the Kowak the people appreciated us, mainly, I think, because we were doing something they understood themselves, namely, capturing the animals of the region. We did it intelligently, like good hunters, which they appreciated, while the examination of our preserved specimens delighted them beyond measure. They subsist entirely on the animals of the region, and they thought it only natural that we should wish to carry such desirable things away with us, particularly if we had none of those kinds at home.

In all this familiar conversation the omnipresent mammoth bones came in for a share of the discussion, and we were told of many places where we could find them. I found the front half of a mammoth skull on the open mossy plain at Schismareff Inlet that was not fossilized in the least, but was as light and dry as a bone could be. At one camp, I remember, we used mammoth tusks to hold down the canvas of our tent. In the vicinity of Elephant Point, in Kotzebue Sound, mammoth bones are very conspicuous, and they can be found along all the rivers flowing into Kotzebue Sound. There are large deposits at many places on the Yukon and Kuskowim, and according to some of the newspapers represented in this budget of clippings they are especially abundant about the headwaters of rivers flowing into Cook's Inlet. I think mammoth bones could be procured of the natives of almost any village north of Cook's Inlet

What we knew of the mammoth was, no doubt, told many times to the eager people, and two mammoth pictures at least—the ones I have referred to—were put into circulation. And so the tares were sown, to be reaped plentifully a few years later, when credulous newspaper gleaners began to write up the country. The people took to the white man's mammoth eagerly. The pictures that went ashore at Cape Prince of Wales undoubtedly went, like the Ark of the Covenant, with the people on their wanderings, and the native who bore them was of no small importance. I can imagine him at each village, producing the first picture of the beast so prominent in their legends. There were the big tusks they had known all their lives, and the creature covered with long hair just as naturally as any Arctic animal. It was food for the imagination. They must have surmised that the white men had seen it at some time, and the surmise was strengthened by the evidence of the book that all the Prince of Wales people had held in their hands. Along with the mammoth, the book showed other strange kinds of reindeer, some of them very like the cow that had been landed from a ship for the trader at St. Michaels, and that had almost scared the life out of the St. Michaels' children when it was turned loose on the beach. The evidence was strong in favor of the white man's knowing a great deal about the mammoth that the Innuits hadn't dreamed of; and they probably very soon began to think that they might find them some day themselves, away off somewhere, where nobody had ever been to hunt, since bones of them were sticking up

THE MAMMOTH (*Elephas primigenius*).

Restoration according to measurements afforded by the St. Petersburg specimen and from bones in the Royal Museum of Stuttgard. This restoration is in the private geological museum of Prof. Henry A. Ward, Rochester, N. Y.

everywhere. Such reasonings would not be unnatural to the Eskimo mind, and so the idea could have developed. Other natives could, of course, copy the picture, and it is almost certain that they did so. The people rapidly got the correct idea of the appearance of the mammoth, if not the facts connected with it.

The natives of widely separated localities appear to have absorbed the idea, and it is no doubt becoming ingrained, for the Innuits are a friendly race, disposed to be accommodating to strangers who treat them fairly, and frequent inquiry about mammoth ivory, or about live mammoths, by the increasing number of visitors to the country, would lead them to the conclusion that the white man attached great importance to it, and also to acquiesce in the white man's fancies as to the mammoth's continued existence.

I think the natives of northern Alaska may truly be said to be eager to please, and if they thought that certain admissions on their part about the mammoth's existenee would give satisfaction, they would not hesitate to make them, in spite of whatever doubts they might entertain privately.

Another point in connection with the making of mammoth pictures by natives is the possibility of future trouble for the anthropologists. The Eskimos are adepts at ivory carving. All sorts of implements and ornaments of ivory are covered with etchings of reindeer, seals, whales, bears and other animals, while their hunting and fishing operations are often minutely represented. Who knows but that they may be already working the mammoth into their ivory records, and that someone will presently be trying to prove man and the mammoth contemporaneous in Alaska? The idea almost excites suspicions of the famous mammoth etching by prehistoric man that is so commonly figured in the text-book on geology.

Other explorers could, of course, have explained to the natives about the mammoth—and it is very likely that they have done so—but I am disposed to think that the first thorough awakening of their ideas on the subject took place eleven years ago at Cape Prince of Wales, where the picture and the story were passed along Both appear to be going yet, and if the growth of the picture could keep pace with that of the story, I should be very glad to see it again after another dozen years.

C. H. TOWNSEND.

WASHINGTON, D. C.

A Mudhen in Trouble.

MADISON, Wis.—While returning from a hunting trip last fall, my companion in the boat noticed what he took to be a wounded duck, swimming along not far from us. We immediately turned the boat in that direction and gave chase. Upon reaching the bird we found it to be a mudhen, whose head was held under the water as if in an attempt to dive. Upon lifting her from the water we found that she was having troubles of her own, her beak being held clasped between the shells of a clam. When we found her she was nearly drowned, having become too tired to hold her head far enough out of water to breathe. After lying some time in the bottom of the boat she revived enough to shake the clam off by banging it against the sides of the boat.

The lower mandible of the beak was held by the clam and we thought that in feeding she had seen the bright rim of the clam's shell on the bottom and had seized it only to find part of her bill held in a clammy embrace.

Have any of your readers had a similar experience?

RALPH STEWART

[Instances somewhat like the one cited above have often been noticed, and accounts of birds caught on the shore by shellfish when the tide was down have been published. We once captured (unhurt) a blackheaded duck which had a mussel clamped to the root of its tongue. The bird could not close its bill, and was nearly exhausted when secured. It had evidently seized the partly-opened mussel and attempted to swallow it when the fleshy root of the tongue became wedged between the two valves of the mussel's shell, and could not be freed. Have any of our readers heard of cases like these?]

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

AN ADVENTURE WITH A DEER.

PALATKA Fla.—Your correspondent enjoys the life in the wilderness and the pursuit of game there with a zest beyond his ability to describe. The beauty of lake and pine forest in this State charms one with its inexhaustible variety. The balmy fragrance of the woods is like incense. The excitement of the chase in this atmosphere exhilarates one like wine. Then the evenings spent in camp, lulled by the crackle of our fire, when fancy weaves strange shapes in its flames—who can describe the witchery of them? That the spice of danger attends the hunting of large game, one of our trips into the woods proved. I shall supply the details of this expedition, and leave it for the reader to furnish the proper setting for them from his knowledge of camping out.

Two of us left Auburndale, Fla., about 10 o'clock one bright December morning upon a camp-hunt to last a week. Numerous signs of bear and deer had been reported to us as seen near a group of lakes thirty-five miles from town. The Doctor and I were to join Morgan and Ben, the other two members of our party, twenty-five miles out at Deer Creek, where we would camp for the night. We drove a small, black horse harnessed to a spring-seat wagon loaded with provisions and the camping outfit. A black and tan, half beagle, chained to the rear axle, ran beneath the wagon, while an industrious white dog, a cross of beagle and foxhound, made short excursions along the road within sight.

The twenty five mile trip made that day, though through deep sand or over palmetto roots, was delightful. For the first ten miles the road lay in the edge of the pine forest, where the air was fragrant, and past lakes rippled by the breezes. The sound made by the light wind through the treetops, and the lapping of the water along the shores, were a soothing accompaniment to the steady grind of our wheels. During the morning we passed within stonethrow of a dozen lakes, and within sight of many others. They varied in size from a quarter of a mile to two miles across, and each lake was a different shade of blue. During the afternoon we traveled through the pine forest. Small palmettos grew in profusion in many places, and their roots made the road very rough. From the wagon seat one could see for long distances beneath the pines, except where swamp growth or sandhill cut off the view. Herds of branded cattle browsed about, and small droves of lean hogs rooted beneath occasional live-oak trees. A ford, a quarter of a mile long, through a cypressed stream, was passed after dark. The water was so clear that the stumps might have been easily avoided in the day time, but they blocked our wheels and nearly threw the horse several times at night. Hooting owls, screaming herons, and screeching wild things of every description cheered us through. From an elevation two miles beyond we could see the camp-fire of the other party, and horns were blown and answered to an accompaniment of howling dogs.

We had strong coffee boiled in tomato cans, bread and butter, cold baked beans, cold beef and apple pie for supper. The tent was pitched afterward with its back to the road. A small stream flowing to the left passed forty rods in front, then turned at a right angle a short distance beyond and crossed the road 100yds. to the left of camp. Its course below the ford lay beneath gum trees and bay bushes to a large sawgrass swamp 500yds. back of the tent. That night the hooting of a large owl in a cypress pond up stream was the signal for a chorus of screeches and yells from all quarters. Murder was committed in the ford while a climax was reached in the large swamp behind camp—the spirits of the damned were abroad. At intervals during the night fuel was heaped upon the fire till the flames showed the moss in the treetops.

In the morning we found where several deer had entered the large swamp behind camp, and the tracks of a bear beyond the stream in front. We struck camp about noon, and started for the lake region, ten miles further on. At one place we crossed a ford several hundred yards long. The clouds of moss that hung from the arched cypress limbs above the crossing formed a shaded tunnel, so narrow that the hubs of the wagon scraped the trunks of the trees. The horses drank in there, and thrust their muzzles into the current for additional sips, even after their thirst seemed to be quenched. The stream was so clear that the smallest objects upon the sandy bottom were plainly visible, and the minnows swimming about the wheels seemed to be suspended in air. Five miles of sandhills were crossed beyond the ford, covered with a scattered growth of scrub oaks, and small, basin-like depressions surrounded by green palmettoes. Camp was pitched about 4 o'clock by the first lake of a chain that form the source of the Kissimee River. Morgan waded into the lake during the afternoon till the water reached his waist, to fish, while we caught frogs for bait along shore. His rod was a heavy bamboo, and his line a stout cord. A large bass almost leaped from the water to

get the bait. There was a whirl in the water, a whiz through the air overhead, and a crash in the palmettoes behind, where we found the fish stunned. After that there were no more bites.

We found the trail of a bear and two cubs in the morning, several miles beyond the lake in a sand scrub of shoulder-high palmettoes and stunted oak trees. The white hound was soon leading upon the trail several hundred feet ahead. The Doctor, Ben and I were able to follow close behind the second dog by hard running. The hounds seemed to be frightened, and ran with every hair erect. The hard sand made good footing, and it was not difficult to make one's way through the palmettoes at full speed. The dog in front became silent; there was a crash in the palmettoes ahead; the dog we were following turned a series of back handsprings and landed between the Doctor's legs snapping in all directions; the Doctor fell down; Ben and I quickly cleared several rods of palmettoes; the cur squirmed from beneath the Doctor and ran off down the back trail yelping, then the white hound bounded into sight ahead, seemingly unconscious of the alarm he had caused. The dogs ran off upon the trail of a fox after that, so we returned to camp, where we shot enough quail in the palmettoes near the lake for dinner.

After our meal was over we struck camp and recrossed the five miles of sandhills. Ben and I drove the teams back by the route we had come. We were directed to turn to the left when we arrived at the swamp beyond the hills, and to stop several miles below at a former camping place. When we were about a mile from the point at which we were to camp, we heard the dogs with the other two members of our party, who had taken a more direct route. By the time the horses were tied the dogs had started the deer several hundred yards from us in the swamp. The chase went up the swamp, and Ben disappeared around the first bend of the road behind at the top of his speed on his way to a stand we had passed a mile back. In a few minutes the dogs seemed to arrive at the edge of the timber there, from the increased clearness of their notes. Then Morgan came running up. We heard a gun shot, followed in a few moments by a second report. We found Ben up there standing over a doe. He had shot her down as she ran into the open, and had shot her down a second time as she rose again. The deer was carried to the wagons and camp made a short distance beyond. Then, as it had been raining for the last hour, after stretching the tent we built a roaring fire by which to dry our clothing. We had juicy steaks of venison for supper. During the evening Ben shot a cat as large as the foxhound.

In the morning, after the dogs had run off, three of us lost our way while following the tracks of a large buck that we had traced for five or six miles on the sandhills. One of the party thought that camp was directly to the left of our course, another that it was to the right, while the third agreed impartially with the other two. We found camp by following our tracks back.

After an early breakfast the next day three of us crossed an icy ford waist deep a short distance below camp. The country beyond the stream was open and interspersed with cypress ponds. The fourth member of the party hunted the foot of the sandhills on the camp side of the stream while we followed the other side. The creek between us was concealed by a dense growth of cypress trees and bay bushes. A mile below camp we heard the dogs across the way and a shot fired soon afterward; then the chase turned up stream and two of us ran back around the first bend in time for the leader to see a doe break from cover half a mile beyond. The chase crossed the open flat country, turned our way at one time, then passed out of hearing. The foxhound was restrained from running off and later he was urged upon the trail of a buck, but he lost the scent toward the middle of the day and we returned to camp.

We hunted the foot of the hills for four miles below camp in the afternoon, and at one place a short distance after we had passed a number of deer beds, a large gray animal bounded from the palmettoes near us and rushed off with its white tail fanning the air. We discovered that it was a steer in time to prevent us from firing. The two runaway dogs joined us as we were returning to camp through the flat country, and when the cypress ponds where the trail of the stag was lost were reached they were urged upon it. They followed it to the nearest pond, which we quickly surrounded. The hounds soon reappeared at the further end and rushed noisily to a second pond that was encircled by us as the previous one. At the third pond, I had placed myself halfway up the left side; Ben was 100yds. beyond me, in sight, the Doctor an equal distance from him, and Morgan about a like distance from the Doctor across the pond from me. The dogs could be heard splashing about the wet ground near the head of the pond apparently at a loss in regard to the trail. The Doctor fired two shots in rapid succession, and the shot crashed through the trees in front of me; a large animal rushed through the shallow water at the upper end of the pond, coming my way. I saw Ben take deliberate aim at a gray streak, as it passed him in the edge of the timber, and fire; then as a large deer fell and rose again, fire a second time and bring it down in the water. We found Ben up there kicking the dogs away from a buck with as fine antlers as we had ever seen. The deer was prepared for carrying by first removing the entrails, then skinning the legs to the knees and removing the lower joints, when the right hind and left fore knee, and the left hind and right fore knee, were tied together with the loose skin. By passing one arm between the forelegs and the other between the hindlegs, and letting the weight fall across the hips, a deer can be carried for a mile or so by a muscular person. Two of us brought this one a mile and a half into camp, with scarcely any assistance from the others.

Morgan and I hunted the foot of the hills in the morning, the others crossed the stream. We found where a large buck had come out of the low ground a mile below camp, and after walking a short distance along the foot of the hill, had turned into the flat woods, where the stream ran away from the higher ground and left a broad flat open. The hound followed the trail at a lively rate on the flat ground. Several hundred yards from the hills the trail turned toward a small cypress pond to the right of our course. Morgan followed the hound, while I hastened to get beyond the pond. Then the trail ran straight from the hills. The scent was strong, but the hound would wait for us to catch up whenever we fell too far behind. Under such circumstances, Tom would exhibit a degree of intelligence seldom equaled by a dog of his breed. We looked for the deer to jump from each cluster of palmettoes we raced by. As the hammers of my gun were lowered in obedience to a prejudice of Morgan's, I was uncertain whether it would be possible for me to shoot quickly if we started game. The dog overran the trail half a mile from the hills, came back 100ft., then turned off to the left at a righ angle to our course. We were now heading for a bunch of palmettoes shoulder high and several rods in diameter. Morgan was running close behind the dog, and I about 10yds. to his right. The hound had approached within 30ft. of the palmettoes, when the deer rose with a bound scarcely 2yds. ahead of him, and with two leaps was in the midst of them. We caught a glimpse of his full outline as he sprang from the ground, then of his head, above the palmetto leaves. My gun cracked at the head, and it disappeared. We ran through the palmettoes and found the deer stretched at full length upon the other side. He had turned a complete somersault. It proved to be a buck of unusual size and possessed of a hide with a handsome silvery luster, but it did not have such large antlers as the deer shot the day before. The killing shot had entered behind the ear, another shot had creased the back, and a third had pierced the body. Morgan had not fired, as the dog was between him and the deer.

After examining its wounds a short while, Morgan suddenly caught the deer by its hind leg and called upon me to take hold. But before I could respond, Morgan was being hurled about by the deer, which rose to its feet to be thrown again, the dog rushed in and fell beyond the confusion, howling pitifully, and there was a whirling mass before me bristling with keen-edged feet and sharp horns. A hold on this was not what I wanted; I should even have preferred to climb a tree and wait for a more favorable time to make my selection, but I grabbed at random and caught a horn, when we all fell in a struggling heap. After awhile the deer allowed us a brief rest; then we had round upon round with short intervals between. We lost our hats in the first engagement. The perspiration poured down our faces. At every opportunity we urged the hound to gnaw the throat of the brute, but his teeth proved ineffectual. What could we do! The beast was enraged by this time, and neither of us dared to drop his hold and rush for a gun. The other boys had not come. Our cries for help had brought only their black dog. That cur sat off at a safe distance and serenely watched our struggles. We dubbed him the umpire, and that office was never filled with less partiality. The deer's frantic efforts to break from us, so benumbed our arms after awhile that the pain of our wrenched joints was the only evidence of sensation left in them. The eyes of the deer had changed to the baleful green seen in those of a dog with rabies. We felt assured if the animal now broke away from us, that one and perhaps both of us might lose our lives. There was not a tree within several hundred feet that we could climb. After struggling for half an hour the deer showed signs of exhaustion. Morgan found that he could sit upon its hind quarters and still hold the leg. During one of our rests he secured his knife, and the next opened it and slashed the throat of the deer. The relief we felt to thus end a struggle with so doubtful an issue cannot be expressed. I will confess to a feeling of compunction whenever I have killed a deer. The joy of being in the woods, and the excitment of the chase I can appreciate, but our chief regret now was that the buckshot had not killed this stag at once. One of my hands had been scratched in the encounter, the side of the dog had been scraped, and Morgan had escaped even that much punishment. We had leveled the grass upon a place 10ft. in diameter, and had worked the soft ground beneath it into mortar. These facts were noted while we were resting. After dressing the deer and hiding it in the palmettoes, we hunted up the other members of the party. We overtook them two miles further on. The dogs started another doe and went out of hearing toward home; so we retraced our way and carried the stag to the camp. After dinner the wagons were loaded, and the teams started in the direction of home. At the first bend of the road we all turned in our seats for a last look at the site of our lucky camp. A thread of smoke rising from the ashes of the camp fire marked the place. At one point on the way home a bear trail followed the road for five miles. We arrived at Auburndale about 4 o'clock the next afternoon with two bucks, and what we had not eaten of the doe, to show for our hunt. The head of the buck we fought hangs in our hall; the gash in the throat mars it as a specimen, but with the eight sharp spikes of the graceful antlers it adds to the trophy a suggestive interest.

H. R. Steiger.

HOW THE MOOSE ESCAPED.

Reed's Camps, Ashland, Me., Aug. 1.—I should like to give, and have published in your paper, some of the reasons why so few moose were killed in this section last season. It was common talk the whole length of the B. & A R R.—from Bangor to Ashland—that there were no moose about Ashland; and if a party started for this place they were switched off below. Now, thirty moose were seen on the Machias waters before one was killed, and yet there was any amount of moose seen by different sportsmen.

The first man who missed getting his moose, started with his guide (and a good one, too, and in a good moose region), where he would expect to meet a moose at any minute. He must have been a little careless, I think. As he was going along he saw a big bull moose step into the road ahead of him. He brought rifle to shoulder and snapped three times without any report; when come to look, he had no cartridge in his gun. It is needless to say that he never got another chance at a moose that season.

The next man on the list started out with his guide one day, the guide not taking any rifle. They went up the side of a ridge and sat down, and the guide began to call for moose, and soon one answered them close by, and then another and another, so there were three moose and only one gun. It is reported that they both climbed up a tree and waited for the moose to go away.

The next man to lose his opportunity to secure a good set of antlers was one of my parties. He had as good a guide as any man could wish for, but he told his guide not to shoot; that if he could not kill his game he did not want to get anything. One day as they were following an old road a big bull came out into the road a few rods ahead of them. The moose stood there some three minutes, his head on one side of the road and his tail in the bushes on the other side. There was time enough to have shot him full of lead, but the man did not. He simply waited until the moose started and then fired one shot at him and let him go.

A few nights or days after this happened his guide was making a canoe trip with the same man. They had paddled up stream until they came to the head of the dead-water, and turned their canoe about and were going back to camp, when in rounding a point they ran into two moose, a bull and cow. It surprised them all. The guide did not have time to think of his gun, as he had all that he could do to take care of his canoe, and the man never offered to shoot until the moose had started for the shore. He then fired two shots, but did not kill his moose.

I had another party from New York at the same time, but they did not get their moose, although they saw a number of them. They saw one big bull on the further side of a pond, but he was too far away to shoot. This same party had one, a bull, too, go by their camp when they were eating supper. They heard him in the water, and all rushed out to see what it was, but he had taken to the woods, so they missed him. I had two other parties who saw moose, and did not get them.

This is a new country up here, being the fourth year since sportsmen began to come for big game, but the game is here. All the country lying south and west of Ashland, Masardis and Oxbow is one vast wilderness. This country is larger than the State of Massachusetts, and it is mostly wilderness with its immense water system of over four hundred lakes and ponds that constitute the best feeding ground for moose and deer in the summer, while its mountains and hills make a desirable shelter in the winter. I do not know where a man can go and count eleven moose and sixty five deer in one day as Mr. Pitman, or twelve moose and fifty-two deer in a half day as Mr. Bowne did here.

C. G. Reed.

THE SPORTSMAN—TWO IN ONE.

Number One.

Editor Forest and Stream:

In the month of July, in the early 80s, it so happened that I was journeying by rail across the sparsely settled prairies of northern Nebraska in search of a small, isolated town in the midst of a good chicken country, where I could stay during the chicken season and engage in the training of a dozen dogs which, duly crated, I had with me; and with trunks and shooting equipments they made a most formidable aggregation of baggage, no inconsiderable source of trouble with such train baggagemen as were either rapacious or disinclined to work.

Arriving at a railroad junction where it was necessary to change cars to take a more westerly course, and where, owing to railroad squabbles, a wait of twenty-three hours was in order to make a connection, I resolved to take advantage of the opportunity by staying in the town three or four days to make inquiries concerning the available locations and incidentally to await a remittance, which might better insure a continuous journey to the desired place, if such were discovered. It came promptly; there are others.

I rented a barn for the purposes of a kennel. The hours passed quickly by in long, gossippy talks with the local sportsmen—talks on the prospects of good shooting when the season should open; on the colors and pedigree of the best dogs; on whether a pointer could work without any water; on how much better a blueblood could do his work than any other dog on earth; and on the common good resulting from a close season and a strict enforcement and observance of the game laws. There were close and open seasons then as now, with much the same problems to be solved, much the same arguments pro and con, and much the same forces contending—the one to preserve, the other to destroy.

There were then many local game protective associations throughout the Northwest whose membership was mostly derived from the professional and business men of the towns, between whom and the farmers there was not always the best of feeling or unanimity of sentiment on matters of game protection.

The subject of game protection—practical, earnest and heartfelt—was much and many times talked over by us; in fact, when we had gone the full round of all the standard topics—guns, dogs, pedigrees, loads, game violators, proper punishment, every-man-a-warden, etc.—we would begin anew from the beginning with a freshness of spirit and flawlessness of interest that I now look back upon with some wonder and with much envy. I was a game protector—rigid, uncompromising and merciless. Let them bring on reasons for game preservation—I could produce one or two more which were bigger and better. The man who shot out of season was a coward—a sneaky coward, for did he not skulk from the gaze of man and pilfer from the belongings of the people? Did he not lawlessly take the shares of men who lost their shares because they were law-abiding? It was thievery—cowardly thievery—was this shooting of game birds out of season; and the local association then would take a new hitch in its trousers and resolve that it would go hard with the next man found guilty of stealing from the public game treasures.

My conscience, or such thing as did service for it with dog trainers, was a little uneasy on this subject, for, outwardly so bold and zealous, I inwardly had some misgivings as to whether it was necessary that I should be so intensely imbued with the local spirit, and so intent in outstripping the others in proclaiming it. But then those were my sentiments as a citizen. As a dog trainer, I had others.

The chief reason of my urgent quest for a small, sequestered town was to be out of the ken of the game associations, and their activity, the letter and purpose of the game laws of the State of Nebraska as they applied to chickens not being wholly consonant with my purposes. I intended to shoot some chickens, not as a citizen, but as a man in the pursuit of his profession, as it was necessary now and then to shoot some birds to get the dogs properly set in their training; at least, we trainers deemed it essential that we should think so, and, also, while we shot professionally as trainers, we permitted ourselves to enjoy the sport as citizens. Many very good men in those days enjoyed the shooting out of season simply as citizens and for the sport of it alone.

It may be said by way of extenuation, if anything can be said at all, that then there were vast regions uninhabited by man in the chicken country, and that away from the larger towns birds were in wasteful abundance. Also, while there was a game law, there was but little public opinion to sustain it, such as there was being confined to the towns, wherein were little local groups whose selfish interests stimulated them to measures of active game protection. They did not care a fig for the law as a public benefaction, but they did keenly care for the chickens and the sport to be had in shooting them.

It was at that time considered but a venial sin to shoot chickens out of season, unless a fellow happened to be caught, whereupon he would be heavily mulcted, much to his own gain in being set aright in what was lawful, and the gain of the public treasury, which was likely to be painfully low and therefore in need of contributions. It was the most trifling sort of an offense so long as the State did not or could not take cognizance of it, but let the violation once be within the legal attention of the State, with a yearning

treasury in the background, and the matter suddenly became serious.

One of the local sportsmen quite won my fancy. He was the proprietor of the best hotel in the town, and a good one it was, too, in its size, appointments and service. He was tall, symmetrical and well poised, easy and graceful in manner, pleasing in his address, and a fluent and intelligent talker. He was enthusiastic in everything pertaining to sportsmanship without any admixture of enthusiastic silliness. He was the president of the local game protective association and a terror to the sinners who broke the game laws. A purer altruistic spirit and purpose I never saw manifested. He recounted the vigilance necessary to restrain the lawless shooters; the personal part he had taken in detective work; the threats of bodily harm of which he was the object; the unpopularity which comes to him who is active in enforcing an unpopular law; the conviction of two or three offenders who were caught red-handed, the last one only recently. This offender had a wife and children, it was true, and he was too poor to pay his fine, consequently he would have to remain in jail a long time, but he took all those chances when he broke the law, etc. It served the lawbreaker right.

Here at last was a great and good man. It was honor enough to sit in the same county with him, but both an honor and a pleasure to sit near him on a broken-down reaper and listen to his legal precepts, his views of an exemplary sportsman's life, and his practical work in the interests of game protection. Here was a man who had the courage of his convictions—no mere theorist, who talked one thing and acted another. I felt better for knowing him.

As a citizen, I firmly resolved that I would inviolably observe the game laws. As a man engaged in a profession, I resolved that I would kill no more chickens than were necessary, and of such as I did kill I would take care that he knew nothing.

I was for game protection with all my heart, and I told him so; but I felt somehow that it would be difficult to arrange my citizen and professional case so that he would have a true perception of it, although I could perceive that he was admirably just. I never explained the distinction to him. Nevertheless he seemed to understand me, as I understood him; and I learned later he understood me better than I thought possible.

And yet he had his maligners and detractors. There were those who were earnest workers with him in the cause, who behind his back would say that he wanted the chickens preserved so that the numerous sportsmen who patronized his hotel would have good shooting. No shooting, few guests. And the base fellows further said that the chickens served for food for the same guests.

I could discern the depths of their baseness, for my hotel friend had already told me that they wanted to kill the birds themselves for the market, so, therefore, they could not decieve me in the least. Could not a man run a hotel without having the hotel in his mind always, I should like to know? Could there not be such a thing as unselfishness without an anchor tied to it? Of what use, then, are the stories of martyrs, patriots, heroes, the every-day hero-toilers of the world? Bah! it was contemptible.

The day at last came for our parting, and my hotel friend and I said good-bye with reciprocal expressions of esteem. He promised to come and see me when I got settled well. I went nearly 100 miles away.

Number Two.

I found precisely the little town I was seeking; one a year or two old, with an immense spread of level prairie on one side and sand hills on the other, in which there were a few rude huts, sod houses, or other rude domicils so wide apart that but one or two could be seen at one time from horizon to horizon; and the people were too intent on their daily toil to give any attention to an idler who was wandering about with dogs at his heels. I had shot a dozen chickens, more or less, each day in my professional capacity without any thought of the closeness of the season. It was not in strict accord with the sentiments I had advanced when debating the matter with my new friends, but then the circumstances were different. Circumstances alter cases.

The roads in my range were very faint trails, and at the rare times I saw a wagon creeping along one, taking a long while disappearing in the far distance, I had at length come to disregard it and to feel a sense of perfect isolation and safety.

One forenoon, about a week before the season opened, I had bagged nearly a whole covey of chickens in a few minutes, and was so intent on my professional function that I failed to observe a carriage drawn by two horses, and advancing rapidly toward me. It was so close on me before I discovered it that all attempts at secreting the birds or differentiating myself from them were useless.

Nearer came the carriage, and alas! in it was my good hotel friend, the president of the most active game protective association in Nebraska, and a practical worker himself in the good cause. My heart sank. Here was I caught *flagrante delictu*, not only a violator of the law, but a deceiver of my friend besides. I, an impostor—was I the man who was fit to listen to one so good?

Evidently he expected that I would resist arrest, for he had a big, brawny driver—probably a sheriff—by his side, whose face had a desperate, truculent look, and from beneath the light summer lap robe protruded 2 or 3in. of the muzzle of a shotgun, the barrels of which were grasped by the hands of my friend. Any tenderfoot could see on the instant that resistance was useless. The driver pulled up the horses a few yards away.

"I see that you have killed some," said my friend who had been.

I did not deny the soft impeachment. In fact I said I had killed some.

"How many have you got?" said he. I thought that he wanted to figure up, at $25 per bird, how much I would be indebted to the Commonwealth when the judge O.K.'d the matter; but it was better to appear cheerful and frank, so I told him the number I had in my possession.

"That's pretty good!" and he looked interested. Raising the lap robe he gave a click with his tongue, and a workmanlike setter sprang out.

'Here," said he to me, "jump in here, and we will go and find a new covey." We went. We understood each other better then. I understood him to be a two-in-one sportsman; he had understood me from the beginning, which I attributed to his greater knowledge of game protectors, and the minutiæ of game protection. REFORMER.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

CHICAGO AND THE WEST.

The Sooners.

CHICAGO, Ill., Aug. 7.—At Winnebago City, Minn., there is, this year, an unusually good crop of prairie chickens, but also a very strong disposition on the part of local shooters to go out and harvest the crop before it is ripe. On this account Deputy Warden Bird is on the ground, and has served notice that he will proseeute all sooners to the limit.

At Creighton, Neb., a protective organizatien has taken into its hands the prosecution of the sooners, who, in the past, have been in the habit of killing prairie chickens before they are half grown. Birds in that vicinity are reported fairly numerous, and there should be shooting, provided the wasteful ways of the past can be stopped.

At Aberdeen, South Dakota, the sooners are out in force this summer, and the local press, in commenting on this fact, says openly that the only way to get any game there is to go out and break the law with the rest.

The sooners are already killing prairie chickens in Illinois, near Denrock and near Sterling. In Lee county of this State we have what is probably the best prairie chicken county left in Illinois, but the sport there has been regularly ruined by sooners, who shoot a month or more ahead of the season. At Harmon, the Lee County Gun Club has been organized for the purpose of stopping this illegal shooting, and I presume that there will be more pressure brought to bear in favor of the law this month than ever has been before.

The Markets.

Last year there were shipped from Duluth, Minn., to Eastern markets over 100,000 partridges or ruffed grouse. This does not cover prairie chickens.

In the *Times-Union*, Jacksonville, Fla., I observe the following paragraph: "The rookeries of the plumed birds in Florida are nearly deserted. The birds have been disturbed so often that they have left the old breeding places. Many species are nearly extinct, even the white egret is becoming scarce."

Acclimatization.

The Ohio Fish and Game Commission will this month, and early in September, begin the distribution of about 2,500 Mongolian pheasants. Last fall 200 pairs of the birds were liberated in different parts of the State, and from these wild birds the most flattering reports are received. It is thought that the wild increase now numbers over 2,000. It would appear that Ohio is to repeat the record of Oregon.

In Oregon, by the way, the work of acclimatization was not confined to Mongolian pheasants. In 1892 large numbers of European song birds were introduced into the Willamette Valley. These birds have multiplied so that the country now overflows with them.

Must Leave their Trophies.

The Attorney-General of Michigan holds that a mounted deer head cannot legally be shipped out of the State of Michigan. A mounted deer head from Mackinaw was seized at Grand Rapids *en route* out of the State, and the deputy warden received the above advice in regard to its disposal.

A Farmers' League.

Farmers in the townships of Stow and Northampton, near Akron, Ohio, have for a long time been troubled by the trespassing of careless and unprincipled tan shooters, who trample over their lands, kill their stock, and otherwise comport themselves in an ungentlemanly and unsportsmanlike manner. As a result of this, action was recently taken and an organization formed, with a view to stopping the hunting on the lands of the members, except in cases of hunting with proper permission. The farmers will swear in enough deputies to enforce their claims, and the present quail crop, which is reported to be a very good one, will have the protection of the men who have most to do with its rearing and feeding. Such a movement can receive no criticism from any sportsman, for the American farmer has never been known to take any such action until driven to it by men who were not sportsmen in any right sense of the word. Those who take everything as a matter of course, and consider the landowner and his land as there for their convenience, are not considerate enough to qualify under the title of sportsman.

For the Birds.

Audubon work has this season been taken up in Milwaukee, Wis., in a very earnest and efficient way, which has attracted some attention from the State press. Several Wisconsin towns have had local secretaries appointed, to act as agents of the newly-created Audubon society of Milwaukee, and it would seem that some actual results will be produced in the future. Mrs. W. H. Upham is secretary for Marshfield, Mrs. Edgar P. Sawyer for Oshkosh, and Mrs. Arthur Knilans for Sheboygan. The society is making war especially on the wearing of aigrettes, and has just sent out a leaflet on the subject of the cruelty practiced by market hunters. Mrs. S. S. Merrill, chairman of the executive committee, has, this week, sent the following circular to the prominent Milwaukee milliners:

"Two months ago, an Audubon society for the protection of birds was formed in Milwaukee. One of the objects of this society is to oppose the fashion of wearing any feathers except ostrich plumes, quills, and cocks' tails as a trimming for hats. Although it has been in existence so short a time it has already a large number of members, each being pledged to carry out its principles. That this membership is drawn from the thinking class of the community is indicated by the names of the officers, printed with the accompanying circular.

"The directors of the society beg that when ordering millinery supplies, you will consider the trend of public opinion on this subject, and they hope that you will cooperate with them by discouraging, whenever it is within your power, the purchase of wild birds' feathers.

"A reception will be given in the autumn, to which the leading milliners of the city will be invited to send hats and bonnets trimmed without the use of aigrettes, wings or breasts of birds."

Mr. J. Newton Baskett, an ornithologist of Mexico, Mo., is putting on foot a movement looking to the establishment of a "bird day" in the schools of Missouri, thus furthering popular education in bird protective matters.

Western Protective Work.

At Spokane, Wash., warden Downey is now afield in pursuit of sooners, who are killing chicken grouse before their feathers are dry.

At Meadow Grove, Neb., an organization embracing several counties has been formed, with the purpose of stopping illegal shooting of grouse and quail. A corps of agents will be put on watch at the beginning of August, at which time the chicken thief is most abroad.

At Dillon, Mont., Mr. Phil Lovell last fall turned out a good number of the Bob White quail, and this summer parties have been found shooting these new birds, which were introduced with the view of ultimately improving the sporting resources of the country. Mr. Lovell makes request that all shooters respect the wishes of himself and friends for a time, and let these birds have a chance to establish themselves and multiply a little before they are pursued with dog and gun.

New Clubs.

The Springfield Outing club of Springfield, Ill., has been organized, with purposes of "maintaining a hunting and shooting ground, and to protect game and fish." The incorporators are Frank D. Hudson, James Morris, Peter Lofy, Charles E. Wright, William Broeker, C. H. Pasch, S. G. Brecount and George W. Anderson.

A club of citizens of Winfield, Iowa, has been organized for the purpose of hunting and fishing, with grounds of Hall's Lake, near Oakville. A good club house has been erected.

Citizens of Norfolk, Neb., have taken great interest in the enforcement of the new fish and game law, and have organized an association for the purpose of prosecuting any person detected in violating the law.

Buffalo Jones In the Far North.

From Edmonton, under date of July 29, comes the following dispatch to the Winnipeg *Free Press* in regard to the redoubtable Buffalo Jones, whose visit to the Arctic country has been previously referred to in these columns:

"Word has just been received from the north that Buffalo Jones, of Oklahoma, who is on his way into the Barren Grounds after musk ox, was rescued from a rock in the middle of Grand Rapids, on the Athabasca, by some northern boatmen, who threw him a tow line and hauled him to the shore. He managed to shoot the Pelican Rapids, but the Grand were too much for him." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

LOOKING UP FOR A MOOSE.

A GENTLEMAN wishing to locate a good place where he would be sure to get a big moose this fall, instructed me to proceed to the woods and see what the prospects were. Taking another man, with a horse and buckboard wagon, we struck into the forest over an old lumber road, meeting trees across the road which were cut through, bridges washed away by the spring freshet, and mud holes skidded; so that quite a little work had to be done to enable us to make twelve miles that day. That night we pitched our tent near a stream, where there was plenty of grass for our horses and trout for our supper and breakfast. We slept the sleep of tired men, awaking at daylight refreshed and were soon under way again, over roots and stumps for three hours, when we reached the stream which we intended cruising. Leaving the road we drove into the brook, making it our highway, and a good one it was. There was not much water, the bottom and sides were of a fine gravel, and the wagon rolled easily along. This was the pleasantest part of our trip; we could sit right in the wagon and catch all the trout we wanted. But even here lots of trees had fallen across. Cut out, go around, cut out and go under, or skid up and over, was the order of the day. After sixteen miles of this we called a halt, where plenty of grass grew for our horse, pitched our tent and set out exploring in different directions. There was not much need to go far, for the moose and caribou tracks were plenty everywhere. In several places the cow moose had passed with her two calves, a very good sign that the bull moose would come here visiting later on. In some places there were beaten paths, with all vegetation trodden out by the feet of these animals just the same as a cowpath in the pasture. Other spots we saw where the fir trees had been stripped of their bark, torn off by bears, while the marks of their teeth could be plainly seen in the tree, so eager were they to get the first food since denning last fall. Take it all together, it looks as though the sportsman, for whom we went, will have here a very fine hunting ground.

There are a few more good places not yet taken, which will yield plenty of game if properly hunted.

This region (I am sorry for the hunter), in regard to game, will soon be a thing of the past, as next year a railroad will be built, cutting this grand old forest of untold generations right through the center. Of course for a year or two it will be handy to get there, but that spoils it, as the game that now breeds in fancied security, will then be either killed or driven far back by the too frequent incursions of men.

S. J. RAYMOND.

EDMONSTON, N. B., Aug. 3.

Nuggets and Eggs.

CINCINNATI.—*Editor Forest and Stream:* Now that the gold seekers are invading Alaska in constantly swelling numbers, and as food is an important essential to them in their wanderings in that land of heat and cold, where the summer time is all daylight and the night is all nightdark, do you not think you could add much to their comfort, their needs, their chances of success, by telling them of the abundance of duck eggs which are there, and which can be secured in countless millions? Up to the present time it seems that they have not discovered the duck egg which forms the shibboleth of the egg protective specialists. But this shows how dull they are. If the association could discover the destruction of eggs at a distance of several thousand miles, the gold seekers should discover the eggs there on the ground, if any are left. As it costs something to get a pound of provisions into the duck country, it probably would cost something to get a dozen of eggs to the seaboard, to say nothing of the risks to such brittle ware in portages, running rapids and carriage over mountains—or the association could serve notice on the miners to keep away from the eggs, or—it should do something or other, even if it were only to pass a resolution that Congress should do the work.

WILLIAM HENRY ATHERTON.

DAMASCUS GUN BARRELS.

From the Consular Reports for August.

THE trade in the renowned damascus gun barrals (*canon de luxe*), of which the valley of the Vesdre, Belgium, enjoys the exclusive monopoly of production, has for some years suffered severely from several causes, principally from the placing on the market of steel barrels in imitation of damascus. The difference between the genuine and false damascus is that the real handmade barrels are composed of iron and steel manipulated by the most expert artisans, who are specialists in this art, whereas the imitation barrels are made of iron or steel, and by an ingenious process of transferring the design of damascus from paper to the barrel are made to appear in finish equal to the real.

The workers of true damascus barrels are paid 3 50 to 4 francs (67½ to 77 cents) a day (piecework); those engaged on false barrels, principally women and children, receive from 1 to 1.50 francs (19.3 to 29 cents) per day. The paper design transferred to the barrel costs about 12 cents.

The imitation of damascus barrels is largely done in Liege by the most important gun makers, and it is calculated to deceive the inexperienced purchaser. It is estimated that 90 per cent. of the guns produced in Liege for exportation to the United States have false damascus barrels. The manufacturers of genuine damascus barrels, realizing the situation occasioned by the large output of this artificial work, which has caused a great decrease in the demand for their product, have petitioned the Belgian Government for the enactment of a law regulating the sale of false barrels in Belgium. They demand that all imitations of damascus, shall be conspicuously marked "faux damas" or "imitation de demas," which, at sight, will distinguish the real from the false. Up to the present time, however, the government has not granted the demand of the damascus makers.

A commission of Liege arms manufacturers was appointed by the Belgian Government to inquire into the extent of the imitation of damascus barrels in foreign arms centers. The report of the commissioners shows that the making of false damascus barrels for exportation to the United States exists only in the province of Liege, Belgium. The life of steel barrels damascened, which are all officially tested, is as great as the real damascus, and will probably resist as many shocks. The advantage, however, of the handmade damascus barrel over the steel is that, in case of explosion, the charge escapes through some of the many welds and the barrel does not fly into pieces, as is the case usually when steel barrels burst, frequently causing serious injury to the person.

It would seem that if the sportsman purchases an imitation damascus gun from the retail gun dealer at much less than the price demanded for a polished steel arm, he obtains a weapon, with an artistic appearance, at a small price, instead of the large outlay required for a real damascus.

HENRY W. GILBERT, Consul.

LIEGE, May 6.

Adirondack Deer Killing.

RAQUETTE LAKE, N. Y, Aug. 5—*Editor Forest and Stream:* There is very little prospect of the laws for the preservation of deer being of any effect here. Many of the guides residing on the lake still have their hounds, and deer are being killed almost daily.

We have been camping for several days on a lake seven miles from here, fishing, and at about 5:30 this morning we heard a hound coming over the mountain. Shortly afterward a fine four-prong buck took to the water only a short distance from where we were. We headed him off from the shore and rowed around him, getting within 3 or 4ft of him, thus showing that he could have been killed even without a rifle. By guiding the boat, we kept him there fifteen or twenty minutes before we allowed him to go ashore again, and so saved his skin for that trip at least. But for us he would now have been numbered among the missing.

The game warden arrives and puts up at the best hotel, so that every man, woman and child knows the moment he comes and goes; and if the Commissioners really wish to carry out the laws, they certainly must take very different measures from those now in force. A SPORTSMAN.

The Maine Guide Law.

PRESIDENT JAMES MATHIESON, of the Rangeley Guides' Association, having been refused a guide's license by the Commissioners, on the ground that he had declared that as a registered guide he would not conform to the requirements of the law, has proclaimed his intention of guiding without a license, thus to make test of the constitutionality of the law. There is much discussion by the parties interested as to what Mr. Mathieson said or meant relative to observing the law if licensed, and as to the grounds upon which his license was withheld. These matters are beside the real issue, which is the constitutionality of the law. On Aug. 4 Mathieson was arrested, charged with guiding without a license, and made the defense that he was not guiding, but simply acting as cook. The case has not yet been decided.

Vermont League.

AT the midsummer meet of the Vermont Fish and Game League last week, President McKinley and other distinguished guests were in attendance; and the occasion was a most enjoyable reunion of the members.

A gentleman who was fishing on Seventh Lake, Adirondacks, a few days ago, became tired and sleepy. So he anchored his boat near the shore in a shady spot, and lay down in the bottom for a nap. After awhile he was awakened by something blowing upon his face, and when he opened his eyes he saw a big buck standing to his belly in the water beside the boat and with his nose close to the fisherman's face. The gentleman lay quite still, rather enjoying the situation. About that time another boat came around the corner into the little cove, and the buck with a bound disappeared in the woods.—*Utica Observer.*

The Marlin Company's New Catalogue.

WE have received from the Marlin Fire Arms Co., a new catalogue dated June, 1897, showing the products of their factory.

The catalogue is interesting because of the great amount of information not strictly pertaining to the company's goods, which it contains. The Marlin Company says that it contains so much supplementary information that they feel that it is really a sort of encyclopedia. It will be sent free on application.—*Adv.*

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

MAINE.

DIXFIELD, Me., Aug. 2.—*Editor Forest and Stream:* The regulations of the special laws and the registration of guides have caused us a great deal of trouble and extra work. There are some kickers on the registration bill, mainly among the camps back in our forests, in fact, in the moose and deer country. As to why this is so, I will let the community draw its own conclusions The law puts up the bars to the killing of these animals in close time. The only reason for the objections made to the law that I have ever heard given is that the penalty is too severe. I did not start in to discuss the merits or demerits of the law. It is on our statute books and the duty of the Commissioners is to enforce it, as we are trying to do impartially, whether for good or bad remains to be proved. The next two years will decide whether it ought to remain on our statutes. The fish and game laws in Maine are being enforced as never before, and notwithstanding some of the reports we read in the papers to the contrary, there is less illegal shooting and fishing than ever before. We are getting quite a number of convictions, but mainly for last year's work. Our wardens are good, and are doing better work than in the past.

There is plenty of large game (especially of deer) in our forests, more than heretofore, and it is almost as common to see deer as partridges nearly all over Maine where there is any forest. I have seen quite a large number myself in the road, in the fields and woods, and on the shores and swimming the lakes.

On my business trips, I have had an opportunity to put in a day's fishing at Rangeley, Sebago, Grand Lake, Sebec, Moosehead, and Square and Eagle lakes, in Aroostook, including many other smaller lakes and streams. In Aroostook I caught only toyne and a few trout. We found fine landlocked salmon fishing, as to numbers, at Grand Lake and Sebec, but not large, 5lbs. the largest, the average at Grand Lake about 3lbs., at Sebec somewhat smaller. At Sebago, in one afternoon, we hooked six fish and landed four (from 4 to 10½lbs.). At Rangeley and Moosehead we had fine fishing, also landing two or three salmon and a large number of trout at each place. The largest trout at Rangeley was 6lbs., salmon 6½lbs.; Moosehead trout 4lbs., salmon 6lbs. I also fished Swan Lake one day, taking a 7lb. salmon and two trout of 2 and 3½lbs. According to my experience, the fishing this year has been as good as I ever had in earlier years.

The addition of the landlocked salmon into the ponds and lakes of Maine has been of great benefit, and helps out the fishing very materially. We have hundreds of lakes and ponds in Maine well adapted to this fish. Many of them are now stocked, and from them salmon are caught in considerable numbers. In my opinion the salmon is to be the coming fish in Maine, and the one that will be the principal cause to attract the angler from abroad. There is one thing in favor of the salmon, which the trout has not—it cannot be caught in sufficient numbers, by legal fishing with hook and line, to decrease its numbers. It is not a free biter like the trout, which takes its meals regularly and often. The salmon when feeding, feeds voraciously, and then keeps a long fast, in which nothing will tempt it. For that reason, if not interfered with illegally, it is bound to multiply and keep up the supply in goodly numbers. HENRY O. STANLEY.

BOSTON, Aug. 7.—The season for shooting shore birds in Massachusetts is on, the "law being off" July 15, but the gunners are showing very little interest yet. Still there is time enough, and it is hardly probable that all the boys have lost their love for the summer decoy and the gun. Perhaps the unusual amount of stormy weather has dampened the ardor of the sportsmen, though such weather is usually expected to make better shooting. It is time for summer yellowlegs and several classes of snipe, with peep and beetleheads.

The illegal moose shooters are likely to get into trouble this year, if they attempt their old tricks in Maine. The daily papers have the report that two Haverhill, Mass., sportsmen, who yearly go to Maine hunting and fishing, have never regarded the game laws. In July they were accused of killing a cow and a calf moose in the Allegash region. The calf was only about four months old, but in their report to their friends they claimed that it was a year old. The guide is reported to have given the information, and the Commissioners have his sworn statement implicating the two men. Commissioner Carleton left Augusta the other day to investigate the case of a man in Sherman, accused of killing a moose and using the meat to bait his bear traps. It is reported that the Commissioners have declined to license five Tobique Indians, of Andover, N. B. It is stated that the Indians had been engaged to guide a party, by Dr. T. Porter, of Boston. The reason given for refusing the license, is that the Indians have been in the habit of killing moose in the States in winter.

James H. Jones is back from his annual fishing trip. He usually goes to Buckfield, his native town, and fishes with his father and a friend or two. This time they drove fifteen or twenty miles to some brooks near the headwaters of Concord River in Woodstock. They fished one day a little stream in the gorge under Speckled Mountain. In the short space of about half an hour they had caught over forty handsome trout. But then the floods came; characteristic of that part of the country, and especially this year. A thunder shower—almost a cloudburst—raised the brook up to full banks in a few moments. One could actually see the waters rise. They could but stand in the most sheltered spot they could find, and laugh at the howling of the storm. Their fishing in that stream was over; the water being full of roil. With their team at the roadside not far away, they concluded to start for home. Going down the Notch Road, below Shag Pond, beside the stream, Mr. Jones concluded that some of the holes looked inviting; the water having already begun to fall. Sitting in the buggy he caught several trout, in fact the largest for the day was actually caught without getting out of the carriage. Back to Boston, Mr. Jones tells this story about fishing from the buggy as they rode along, and taking handsome trout. The boys all want to brand him as the "champion first-story liar," and put his name at the top of the list. But in this they only show their ignorance of the mountains, the streams and the Notch Road from Woodstock to Buckfield, Me. SPECIAL.

SUCKERS AS TROUT DESTROYERS.

Editor Forest and Stream:

As I understand the fish law with its recent amendments, taking suckers with nets, especially in streams where trout abound, is absolutely prohibited, and the Commissioners are not authorized to grant licenses for that purpose, and if I am right, then we are confronted with a very serious question, which I have never seen raised.

I have been a pretty close observer for very many years in regard to the habits of some fish, and have been surprised to find the extent to which trout spawn is destroyed at the present time as compared with many years ago, and to show the extent to which it can be destroyed I will mention a fact in regard to Lake Willewemoc, which contains about eighteen or twenty acres, and is situated in the Catskills.

This little lake abounded some years ago in large trout, but a small one was rarely seen, and we found after a while that the spawn was practically destroyed by the newts which abound so frequently in very pure waters.

I constructed a spawn bed about 10ft. in width and 50ft. in length in one end of the lake, where the spring water came in, and this was filled with large trout during the spawning season, but it was also filled with newts, and the first day that our warden removed them with a hand net containing very small meshes he took out two barrels full.

We could drive out the trout and screen the spawn bed, but could not keep out the newts.

A constant examination of the trout showed that they never eat their own young, and I never knew them to take the little killies, which abounded to quite an extent in the lake during the summer season.

A fish almost as destructive turns up in greater abundance than ever before in the sucker, which has been gradually creeping up the trout streams in the Catskills, attracted probably by the increasing warmth of the water, for the water, as you are aware, has been getting warmer every year through the running down of the streams.

I have stood practically as one of the guardians over the Rondout, where we have our Sun Down Lodge, for many years, and have fished it for over thirty-five years.

Like all other streams, it has been running down in the summer season, and the suckers have been getting more and more abundant.

Some years ago we constructed, a mile or two above our lodge, a spawn bed, in which there are no suckers, with the result that the trout have increased with wonderful rapidity, and this bed has yielded a large supply of trout to the main stream.

A little binnekill, containing a spawn bed of ten times the extent of the other, and which is the finest spawn bed I have ever seen, is situated very close to the lodge.

I visited this spawn bed in the latter part of November, 1879, with Mr. Peter N. Christie, then engaged in fishculture, for the purpose of making a critical examination, and almost every handful of gravel which I took up from this bed contained one or more eggs, and this bed at that time was the great feeder of the stream.

Some six or eight years ago a couple of dams were placed on this binnekill for the purpose of creating a couple of small ponds, with the result that for two or three years the trout were very abundant; but within the last three or four years the suckers have found their way into these ponds and seem to have remained there during the entire year, and are now very abundant, with the result that the small trout have almost totally disappeared.

This evil can be remedied by breaking down the dams and driving all the suckers into the main stream, thus leaving the spawn beds in their original condition, but here we are confronted to a large extent with the same trouble.

Three or four years ago a new dam was placed on the stream just above the lodge to replace one which had been destroyed, and the pond thus created became immediately a harbor for the trout, which were very abundant for a year or two.

The suckers have now invaded this pond, and are increasing very rapidly, with the result that this year this pond is almost entirely devoid of trout, with the exception of a few large ones.

To open the dam for the purpose of getting rid of the suckers is not practicable on account of its peculiar construction, and the question now arises what remedy have we, or how can we get rid of the spawn eating suckers.

This trouble arising from the sucker is equally noticeable further down the stream, where the trout are reappearing in quite large numbers.

Mr. John Shields, who for many years has had the hotel at Lackawack, situated about eight or ten miles above Warwarsing, informed me a few weeks ago that while the trout had appeared in the stream in quite large numbers, the suckers had also increased very rapidly, and that there are no small trout in the stream, and he attributes this to the destruction of the spawn by the suckers, and in my judgment his views are correct on this point.

The remedy which I would suggest is the following, which would probably require an amendment to the game law before it can be applied, and for this I am largely indebted to Mr. Shields.

Let permission be granted to the riparian owners of streams or waters to take out the suckers with nets under a special permit, and in the presence and under the supervision of the fish protector, and also grant permits for the removal of the suckers to responsible persons or clubs who, if desired, should give a satisfactory bond to the effect that no other fish but suckers would be taken, or if taken out returned immediately alive. J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., Aug. 4.

Carp as Spawn Eaters.

IN a letter accompanying his paper on suckers as trout destroyers, Mr. Van Cleef writes:

"If I had had any personal knowledge on the subject I should have had something to say about carp as being very destructive of spawn. A brother angler undertook some time ago to give me some facts in regard to the spawn-eating tendencies of carp, basing his belief upon an article which

he had seen possibly in FOREST AND STREAM. The incident as he gave it to me was substantially as follows:

A person standing on the edge of a lake was noticing with great interest, the manner in which a spawn bed was being guarded by one of the parent bass, when he saw two large carp stealthily approaching the bed very slowly with their heads close together and their mouths wide open as though engaged in earnest conversation. Presently one of the carp swam off to some distance while the other one approached the spawn bed with the apparent intention of destroying the eggs. The bass drove him away a number of times, and finally, with apparent anger, chased him away for a long distance leaving the bed for a short time unprotected, and thereupon the other carp immediately attacked the bed destroying a large amount of spawn before the bass returned.

From this he drew three conclusions. First, that the carp is very destructive of spawn; second, that they are endowed with an intelligence not usually credited to the carp family; and third, that fishes have a language of their own.

I suggested to him that the weak point in his story was the generosity of the carp which enticed the bass away from its bed while the other gobbled up the spawn, but he met this criticism by suggesting that probably both of the carp very promptly visited another spawn bed and reversed the method of attack, so that each was enabled to enjoy a substantial 'breakfast on eggs.'"

CHICAGO AND THE WEST.

Western Catches.

CHICAGO, Ill., Aug. 7.—The summer season draws to a close and we begin to hear something of the fishing records for the season, which appears to have been an unusually good one in this part of the country. At Tomahawk Lake, on Wednesday of last week, A. M. Pride took a mascallonge which weighed 36lbs. 4oz. Ed Carmen, of Waterville, Minn., last week took two black bass in Lake Francis, one weighing 8½lbs. and the other 7½lbs. Frank Carlton, of Minneapolis, caught in the Kinnickinick Creek, of Wisconsin, the largest brook trout ever taken in that stream. It weighed 3lbs. 9oz. At Oconomowoc, Wis., on Wednesday of last week, Ed Butcher took in Lac La Belle, a 13lb. pickerel, the largest known there this year. In Devil Pond, near Massillon, O., Charles Waltz caught with hook and line, a carp weighing 14lbs. 3oz. At Fox Lake, Ill., fishing has been very good this summer. C. F. Hills, of Chicago, a very expert bass fisherman, in one week caught 131 bass and twenty-one pickerel. His friend, Charles E. Hyde, also of Chicago, took a great many bass; among others, two which together weighed 11½lbs. Mr. and Mrs. R. E. Shimmin are reported to have taken, this summer, 171 pickerel. Col. George R. Davis is reported to have taken 151lbs. of bass during his trip. From Spring Lake, Mich., I hear of heavy catches of large bass. Mr. E. R. Emery, of Baraboo, Wis., writes me as follows in regard to a little lake he has discovered. I have never heard of Mirror Lake before, and of course am always glad to learn of new fishing waters. He says:

"We found a resort ten miles from here that is too good to keep. Mirror Lake is one of the most delightful places I have ever found. We drove over, arriving at the farm just in time for a good country dinner. During the afternoon Mrs. Sumner's son Duke rowed Mrs. E., a lady friend and self up the lake two or three miles, while I cast with a Bristol steel rod and live frog. The water was too roily lower down, however, owing to recent heavy rains, and I didn't have a strike until we reached the slough, where the water was clear. I was casting well up to the shore, where there was an undergrowth of weeds, when there was a break and a swirl, a moment to allow the frog to be taken, a twist of the wrist, and we were fast to a bass or maskalunge, so heavy I could not control it with the light rod, and it got into the weeds. We rowed to the line and pulled up the bottom of the lake with the weeds, but the fish was gone. This fish weighed over 5lbs., judging from the number of 2 and 3lb. bass I have landed with a light split-bamboo. After this the striking was fast and furious, and although a number were lost, we landed five nice bass in a little while, two weighing over 3lbs. There were several other parties who had been fishing longer, and had strings of from eight to eighteen. Some wonderful strings have been caught there, some overgrown pickerel and pike, but mostly bass.

"Maybe I ought not to reveal the secret; but a number of the most successful—I might say prominent—fishermen of Chicago make this place their resort in preference to all other places, in this country of fishing.

"Bass are being taken at Devil's Lake between 7 and 11 P. M., trolling with a white rag, so we are told. Will give it a trial, though, before we can vouch for it."

Some Fish Stories.

This week, while Mr. Irving Bates, a cottager at the St. Clair Flats, was sitting on his veranda a steamer passing down the channel caused a large swell to run up along the edge of the lawn. The recession of the swell left a large bass stranded a few feet away from the lawn mower, and upon this bass Mr. Bates fell eagerly, making from it a supper for himself and his entire family.

While Mr. John Mulvihill, a Missouri Pacific engineer, was crossing the Walnut Creek bridge, near St. Joseph, Mo., one morning this week, he dropped a fish line from the cab window of his engine, and was so fortunate as to take, during his transit across the bridge, a large catfish, which he drew into the window and secured. What makes the feat more remarkable, is the fact that Mr. Mulvihill's train was going at the rate of thirty miles an hour.

At Huntsville, Mo., on the Chariton River, there is this week a great migration of fish, so that the inhabitants are all out fishing with pitchforks and the like; large numbers of fish being taken in this way.

The growth of a fish story may be seen from the following, which is told of Judge Coffey, of Brazil, Ind. Last year the Judge was fishing in a lake in Michigan and caught a 10lb. pickerel. This year, visiting the same lake, he was informed by a guide that during the previous season a man by the name of Tea had caught a pickerel in that lake that weighed 60lbs. "Are you sure the man's name was not Coffey?" said the Judge. "Well, yes, I guess it was," said the guide. "Then you are a liar," said the Judge, "for I caught the fish myself, and it only weighed 30lbs.!" This story, methinks, is not absolutely new, but it is significant.

Work of the Wardens.

Dr. J. W. Shultz, Fish Commissioner for Kansas, has appointed Fremont Simons deputy fish and game warden for Saline county, with instructions to break up dynamiting and early shooting.

At Lake Contrary, near St. Joseph, Mo., Deputy Warden Prather, with deputy constables Noland and Gill, and deputy sheriffs Ryan and Morgan, detected several persons in the act of seining fish in violation of the laws. The names were O. M. Bromley, Joseph Goddard, Harvey Knapp, Mrs. Maud Knapp, Frank Blakely and Al. Hilderbrand. Their trial will soon follow, and it is very likely they will be convicted.

The State Sportsmen's Association of Washington offers a reward of $10 for the arrest of each person who can be shown on reasonable proof to have killed game before the legal season. This is the sort of work which a great many other State sportsmen's associations would do exceeding well to imitate.

State Warden Buntain, of Ohio, a very active and efficient officer, last week gathered some proof in a fish case in a unique way. A party of five men were dynamiting fish. It was night, and dark. Warden Buntain crept up close and succeeded in making a flash-light picture with his camera, which will be introduced as evidence in the case.

On last Friday, Fish Commissioner Delevan, of Iowa, and his deputy, Mr. Bates, arrested five men for illegal seining in the Cedar and Wapsie rivers. Their names are John, Louis and James Rose, Fred Crane and Robert Rose. They will get the limit of the law. Ben Aucutt, one of the same gang, was last week fined $25 and costs.

At Breckenridge, Colo., on July 29, Henry Recen and M. R. Erickson were arrested on a warrant sworn out by A. D. Searle, of Leadville. Searle claims to own the lake, though it has been stocked by the United States hatchery.

The good work of Warden Earle continues along the Wabash River, in Indiana. The latest to be fined for violation of the fish law are William Schell, Dan Kelly, Albert Duvall and E. W. Snooks, who got $5 and costs each for seining.

A Minnesota Record.

Mr. E. S. Gibbs, of St. James, has returned to St. Paul from a fishing trip at Pine City, with some 300 lbs. of pike. In an hour and a half he caught thirty-three pike, and on one day he and his friend W. W. Cooley, of St. Paul, caught thirty-four pike, averaging 2½lbs.

Good Country.

I hear more and more of Minnesota this year as an attractive field for anglers. Lake Vermillion, in upper Minnesota, is spoken of with enthusiasm by St. Paul parties who visited it. A Minneapolis newspaper, the *Journal*, prints the following description of this big bit of water:

"It seems surprising, noting the enormous quantity taken from the lake this season, that the supply does not become exhausted, but on the contrary there seems to be no end to it. Vermillion has about 400 miles of meander, and contains 365 islands, all ideal camping grounds, and abounds in numerous sheltered bays, where the best of fishing is to be had.

"For a season's outing, no better field can be shown than through Vermillion and its attendant chain of waterways to the Lake of the Woods, and in making this trip the sportsman is given opportunity to land every species of fish known to northwest waters, besides some of the best shooting to be found in any locality, and the scenery is something grand.

"A catch made yesterday by a party of two, on Trout and Vermillion Lakes, and exhibited in the city last evening, consisted of sixty-three pike, forty-one pickerel, four trout and eight bass, besides several perch, the lot weighing 253lbs."

Mr. J. E. Richert, recently returned to Chicago from a trip to Missouri, has the following to say, in the Chicago *Inter Ocean*, in regard to some of the famous streams of that State:

"Among the best fishing streams in Missouri are the Big Piney, Current, Gasconade, Meramec, and White rivers. Arlington and Crocker are the two favorite starting points for those who fish the Gasconade or Big Piney. There is no place where more comfort or convenience can be enjoyed than on those two Ozark streams for so small an outlay of money.

"The Current is the greatest stream of the Ozark country in many respects, but it is hard to navigate. There are some good jack salmon in the Current, and near the springs rainbow trout and California salmon are often taken with the fly by bass fishermen. I landed three jack salmon that tipped the beam at 21, 19, and 17½lbs., respectively, and several 13 pounders.

"The White River is another grand stream. It has large and small mouth bass, jack salmon, croppie, and other kinds of fish known to mountain streams. The White pierces the great game country of Arkansas, and runs through miles of rugged cliffs, capped with cedar and pine, and through a wilderness of canebrake."

Mr. Fred N. Peet, captain of the Chicago Fly Casting club, is back from a trip to northwest Utah, where he had fine fishing in Lost Creek, a tributary of Weaver River. He and his friend L. L. Terry, of Salt Lake, had good sport, usually taking forty or fifty fish a day, some running to 1lb. in weight. The water was bright and clear, and upstream fishing was most successful. Mr. Peet says there is also good trout fishing on Saleratus Creek at Big Bend, as well as in the Spearfish and Ogden rivers.

With Basket and Net.

The Leavenworth, Kas., *Times*, describes a little picnic lately indulged in by some of the citizens of that city, and goes on to say: "They took with them well-filled baskets and a trammel net." Is it thus, then, that sport is conducted at the city by the Big Muddy!

Wants a Hatchery.

Winona, Minn., has applied for a government fish hatchery, and the proper officials are making due investigation of the facilities at that point.

Beware the Insidious Carp.

Dredging is going on at Lake Como, one of the St. Paul lakes, and the local press is glorying in the fact that the citizens of St. Paul will soon have a sheet of water which will be suitable for the planting of fish on an extended scale. "It is thought that the German carp," says the *Pioneer Press*, "will flourish sufficiently in Como to furnish very good fishing at no distant date." There is much truth in this forecast, indeed entirely too much. The carp will furnish fishing for everybody, about the time they want to get him out of there. We tried this in Chicago. Rather than seed their lake down to German carp, the Park Board of St. Paul would much better seed it down to bluegrass and make flower beds over it. They are digging up buffalo heads and elk antlers from the bed of Lake Como now in their dredging, but if they ever get the German carp in there, they'll never be able to dig him out in a thousand years. But they will wish they could.

The Awakening In Iowa.

It is only of late years that any news ever came from Iowa of convictions for violations of the game or fish laws. There seems to be an awakening now in this grand State, and possibly there will be a harder row for violators to hoe in future. The trouble in the past has always been that no Iowa legislature would ever pass an appropriation large enough to enable the Fish Commissioner to do any work. Nowadays they are doing better on the west bank of the Father of Waters. After tracking up the violators of the fish laws along the Cedar River near Cedar Rapids, Commissioner Bates went out to gather in a few of his suspects. Instead of taking a few, he got no less than twenty-four illegal fishers at one haul, and the next day he had sixteen of these arraigned and fined $25. They all concluded to go to jail, so a street car full of them were sent to the jug.

Deputy wardens acting for Commissioner Delevan, went on a hunt for illegal fishermen on Honey Creek Lake, near Council Bluffs, Ia., last week, and gathered in about a dozen.

At Auburn, Ia., Frank Schultz, of Mount Carmel, has been sentenced to serve fifteen days for dynamiting fish in the Coon River. Joel Borders, George Sargent and Henry Miles, of Grant City, were each sentenced to nine days' imprisonment for using a trammel net.

Shake-up In Kansas.

Out in Kansas the new State warden, J. W. Shultz, of Wichita, is giving things a good shaking up. He has only been in office about six weeks, but has secured nearly 100 arrests of violators, and has appointed sixty odd deputies. He has been working along the Republican, the Neosho, the Arkansas and the Kaw rivers, where many tons of fish have been taken illegally. Among others tried for violating the fish laws at Wichita are Wm. Mendenhall, Andy Mendenhall and two brothers-in-law of the family, all of whom engaged in a free fight with Deputy Parrish when arrested. Al Lattin and J. B. Bledsoe were fined $10 each, with costs, but have appealed. The work goes on merrily, and the residents of Kansas are treated to several surprises in the course of each week. Wardenism that wardens is a most excellent and lovable thing.

Interesting In Indiana.

Affairs also appear to be interesting down in Indiana about now. Deputy Hildebrand confiscated the 150ft. seine of Levi Burkett, near Winamac, last week; and thinks he knows where he can take another one or two in out of the wet. Deputy Earle, who has been scouting on the Wabash for some days, has made a number of seizures of nets and seines Deputy Earle, assisted by Constable Ehrenhart, of Terre Haute, made a raid on Tecuseh parties and took ten nets from John Winters, and also got a 60yd. seine from a gentleman known as "Tag" Collins. At Kokomo, Ind., Deputy Welty arrested Albert Kenworthy and Joseph Pence, charged with dynamiting fish near New London. They were fined $31 50 each and settled like little men.

In Ohio.

At Findlay, O., Warden Franklin this week arrested Alfred Leroy, Leopold Leroy, Francis Wuery, John Neal and Louis Walty, charging them with illegal seining of fish on the farm of Solon Van Zant, along Blanchard Creek. Trial will probably go hard with the accused.

In Illinois.

Thomas and Charles George were arrested last week at Danville, Ill., charged with seining. The elder George claimed he had a right to seine on his own land. The jury disagreed. George says he will go to the Supreme Court and have r-r-r-revenge.

In Wisconsin.

On one day last week Capt. Johnson, the hustling warden of wild Winnebago waters, gathered fourteen nets into the fold. He took out warrants for Charles Lucas and Joseph Rothgerry.

In Michigan.

Herbert and Hiram Hillards, of Kalamazoo, were arrested July 22, charged with spearing fish in Indian Lake, and released on $300 bail.

In Nebraska.

Commissioner W. J. O'Brien, of Nebraska, discovered and destroyed thirty-six nets in the Loup River, near Columbus, last week. The owners were warned to desist in their illegal fishing, and were allowed to go at that.

In Colorado.

On the Frying Pan Creek in Colorado, near Grand Junction, dynamite fiends have this month been killing many trout. Officers are asked and expected to trace the offenders.

In Louisiana.

The New Orleans *Picayune* complains that the former prolific waters near New Orleans are being depleted by the unscrupulous net fishermen. It cites one shipment made by fishermen from Little Lake, an inland water not open to market fishing, and on the whole sounds a note which might very well be taken up by the daily papers all over the land.

Fish Planting.

At Sheboygan, Mich., 35,000 trout and 1,000 black bass have been planted, and 40,000 more trout will soon be put in the local waters.

At Spearfish, S. D., United States Fish Commissioners have made surveys for the establishment of a hatchery which should be a successful one from all indications, as the surroundings are very favorable.

At Rico, Colo., 16,000 trout, in two consignments, have been planted in the Dolores River and Fish Creek. The cans of fry were taken to Fish Creek on burro back, but the loss of fry was absolutely none. A good lot of rainbow trout from Durango are expected for distribution in the Dolores and adjacent streams this summer.

E. HOUGH
1206 BOYCE BUILDING, Chicago.

Ontario Fishing.

Belleville, Aug. 7.—For the information of Forest and Stream readers I send a few more notes of fishing in this district, taken from the *Daily Intelligencer*, with dates attached:

Aug. 4.—Messrs. Bottum, Foy and Stortts sent to this city yesterday from Bobcaygeon three fine maskinonge, the fruit of their first afternoon's fishing. They also caught a considerable number of fine bass—small-mouths.

Aug. 5.—The Forest and Stream Club's second fishing competition took place yesterday afternoon. Eight boats went out, but only seven returned within the time limit—10 o'clock. Messrs. T. Purvis and J. Templeton made the largest catch—seven—and their three largest weighed 6½lbs. Mr. William Ormond and Major Casswell, the veterans, got the largest fish, 2lbs. 14oz.; their catch numbered six. Messrs. A. Tisdale and J. Haslett caught five. Their anchor became fastened in a fissure in the rock bottom near Snake Island and could not be got loose, so they fished in one place, much to their disadvantage. The other boats got no bass. Among those who went out, but not engaged in the competition, was Miss Katharine L. Ward, of New York, and her father, Dr. M. D. Ward. Miss Ward caught a bass that weighed over 3lbs., the largest of the day.

Aug. 6.—Messrs. Thomas O'Brien and W. Ward were fishing for bass up the bay yesterday afternoon, and they took three that weighed over 3lbs. each. The fishing seems to be better west than east of the city.

Aug. 7.—Messrs. W. Ormond, Cap Robinson and party had a good day's fishing yesterday up the bay. Their catch of bass was twenty-six fish, which weighed 45lbs. Their largest bass weighed 3lbs. 13oz. The fish are very gamy at present, and afford fine sport to the angler. Messrs. Joe Templeton and Dr. McKeown caught three bass and a number of large pike yesterday.

The record given is almost wholly of bass of the small-mouth variety. Cartloads of perch, rock bass, pike, sunfish, bullheads, large-mouth bass, golden-eyes, shad, eels, sheepshead, dogfish, chub and other fish are also taken, "and now and then" a maskinonge. R. S. B.

On the Florida Shore.

Summer Haven, Fla., via St. Augustine, Aug. 2.—*Editor Forest and Stream:* This place is three-quarters of a mile south of Matanzas Inlet, conveniently located for bathing in the surf and for fishing in the Matanzas River. A man is lazy indeed who will not net shrimp or small mullet for bait and catch sheepshead or striped bass for dinner, or dig clams or oysters between times. Mr. Jacob Spence, of Marion, Ala., and Mr. J. A. Vertrees, of Palatka, Fla., were fishing in the surf for bass one night two weeks ago, when an immense green turtle at least 4ft. long and wide in proportion, came out of the surf, much to Mr. Spence's alarm, who thought it a dead body come ashore. It crawled up the beach to the bluff above high water and proceeded to lay eggs. It was indifferent to the presence of men (only it may not be touched), and laid 138 eggs in its shallow nest, dropping some one at a time and some two or three at a time, not noticing Mr. Spence when he held his hand under it and caught some of them. When it got through it made its way to the ocean, carrying Mr. Spence, who weighs 240lbs., on its back for about 50ft., and would have taken him into the surf if he had stayed on.

There is some nice bay-bird shooting about here. The first seen was a bunch of twenty summer yellowlegs on July 10. When a boy, July 10 was the date for first flight of "summers" and peeps. Last week, the 28th, I shot seven brownbacks (they are almost like Wilson's snipe, except for more brown on back and brown on breast), one winter, two grass birds, two willet (many willet breed here, they say), one beetlehead, two chicken plover, and eight "summers," on one tide, and very pretty shooting. They seemed all to be on a leisurely flight southward, and decoyed very well. The brownbacks were all fat and fine, the others rather thin.

The last contribution from me, April 24, had an account of my shooting snipe in March, which is spring here. I cry "Peccavi," and will do so no more. I had been too busy to shoot at all for twelve years here till since the freeze, and I was behind the times, and have you to thank for very able and unanswerable articles this spring that should convince any one. Captain.

A Parmachene Belle.

Two trout fishermen were standing at the post office corner yesterday afternoon, when a neatly-attired young lady happened to pass.

"There goes a Parmachene belle," remarked one of the anglers, provoking a smile on the part of his companion.

The remark was overheard by a young man who was passing, and who at once approached the anglers and asked what remark had been made about the young lady.

"I said she was a Parmachene belle," was the reply.

"That young lady is my cousin; now, I should like you to explain what a Parmachene belle is, as I do not propose to have her insulted by any one," was the rejoinder on the part of the young man, who was evidently getting hot under the collar.

It took the anglers a few seconds to explain that no insult had been intended. A Parmachene belle is a trout fly made of white and red feathers; the young lady was dressed altogether in red and white, and hence the comparison.—*Paterson (N. J.) Chronicle.*

Iowa Fishing.

Charles City, Ia., Aug. 2.—Upward of 300 black bass have been taken from the Cedar—both above and below the city—in July. In most instances live bait has been the attraction. We have been having excellent sport with wall-eyed pike—more properly speaking pike-perch. The combined weight of seventeen pike taken from the Cedar by Ben Dickman and myself the past eight days was exactly 63½lbs. Sixteen caught by S. G. Pickett, two years ago in the same locality, weighed 52½lbs., taken with a phantom minnow with nine hooks—at present an unlawful bait—while this catch was made with the fly—one hook—and spinner above, as bait. Vane Simmonds.

German Carp in Erie Canal.

Lockport, N. J., Aug. 7.—For the past few days there has been an unusual number of German carp caught from the Erie Canal in this city. On Thursday some boys were fishing at the head of the locks when one of them took a 4lb. carp. Shortly after another lad took one weighing 6lbs., and during the forenoon more than a score were taken, weighing nearly 100lbs. When it got reported about the city that many big fish were being caught, the anglers turned out in force, and during the afternoon over forty carp were taken. Yesterday Bert Murphy while fishing near Prospect street bridge took a carp weighing 10½lbs. But the largest of this species was reported in the *Union-Sun* last week as taken from the wide water below the city, and weighing 27½lbs. It is thought that the dredging of the bottom of the canal about three miles above the locks has disturbed these fish and driven them down the canal. Whether or not that is the case, never before has anything like the number been taken.

J. L. Davison.

The Nepigon River.

Port Arthur, Can., Aug. 5.—*Editor Forest and Stream:* Fishing up the Nepigon River is at its height. There are quite a number of tourists this month visiting, among them Mr. Dabney Carr, of St. Louis. A party of six, Mr. Geo. Kellog, Mr. John Kellog, Mr. F. R. Greene, Mr. W. K. Greene, Mr. D. W. Shuler, Jr. and Mr. H. O. Chase, all of Amsterdam, N. Y., have just returned after spending three weeks of enjoyment and sport; they were up as far as Lake Nepigon, and have caught all the speckled trout they want this season, among them were some 5 and 6lbs. weight.

I am sorry to inform you that the first fatality for years took place on Wednesday. Rev. Alex Grant and Mr. Archie McDougall, of Winnipeg, started up the Nepigon River in a canoe together without a guide, and in trying to ascend the first rapids, about seven miles up, their canoe upset and Mr. Grant was drowned. He leaves a wife and family to mourn his loss. John E. Newsome.

Weakfish at Giffords.

New York, Aug. 2.—*Editor Forest and Stream:* For any one fond of salt water fishing there is no better place to go than Giffords, on Princess Bay, Staten Island, where you are reasonably sure of a mess of fish.

Mr. Fitzgerald has a large number of good boats to hire, and bait for sale (most of the time) during the season. At the hotel Mr. Gilles will serve meals at all hours and attend to the wants of his patrons in a satisfactory manner. Morris will direct you to the likely places, if you are not familiar with the grounds.

Saturday, July 31, G. W. Price and I spent the day there (as we have been in the habit of doing for several years), and had a pleasant outing. We caught sixty-four weakfish, thirty-one of which, being lightly hooked, we put back into the water uninjured. P. A. M.

Camp-Fire Flickerings.

"That reminds me."

CHARLES.

Charles is a very good sort of a fellow. In many respects he is much like me, but his disposition is not quite so sweet as mine; in fact, it was his lack of a forgiving disposition that finally caused a coolness to spring up between us. Not, however, upon my part, as I have never laid up anything against him, but of this, more hereafter.

When I first met Charles, we were about ten years old. His family had just moved into the neighborhood, and my mother gave me a big, red apple and advised me to go over and give it to Charley. Upon my arrival at the house, I inquired for Charley, and was told by his mother that there was no Charley at all, she had but one boy and his name was Charles. This struck me, and as Charles was close by, I remarked that the apple was sent to Charley, but as there was no such a boy here, I should have to eat it myself, and at once took a big bite out of it. She went into the house, and Charles sidled up to me, and with a longing look at the tempting fruit, said that I could call him Charley when she was not present, if I wished. This set matters straight, and we were from that time the best of friends, until that unfortunate coolness on his part rather put a damper upon our friendship. But of this, more hereafter.

Both Charles and I were very fond of fun in almost any shape, and we managed to get a little amusement about every day, and some days we had enough to last any reasonable boy a week; but we were not always reasonable, and did not wait a week before we had something else going.

As time went on, similar tastes developed in Charles and myself that cemented our friendship, and we were almost constantly together.

Hunting and fishing were our delight, and innumerable trips in pursuit of our favorite sports occupied nearly all our time from early spring until late winter, and there was not a stream or covert within many miles of our home that we did not pretty thoroughly explore. We nearly always got along very well together, but as both Charles and I were occasionally given to practical jokes there would once in a while a coolness spring up between us when the joke was on Charles, for, as I have before remarked, his disposition was not quite so sweet as mine.

I well remember one day we were shooting in the Johnson cover, some three miles from home, and as we neared the end Charles proposed that I should go and get the team just below, while he worked out a run that ended near the road above, where he would meet me. To this I agreed, and went for the team and started toward the place of meeting. As I descended into a hollow that hid me from the sight of Charles an inspiration seized me, and giving the horse three or four cuts with the whip and shouting whoa at each stroke, we went through the hollow and up the rise past Charles upon a keen run, while I was apparently doing my best to stop, and Charles was laughing and having lots of fun at my expense. How long he enjoyed himself I never knew, as I kept right on home, and when I saw him the next day he was so grumpy that I did not bring up the subject, but only grieved in silence that his disposition was not more like mine, for I was not put out in the least. It was this unfortunate disposition of his that finally caused a coolness to spring up between us, particulars of which I will give further on.

Perhaps I may as well give the sequel to the runaway episode, when the joke was on me. About a half-mile from our home was a beautiful cover, but it was on the other side of the river, and we had to go nearly three miles around by the bridge in order to get there. A few days after the runaway, Charles came over and proposed that we try this cover, saying that his uncle had gone away and left the key to his boat, which was nearly opposite the house, and by using it we could save the time and travel usually spent in getting here This suited me, and we were soon on the way. When we reached the other side, we drew the boat ashore in a little cove, and hid the oars under a fallen treetop. After working out the grounds, we turned toward the boat. I noticed that Charles was walking rather fast, but thought nothing of it, and allowed him to get some little distance in advance, and he arrived at the boat some 50yds. ahead of me, when he at once pushed it into the water, and giving it a mighty shove he jumped in, and was some distance from the shore before I saw the point, of the joke. When I did catch on, I was unhappy for three or four seconds; but as I saw him rise in the boat and look for the oars my sadness fled. The expression of his countenance as he cast a furtive glance in my direction would have amply repaid me for three times the travel that he had forced me to take. I had to laugh, but as I did not wish to hurt his feelings, I lay down behind a bush and had a most enjoyable time; then I crawled to the oars and dragged them to another treetop for fear that they would not be quite safe so near the river. By this time Charles had drifted down stream some distance, and I followed on, keeping out of sight, taking solid comfort in witnessing his experiments in navigation. The momentum of that vigorous push had carried him nearly half way across, and as the current here set toward the other shore, he remained about in the middle of the river, in spite of his efforts to get back by using his gun as a paddle; but he was fast drifting down the river, and as I crossed the bridge I saw him just coming round the bend and noted that he had changed his tactics, and was pulling for the other shore. I went home and did not see Charles for two or three days, and as he appeared to be out of sorts about something when we met, I made no inquiries as to the outcome of his voyage; but when his uncle came back I went with him to get the oars, and he told me that Charles got ashore about a half mile below the bridge and found a bit of board, with which he paddled back to where we left the oars, but could not find them after a long search, and finally went home, arriving about 10 o'clock, very tired and, his mother said, very cross.

Charles was grouty for more than a week, while I, the victim of his joke, did not display any temper, nor even have any hard feelings toward him. This will serve to show the difference in our dispositions, a difference that finally caused a coolness between us on his part, but not on mine, the particulars of which I will now proceed to relate.

In our exploring expeditions we often discovered capital shooting grounds. One of the best of these resorts was quite a large tract of woodcock cover, nestled in a quiet nook among the hills some twenty-five miles from our home. Upon our first visit we struck the bonanza just after lunch, and after an hour or two of capital sport we decided to look up a lodging and stay all night, and give the grounds a more thorough examination the next day. We were fortunate in finding a farmhouse nearby, and still more fortunate in finding in the genial farmer and his pleasant wife a host and hostess whose cordial welcome made us feel at home at once. There was also a pretty girl—Charles said very pretty—of some thirteen or fourteen summers, who also welcomed us in a shy way that was very fascinating—to Charles. Now I was rather susceptible to female charms, not blindly nor unreasonably so, but still I had in my heart a warm corner for the dear creatures, and to this day I like to see a pretty girl. Charles was very like me in this respect, only a great deal more so, and while I worshipped at a proper distance, he, poor fellow, often fluttered near enough to get singed. But I am again wandering from my subject.

For three successive years, early October saw us the guests of our worthy friends, but after this, owing to the aforementioned coolness upon the part of Charles, our visits to the place were not made in company. It was upon our last trip together there that the trouble arose that caused the coolness of Charles.

Upon our arrival at the house, about sunset, we found the farmer and his wife all rigged out to attend a lecture at the village, some two miles away, and in spite of their determination to stay and take care of us we insisted upon their going, and finally persuaded them to leave us in charge of the daughter that I have previously mentioned, and, after many injunctions to the young lady about our supper, they started for the village. Charles and I were both handy about the house, and we had quite a merry time getting supper and eating it. I could now see, without any coaching from Charles, that the girl was very pretty. What he thought upon the subject I could only guess at, and I distinctly remember guessing at the time that it would take a lot of adjectives to express his thoughts, for he appeared to be a goner, sure. He was very attentive, and was so prompt in assisting her to clear the table that I took the easy chair and just watched them. Charles clamored for a dish-wiper, and, as she handed it to him, I overheard the rascal stipulate for kisses in payment for wiping the dishes. "Come, come," thought I, "this is going a little too fast and far." But, as she blushingly shook her head, I could plainly see that Charles was sure of his reward; so I just settled back in the easy chair, closed my eyes, and watched them. When the dishes were done she began carrying them into the buttery, while Charles, seeing that I was asleep, took the dogs' supper and started for the barn to feed them. Now, I had been wondering how and when Charles was to get his pay, as I was very much afraid that some one would drop in and spoil all; indeed, I had got quite worked up about this, and was in mortal fear that poor Charles would get left. Just then I was seized with an inspiration; my friend should not be cheated out of his just dues. I would see that he suffered no wrong, so as she again went into the dark buttery I quietly followed her, and lightly whispered a demand for those kisses. She coyly retreated further into the dark, and as I followed she faintly intimated that I might take one. I took it, but as I had plainly heard Charles say kisses, I was not going to see my dearest friend wronged, so I kept on, and as I had no idea of the number justly his due, I still kept on, until she pushed me away with the rather irrelevant remark that there were not more than twenty or thirty dishes, anyway, and that I ought to be ashamed of myself. As she thought it was Charles, of course I did not feel it my duty to take the remark personally, and as I heard Charles shut the barn door I skipped back into my chair, and had just time to get sound asleep as he came in. When he entered the room our very pretty friend was just disappearing through the buttery door, and before I had time to tell him that his account was settled, he also disappeared through the same door. Just as I was going out of doors I heard a resounding whack, coupled with a very energetic "Go along!" and I also heard, "You have already had more than twenty, and you sha'n't kiss me again."

It was a beautiful evening and I wandered some distance enjoying the balmy air, the drone of the harvest fly and the

merry twinkle of the stars, and did not return to the house until after the folks had been home some time and Charles had gone to bed. In the morning Charles kept his bed and our host went up to see what was the matter. Upon his return he reported that Charles was quite sick with a terrible headache and that I was to go shooting alone, as he would be unable to accompany me. When I returned at night I learned that Charles had felt so badly that he had hired a man to take him home, and when I got home I found that he had started on a trip west, and it was nearly a month before I saw him again. When I did meet him he was more cold and distant than I had ever known him to be, and to this day the coolness—on his part but not on mine—still remains, and I often grieve over the fact and often wish that his disposition was as sweet as mine, as, except for this one fault, Charles is a very good sort of a fellow.

FIELD TRIALS AND FIELD TRIAL JUDGES.—I.

At the present day the "kicker" is few in number and generally wisely circumspect in his kicks as compared with the sterling article of past years. Some years ago "kickers" were quite numerous and brave. Their vigilance in watching for grievances and their activity in airing them were beyond reproach. Being such a clamorous babbler for honesty in others, the kicker was inferentially honest himself to a degree which put in shadow the honesty of all others. Notwithstanding his rectitude, he was constantly the victim of the rapacity and dishonesty of others, or a victim of their incompetency and ignorance, or all these things combined. The fact that he did not win was sufficient proof in itself that there was something wrong with the judges or the management. Thus he was constantly subjected to hardships and losses. It was enough to dishearten a man to be met by undeserved defeat at every turn, in his efforts to better the public weal; and all this he has many times feelingly related in articles over his own name when he felt a bit brave, but oftenest over a *nom de plume*, which would conceal his identity.

He always had a grievance. No proof as to whether it had any substantial grounds was necessary. It was sufficient that it was so because he told the public it was so. He was of the rare few who could compose their own songs and sing them too. And yet, notwithstanding that he was a constant factor in the competition, a chronic sufferer from undeserved defeats and an habitual discoverer of deep-laid villainies, he before this date has never been specially set forth in print to the degree which his importance, activity and talents entitle him. Frankly outspoken in his contempt and denunciation of those who did not see the merit in his dogs which he himself saw, and freely confessing the worthlessness which he saw in all dogs owned by others, and promptly earnest in communicating to the public his feeling of distress and the story of his wrongs, affixed to such instructive information concerning the excellence and price of his dogs as he could stuff into his article, he has had a special field largely to himself. But he has never had a good opportunity to see himself as others see him.

The "kicker" has done incalculable harm to field trial interests. He has written many columns of contumacious writings, directed at judges, management, reporters, competitors—all, in short, who in any way ran counter to his wishes or interests. In the responsible work of doing something substantial for promoting trials, few of them ever did anything beyond paying their entry fees, and what little they did do would not have been much missed had it been withheld.

Notwithstanding that clubs and judges have done a great work in behalf of American sportsmanship, work accomplished only by great outlay in money and laborious care and effort, not a single column has ever been written heretofore specially in their favor.

Several journals (Forest and Stream was not of the number) were liberal in the allotment of space to the "kicker" who desired the public to participate in his grief, to take notice of the bargain sales he could offer, or the excellence of the get of his favorite stud dog, and above all, to note the rotten and general dishonesty of clubs and judges—and why? Some other man's dog had won. Had he not kept the scores himself? Had not his friends, Tom, Dick and Harry, assured him that he had been defrauded? Everybody knew that the judges were prejudiced against his line of blood. Did not his friend So and So, who had purchased a puppy of him, by his stud dog Goggle Eye, who was available to the public at the low sum of $35, and out of the celebrated bitch Snipey Nose, whose last litter he had sold for $50 apiece, every one a winner by right, and he would soon have another litter of the same breeding to sell at a reduced figure—did not his friend So and So note that the judges did not give his puppy half a chance? The end of trials was near.

Almost from the inception of field trials, and distinctly constant when they became more or less commercial, there was an insubordinate element composed of men who, being disappointed, lost their heads, or men who, looking solely for revenue, made every possibility a matter of commercial calculation.

Whatever differences there might be as to the cause of the "kickers'" grievances, they were a unit in squealing denunciation at the judges, at the management which employed the judges, and the reporters who failed to expose the alleged dishonesty.

Some of the "kickers" were men who were new to any kind of competition. They, therefore, were men who had none of the discipline or knowledge of sporting etiquette, which enables men to lose or win with a good grace, and not a few did not consider the possibility of losing at all. They were childishly confident of winning. Some of them were shamelessly boastful of the superiority of their own dogs and offensively garrulous in the recountal of their dogs' wonderful performances. They also were outspoken in their expression of contempt for the dogs owned by others. They were the most persistently wearisome of bores. They had but one topic. They could prate only on their dogs or themselves, and any attempt to discuss one or the other from any other than their egotistical point of view was sure to evoke ill temper. They seemed to own the prizes before the competition began. They had prejudged the trials, and the judges were a mere inert adjunct—a necessity to formality and official record.

Whether their dogs were worthless duffers, or excellent in some parts of the field work and poor in others, or whether they were good performers defeated only because they were against better ones, no adverse decision of the judges shook their unalterable faith in their dogs, or their silly belief that defeat could only come from dishonest decisions.

Some men are constitutionally incapable of joining in a competition in a spirit of common fairness. The boy who loses at a game of marbles, thrashes his victor, robs him of his winnings, or, being weak-hearted, sobs because he lost, is likely to become a man who will boast endlessly and have many angry griefs, and will be always treated unfairly—when he loses. But some men kick as a matter of business policy. By making a hullabaloo they bring themselves and dogs into public notice, and, having once derived some financial benefit from it, they cultivate it for profit forever afterward. A few seem to take a vain pleasure in making themselves conspicuous, regardless of sense, practice or cause. Publicity panders to their egotism.

Some years ago, at very infrequent intervals, however, judges, smarting under the sting of false accusations and misrepresentation, would enter a public controversy with a kicker on the merits of the awards. Such was always fruitless so far as any definite demonstration was concerned. It could not be otherwise. If the kicker was playing for free advertising, he was far from desiring a conclusion. If he had an egotistical craving for notoriety and sympathy, the controversy was an excellent medium. If he loved his dog, and was defending him because he loved him, no argument could prevail against a conviction founded on such data—that is, his love for his dog.

As the objection was almost always personal and violent and emotional, resting on the owner's judgment of his own dog, and on his opinion of the judges, it was called a "kick," and the objector was called a "kicker." It was a happy term, in that it implied an act which could be done without sense, right or reason. There were habitual kickers who kicked at everything. The juncture at which they would kick could be forecast to a nicety under certain conditions. They seemed to have a constitutional impulse to perceive dishonesty or stupidity in every plan or action. They believe that they were singled out for relentless persecution. By premeditation, they asserted, their dogs were always cast off at the worst time of day, in the worst places, where there were the most briers and the fewest birds. Or the poorest course possible was laid out for the day's work. It was certain that the management favored the other man and his dogs because he made more entries. Two of the judges were sure to give the prize to a certain dog because they owned a thirty-second cousin of him. Another dog was sure to win, too, for Mr. So and So, a friend to the owner, was seen to hold a conversation with one of the judges. None of the judges liked a pointer, and it was no use running one, except to get a report in the sporting papers for proof to the owner that the dog was broken, so as to collect the fees for training—and so on *ad nauseum*.

The kicker who was able to put his kick in print, dressed up with all the plausibility that cunning and distortion could give it, had an advantage over his fellows. The kicks which were published were but a small part of the whole number made; yet the kicker who talked and wrote publicly was precisely the same as the kicker who privately suggested, and boasted and scolded, and aired his supreme selfishness when he could secure hearers. And yet there have been those who, hearing but one side of the case, and that from the party directly interested, have considered that all the proof necessary was presented, and that the kicker's conclusions were quite correct. Three competent judges, an experienced management, and the other competitors were therefore all wrong.

There are men who are mentally unfitted to join in any contest. If they play a social game of cards, or checkers, or chess, etc., defeat brings ill temper. They wrangle and object. As for unreservedly placing their contentions in the hands of a third party for adjudication, and abiding with a gracious manner and a good heart to his ruling, they cannot do so unless the case is decided in their favor. It is but justice to say that some wholly new to competition, and therefore undisciplined in considering both sides of the case, improve with experience, and learn that an interested party is not a competent judge of his own case. If one competitor could judge his own dog, all competitors would have the same right—a pretty sight it would be if they were settling the matter among themselves. They should learn the chief point of sportsman's etiquette, the one most punctiliously observed by genuine sportsmen—that is, having submitted the dogs to the judges, to abide by their decision. There is a certain dung-hill spirit in a man who squeals because he has lost. A man may be a very sweet gentleman in a certain environment and still make a very indifferent or disagreeable sportsman. At home, where everything is pleasant, or at business where everything is routine, he may look and feel and think alike day after day, but in camp, where he must suffer some discomforts or do some repugnant work, or at a field trial, where rivalries are aroused and his dog is in question, he may show some unlovely traits.

While there are kickers, they are fortunately but a small part of the field trial patrons, and so far as their value to the trials are concerned they are of the least importance. Improbable as it may seem to him whose knowledge of field trials is gathered from the published articles of kickers, there is now no general dissatisfaction with field trial managements, nor field field trial judges. Such reform as is needed is mostly the reformation of the kicker. Out of all the published diatribes of kickers, no good has ever been accomplished and no injustice has ever been shown to exist.

That there were and are sterling sportsmen in substantial numbers, ones who love sport for its own sake and who have steadfastly and uncomplainingly given time, effort and money in its support, the history of field trials and their standing now amply prove. Nor are they the fugitive frazzle edge class of field trial supporters or field trial theorists called kickers. They are the ones who shouldered the burdens and did the thinking and made the way easy. Some of them in the hour of need have put their hands in their pockets for $100 each to make up a single field trial deficit. Others work faithfully and silently to make the trials a success. And while they are doing so, the kicker raises his ululation throughout the land, asking the populace to witness his wrongs. Did any kicker ever donate $100 to make good a deficit? The sterling stuff required to manage field trials, to support them, to give them prestige and to judge them is not made up of kickers.

The Pointer as a Workman.

Springfield, Mass.—*Editor Forest and Stream:* I have been a pointer admirer these many years, though not such a blind one that I could discover no faults in him. I have been interested in field trials, too. They have done much to improve both pointers and setters. To them they owe their fame; their improvement; their greater popularity; and, through the greater knowledge which pointer breeders gained from the lessons taught by field trials, came a better and more intelligent system of breeding, developing and training. If there had been no field trials then there would have been no improvement in pointers. There would have been no public notice of them either.

I noted one remark in Forest and Stream of a recent issue, referring to the fact that pointer breeders never did much for pointers by assuming the responsibilities of a competition. I thought at first it must be wrong. Surely it would seem that the great number of pointer men would furnish an active, financially responsible part in fostering field trials and in managing them.

I remember that the Irish setter owners and breeders organized a club and held field trials, and that the Gordon setter owners and breeders did likewise, but I cannot find any record of a pointer club ever having done so.

To me it seems that if the setter owners and breeders had not done all the promoting and managing, fixing things so that the owners of pointers could run their dogs, there would not have been any pointer trials at all. The trials were what gave the pointers their monetary value. They were what demonstrated the pointer's field ability. They furnished a means for public information. Without them the public could never learned anything about the good or bad. And without published reports of the trials they would have been of limited value. The large prices obtained for some pointers was a result of the field trials. I regret that some pointer owners forget all this, and instead of being grateful for the favors and benefits they have received, they "kick" because they did not get more.

Is it not astonishing that they have never done anything for themselves, yet bitterly complain of those who have done all that ever has been done for the pointer's benefit in competition? To me it seems ungrateful to accept a favor, and then complain that it was not quite so good or so large a favor as it should have been.

I fell in perfectly with the humor of your suggestion to the dissatisfied pointer men—to turn to and do something for themselves. We all know how cheap everything is when it is secured without effort, and how dearly it is prized when it represents work, care, expenditure—and when one is forced to trust to his own exertion he then does not find fault with others.

I have seen some field trials. It is an impossibility for any spectator to make any correct special criticism on them which involves the merits of two dogs in competition. No spectator can see more than fragments of the work; every spectator feels competent to pass positive judgment nevertheless; every owner is certain to have a pretty good opinion of his dog, no matter how worthless a brute he may be, and it is an unpleasant incident of the judging that when the judge decides against a dog, the owner suspects not that his dog was not the best dog, but that the judge was stupid or prejudiced, or had favorites.

The time has come when the "kicker" no longer finds a heedful ear in the public. He is classed as he belongs, with the ill-tempered, disappointed men who have none of the training of sportsmen, and none of the gameness which makes a man plucky loser or a pleasant winner.

Pointer Alan.

C. F. T. C.'s Entries.

The entries for Continental Excelsior (all-age) Stake to be run at Morris on chickens in September next are as follows:

POINTERS.

Lady of Hessen—Tabasco Kennels' l. and w. bitch (Hessen Boy—Lady of Rush).

Tick's Kid—Del Monte Kennels' b. and w. dog (Tick Boy—Lulu K.).

King Lee—E. H. Osthaus's l. and w. dog (Kent's Joe—Lads Lady).

Elgin's Dash—F. W. Dunham's lem. and w. dog (Kent Elgin—Mack's Juno).

Lord Buster—B. Gordon's l. and w. dog (Lord Mount—Unknown).

Top Sawyer—E. O. Damon's l. and w. dog.

Alabama Girl—H. H. Mayberry's l. and w. bitch (Arrow—Lady Mell).

SETTERS.

Hurstbourne Zip—S. P. Jones's b., w. and t. dog (Tony Boy—Dimple II.).

Christina—Hobart Ames's b., w. and t. bitch (Blue Ridge Mark—Lou R.).

Josie Freeman—C. A. Draper's b., w. and t. bitch (Antonio—Nellie Hope).

Sam T.—Del Monte Kennels' b.,w. and t. dog (Luke Roy—Bettie B.).

Jill—E. H. Osthaus's b., w. and t. bitch (Fauster—Nan).

Swab—A. C. Reid's b. and t. bitch (Manitoba Toss—Pitti Sing).

Cincinnatus Pride—E. A. Burdette's b., w. and t. dog (Cincinnatus—Albert's Nellie).

Anne of Abbotsford—E. A. Burdette's b. and w. bitch (Gladstone's Boy—Bohemian Girl).

Iroquois Chief—Verona Kennels' b., w. and t. dog Antonio—Can Can).

Duke T.—W. R. Tait's w. dog (Monk of Furness————)

COUNT ROBERT—Edward Gray's b., w. and t. dog (Count Eric—Ann).

TONY'S GALE—Eldred Kennels' b., w. and t. dog (Antonio—Nelly G.).

SCHOOLING THE DOG.—IX.

THE dog, having been taught the meaning of the different commands and so thoroughly disciplined that he is promptly and reliably obedient to them, has a sufficient understanding of the commands which are necessary to use in working him on game. His yard training is completed. The practical application of his schooling in actual field work is a matter of much difficulty, since he, when turned loose in the fields or woods, is so imbued with the spirit of his natural wild life and the desire to do as he pleases without restraint, that he is at first almost always uncontrollable. Working to the gun after a systematic manner, in which he must restrain his natural inclinations and methods to hunt for himself, looking to the interests of the shooter instead, is established only by months of discipline and training. These must be combined with experience.

Being constantly checked in his attempts to work in an undesirable manner when "Toho" is not used, and from experience observing that success follows certain arbitrary methods enforced by the trainer, he after a time abandons his own methods and accepts those imposed on him. In time they become so habitual that he submits to them without any attempt at disobedience.

The advantage of the preliminary training will be clearly manifest when the field training is begun. It is difficult to teach correct methods of work to the gun, but it is a thousand times more difficult to teach them and the meaning of words and orders at the same time. If the trainer is so regardless of intelligent method as to begin the training with field work, he can hope for only imperfect success or total failure, and what is accomplished by him will be with great additional labor. He will engage in so much trouble with his pupil and inflict so much punishment, that the dog will be certain to associate it with the presence of birds, or with seeking them, or with going a-field, and will either refuse to work at all or will run away on opportunity, any of which is not conducive to good training.

The old authorities who wrote on the subject of training treated the teaching of "Toho" as a matter of great importance. They gave it an exaggerated valuation. In theory, as they presented it, it seems to be both necessary and useful; in practice it is unnecessary and valueless.

"Toho" is the order which signifies that the dog is to stop and stand still. As the dog stands still when he points game, there would seem to be a most useful gain toward his training by teaching him to stop and stand still at command. When he is roading or drawing on birds, if disinclined to point, the trainer utters the command, "Toho!" The dog stands still and we are told a kind of point is secured. Some repetitions of this act, and the dog learns to point, as the author sees it.

In practice, it does not prove of any value. When a dog is roading birds, the handler never can know whether the dog is in the right position to point them, and to stop him at an improper juncture is but to balk his efforts. To bawl out "Toho" to him when near birds furthermore would many times flush the birds and destroy all further chance for a point at that juncture. Being more or less excited, and with all the impulse of pursuit dominating his being when on game, he then rarely pays the slightest heed to the order. If the trainer disregards all other matters, and makes a specialty of enforcing obedience to "Toho," by the time he has it properly done he will have spent much more time and many times more effort than would be required to train the dog to correct pointing without it.

But supposing the dog will be promptly obedient to the command "Toho" when he is on the trail of birds. We will suppose that the trainer thinks the dog is in the right position to point, and he commands him to "Toho." The dog stands still, same as a horse does when he is told to whoa. The order means to stop, and he stops. The dog can only learn to point from experience. The trainer has no substitute for it. He must make errors if he will learn how to avoid them. The trainer—except in very rare instances when he accidentally sees the birds—never knows where they are, and it is therefore clearly absurd that he should attempt to assist the dog to point them, when he is so ignorant himself of their whereabouts. If he sees them, he cannot tell whether the dog has the scent properly for pointing, even if he has the scent at all.

If the dog is stopped on the footscent and made to so recognize it, he may acquire the bad habit of pointing and pottering on the footscent, both harmful and difficult to cure, and often incurable. The dog should always be encouraged to avoid such faulty method, instead of being helped into them and confirmed in them by training and habit.

The teaching of "Toho," if the trainer feels it to be a necessity, if properly done, is a part of the yard training. It is best done in a room or small inclosure. The trainer ties a cord to the dog's collar. He walks around with the dog, gives the command "Toho," and then makes him stand still. "Go on" or "Hie on" is used to order him on, so that he is being incidentally both trained to go on and stop to command. After he has a fair understanding of the meaning of the order and some obedience to it, a piece of meat is thrown out. As he rushes eagerly for it he is ordered to "Toho." He refuses to obey as a matter of course. The trainer forces him to stand still till his eagerness is under control, then he orders him on and permits him to eat the meat. When he is fed, he has a similar training. The lessons are persisted in, till at last the dog will stop promptly when going to his dinner, then goes on and stops as the trainer may desire. He can be taught so perfectly that he will stop with his nose within less than an inch of his food.

But stopping to order on food bears no relation to a point or the purposes of a point. This will be more fully shown when the subject of pointing is treated.

Collie Club Stakes.

AN error was made in correcting the conditions of the Collie Club Stakes by misplacing the first line of each stake. The full and proper conditions of the stakes are as follows:

The Westminster Stakes, for puppies born in the United States or Canada between June 30, 1896, and July 1, 1897; entrance, $2 due with entry, and an additional $3 to fill, due on Dec. 1; the winner to receive 50 per cent. of the stake and added money; 25 per cent. to go to the second; 15 per cent. to the third, and 10 per cent. to the fourth; to be decided at New York show, February, 1898.

To be divided by sex if five or more of each sex are entered, half of any added money to go to each sex.

The Mascoutah Stakes, for puppies born in the United States or Canada between June 30, 1896, and July 1, 1897; entrance, $2 due with entry, and an additional $3 to fill, due on Dec. 1; the winner to receive 50 per cent. of the stake and added money; 25 per cent. to go to the second; 15 per cent. to the third, and 10 per cent. to the fourth; to be decided at Chicago show in 1898.

To be divided by sex if five or more of each sex are entered, half of any added money to go to each sex.

Particular attention is directed to the date of closing of entries, which is Saturday, August 14.

POINTS AND FLUSHES.

Mr. A. P. Fish, Binghamton, N. Y., secretary of the Binghamton Industrial Exposition Association, informs us that the Association's seventh annual bench show, under A. K. C. rules, will be held in the four days beginning Aug. 31. Premium lists can be had on application. Mr. John Brett will judge.

In a letter bearing date of Aug. 7, Mr. Everard Dexter, president of the Champion Field Trial Club, writes us that the club will hold a meeting immediately after the Continental Club's next winter meeting.

A special meeting of the American Spaniel Club will be held on Friday, Aug 20, at 8 o'clock P. M., at No. 13 West Eighteenth street, New York. Notices of this meeting have been sent to all the members and a full attendance is requested, as matters of importance will be acted upon at this meeting.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

THE first victim of the foolish and unjust Payne bill is Mr. F. B. Goodenow, of Castine, Me., owner of a small steam yacht built across the line at Yarmouth, N. S. In answer to an inquiry he has been informed by the Treasury Department that his yacht is liable to tonnage dues every time that she goes from one customs district to another. Under the wording of the Payne bill it is still an open question whether or no this is really the case, and in all probability no settlement will be reached until some yachtsman with the spirit and money comes forward to fight it out in the courts, as Mr. Vanderbilt did the attempt of the New York authorities to seize his yacht Conqueror a few years ago. A very nice point is involved as nearly as we can learn, as to whether an entry, as the term is used in this connection, gives to a foreign vessel the freedom of one of the Great Districts into which the Atlantic coast is divided, with the privilege of going from one District to another, or whether it applies solely to the District alone. In the former case a yacht would be at liberty on the strength of once paying tonnage dues, to cruise at will within quite an extended area. Of course this was not the intent of the law, the idea was to hamper in the greatest possible degree the use of foreign-built yachts, but it is quite possible that the courts may finally place this interpretation upon it.

THE photos of Glencairn and Avoca from which our illustrations were made, were taken by Wm. Notman & Son, the Montreal photographers, who have many fine pictures of the new fleet.

New York Y. C. Annual Cruise.

RENDEZVOUS, GLEN COVE.

Monday, Aug. 2.

IN the important matters of programme and prizes the annual cruise of the New York Y. C. for 1897 surpasses all previous efforts of the club. The total course of the cruise, from New York to Bar Harbor, is the longest ever sailed, including one racing run of 210 miles, and the prizes offered are not only numerous, but some of them are of exceptional value. The programme of the cruise was as follows:

Monday, Aug. 2.—Races for Vice Commodore's and Rear-Commodore's cups, start from Glen Cove and finish off Huntington Harbor.

Tuesday, Aug. 3.—Squadron run, Huntington Harbor to New London.

Wednesday, Aug. 4.—Squadron run, New London to Newport.

Thursday, Aug. 5.—Races for Goelet cups, either Block Island course or Vineyard Sound course. Fireworks and illumination in the evening.

Friday, Aug. 6.—Squadron run, Newport to Vineyard Haven.

Saturday, Aug. 7.—Squadron run, Vineyard Haven to Saddleback Ledge Light, at entrance of Isle Au Haut. This being the longest run of the cruise, will extend over Saturday and Sunday.

Monday, Aug. 8.—Saddleback Ledge to Bar Harbor, where the squadron will disband.

The regatta committee offers a prize for a race to start from Saddleback Ledge light at entrance to East Penobscot River; finish at Egg Rock light at entrance to Frenchman's Bay, leaving Isle au Haut, Long Island, Great Duck Island, and Baker's Island to port. Thirty-six miles. The line at the start and at the finish will be between the Corsair and the light.

In addition to the annual offer of Mr. Ogden Goelet of a $1,000 cup for schooners and a $500 cup for cutters, the following prizes were offered by Com. Morgan for the ocean race:

A cup of the value of $2,000 for the winning schooner in classes A, B and C.

A cup of the value of $1,000 for the winning schooner in classes D and F.

A cup of the value of $1,000 for the winning cutter in class G.

A cup of the value of $1,000 for the winning cutter in classes H, J, K, L and M.

For the initial race of the cruise, off Glen Cove, Vice-Com. Ledyard offered a cup for schooners and another for cutters. Mr. Henry Walters, steam yacht Narada, offered a cup, to be called the Narada cup, for the yacht, regardless of rig, making the best elapsed time in the greatest number of squadron runs, not including those for the commodore's and vice-commodore's cups, and Mr. Percy Chubb offered $200 in addition to the other's prize for the handicap race for Saddleback Ledge to Bar Harbor. Vice-Com. Belmont also offered a cup for the 30ft. class.

The courses, in detail, were as follows:

Glen Cove to Huntington Bay.

Huntington Bay to New London—From Eaton's Point Buoy to New London Light, leaving Cornfield Shoal L. S. and Bartlett's Reef L. S. to port. Sixty-four miles.

Huntington Bay to Morris Cove—From Eaton's Point Buoy to a mark displaying red flag with white stripe, 1 mile S. from Luddington Rock. Twenty-eight miles.

Morris Cove to New London—From a mark displaying red flag with white stripe, off breakwater, to New London Light, leaving Bartlett's Reef L. S. on port hand. Forty miles.

New London to Newport—From Sarah's Ledge Buoy to "Castle Hill Light, leaving Race Rock on port hand. Forty miles.

Newport to Vineyard Haven—From Brenton's Reef L. S. to West Chop Buoy (Red No. 2), leaving Vineyard Sound L. S. on port hand. Thirty-seven miles.

Vineyard Haven to Saddleback Ledge Light—From East Chop Buoy, leaving Shovelful Lightship to starboard and Pollock Rip Lightship to port. One hundred and eighty-five miles.

Squadron anchorage at Bar Harbor—The anchorage while at Bar Harbor will be in Frenchman's Bay to the northward and westward of Bar Island.

Isle au Haut to Bar Harbor—From Saddleback Ledge Light to Egg Rock Light, leaving Baker's Island on port hand. Thirty-six miles.

Owl and Game Cock Colors—To be rowed for at such port as the Commodore shall decide, under the management of the fleet captain. Entries: "Game Cock," $10; "Owl," $5; dinghies, $2; launches, $10. The club will add $5 an oar, and $10 for launches.

The conditions of the long race were:

By invitation of the commodore, the regatta committee will be on board the Corsair.

Entries—Crossing the line will be regarded as an entry. The start will be off East Chop, Vineyard Haven, at a time to be announced the day before or signaled the day of the race. Should the race be postponed, it will be started on the following day, if favorable.

Starting Signals—(Should a signal gun miss fire, a prolonged blast of the steam whistle will be given instead.)

No. 1. Preparatory—A gun will be fired and the blue peter will be hoisted.

No. 2. Start for single-masted vessels and yawls—Five minutes later a second gun will be fired and a red ball will be hoisted.

No. 3. Start for schooners (handicap time for single-masted vessels, etc.)—Five minutes later a third gun will be fired and a second red ball will be hoisted.

No. 4. Handicap time for schooners—Five minutes later a fourth gun will be fired and both balls will be lowered.

The course will be from an imaginary line between the Corsair and East Chop Buoy to Saddleback Ledge Light at the entrance to the East Penobscot River. The finish line will be between the Corsair and the light, 185 miles. Yachts must leave the Shovelful Lightship to starboard and the Pollock Rip Lightship to port; but if the channel by way of the Great Round Shoal Lightship is used, the restriction as to the Shovelful lightship will be waived.

At the finish the Corsair will display a large club signal at the fore and a red ball, by day; after dark she will show four white lights, hung vertically, and will burn club signals. In the absence of the flagship, the finish at Saddleback Ledge Light will be indicated by a mark with a tug lying by with the usual signals. A change was made later on, the finish being made off Baker's Island.

Monday found at the rendezvous the following yachts:

Schooners—Amorita, W. G. Brokaw; Ariel, Stephen S. Palmer; Colonia, Clarence A. Postley; Emerald, J. R. Maxwell; Fenella, C. L. Poor; Fortuna, H. S. Hovey; Hildegarde, G. W. Weld; Intrepid, C. Oliver Iselin; Iroquois, H. C. Rouse; Elsemarie, J. B. King; Marguerite, H. W. Lamb; Montauk, Lewis C. Ledyard; Quissetta, H. W. Harris; Sachem, John G. Moore; Shamrock, P. H. Butler; Varuna, Rives & Sturgis; Viator, Albert J. Morgan; Viking, James D. Smith.

Cutters—Carmita, W. K. Vanderbilt, Jr.; Como, S. V. R. Cruger; Eclipse, L. J. Callanan; Gloriana, J. M. Lasell; Gossoon, P. T. Dodge; Huron, E. S. Hatch; Jessica, John G. Agar; Katrina, Charles Smithers; Liris, C. B. Henriques; Mineola, August Belmont; Minerva, Joseph E. Fletcher; Navahoe, R. P. Carroll; Norota, D. B. Burnham; Queen Mab, N. L. Francis; Sayonara, J. M. Woodbury; Syce, F. M. Hoyt; Thistle, J. H. Ford; Vigilant, Percy Chubb; Wasp, H. F. Lippitt.

Steamers—Albatross, Jacob Ruppert, Jr.; Allegra, Charles M. Pratt; Almy, Frederic Gallatin; Althea, Charles Sooysmith; Aquilo, H. A. Von Liew; Calypso, John D. Crimmins; Claymore, Jarvis C. D. Edson; Clermont, A. Van Santvoord; Corsair, J. Pierpont Morgan; Duquesne, T. H. Hostetter; Electra, Elbridge T. Gerry; Embla, John T. Williams; Giralda, E. S. Renwick; Halcyon, Howard C. Smith; Helvetia, C. O'D. Iselin; Hermione, Gen. Samuel Thomas; Hiawatha, Charles Fleischmann; Hildegarde, B. M. Whitlock; Intrepid, Lloyd Phenix; Ituna, Allison V. Armour; Katrina, John C. Barron; Linta, Walther Luttgen; Marietta, H. B. Moore; Marion, N. Witherell; Narada, Henry Walters; Nydia, Isaac Emerson; Oneida, E. C. Benedict; Oneonta, G. K. Clarke, Jr.; Orienta, E. R. Ladew; Parthenia, A. H. McKee; Penelope, H. E. Converse; Sagamore, John H. Hanan; Satanella, E. W. Bliss; Scythian, Miss S. De Forest Day; Varuna, Eugene Higgins; Vision, Colgate Hoyt; Vergana, F. H. Benedict; Wachusett, F. T. Holder; Wadena, J. H. Wade.

The steamboat Sam Sloan was also present, with members of the club and the Seventh Regiment Band. A meeting of the captains was held on board the flagship Corsair, Com. Morgan presiding. All through the morning there was no wind at all, a condition which maintained through the afternoon as well, to the disappointment of hundreds. The postponement of the race was signalled at 4 P. M., and such as were lucky enough to get a loan of a rope's end from a friendly steam yacht or to catch a tugboat, made their way toward Huntington Bay. A little later a nice N.E. breeze sprung up and started the sailing craft, holding long enough to carry them to their destination.

Second Day, First Squadron Run.

HUNTINGTON BAY TO NEW LONDON.

Tuesday, Aug. 5.

Tuesday morning promised no better than Monday, with a flat calm at 5 A. M. The start was set for 7 o'clock, but there was no wind at all, and it was not until 10:20 that the preparatory signal was given, followed by the start for the smaller cutters at 10:30. Even then there was no wind with a strong ebb tide; Wasp, Norota and Queen Mab managed to cross and worry along slowly in the right direction, but the rest of the fleet dropped their anchors and lay idle, unable to get to the line.

At noon a light S.W. wind came in, and the yachts were soon on their way, being timed unofficially at the line, all being handicapped:

Hildegard	12 16 45	Emerald	12 19 3
Thistle	12 18 00	Marguerite	12 20 0
Gevalia	12 18 02	Uvira	12 20 1
Carmiya	12 18 30	Ariel	12 20 1
Colonia	12 18 05	Gossoon	12 20 2
Minerva	12 18 30	Minerva	12 20 5
Syce	12 18 32	America	12 21 -
Vencedor	12 18 43	Katonah	12 21 5
Vigilant	12 18 55	Fenella	12 22 0
Sachem	12 19 00	Gloriana	12 22 3
Navahoe	12 19 20		

Fortunately the wind held and then freshened, so that the fleet was able to make the long run before dark, in spite of the late start. The finish was timed:

Vigilant	5 54 36	Amorita	6 24 18
Hildegard	5 58 56	Sachem	6 25 10
Colonia	6 00 53	Iroquois	6 25 15
Emerald	6 02 40	Ariel	6 26 47
Navahoe	6 09 45	Wasp	6 47 17
Marguerite	6 23 03	Queen Mab	7 00 00

Wayward, Syce, Vencedor and Norota not timed.

Minerva lost her topmast.

The regatta committee issued the following concerning the race for the Vice-Commodore's cups:

The race for the Vice-Commodore's cups, postponed on Aug. 2, will take place on the run from New London to Newport at the same time, over the same course, and with the same starting signals as the squadron run.

All yachts crossing the line at the start will be considered as entered for the Vice-Commodore's cups, and for the squadron run cups as well. The Rear-Commodore's cups for 30-footers will be raced for on a day to be named later.

[Signed] THE REGATTA COMMITTEE.

NEW LONDON HARBOR, Aug 3.

Third Day—Second Squadron Run.

NEW LONDON TO NEWPORT.

Wednesday, Aug. 4.

On Wednesday morning there was a moderate S.W. wind, and the start was made off Sarah's Ledge. In place of the usual finish well up Newport Harbor off the Dumplings, it was decided to finish off Brenton's Reef Lightship. The start was unofficially timed:

Wasp	10 01 06	Syce	10 04 09
Navahoe	10 01 11	Gossoon	10 04 52
Vigilant	10 01 40	Amorita	10 06 26
Vencedor	10 01 50	Gevalia	10 06 40
Gloriana	10 02 09	Iroquois	10 07 19
Carmita	10 02 12	Fenella	10 07 19
Uvira	10 02 25	Ariel	10 09 31
Queen Mab	10 02 29	Colonia	10 09 33
Norota	10 02 30	Emerald	10 10 03
Liris	10 02 56	Sachem	10 11 14
Katonah	10 03 04	Hildegarde	10 13 09
Sayonara	10 03 17	Marguerite	10 14 22
Kestrel	10 03 46		

Volunteer joined the fleet at New London, but did not start with the racing division. They stood out to Race Rock and then eased sheets and set spinakers to starboard. Colonia and Emerald fell in together, and Navahoe and Vigilant were also in for a duel. The big new schooner Hildegarde, which had made sail for the first time on Monday afternoon, was in trouble soon after the start, her spinaker halyards breaking when the sail was masthead and dropping into the water, the crew having hard work to recover it. The yachts were soon scattered over miles of water. Off Watch Hill Navahoe and Vigilant luffed far out to the south'ard, where they were fortunate in finding more wind, the others following. Spinakers were set to starboard again off Point Judith, the wind being more to the south'ard, and they ran up for the finish, the times being:

SCHOONERS—CLASS B.

	Start.	Finish.	Elapsed.	Corrected
Colonia	10 09 12	2 43 23	4 34 11	4 34 11
Emerald	10 09 35	2 41 57	4 32 22	4 30 51
Sachem	10 10 00	3 19 44	5 09 44	5 07 51

SCHOONERS—CLASS C.

Ariel	10 09 01	4 18 30	6 09 29	6 09 29
Marguerite	10 10 00	3 37 55	5 27 55	5 27 55
Iroquois	10 06 50	4 03 58	5 57 08	5 56 04

SCHOONERS CLASS F.

Gevalia	10 06 44	4 39 37	6 33 10	6 33 10
Fenella	10 06 27	4 48 20	6 41 46	6 33 04

CUTTERS—CLASS G.

Vigilant	10 01 50	2 07 04	4 05 14	4 05 14
Navahoe	10 02 09	2 15 50	4 13 41	4 10 05

CUTTERS—CLASS J.

Wasp	10 00 34	3 46 10	5 45 36	5 45 36
Carmita	10 01 46	3 32 27	5 31 47	5 31 37
Gloriana	10 01 37	4 01 27	5 09 50	5 58 31
Sayonara	10 02 49	3 50 12	5 46 46	5 45 17

CUTTERS - CLASS K.

Syce	10 03 36	3 50 12	5 46 36	5 42 36
Kestrel	10 03 10	4 55 47	6 52 57	6 47 52
Gossoon	10 04 02	4 55 43	6 51 41	6 44 55
Uvira	10 01 66	4 20 13	6 18 17	6 10 54
Choctaw	10 03 31	5 02 18	6 59 37	5 50 18
Vencedor	10 01 12	4 44 38	6 43 26	Not meas.

CUTTERS—CLASS L

Norota	10 02 00	4 20 35	6 18 35	Not meas.
Katonah	10 02 29	4 33 15	6 30 36	Not meas.

MIXED CLASS.

Hildegarde	10 10 00	3 37 51	5 27 51	Not meas.
Amorita	10 05 55	3 26 17	5 20 22	. .. ..
Queen Mab	10 01 53	3 20 58	5 19 05	. .. ..

Emerald wins the Vice-Commodore's cup for schooners and Vigilant that for cutters, the corrected time for the single-stickers being:

Vigilant	4 05 14	Gossoon	5 53 31
Navahoe	4 10 05	Uvira	5 19 30
Wasp	5 01 18	Choctaw	5 58 34
Carmita	4 47 19	Vencedor	Not meas.
Gloriana	5 14 13	Norota	5 08 07
Sayonara	5 00 59	Katonah	Not meas.
Syce	4 55 12	Queen Mab	Not meas.
Kestrel	5 56 28		

At Newport the entire day had been given up to the annual fête—water sports, processions, illuminations, etc.—the yachtsmen coming in for a good part of the entertainment.

Fourth Day—Goelet Cups.

OFF NEWPORT.

Thursday, Aug. 5.

Thursday morning brought a change of weather—a strong N.E. wind and rain. The first event of the day was a collision in the harbor, the steam yacht Wild Duck, J. M. Forbes, running into the steam yacht Susquehanna, and afterward into the steam yacht Almy. The latter was so badly damaged in bulwarks, ladder, steering gear, etc., that she was obliged to return to New York for repairs. Although the start was set for 10:30, off Brenton's Reef Lightship, as usual, it was 11 o'clock before the Corsair set the signals for a start at 11:30. Colonia, Vigilant and Navahoe were ready for the race, but Emerald remained in the harbor. Navahoe dropped a hand overboard as she went out, but her dinghy was promptly launched and he was picked up. The signals were set for the Block Island course and the preparatory sounded at 12:10, the cutters being started at 12:15. Vigilant, under mainsail and jib, crossed at 12:18:22, with boom to starboard, and Navahoe, with jib and foresail set and boom to port, crossed at 12:19:48. Vigilant was on the wrong jibe and shoved her boom to port after a few minutes, both setting working topsails. Navahoe set her spinaker at 12:27, but Vigilant luffed out across Navahoe's bows before setting hers at 12:32.

Colonia, the only schooner starting, was sent away at 12:20, crossing at 12:21:40. The tug Luckenback had run ahead to set the Block Island mark, but the two boats were traveling very fast, with such a breeze astern and there was little time left. Unfortunately after being set the mark capsized, and the tug dropped another, but to leeward. Vigilant, heading for the first mark, had to take in her spinaker and jibe over, having thus overstood the new mark, and by this maneuver Navahoe, just astern of her, was enabled to turn first, the times being:

Navahoe	1 40 09	Vigilant	1 40 30

The next leg of 18 miles, to the West Island mark, was to windward, with plenty of wind and a lively sea, just the conditions to stir the soul of a true racing yachtsman after three days of drift or light weather. To be sure, it was raining and the decks were wet and sloppy, but for big boats like the modern 90-footers it was mere child's play. Navahoe had torn the clew of her topsail when it was first sent up, and now she shifted to a new one with advantage. The two broke tacks for a long time, and when they came together near the mark Vigilant had to cross under Navahoe's stern, and the latter at once swung about on her weather quarter. The times at the West Island mark were:

Navahoe	4 07 35	Vigilant	4 08 25

Navahoe broke out a balloon jibtopsail as she rounded, while Vigilant set her No. 1 jibtopsail. The six miles to the finish witnessed some lively fighting. With her smaller headsail, Vigilant was better fitted for a luffing match, and she kept at it until she finally went by Navahoe to windward at 4:23. The race was not won yet, however, as Navahoe hung close to her quarter and kept her luffing in turn. Though she managed to get clear and to finish in the lead, she failed to save her time, and was beaten by 1min. 1sec. elapsed time, and 4min. 21sec. corrected time. The official summary was:

CUTTERS.

	Start.	Finish.	Elapsed.	Corrected.
Navahoe	12 19 48	4 41 13	4 21 25	4 18 05
Vigilant	12 18 22	4 40 48	4 22 26	4 22 26

SCHOONERS

Colonia	12 21 40	4 54 25	4 32 45	4 32 45

The question has been raised whether Colonia, having sailed alone, is entitled to the prize, Rule IV. reading: "At least two yachts must start in a class to entitle a yacht to a prize."

After the race there was some complaint on the part of certain yachts that they really wished to start but had not received sufficient notice to enable them to get under way in time.

Sixth Day, Fourth Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Friday, Aug 6

Friday morning brought clear weather and a breeze light enough for the most timid of yachtsmen, though still from N.E. The start for the Vineyard was made at 10:40, many of the yachts being late in getting out of the harbor, Navahoe was handicapped 28m. and Hildegarde was even later. A few of the yachts set balloon jibtopsails, the wind being well on the port bows, most of them being content with smaller headsails. Colonia carried her balloon maintopmast staysail. Queen Mab led for some time, but as the breeze freshened the larger boats passed her. About noon the wind fell and then a new breeze came in from the south, putting the leaders to leeward and astern and shaking up the whole fleet in a way that made the results of no meaning at all. Booms were jibed to port and spinakers set to starboard and the race virtually recommenced on a new basis. The yachts ran quickly through Vineyard Sound with spinakers set and finished in good season, the times being:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	10 40 38	4 50 40	6 03 02	6 03 02
Emerald	10 48 44	4 52 00	6 03 16	6 42 30
Ariel	10 46 44	Did not finish.		
Marguerite	10 50 00	5 04 52	6 14 52	6 14 52
Iroquois	10 50 00	5 46 28	6 56 28	6 55 24
Gevalia	10 50 00	5 57 20	7 07 20	7 07 20
Fenella	10 47 25	6 20 16	7 32 51	7 24 47

CUTTERS.

Vigilant	10 45 00	4 44 40	5 59 40	5 59 40
Navahoe	10 45 00	5 00 12	6 15 12	6 11 57
Wasp	10 41 22	5 08 48	6 27 26	6 27 26
Carmita	10 42 20	6 01 23	7 19 03	7 18 53
Gloriana	10 43 10	5 13 44	6 31 34	6 30 15
Sayonara	10 41 34	4 56 27	6 14 53	6 13 24
Syce	10 45 00	5 34 13	6 49 13	6 49 13
Jessica	10 41 05	5 29 18	6 48 13	6 46 55

Vencedor	10 44 46	5 44 44	6 59 57	6 55 12
Gossoon	10 41 55	Not timed.		

CUTTERS.

Norota	10 45 00	6 14 49	7 29 49	7 29 49
Liris	10 43 10	6 23 15	7 40 05	Not Meas.
Katonah	10 42 40	5 31 46	6 49 06	Not Meas.

MIXED CLASS.

Hildegarde	10 50 00	5 26 31	6 36 31	Not Meas.
Amorita	10 50 00	4 59 49	6 09 49	Not Meas.
Queen Mab	10 40 43	5 04 05	6 24 06	Not Meas.

Emerald wins from Colonia by 1m. 17s.; Gevalia wins from Fenella by 17m. 27s; Marguerite wins from Iroquois by 40m. 32s.; Vigilant wins from Navahoe by 12m. 17s.

Kestrel lost her topmast off the Sakonnet River and put back to Newport.

Sixth and Seventh Days—Commodore's Cups.

VINEYARD HAVEN TO BAR HARBOR.

Saturday and Sunday, Aug. 7-8.

A lay day at the Vineyard, often two, has been the rule of the New York Y. C. for years, but this year the main object is to go as fast and as far as possible, and so the sailormen who turned in tired after the run of Friday were up bright and early on Saturday, at least those of them who proposed to face the long race around the Cape. The list of starters, twenty-two in all, was as follows:

Cutters—Vigilant, Percy Chubb; Navahoe, Royal Phelps Carroll; Queen Mab, N. L. Francis; Gloriana, Josiah M. Lasel; Sayonara, Dr. J. M. Woodbury, and Wasp, H. F. Lippitt.

Schooners—Colonia, Clarence A. Postley; Emerald, J. Rogers Maxwell; Iroquois, H. C. Rouse; Amorita, W. Gould Brokaw; Gevalia, Howard W. Coates; Fenella, Charles Lane Poor; Marguerite, Henry W. Lamb; Fortuna, H. S. Hovey; Hildegarde, George W. Weld; Sachem, John G. Moore; Alert, C. A. Griscom; Viking, James D. Smith; Varuna, Messrs. Rives and Sturgie; Crusader, S. L. Husted, Jr.; Montauk, Vice-Com., Lewis Cass Ledyard, and Columbia. Of these all but four finished. The original programme was changed, the course being extended to Baker's Island, making 210 miles.

The start was given at 10:00 off East Chop Light, Wasp going over first in a light N.W. wind that soon died away and left the fleet drifting.

Some of the yachts dropped their kedges, and Intrepid, under charter to C. Oliver Iselin, went on the Hedge Fence, but worked off unaided before the tug Kate Jones could reach her. This tug and two others were provided by the club to give assistance to the yachts in case of need.

Shortly after the start Fortuna and Queen Mab drifted together, but cleared without injury.

About noon a light S.S.E. breeze came in and started the race, though at a slow pace at first. The breeze increased, however, and after the Cross Rip Lightship was passed it shifted to S.W. The Shoals were passed in perfectly clear weather and smooth water, and save for the light weight of wind at times the conditions were ideal for this dangerous and troublesome course. Wasp led for a long time, but was passed by Emerald between Cross Rip and the Handkerchief, the order then being: Emerald, Wasp, Colonia, Vigilant, Marguerite, Navahoe, Amorita, Queen Mab and Hildegarde, with the others well astern. During the night the wind was light S.W. and spinakers were carried to port. The wind fell for a time in the morning, but freshened again, still S.W. Vigilant, Colonia, Navahoe and Emerald, the leaders, shifted about from first to fourth place through the day, but Vigilant finally led the fleet in. After she had finished between Baker's Island and the flagship, the Corsair shifted her position, making a slight difference in the timing against the other boats. Over an hour elapsed before her mates came up, Colonia first, then Navahoe, Emerald and Hildegarde. The official times were:

SCHOONERS—CLASSES A, B AND C.

	Start. Aug. 7, A. M.	Finish. Aug. 8, P. M.	Elapsed.
Colonia	10 10 10	4 42 22	30 32 22
Emerald	10 10 10	4 51 18	30 41 18
Hildegarde	10 10 10	5 11 40	31 01 40
Marguerite	10 10 10	6 28 56	32 18 56
Fortuna	10 10 10	6 51 33	32 01 38
Sachem	10 10 10	7 11 16	33 01 16
Iroquois	10 08 12	7 23 15	33 15 03
Montauk	10 10 00	7 29 07	33 19 07
Alert	10 10 00	8 34 40	34 24 40
Columbia	10 10 00	10 13 30	36 03 30
Crusader	10 10 00	10 22 10	36 12 10
Viking	10 10 00	10 41 00	36 31 00
Varuna	10 10 00	10 58 20	36 48 29

Corrected time: Colonia 30:32:22; Emerald 30:3 :43. Colonia wins by 21sec.

SCHOONERS—CLASSES D AND F

Amorita	10 08 51	6 46 09	23 37 18
Gevalia	10 10 00	10 14 55	36 04 55
Fenella	10 10 00	1 05 00	*2 8 55 00

* Aug. 9.

CUTTERS—CLASS 1.

Vigilant	10 05 00	3 59 28	23 54 28
Navahoe	10 05 00	4 44 17	30 29 17

Corrected time: Vigilant, 29:51:24; Navahoe, 30:20:52.

CUTTERS—CLASS 2.

Queen Mab	10 05 00	7 22 30	33 17 30
Wasp	10 01 05	7 21 10	33 20 15
Gloriana	10 05 00	9 11 00	35 16 00
Sayonara	10 05 00	8 51 10	34 46 10

Wasp wins on corrected time.

Beverly Y. C. 251st Regatta.

THE 251st regatta of the Beverly Y. C. was sailed at Marblehead Aug. 3, being the first open race of this year. The bad luck the club had in '95 and '96, of having dead calms on its open race days, fortunately is over, and there was a good southerly breeze.

The race was for all the classes in the Y. R. A. of Massachusetts, and there was a class of 17 to 21 catboats, and a handicap class of the older knockabouts in addition.

In the regular knockabout class there were seven starters, though Cock Robin did not start, her owner being absent. Mr. Sears's new Herreshoff boat Hazard won in this class, and the Maia won in the handicap knockabout class.

Emma C., Little Peter and Asahi had a hot fight in first class. Emma C. beating Little Peter 9s. Asahi led to windward, but the others passed her running.

In second class open boats Hoodlum had it all her own way, she passed all the first class boats who started five minutes before her, and was the first over the home line.

There were six good boats in the second cabin class. Privateer won on allowance, though Susie and Muriel made better actual time, the course for these boats was a triangle of 10 miles.

The other classes sailed 6½ miles with a good beat, there were five starters in each class, viz.: third, fourth and cat classes.

Alison won in the cat class on allowance by 20s., though Cleopatra and Omene beat her on actual time.

Ben My Chree won in third class, with Perhaps and Mephisto in second and third places, and Vitesse was first in fourth class, with Fantasy and Alpine as second and third.

The following boats took the first prizes of $20 each: Hazard, Maia, Emma C., Privateer, Hoodlum, Alison, Ben My Chree and Vitesse. Seconds of $10 by Mongoose, Mayona, Little Peter, Muriel, Cleopatra, Perhaps and Fantasy. Third prizes of $5 each were won by Fly, Water Lily, Asahi, Rex, Omene, Mephisto and Alpine.

Judges: F. Elliot Cabot and Walter Lloyd Jeffries.

Hobe Sound Y. C.

HOBE SOUND, Fla., Aug. 2.—The fourth race of the prize series of the Hobe Sound Y. C. was sailed to-day in a light S.E. breeze. The race was slow, with nothing to relieve the monotony except the fine windward of Gull on the last leg, where she worked from third place to first.

The series is very even, the points being:

FIRST CLASS.		SECOND CLASS.	
Gull	9	Juanita	4
Wenonah	8	Lorraine	4
Francis	6	Ruby	1
Wanda	5	Mary B	0
Sprogie	3	Marie	0

Following is the result of to-day's race:

FIRST CLASS.

	Elapsed.	Corrected.
Gull	2 15 46	2 10 06
Francis	2 26 48	2 13 26
Wenonah	2 28 32	2 17 54
Wanda	2 32 36	2 32 36
Sprogie	Withdrew.	

SECOND CLASS.

Lorraine	1 12 07	1 12 07
Juniata	1 27 50	1 21 03
Ruby	Withdrew.	
Mary B	Withdrew.	

H. D. McVean, Purser.

SEAWANHAKA INTERNATIONAL CHALLENGE CUP.

Trial Races for Defense.

DORVAL—LAKE ST. LOUIS.

Aug. 2, 3 and 5.

THE third contest for the Seawanhaka International cup has transferred the racing to entirely new waters, comparatively unknown to the yachtsmen of the Atlantic coast. As a strictly international contest, these races between the yachtsmen of the St. Lawrence and those of Long Island Sound are on quite a different footing from those of 1895, when one of the participants was a representative of the Thames and Solent racing; but if anything is lost in this respect, it is fully made up by the competition between the sailors on salt and those on fresh water. In water sports, at least, political lines are very lightly drawn on the Lakes and the St. Lawrence; neither shore can boast of a distinctive national type in yachts, sailing boats or canoes; in both yachting and canoeing, as in the Lake Y. R. A. and the American Canoe Association, perfect harmony and community of interests exist, the two national ensigns always fly side by side, and when differences arise at times, the discussions are always on other than political lines.

The interest in the present races lies only to a limited extent in the fact that the defender of the cup is a Canadian club. What is of much more importance is that this club is a purely local one, completely shut off by distance and natural barriers from the yachting centers of both salt and fresh water, with no renowned designers, builders or sailmakers, to whom it could look for aid, and thrown completely upon its own resources in every way. That under such circumstances it challenged the Seawanhaka Corinthian Y. C., created a fine trial fleet of 15-footers, and won the cup in a most creditable manner, is enough of itself to attract universal attention to the defense which it is now making of the international trophy.

The Royal St. Lawrence Y. C. was organized as the St. Lawrence Y. C. in 1888 by a few residents of Montreal, who were interested in yachting, and accustomed to sailing on Lake St. Louis and the adjacent waters. Among the leaders were Messrs. Duggan, Hamilton, Greene, Clouston and Davidson, still active in the club. In 1891 the club was incorporated, and in 1894 it was granted an Admiralty warrant, authorizing it to prefix the word "Royal" to its name, and to fly the blue ensign over its fleet.

Starting under many difficulties, with a mixed fleet of old yachts, no racing rules, and strong prejudices in favor of the old length rules and sandbag methods that prevailed in New York twenty years ago, the club from the first adopted a high standard and a progressive policy, and it has ever since lived up to them. The racing rules first adopted as a compromise were by degrees improved, until the rules of the Lake Y. R. A., identical with those of the Seawanhaka and other coast clubs, were adopted *in toto*. The fleet was gradually divided into systematized classes, which were strengthened by new yachts.

As in many Canadian organizations, the question of finances has always been an important one, and the building up of the fleet has been slow as compared with some of the younger coast clubs.

At the same time the work, both in designing and sailing, has been purely Corinthian, and the club has proved an excellent training-school for the young yachtsmen of Montreal.

At first the young club had no station of its own, and accepted the hospitality of the Valois Boat Club; the races were held at Valois, Dorval, Lachine, Pointe Claire and other places on the north shore of Lake St. Louis, the members of the yacht club at that time belonging also to one or the other of the boating clubs of these localities, which clubs were, ten years ago, in a very prosperous condition.

Finally the club secured a permanent location and house on the shore at Dorval, just above the island of that name. Here it has gone on from year to year, with a fairly good fleet of yachts from 30ft. downward, the older yachts being improved from time to time and new ones added.

Its isolated position has protected it from the invasion of costly racing machines, and, though a few Burgess boats were built for its members at the time when Mr. Burgess first became known abroad, there has never been such competition as to induce the introduction of the modern racing machine.

If the development has been slow under these conditions, on the other hand the club has suffered nothing from rapid outbuilding, and it has enjoyed regular and sustained racing of a popular sort for years.

At the present time it has a membership of over 400, with a handsome property at Dorval, its winter headquarters being at Montreal. The question of a better club house has been discussed for several years, and this year, of necessity, in view of the international races, it has been settled by the erection of a large and well appointed house at the edge of the lake. Owing to various delays—in particular the wet weather of last spring—the house is now barely completed, and will be by no means in exhibition order, but the club has spared no effort to entertain the expected visitors from the States.

Beautiful as it is, with its picturesque green shores and blue waters, Lake St. Louis is by no means an ideal yachting ground, the bottom is too painfully near the top, and also is far too liberally strewn with boulders, rolled about into new positions by the ice each winter. While the lake is in the main but an expansion of the great St. Lawrence River, it is at the same time the point of junction of the Ottawa River, whose two mouths come in above and below Isle Perrot, the latter just above Pointe Claire. The double result is a swift and variable current and various sand bars of more or less permanent shape. While deep water can be found in the channels and good courses can be laid out, the entire north shore of the lake, off Pointe Claire, Valois and Dorval, is very shoal. This is the case immediately in front of the club house, where a pier runs out for several hundred feet with a depth of little over a fathom at the end. As a matter of convenience, the regular club races are started off this pier, the buoy forming one angle of a triangle, but this course is by no means free from shoals and rocks, especially just about the starting line.

The anchorage of the fleet is directly off the club house, the shoaler boats lying inshore under the lee of this pier, but many of the boats are kept by their owners at different points about the lake. A railway leads from the water into a very large shed with a high arched roof, built several years ago for the storage of yachts and for building. The lawn between the road and the house is laid off in tennis courts, and there are stables for teams. The shore on either side of the club property is covered with summer houses, the summer homes of residents of Montreal, twelve miles distant by train.

At the time of the Spruce-Ethelwynn races the Royal St. Lawrence Y. C. had nothing of the half-rater type in its fleet; the racing was mainly in the 25ft., 30ft. and "A" Class (over 30ft.). There was a 16ft. class, with some centerboard and some fin-keel boats, but all of these were of the cruiser rather than the racer type, and in model, construction, fittings and rig very far below the standard of Spruce IIII., Ethelwynn and Trilby.

When the club came to look at the cold, hard facts before it after the very prompt acceptance of its hasty if not rash challenge to the Seawanhaka Corinthian Y. C., the outlook was rather discouraging. The successful defenders of the cup were at least a season ahead in experience, and they had, in addition to the Herreshoffs, competent designers, both amateur and professional, many skillful builders and sailmakers, and almost everything needed in the way of fittings. In addition to this, while the challenger was practically limited by circumstances to such boats as the club itself could produce, the defender was sure of a large outside attendance at its trial races.

There was in all Canada no professional designer, no concern similar to the Herreshoffs, to turn out a complete challenger, and there was not about Montreal one competent boat builder or sailmaker, while the canvas, wire, cordage and fittings for the modern racing machines were not to be had short of the States, which national pride forbade, or of England, with delay and inconvenience in importing the innumerable small trifles needed on a racing 15-footer.

In what at first appeared to be a serious emergency, the club had only itself to rely on, but the members came to the front in a most spirited manner. The main work of designing fell naturally upon Mr. Duggan, a particularly clever amateur designer, a very skillful boat handler, posted in a general way, as far as distance admitted, with the general current of designing work in the States and England; and with an experience in designing which, if limited in scope to pretty much one local type, such as Valda and Xania, covered many years of combined work at the drawing board in winter and the helm in summer. Closely associated with Mr. Duggan, was his first mate, Mr. Shearwood, the two being mechanical engineers and in the same firm, mates in numerous canoe races about the lake for years, swinging the single blade in tandem races and winning many prizes; and also shipmates in Valda, Xania and other racing yachts. Mr. Shearwood's work, as lieutenant to Mr. Duggan, began as calculator and assistant draftsman in the winter, and continued as "crew" through the races, both on Lake St. Louis and Long Island Sound. With these two was Mr. Poe, an old member of the club, a canoeist and yachtsman, and manager of a machine shop, that of the Linotype Co., engaged in a high class of work, the construction of typesetting machines. While the questions of design and construction were regularly debated by the three from the start Mr. Poe's special task was the designing and construction of the metal work and fittings.

While the practical details of the work were mainly in the hands of these three gentlemen, the other members of the club were not idle; a fleet of sixteen of the new yachts were ordered, crews selected, and all possible arrangements were made for the thorough working up and trial of the fleet.

The details of the construction and racing of the 15ft. class were given last year in the FOREST AND STREAM, and need not be repeated now; as every yachtsman knows, the efforts of the club and its members met with that success which they so well deserved; the result being that this year the club was placed in a defensive position, and under the necessity of creating an entirely new fleet of larger yachts.

While the conditions were much less trying than in 1895-6, there were, nevertheless, serious difficulties. In the matter of design, both in construction as well as form, Mr. Duggan had shown himself, in Glencairn, decidedly the master of his opponents in the States, but there was still no one to build the boats or to make the sails. The 15-footers were either built at a distance—in Toronto or Brockville—or by workmen sent to Montreal from the former place, both methods being unsatisfactory when extreme light construction was desired. The club had for several years tried, without success, to find a good builder who would lease its ways and shop and build on the premises. Most of our readers are familiar with the designs and writings of Mr. H. K. Wicksteed, of Cobourg, Canada, an old canoeist, cruiser, singlehander and a very skillful designer of cruising craft. Mr. Wicksteed, by profession a civil engineer and an expert in railway work, was idle last summer, and, besides attending the international races at Oyster Bay, he gratified his *penchant* for amateur work by building several small yachts at Cobourg. Being intimately acquainted with Mr. Poe, who originally hailed from Cobourg, and with the other Dorval men, he finally decided to undertake the building of the new fleet, he and Mr. Poe, under the name of the Yacht Company of Canada, taking a lease of the grounds and shed, and starting in to build yachts and make the fittings.

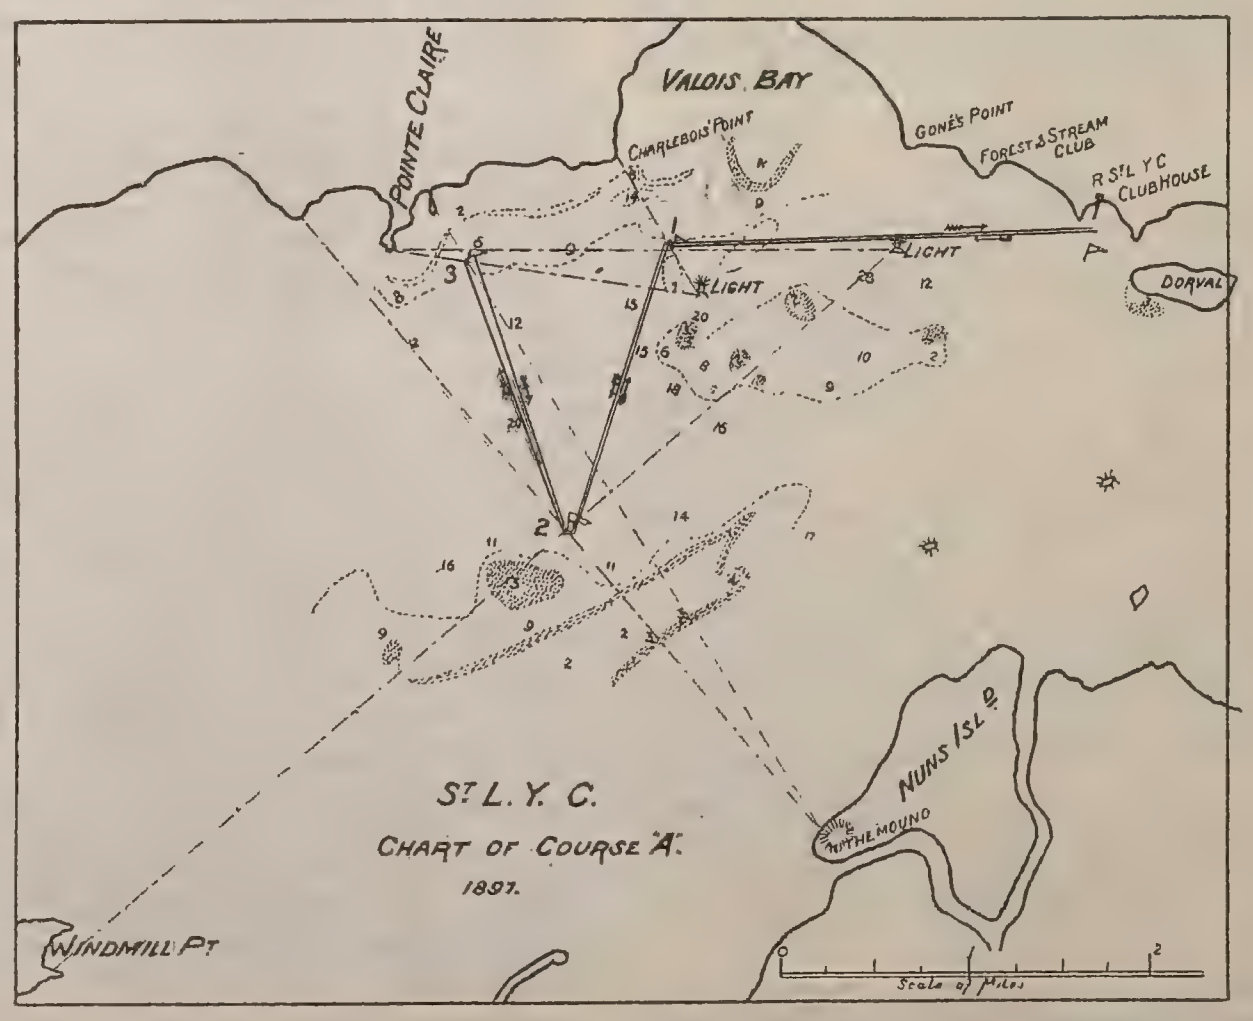
Under this new arrangement the four—all purely amateurs—worked together in the production of the 20-footers, with results that would show creditably beside the output of any concern on either side of the Atlantic, when the use, quality and cost are all considered.

The main work of the designing or planning, was left to Mr. Duggan, Mr. Shearwood making all the calculations, a very extensive task, as it was carried out in eight or ten designs, some merely studies. He also helped with the drafting. Mr. Poe took charge of the blocks and fittings in the Montreal shop, with the business part of the Dorval shop, and the practical management of the latter was in Mr. Wicksteed's hands. All details of design, construction and fitting up were constantly discussed by the four throughout the fall, winter and spring. Mr. Wicksteed gave his entire time to his part of the work, but the other three were also engaged very fully by their regular occupations, with which cups, challenges and yacht races have nothing whatever to do. The work of designing was carried on with the utmost thoroughness and system; every set of lines was carefully drawn, not only in the usual upright position, but the necessary level and diagonal lines were plotted with the hull inclined to the average sailing angle, and calculations of displacement and centers made for this position. Stability calculations were also made, and every design which was built from was studied as thoroughly as possible on paper and by figures. When it came to the question of materials, every block, shackle and fastening was tested to the breaking point at the shops of the Dominion Bridge Co., of which Mr. Duggan is superintendent. In connection with the actual building of the hulls, it is interesting to note that the small but efficient force of the shop did not include one professional boat builder, the best mechanic of the lot being a pattern-maker and millwright, who was taught to build boats by Mr. Wicksteed. The company was fortunate in securing the services of an excellent rigger and all-around man, a Norwegian sailor.

The new boats built in the club for the 20ft. class are as follows:

20FT. FLEET, ROYAL ST. LAWRENCE Y. C., 1897.

Name.	Owner.	Designer.	Builder.	Length over all.	L.W.L.	Overhang, Bow.	Overhang, Stern.	Beam.	Draft.	S.A.
Glencairn II.	Com. James Ross	G. H. Duggan	Yacht Co. of Canada	32.2	17.4	7.9	7	8.1	5½in.	...
Avoca	G. H. Duggan	G. H. Duggan	Yacht Co. of Canada	33.1½	16.9	8.6	7.10	8.4	5½in.	473
Glenowen	Shirley Davidson *et al.*	G. H. Duggan	Yacht Co. of Canada	33.8	17.1	8.2	8.6	...	5½in.	483
Rogue	Allun, Almon and Riddell	G. H. Duggan	Yacht Co. of Canada	31.1	17.7	7.1	6.5	9	5½in.	488
Islander	A. Hamilton *et al*	G. H. Duggan	Yacht Co. of Canada	32.8	18.2	7.7	6.11	7	5½in.	416
Maida	Young & Wallace	G. H. Duggan	Yacht Co. of Canada	...	...	...	...	...	5½in.	498
Millie	Rev. Hy. Kittson	Geo. A. Kittson	...	29.7	17.5	5.3	6.11	...	.....	495
Lalagé	J. B. Abbott	Cuthbert	Cuthbert	...	....	...	....	9	3ft.	...
Bonshaw	Æmilius Jarvis	Æmilius Jarvis	H. F. Hodgson	...	....	...	....	7	4in.	...



With differences in dimensions, as shown in the above table, and the accompanying differences in model, the new boats may all be classed as of the type of Glencairn I., Mr. Duggan's final 15-footer of last year, the winner of the cup. With a range of beam of from 7ft. in Islander to 9ft. in Rogue, the difference in midship section was necessarily very great, and with the experience of last season and the differences necessitated by the change to a larger class, with less sail and a crew of three, many changes were made from the original Glencairn, but still the leading characteristics were retained.

The general appearance of the two leading boats of the Duggan fleet, Glencairn II. and Avoca, is well shown in the photos. The underwater body shows a flat and wide floor, the flat carried fore and aft from bow to transom, this flat floor being joined to a strongly flaring topside by a round bilge that is approximately a quarter of a circle. This general form of section, carried as far fore and aft as possible, the round of the bilge being plainly visible in Glencairn II within a couple of feet of the stemhead, is the leading motive of the design; but as the result of careful drawings and calculations in the first place, backed by trial of the previous boats in the case of Glencairn II., each design has a distinct individuality of its own, and one is in no way a mere chance change from another. Naturally the most interesting of the fleet is the new Glencairn, and a description of her will answer nearly enough for the others.

Her sheer plan above water is well shown in the photos, the stem is carried out to a good length, thus avoiding a bowsprit and giving a better chance to work in shifting headsails; the line of keel runs down quite straight, with no indication of a hollow about the fore end of the L.W.L. to "cheat the rule," and it sweeps into a slight curve under the middle of the boat, rising again in a straight line to the transom. The height of deck at the stemhead is 1ft. 7in.; at the lowest point 1ft. 2in., and at the transom 1ft. 4in., thus giving a rather high side and a handsome and shipshape sheer.

The transom in Glencairn is square and vertical, made thus because the time did not admit of the working out of something more elaborate. In Avoca, the transom has a slight round, but so slight as to be unnoticed at a short distance, and it is really no more sightly than that of Glencairn. Glenowen has the best transom of the lot, tucked in on deck and with a good sweep and on a rake; Islander is similarly finished. The very peculiar counter seen an Glencairn I. last year has not been repeated on any of the new boats.

One marked feature of the fleet is the turtleback deck, Glencairn and Avoca having each a crown of 7in. at the mast. In the former boat some care has been taken to disguise this, and with good results; though extreme, it is not unsightly,

GLENCAIRN II.

Mr. Duggan at the helm, Mr. Shearwood forward, and Mr. Paton on starboard side. From photo by Wm. Notman & Son, Montreal.

and the sheer of the hull is not materially impaired by it. Each deck beam was laid out in the original drawing, all being faired by buttock lines. In Avoca this was not done, but the deck was run in by eye, and with rather disastrous results so far as appearance goes. The crown amidships is of a peculiar sweep; in fact, an ellipse, flat in the middle, where cut by the cockpit, and with an excessive curvature in the side deck. No two beams are of the same sweep, not one is either straight or of a true circular sweep; but outside of this they look to include every curve of the conic sections. The fore and aft lines of the deck wander down, up, and down again, with a flat place forward of the mast, a very high turtleback amidships, and a flat near the rudder head. This effect has been exaggerated by some changes of form which have taken place in the course of much hard sailing.

While by no means adding to the shipshape appearance of the boats, this high crown is really an admirable feature, allowing them to float high if entirely capsized, and with the well out of water. When carefully managed, as in Glencairn II., there is very little to be said against it on the score of looks. It is, of course, a disadvantage in working about the deck, unless the boat is greatly heeled.

In connection with this last feature, it must be considered that all of these boats have open cockpits about 6ft. long and 4ft. wide, with only a light grating on the floors along each side of the centerboard trunk. At the same time they have no bulkheads, but are entirely open from end to end. The experience thus far in the few capsizes that have occurred shows that there is little or no danger of taking water below, the hull floating very high and with the coaming well clear of the water. The shallow, suspended cockpit, seen in all of the New York boats which pretend to anything more than a perfectly flush and closed deck, is not found in any of the Duggan craft.

Taking these six boats as compared with the New York fleet, Momo—with a moderate freeboard and a shallow cockpit—being the best, and Skate—with no freeboard and a flush deck save for the cheesebox in which the light sails were stowed—being the worst, there is simply no comparison in the matter of convenience and general use apart from speed in cup racing. While the New York boats, as they stand, are mere racing machines and fit only for skillful racing men, the Montreal boats are really little ships, of quite as good a type as is at all consistent with a shallow hull below water and an absence of fixed ballast. During the races both Islander and Rogue—the latter not in the trials, though having scored second in points in the series of ten races for the Ross prizes—were out on the course, each with one or two men and four or five girls aboard, as though they were big catboats instead of mere racing machines, their main use. Glenowen sailed the whole series of trial races, but on the day of the special matches between Glencairn and Avoca, Mr. Davidson had her out with several ladies aboard, knocking around the course very comfortably. One of the boats in constant attendance at the trials was the 15-footer Anita, designed by Mr. Duggan last year for Mr. Eadie, and still raced in the 15ft. class, of the same general dimensions and type as Glencairn I. Young Mr. Eadie had her out all the time, sailing her single-handed or with a couple of ladies aboard.

After the victory of Glencairn over El Heirie last year, and of Momo, a compromise between the two types, over Skate and Keneu this year, it would certainly seem that the type developed by Mr. Duggan, of yacht-like form, with good freeboard and considerable bulk of topsides, and with open cockpit, is not only faster as a racing craft than the slab type, from Question to El Heirie, with low freeboard, no sheer and a flush deck; but that it is well adapted to general uses of which the latter is in no way capable. It is not forgotten that Glencairn I. had a shoal and watertight cockpit; and it is not yet a certainty that the compromise, Momo, may not show a decided advantage in speed over Glencairn II.; but we have very little doubt that a further comparison of the two types through a prolonged series of races will show that while the slab type with flush deck is fit only for racing, the new Duggan boats while quite as fast in racing, are as good for a certain general use, especially about Lake St. Louis, as anything of a similar draft can be. It is very evident that, save for one defect, every boat of the six can be used for an indefinite time in the future as a most convenient and speedy sailing boat, just as the 15-footer Anita now is, on a much smaller scale.

The one weak point of these boats from other than a racing standard, is the construction; but as this was planned solely from considerations of speed, and as it is amply strong enough for the present season, in spite of the large number of races sailed, they are open to no criticism on this account. The construction is certainly excellent and most ingenious in its details. As in Glencairn I., there is no keel, the garboards meeting, with but a light batten, ⅜in. inside. There is a good keelson, the centerboard trunk carried well forward and aft. The shiplap planking used in Glencairn I. has been abandoned in favor of the ribband carvel, with some original details. The planking is but ⅜in. thick (in Avoca it is but 5-16in.) and about 5in. wide. Both planking and decking are of British Columbia cedar. With a very full middle body and comparatively small ends to cover, a peculiar system has been followed. The bottom planks all run fore and aft, practically of the same width from end to end, and parallel with the garboards. The planks of the topsides run around the boat from stem to transom in the usual manner. The outer planks of the bottom are necessarily short gores, the last one straight on the inner edge and with a circular sweep on the outer, where it meets the lower plank of the topsides. Planked in the usual way, with a regular diminish of each plank from midships to each end, there would be an excessive sweep to almost every plank, to cover the hard bilge and straight bottom and flaring topsides. As it is, not only are the planks nearly straight, but many of them are of parallel width, saving a great deal of time in spiling off and getting out the stuff, as well as in fitting and fastening. The ribbands are about ¾in. square, and of course there is one inside of each seam. The frames are all steamed, about ¼ by ½in , spaced about 6in., and are set down into the ribbands. After the moulds are notched and set up, the ribbands are run over them; then the ribbands are jogged out to receive the frames, and the latter are bent in and fastened. With the framework thus completed, it is a comparatively rapid and simple job to get out the garboards and other planks, to fit them and fasten to the frames and ribbands, a "chair nail," of iron, similar to one of the old-fashioned "cigar box nails," but larger, being used.

The interior of the hull is stiffened by strong cross-floors under the mast, and by diagonal braces all over.

In connection with the cross floors, one serious defect developed in all of the early boats. In order to avoid the cutting of these floors, the edge keelson, a prolongation of the centerboard trunk, and the backbone of the boat, was stopped short of the mast to allow the floors to cross. This proved to be a serious mistake, the great strain on the mast forcing down floors, bottom and deck. It was effectually remedied, however, by building in a couple of deeper floors at the partners, carried up as frames on the sides; in one boat the mast is actually hung on cantilevers from the fore end of the centerboard trunk, thus relieving the bottom below the step of much of the original strain. In Glencairn II. the keelson has been carried well forward, crossing over the floors, and the mast stepped on top of it, making a very strong support and avoiding all straining of bottom and deck.

The centerboards of most of the boats are of rectangular shape, and built up; two pieces of sheet steel riveted together at the edges, and spaced about 1in. apart through the middle by wood blocks, then the lower portion is filled with shot or melted lead until a weight of 200 to 250lbs. is obtained. The metal triple blocks, by which the boards are easily handled by one man, are works of art in their way, the invention of Mr. Poe. They are very small and light, but amply strong for the work, and fitted with roller bearings of steel rod. They were specially designed for this use, and have proved most successful. In one or two boats, plain steel plate boards, ½in. thick, have been used.

The deck fittings are very convenient and serviceable; there is hardly a coaming to the cockpit, but a strip about 1in. high runs from its fore end nearly out to the stern, forming a needed brace for the feet on the after deck. The ends of the cockpit each have a similar strip. This strip was some 3in. high in the first boats, but was cut down, as the height proved unnecessary. Just abaft the mast are two flaring pieces about 3in. high, meeting at an angle and throwing off all water that may come over the bows, though the users of the boats unite in saying that the decks are never wet in a sea. Abaft the stemhead in the center of the deck, is a strip

AVOCA. GLENCAIRN II.

From photo by Wm. Notman & Son, Montreal.

about 2ft. long, 1in. wide and 2in. high, with several belaying pins through it to be used as riding bitts, for stowing headsails and any similar use. On each side of the deck, abaft this strip, is an inch strip as a hold for the feet.

The entire bottom and topsides are polished until they look like a new stove with the Canada Paint Co.'s special graphite preparation. The surface thus obtained is very hard and smooth as far as the roughing up of the new wood goes, and whatever may be thought of the lubricating qualities of wet graphite, the paint seems to answer admirably. In putting it on the hands of the workmen are apt to bestow a liberal coat on the deck, and with its lubricating qualities added to the high crown, all deck work is made most dangerous.

The rudders are approximately rectangular and slightly balanced, and very small in area; that of Avoca, a very powerful craft, is just 1in. wider and deeper than the rudder of the 15 footer El Heirie. It was entirely too small in strong winds, and that of Glencairn II. was made larger. The boats have wood tillers about 3ft. long, each with a jointed piece or "dog's leg."

A very neat and shipshape detail of the deck fitting is the pinrail about the mast, to which all halyards lead.

The spars, made in the shop, are all hollow and of very light proportions, the masts being barely 4in. diameter in the partners and with but 3/16in. shells. Several have failed, but those which have been carefully handled have stood through the season; the limit of reduced size and weight has probably been reached, but it seems to be only a question of careful and skillful handling to hold them safely. The rigging is of a fine grade of steel wire rope imported from England; it is very well disposed about the masthead, with a single shroud from the top and runners led well aft. The chainplates are of steel, 1 by ¼in., and spliced into each is a piece of wire rope about 1ft. long. Between this leg and the shroud is the lanyard, of rope, no turnbuckles being used on the boats. The blocks were all designed and made by Mr. Poe, with a very complete outfit of special shackles and other fittings.

The weakest point of the whole outfit, and the one in which the New York boat is unquestionably superior, is the canvasing. Montreal boasts of no sailmaker up to this work, and though the local man—Sonne, who has made the sails for the fleet—has done the best possible, his work by no means compares with that of the New York and Boston makers—men who have long been experts at the art. Both Mr. Duggan in Montreal and Mr. Jarvis in Toronto, have cut their sails, of necessity. The sails of Glencairn and Bonshaw were made from the same piece of Union silk, imported by Mr. Jarvis. Both Glencairn and Avoca are now swinging crosscut mainsails—very fair sails, but not up to those of Momo.

During the season Mr. Duggan has had every possible opportunity to try Avoca, and he was fully satisfied with her performance as compared with the rest of the fleet, and also with Glencairn I., Sothis, Xania and other of his older boats. She proved to have an excess of stability for match sailing—more than was needed with only a moderately heavy crew. It was at Com. Ross' suggestion that the new Glencairn was planned, he wishing to leave nothing undone that was possible to insure success, and believing that Mr. Duggan could improve on Avoca as he had done last year in Glencairn I. on Sothis. In the new boat, with substantially the same sheer plan, the beam was reduced about 4in., the bilge was eased off, the whole section being thrown into a little rounder and fairer curve, and the fore and aft lines were changed, a fair sweep being maintained from end to end, but with the bilge carried out almost to the stem, making a perceptible hard spot there. The design, as a whole, in spite of all fullness, is fairer and more pleasing than Avoca, and it is undoubtedly superior; though Avoca still showed very well in comparison with the finer boat off the wind in light weather in the final extra races.

The only Montreal boat of outside design in the trial races was Millie, the work of an amateur member of the club, the Rev. Henry Kittson. Mr. Kittson last year designed the 15-footer Missie, and she was built quite heavily for general use; however, she made a very good showing in the races, taking the second prize in the Ross series. This year Mr. Kittson went up to the 20ft. class, and made a design for a racer, the boat being built at his home by a couple of boat builders from Toronto. She has a high freeboard, a short and full fore overhang, an oval stern on a rather long and fine counter, and her topsides are bright. The jib is high and narrow, with a club on the foot. One of the fleet, which has done little in the races, is the Toronto boat Lalagé, designed and built by Cuthbert. She is of shallow body, but carried down into a wooden fin with a lead bulb, through which a centerboard drops, the draft of keel being 3ft. The middle body and fore end are well formed, and, though not a racer, she should make a very good sailing boat, but her counter is carried out to an extravagant length and width, 5ft. across the sternpiece, and very flat. Viola, another new boat of the class, sailed only in the first races.

It looked at one time as though a number of outside boats would be sent to Montreal for the trial races, but only one appeared, Bonshaw, owned and sailed by Com. Æmilius Jarvis, Royal Canadian Y. C. of Toronto, who last year sailed Canada in her international races with Vencedor. Bonshaw is of the scow type, but quite unlike the New York boats. She was built by Hodgson, at Toronto, from a modification by Com. Jarvis of a design, as published, of Mr. Linton Hope's Flying Scud, so successful last spring in the Mediterranean. The design was lengthened considerably, with the same beam. The bottom is perfectly flat, the sides are nearly vertical, with a right angle between them and the bottom, but instead of being almost parallel, they have a strong sweep, the deck being pointed forward and oval aft. The planking is but ¼in. thick, but the frames, spaced about 12in., are all trusses, while the hull is liberally trussed fore and aft; a cat could hardly chase a rat through the maze of light struts and braces below. She has a large plate board and shoal cockpit, and is steered with a long tiller of steel tubing. The rig is peculiar, having the mast well aft and a very large fore triangle, by means of which she was enabled to set a big spinaker, very long on the foot, giving her an odd appearance down wind. The boom and gaff were hollow and the mast solid, she had lost her first hollow mast in a collision when first under way at Toronto, and the solid one was hastily prepared. Mr. Jarvis was at a serious disadvantage, as the boat was finished so late in the season that he had no opportunity whatever to try her alongside of other craft and to get her into shape or to become acquainted with her peculiarities. Even considering that inexpensive woods have been used in place of mahogany and Spanish cedar, the cost of these boats is astonishingly low, $500 complete for racing, as compared with $1,000 to $1,500 for the New York boats.

All of this year's fleet are rigged with the ordinary gaff mainsail, and most of them have a club on the foot of the jib. While Momo has the lofty and narrow rig now popular in Boston, the Montreal boats have a lower and broader rig.

As the result of the ten races of the Ross series only Glencairn, Avoca, Millie, Glenowen, of the club fleet, with Bonshaw, were present to start in the trial races. Neither Viola nor Lalagé were up to the fleet in speed; Islander, a very fair and taking boat in model and rigged with the other Duggan boats, had not shown such speed as might be expected from her; and though Rogue had done very well in the Ross series, there was no chance of her being chosen in the face of Avoca and Glencairn, and Messrs. Almon and Riddell were both needed on the race committee. The entries for the races were:

Bonshaw—Skipper, Æmilius Jarvis; crew, J. S. McMurray and Temple McMurrich.

Glencairn II.—Skipper, G. H. Duggan; crew, F. W. Shearwood and J. Paton.

Avoca—Skipper, H. K. Wickstead; crew, Arthur Hamilton and Harold Eadie.

Millie—Skipper, Vincent Pelletier; crew, Arthur H. Hersey and F. W. Gross.

Glenowen—Skipper, Shirley Davidson; crew, L. Davidson and J. Whyte.

The courses for the club races, as already stated, lie just off the club pier, the longer course being shown on the accompanying chart. In order to avoid the shoals, rocks and sand bars, the courses for the international races, which will be determined this week by the club and Mr. Crane, will be up the lake and somewhere off Pointe Claire, starting about four miles from the club house. The courses for the trial races were laid in these waters, the starting line being close to the point marked 2 on the chart. From this point a mile leg was laid off, the mark just west of Pointe Claire, the next leg, of one and one third miles, ran S.W., and then a mile leg closed the triangle. It was decided to sail a large number of very short races, not more than three and one-third miles, as eliminating flukes, poor starts, etc., and giving a better test of the actual merits of the boats. This triangle was sailed, with marks on port or starboard hand, according to the wind, and a windward or leeward course was laid out according to the direction of the wind at the time. The result of this experiment, rather a novel one, in that it gave Glencairn a chance to make a record of six firsts for six starts in one day, was generally satisfactory, all who took part in or witnessed the races were unanimous in the opinion that it was the best method yet tried of making a thorough test. Of course, the running off of so many short races would not be practicable with a fleet of fifteen to twenty boats, but with half a dozen there was no trouble in getting all together at once after the finish for a new start.

In the different races of the 15-footers in previous years there has been a time limit of five hours for the regular course, twelve nautical miles. At a meeting of the sailing committee of the club on the evening of the first trial race, Mr. Crane being present, a suggestion from him of a shorter time limit, in view of the greatly increased speed of the 20-footers over the 15-footers, was discussed, and it was unanimously decided to make the limit four instead of five hours, and in the same proportion for the shorter courses of the trial races.

Mr. C. H. Crane was on hand for the first of the races, about the course much of the time in one of the other boats. Mr. Stackpole and Mr. Shaw, who will be the third member of the crew of Momo, came up on Wednesday.

First Day.

Monday, Aug. 2.

FIRST TRIAL.

Monday morning brought hot weather and little wind, what there was being from S.W. The steam yacht Dama had been placed at the disposal of the club by her owner, W. Barclay Stephens, and it was arranged that she should call at the club house early in the morning for the committee, guests and luncheon. She was down the river, and the locks are closed on Sunday. She started early on Monday morning, but was delayed for some hours in the locks.

In her absence, the naphtha launch Gadabout came to the aid of the committee, and they ran up in her to start the first race. Meanwhile a number of ladies were left at the club house, while others waited at Pointe Claire for the yacht.

The first race was called at 11 A. M., with the preparatory at 11:10, and the start at 11:15. The wind was light S. W., veering to W., with smooth water. The triangular course was used, with all marks to port. Millie was first away, with Avoca second, Bonshaw, Glencairn and Glenowen. They could lay their course for the Pointe Claire mark, and they moved along slowly in a falling wind, Glencairn soon taking the lead. Both she and Bonshaw set balloon jibs for a short time. The Pointe Claire mark was timed:

Glencairn	11 31 03	Glenowen	11 34 30
Avoca	11 32 03	Bonshaw	11 36 01
Millie	11 33 11		

It was a reach on the other tack to the second mark, with the same light breeze, the times being:

Glencairn	11 53 25	Glenowen	11 54 40
Avoca	11 53 45	Bonshaw	11 57 47
Millie	.. .. ..		

Millie, in third place, was hidden by another yacht and could not be timed at the buoy. They jibed and set spinakers to port, running in with the current, the final times being:

	Finish.	Elapsed.	Points.
Glencairn	12 11 34	0 56 34	8
Avoca	12 12 17	0 57 17	7
Glenowen	12 13 20	0 58 20	6
Millie	12 14 28	0 59 28	5
Bonshaw	12 15 20	1 00 20	4

SECOND TRIAL

The second race was at once called over the windward-leeward course, with marks to starboard, the wind being still light from S.W. The start was given at 12:35:45, Glenowen going over first, with Bonshaw, Glencairn, Millie and Avoca in order. They drifted out slowly to the windward mark, Glenowen always in the lead, and were timed:

Glenowen	1 11 00	Bonshaw	1 16 12
Avoca	1 14 04	Millie	1 19 04
Glencairn	1 14 36		

They ran home very slowly, and Glenowen was nearly 6m. over the time limit of 50m. for the two-mile course. The race was not counted, but the times were taken:

	Finish.	Elapsed.
Glenowen	1 31 35	0 55 50
Bonshaw	1 35 38	0 59 53
Avoca	1 36 09	1 00 24
Glencairn	1 36 12	1 00 27
Millie	1 41 02	1 04 17

While the races were going on the ladies were waiting impatiently at the club house, where the club steward was ready with a bountiful luncheon packed up for the committee boat. About noon the Dama came in view clear of Dorval Island, but ran up to the course and anchored instead of coming in to the club house. She was finally notified, and returned for the ladies and the luncheon, reaching the line about 2 o'clock. She was at once boarded by the famished crews, who had been broiling since early morning with nothing to eat or drink. After luncheon, at 4:45, an attempt was made to start another race, but there was no wind.

Second Day.

Tuesday, Aug. 3.

THIRD TRIAL.

Tuesday morning found the wind still about S.W., with the sky overcast and cooler weather. The Dama was off the club house in good season and started for the course with Avoca, Millie, Glencairn, Glenowen and Bonshaw in tow. With a moderate breeze from S.S.W. at the line, it was decided to sail the triangle with all marks to starboard, the first leg being thus dead to windward. The first whistle was given at 10:38, the second at 10:39 and the start at 10:44.

The five boats were grouped about the buoy and four went over promptly, Glencairn to windward of Glenowen, then Avoca and Millie. Bonshaw was about 30s. late at the line. Avoca footed off through the lee of the fleet, but Glencairn from the start worked out to windward and was soon ahead of Glenowen, the second boat. Bonshaw footed very fast, but at all times she sagged to leeward. The weather mark was timed:

Glencairn	11 02 20	Millie	11 05 00
Glenowen	11 03 03	Bonshaw	11 05 60
Avoca	11 01 14		

On this leg the wind was moderate and there was a little sea.

The second leg was a free reach, with booms to starboard, to the Point Claire buoy. They set balloon jibs and ran off very fast, Bonshaw passing Millie. The Point Claire buoy was turned:

Glencairn	11 10 50	Bonshaw	11 14 10
Glenowen	11 12 02	Millie	11 15 02
Avoca	11 13 50		

The last reach was quickly made, the only incident being the finish of Avoca and Bonshaw, the latter almost catching Avoca at the mark, but failing to secure her overlap, Mr. Wicksteed luffing out and cutting off Bonshaw, and then bearing away sharp to get by the buoy first. The final times were:

	Finish.	Elapsed.	Points.
Glencairn	11 17 51	0 33 51	8
Glenowen	11 19 15	0 35 15	7
Avoca	11 20 36	0 36 36	6
Bonshaw	11 20 42	0 36 42	5
Millie	11 21 49	0 37 49	4

FOURTH TRIAL

Very few minutes' grace were given before the crews were ordered to repeat the same course, and the start was given at 11:30. The four home boats were at the line too soon and reaching along, when the leeward one luffed, and put herself as well as the others over before the whistle. Bonshaw crossed properly and was well on her way, but when the other four were recalled she came back as well, and a new start was made at 11:40. A good start was made this time, the order being Glenowen, Bonshaw, Millie, Glencairn, Avoca, all on starboard tack, with Millie to windward. Glencairn soon tacked to clear her wind, and Avoca followed. With a lighter breeze than in the first race, Glencairn again gained on the fleet, the first mark being timed:

Glencairn	11 59 21	Bonshaw	12 03 52
Avoca	12 00 49	Glenowen	12 04 13
Millie	12 03 40		

They reached across to the second mark in a very light breeze, and were timed:

Glencairn	12 09 50	Millie	12 16 10
Avoca	12 11 48	Glenowen	12 16 40
Bonshaw	12 15 03		

The wind came offshore in by Pointe Claire, and Glencairn tried her spinaker to starboard, but soon took it in. Bonshaw set hers and it fouled a jibhank, so that she could not lower it. She ran by the lee, finally luffing for the line with spinaker set, and barely saved third place from Millie. When she finally lowered jib and spinaker together the latter was torn. The final times were:

	Finish.	Elapsed.	Points.
Glencairn	12 19 14	0 39 14	8
Avoca	12 22 20	0 42 20	7
Bonshaw	12 25 20	0 45 20	6
Millie	12 26 35	0 46 35	5
Glenowen	12 27 40	0 47 40	4

FIFTH TRIAL

The buoy for the windward course had meanwhile been set, and the boats were at once ordered to prepare for another race. Bonshaw lost some time in clearing her headsails and requested a delay until she could mend her spinaker, but her request was not heard by the committee, and the start was given at 12:40. It was hardly more than a drift over the line, the order being Glencairn, Millie, Avoca, Glenowen and Bonshaw. The latter was not ready and far to leeward, with little wind to bring her up against the current; she crossed the line, but soon withdrew, and set to work to mend her spinaker for the next race.

Again Glencairn went to the front, the times at the weather mark being:

Glencairn	1 11 30	Millie	1 12 30
Glenowen	1 12 00	Avoca	1 12 10

Millie, in rounding, fouled the mark boat and set her adrift.

The run in was quickly made in the same order, the final times being:

	Finish.	Elapsed.	Points.
Glencairn	1 22 22	0 42 22	8
Glenowen	1 23 27	0 43 27	7
Millie	1 23 39	0 43 39	..
Avoca	1 24 05	0 44 05	6

SIXTH TRIAL.

A wait was now made for luncheon, which was passed out from the committee steamer to the boats as they came alongside; at 2:00:00 the fleet was again sent away over the windward course. The wind was now quite fresh, W.S.W., and Avoca, with a light crew, tied in one reef before the start. They made a good start, Avoca, though first over, being to leeward. Glencairn, second over the line, was close to the weather buoy, with Bonshaw, Millie and Glenowen in a string astern of her. They all crossed on starboard tack and held it for a time. Bonshaw footed fast through Glencairn's lee, standing up very straight. Glencairn held the lead with Bonshaw a good second, but the leeward propensities of the latter gradually told on her and she dropped astern. Before a third of the leg had been covered Glenowen luffed up, lowered jib and finally withdrew, her hollow mast having opened a little below the gaff. The weather mark was timed:

Glencairn	2 16 40	Avoca	2 20 10
Bonshaw	2 17 52	Millie	2 21 49

They ran home under spinakers and were timed:

	Finish.	Elapsed.	Points.
Glencairn	2 25 30	0 25 30	8
Bonshaw	2 27 01	0 27 01	7
Avoca	2 30 00	0 30 00	6
Millie	2 31 14	0 31 14	5

SEVENTH TRIAL.

Another race was at once ordered, and at 2:46 they were sent away over the triangle, this time with all marks to port, to the Pointe Claire mark first. Millie decided to withdraw from the trials; but Glenowen was ready to start again. They went over well together on port tack, the order being: Glenowen, Glencairn, Avoca and Bonshaw, the latter to windward. The wind was W.S.W. at the line, but drawing off the Pointe Claire shore, making a beat to the first mark.

Bonshaw made a good start, and followed it up by running past Avoca to windward and taking first place. It was the old story, however; she fetched to leeward and lost more than she gained in the footing, while Glencairn, starting in a leeward berth, worked out from the fleet and was ahead before she was half way to the buoy. They all had to beat up to the mark from under the Pointe Claire shore, and they were timed:

Glencairn	2 59 21	Bonshaw	2 59 41
Avoca	2 59 36	Glenowen	3 01 41

Avoca fouled the mooring line of the buoy with her board, but was not disqualified, as the line was very long.

They reached across to the record mark, and were timed:

Glencairn	3 09 58	Avoca	3 10 51
Bonshaw	3 10 38	Glenowen	3 14 52

They ran for the finish with spinakers to port, and were timed:

	Finish.	Elapsed.	Points.
Glencairn	3 21 10	0 35 10	8
Bonshaw	3 25 05	0 37 05	7
Avoca	3 23 09	0 37 09	6
Glenowen	3 27 26	0 41 26	5

EIGHTH TRIAL.

Another race over the same course was at once called and started at 3:35:00. The sky had clouded over but there was a little less wind. The order over the line was Glenowen, to windward, Glencairn, Avoca and Bonshaw, the latter about 30s. after the whistle.

This time Glenowen held second place to Glencairn in the windward work, the Pointe Claire work being timed:

Glencairn	3 56 20	Avoca	3 59 17
Glenowen	3 58 40	Bonshaw	4 01 00

They reached across and were timed:

Glencairn	4 15 58	Avoca	4 19 37
Glenowen	4 18 50	Bonshaw	4 21 00

The run in was made as before, Avoca ran Glenowen very hard, and by a little quick handling cut the leading boat out at the line and took second place. The times were:

	Finish.	Elapsed.	Points.
Glencairn	4 32 20	0 57 20	8
Avoca	4 36 13	1 01 13	7
Glenowen	4 36 14	1 01 14	6
Bonshaw	4 37 46	1 02 46	5

An interesting incident of the day was the visit of Com. Ross, owner of Glencairn I. and Glencairn II. After spending part of the summer in England and Scotland, having a small schooner under charter to follow the races and to attend the Jubilee review at Spithead, Com. Ross reached New York on the Lucania and arrived at Montreal on Monday. On Tuesday he came out to Pointe Claire and one of the launches carried him out to the committee steamer just in time to see Glencairn winning one of her afternoon races.

The summing up of the seven races, omitting the second trial, which was not made within the limit, was as follows:

	Points.		Points.
Glencairn	56	Bonshaw	34
Avoca	45	Millie	19
Glenowen	35		

Glencairn had won every race of the seven, taking the first prize, while Avoca took second. There was no question whatever of the superiority of these two over all the others of the class, but in view of the long experience of all of Glencairn's crew in racing, as compared with the crew of Avoca, there was still a question as to the relative merits of boat and handling in each case. In order to test still further the boats, a suggestion was made to the race committee and promptly acted upon, to the effect that Mr. Jarvis should be invited to sail one of the two boats against Mr. Duggan in the other.

These gentlemen, nearly of an age and companions from boyhood, have been friends and rivals in yachting since they sailed against each other as small boys, Mr. Duggan representing Toronto and Mr Jarvis, Hamilton. For a dozen years or more Mr. Duggan has resided at Montreal, while for about half that time Mr. Jarvis has been at Toronto, each being recognized as the leading yachtsman of the respective localities. With Mr. Allan Ames, of Oswego, owner of Yama, the two divide the honor of being the best yacht sailors, Corinthian or professional, from the Gulf to Niagara, and it is quite safe to say, to the head of the Great Lakes. With two yachts so evenly matched in model as Avoca and Glencairn, of identical handiwork in hull, sails and fittings, handled by two such cracks, only good weather was necessary to make perfect racing. It was finally arranged between the two principals that Mr. Duggan should take Avoca and Mr. Jarvis Glencairn, and that a series of short races should be sailed on Thursday. Mr Duggan left his crew, Messrs Shearwood and Paton, on Glencairn, and selected for Avoca Messrs. Arthur Hamilton, Lyle Davidson and Lawrence Morris. This made four in place of three, but in order to get exactly the same weight of crew in both boats, young Mr. Morris was taken, making him the envy of every boy for miles around.

All day Wednesday was occupied by Messrs. Duggan and Jarvis in the effort to get Bonshaw hoisted aboard the Toronto steamer, an unsuccessful job; after many attempts she was finally slung under the sheers at Lachine and left for the steamer on Thursday.

Third Day.

Thursday, Aug. 5.

FIRST RACE.

Both Wednesday and Thursday were clear and pleasant, with a light east wind in the morning. Mr. Eadie's steam yacht Chipmunk was off the club house at 10 A. M., and towed the boats up to the starting line, where the first signal was given at 10:37, with the start at 10:43, over the triangle, with all marks to port. With the light east wind, this made a reach on each of the first two legs and a beat home.

Just before the whistle sounded, Glencairn came along the line from the buoy at the lee end to the steamer at the weather end and, being a little ahead of time, luffed just at the line, then filled away and crossed with the gun, being within a foot of the Chipmunk. Just before, as Glencairn luffed, Avoca came around Chipmunk's stern and between Glencairn and Chipmunk, finally striking Glencairn and the yawl boat lying beside the yacht. Glencairn went clear and away, but as Avoca struck the steam yacht's side amidships, Mr. Duggan seized her rail to fend off. As he did so, he called out, "I claim room at the mark," and at the same time he ran Avoca alongside for half the length of the steam yacht, ending with a strong shove as he reached the bow, sending Avoca off in chase of Glencairn. No protests were made, though the incident resulted in a lively but amicable discussion after the race. The committee was not called upon to decide whether Avoca had an overlap, and the general opinion was that she gained as much by being shoved along so far as she lost in other ways.

After the general laughter had subsided all hands settled down to work, sheets were trimmed for an easy reach to the Pointe Claire mark, and they rounded:

Glencairn.....10 51 47 Avoca.....10 52 25

After the jibe balloon jibs were set, and finally Avoca set her spinaker, followed by Glencairn. The second mark was timed:

Glencairn.....11 07 29 Avoca.....11 07 54

They luffed around the mark and started off with booms to port for the beat home, Glencairn, with her lead of 25s, in the weather berth. The wind was not only light, but very fluky, and the two were differently served at times. Glencairn practically held her lead and luffed over the line with Avoca 21s. astern. The times were:

	Finish.	Elapsed.
Glencairn	11 32 28	0 49 38
Avoca	11 32 59	0 49 59

SECOND RACE.

Another race over the same course was immediately called, and started at 11:41. After some smart work at the line Glencairn went over 7s. after the whistle, and Avoca 18s. later. They reached across as in the previous race, and were timed at the Pointe Claire mark:

Glencairn.....11 54 30 Avoca.....11 55 28

After the jibe balloon jibs were set, but no spinakers this time. The second mark was timed:

Glencairn.....12 06 42 Avoca.....12 07 05

They stood by the port tack for a short distance when Avoca tacked, only to find Glencairn about on her weather. As they worked on, however, after two or three short tacks, Avoca, though astern, got to windward of Glencairn and gradually drew up and ran by her weather into first place, the finish being timed:

	Finish	Elapsed.
Avoca	12 27 46	0 46 46
Glencairn	12 29 20	0 48 20

Both boats came alongside the steamer for luncheon, the wind meanwhile dropping almost flat.

THIRD RACE.

After an hour of calm a light breeze came out of the southwest, and at 2:29 the boats were started, again over the triangle, marks to port. The same lively work at the line brought Avoca over 8s. after the whistle, with Glencairn 5s. later, but in the weather berth. Almost on the line they began a spirited luffing match, reaching up to the center of the triangle before bearing away for the Pointe Claire Buoy. Avoca came out a little the better at this game, and when they bore away, with spinakers out to port, she was clear ahead. She broke out her spinaker, but after hanging in stops for a time Glencairn's was taken in. They jibed about the Pointe Claire mark:

Avoca.....2 44 47 Glencairn.....2 45 04

They reached across for the second mark with booms to port, and were timed:

Avoca.....3 02 47 Glencairn.....3 03 49

Spinakers were set to port for the run in, and the finish was timed:

	Finish	Elapsed.
Avoca	3 21 19	0 52 19
Glencairn	3 22 19	0 53 19

FOURTH RACE

The signal was given at once for the fourth race, and the start was made at 3:31, the course this time being to the second mark, one mile to windward and return, marks to port. Both came reaching along the line before the gun, Glencairn on Avoca's weather quarter, which she touched with her bow; they made a good start on starboard tack, Glencairn to windward. The breeze was a little stronger in the morning, and truer as well. Glencairn weathered out from the start, as they stood to the southward, and at the turn she had a lead of about 1m. 30s. Unfortunately some outside yachts broke the view of the buoy, but Glencairn turned at about 3:50. Her spinaker quickly bloomed out to port, while Avoca set hers to starboard. The finish was timed:

	Finish	Elapsed.
Glencairn	4 05 19	0 34 19
Avoca	4 07 03	0 36 03

Little time was lost in sending them off again for the same course, the whistle sounding at 4:17. Much the same maneuvering as in the previous race brought Glencairn over again in the weather berth, but before the gun she fouled Avoca's weather quarter as both swung off to keep clear of the line.

This time the pair stood to the north and Glencairn, under much the same conditions, did decidedly better, the windward work being timed:

Glencairn.....4 42 07 Avoca.....4 43 24

In the beat of a mile, with no advantage at the start beyond the weather berth, she had made 4m. 27s on Avoca. Both set spinakers to port, but jibed them later. The finish was timed:

	Finish.	Elapsed.
Glencairn	5 01 45	0 44 45
Avoca	5 05 45	0 48 45

As the wind was now falling it was decided to finish the racing. The results of the day were satisfactory in showing that under as nearly equal conditions of crew and handling Glencairn was sufficiently faster to fully justify her selection, and also that she in the main realized Mr. Duggan's expectations of the results of the changes from Avoca. At the same time the latter was quite as fast down wind and equal to Glencairn in reaching, both of which were unexpected.

The selection of Glencairn followed these trials as a matter of course, and she was hauled inside the boom that night at the club house, being stripped of her spars next morning, and hauled into the shed for final rubbing down and polishing. Momo and Al Anka did not arrive from Ogdensburgh until Friday afternoon.

L. Y. R. A. Races.

HAMILTON—LAKE ONTARIO.

Thursday, July 29.

COURSE, to leeward 2½ miles and return; weather showery; wind moderate and shifting; no time allowance:

42FT. CLASS—20 MILES.

	Start	Finish.
Aggie	10 40 00	1 26 30
Zelma	10 40 00	1 26 45

37FT. CLASS—20 MILES

Dinah	10 50 00	1 45 40
Vivia	10 50 00	1 47 38
Vedette	10 50 00	Did not finish.

32FT. CLASS—15 MILES.

Eva	11 00 00	1 22 40
Nadia	11 00 00	1 28 30
Dorothy	11 00 00	1 33 08
Nancy	11 00 00	1 58 15
Alert	11 00 00	2 01 00

Winners: 42ft. class, Aggie first; 37ft. class, Dinah first, Vivia second; 32ft. class, Eva first, Nadia second, Dorothy third.

27FT. CLASS—15 MILES.

	Start.	Finish.
Sylvia	11 10 00	1 47 50
Hiawatha	11 10 00	3 12 00
Mirage	11 10 00	4 03 00
Kestrel		Did not finish.

These last three crossed the starting line leaving buoy to port instead of starboard. Hiawatha and Mirage sailed an extra round to correct their mistake.

25FT. CLASS—10 MILES.

	Start.	Finish.
Rosemaryn	11 20 00	12 59 30
Ko Ko	11 20 00	1 00 00
Pedro	11 20 00	1 03 30
Scalawag	11 20 00	1 04 40
Fanetta		Did not finish.

SPECIAL SCHOONER RACE—TRIANGULAR COURSE—30 MILES

	Start.	Turn.	Finish.
Oriole	12 00 00	2 58 25	6 17 35
Priscilla	12 00 00	Did not finish.	

Winners: 27ft class, Sylvia first, Hiawatha second, Mirage third; 22ft. class, Rosemaryn first, Ko Ko second, Pedro third. Schooner Oriole wins Jubilee gold medal offered by Royal Canadian Y. C.

W. Q. Phillips, Association timekeeper.

TORONTO—LAKE ONTARIO.

Monday, Aug. 2.

Course, triangular, 15 miles; weather, fine; light winds; no time allowance; postponed from July 27:

42FT. CLASS—15 MILES.

	Start.	Finish.
Zelma	11 00 00	5 05 05
Aggie	11 00 00	5 31 20

37FT CLASS—15 MILES

Dinah	11 10 00	5 23 30
Vivia	11 10 00	5 43 20
Vedette		Did not finish.

32FT. CLASS—15 MILES.

Nadia	11 20 00	5 52 20

27FT. CLASS—15 MILES.

Kestrel	11 30 00	5 38 30
Sylvia	11 30 00	5 31 28
Hiawatha	11 30 00	5 41 18
Wa Wa	11 30 00	5 56 00

22FT. CLASS—10 MILES.

Enid	11 40 00	2 34 50
Ko Ko	11 40 00	2 35 40
Pedro	11 40 00	2 40 05
Frou Frou	11 40 00	2 54 15
Kitti Lou	11 40 00	2 56 00

Prize winners: 42ft. class, Felma; 37ft. class, Dinah first, Vivia second; 32ft. class, Nadia (sail over); 27ft class, Kestrel first, Sylvia second, Hiawatha third; 22ft. class, Enid first, Ko Ko second, Pedro third, Frou Frou fourth

W. Q. Phillips, Association timekeeper.

The weather which followed the circuit was by no means good. The Toronto regatta had to be postponed from July 27, as it was blowing hard from the east, and many regular steamers would not leave the harbor. As Priscilla could not return later the special schooner race with Oriole was sailed at Hamilton. At Niagara there was a fresh breeze, making good racing, but it carried away the lake buoy placed out the night before, and the race could not be finished. There is no club there and the facilities for laying an open lake course were altogether inadequate.

The new rule doing away with time allowance in class racing to yachts within 1 per cent. of the upper limit of their class has abolished it almost entirely. In the 22ft. class there is no time allowance in any case. W. Q. PHILLIPS.

The 30-Footers at Newport.

ON Aug. 2 a race was sailed over a 15-mile triangular course in a light S.W. wind, the times being:

	Elapsed.
Hera, R. N. Ellis	2 45 10
Puck, E D. Morgan	2 45 50
Maia, Mr. Jennings	2 48 58
Dorothy II., H P. Whitney	2 52 02
Esperanza, A. S. Van Winkle	Did not finish.
Vaquero III., H B. Duryea,	Did not finish.
Wa Wa, J. A. Stillman	Did not finish.

Two of the 15-footers also sailed a race, as follows:

	Elapsed.
Ilead, R. Gerry	2 05 25
Trio, F C Havemeyer	2 14 50

Another race was sailed next day over the Dyer's Island course, a sweepstakes, in a fresh S.W. wind, the times being:

	Elapsed.
Vaquero III., H. B. Duryea	2 07 25
Dorothy II., H. P Whitney	2 11 01
Wa Wa J. A. Stillman	2 11 40
Hera, R. N. Ellis	2 12 43
Esperanza, A. S. Van Winkle	2 14 02
Puck, E. D. Morgan	2 16 57
Maia, Mr. Jennings	Did not finish.

Maia was dismasted.

On Aug. 4 the boats started in a strong S.W. wind and a sea for a beat out to Point Judith and back, for a cup offered by Mr. Stillman, owner of Wa Wa. The times were:

	Elapsed.
Vaquero III., H B Duryea	3 55 13
Dorothy II, H. P. Whitney	3 58 59
Esperanza, A. S. Van Winkle	4 01 27
Hera, R. N. Ellis	4 05 58

How to See the Races.

THE third series of races for the Seawanhaka International Cup will be sailed on Lake St. Louis, near Montreal, beginning on Saturday, Aug. 14, and continuing each week day until one of the competitors shall have won three races. The contest promises to be close and exciting, and well worth the trip to the St. Lawrence. The club station is at Dorval, twelve miles from Montreal, a small village with no hotel; but visitors can spend the night in Montreal and go out by train to Lachine, eight miles, where the steamer Duchess of York will start every morning to follow the races. The steamer is chartered by the Royal St. Lawrence Y. C., and tickets may be obtained by visitors from the States, the price being $1.50 for Saturday, $1.25 each for the other days, or $4 for the series.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 13.—ROCHESTER, N. Y.—Tournament of the Rochester Rod and Gun Club Targets.

Aug 14.—ROCHESTER, N Y.—Elliott-Glover match for the Kansas City *Star* cup. Also all-day shoot at live birds, under the management of Sim Glover.

Aug. 17.—WINDSOR LOCKS, Conn.—Fourth tournament of the Connecticut Trap-Shooters' League, under the auspices of the Windsor Locks Gun Club.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 24-25—BUFFALO, N. Y.—Tournament of the Bison Gun Club. Targets C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club. $200 added money.

Aug. 26-27.—WATERLOO, Ont.—Tournament of the Ontario Rod and Gun Club League. W J. Marshall, Sec'y-Treas.

Aug. 26-27.—MANY, La.—Tournament of the Many and Robeline Gun Clubs

Aug. 28.—EAU CLAIRE, Wis.—Elliott-Budd match for the Du Pont trophy.

Aug. 31-Sept. 2.—SUTTON, Neb.—Tournament of the Sutton Gun Club. $150 added money, as well as merchandise prizes. E. E. Hairgrove, Sec'y.

Sept. 1.—HAVERHILL, Mass.—Third shoot of the Massachusetts State Shooting Association, under the auspices of the Haverhill Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 6—MARION, N. J—Annual Labor Day tournament of the Endeavor Gun Club. A. R Strader, Sec'y.

Sept 7-10.—DETROIT, Mich.—Jack Parker's annual tournament.

Sept. 8-9.—TERRE HAUTE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Terre Haute Gun Club.

Sept. 11-12.—————, La.—Tournament of the Many and Robeline Gun Clubs.

Sept 14-16—KANSAS CITY, Mo—Tournament of the Schmelzer Arms Co. Merchandise and amateurs.

Sept. 14-16—DES MOINES, Ia.—Tournament of the Capital Gun Club. S. C. Quimby, Sec'y.

Sept. 15-16.—Portsmouth, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.
Sept. 15-16.—Parkersburg, W. Va.—Tournament of the Mountain State Gun Club. State and open events. Chas. E Morrison, Sec'y.
Sept. 21-23.—Mitchell, S. D.—Tournament of the W. J. Healey Hardware Co.
Sept. 28-29.—Indianapolis, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.
Sept. 28-Oct. 1.—Passaic, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. W. H. Huck, Sec'y, Rutherford, N. J.
Oct. 6-8.—Newburgh, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.
Oct. 13-14.—Greensburg, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.
Oct. 22-23.—Huntington, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Erie Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Phil Lumbreyer, late manager of the Carteret Club's grounds at Bayonne, N. J., has leased those grounds for his own use, since the removal of the Carteret Club to Garden City, L. I. Mr. Lumbreyer has started in to give shooters in the vicinity of New York city some grounds where they can go in less than an hour, and shoot matches or practice with all the comfort and quiet that attaches to a proprietary club. The conveniences for shooters at the old Carteret grounds are not to be sneezed at, as they are strictly first class, and that means a great deal to shooters. Target shooting will also be a specialty at "Phil's grounds," as these grounds will shortly be very generally called. The simplest way to reach them from this city is by a Bayonne trolley from the Pennsylvania station, Jersey City, getting off at Nineteenth street, Bayonne, and walking two blocks down toward Newark Bay. The trip can also be easily made by Jersey Central trains to West Eighth street, where hacks can be found to drive one to the grounds for a small sum. Lumbrever will always have plenty of live birds on hand, and a wire or letter to him, addressed Bergen Point, N. J., will ensure everything being ready when needed. Attached to the grounds is a school of instruction for beginners, and others who want to correct certain faults and improve their shooting. The instructor is none other than Jack Brewer, and when it comes to handling a gun easily, gracefully and with effect, Brewer should surely be able to give very valuable pointers.

We received the programme for the fifth tournament of the Pennsylvania and Ohio Border Gun League too late for notice in our issue of Aug. 7. Any mention we make of it now would be useless so far as advertisement of the shoot is concerned; the shoot takes place on Thursday of this week, Aug. 12, at Warren, O., under the auspices of the local gun club. The programme is, however, rather an unusual one, and it might interest the managers of other leagues to know just what the P. & O. Border Gun Club League does in this line. A 10- and two 15-target events start the programme, entrance fees being at the usual rate of 10 cents per target. No. 4 is a 25-target handicap race for a model '97 Winchester repeating shotgun. No. 5 is a 15-target event. No. 6 is the League team contest, 25 targets per man. Nos. 7 and 8 are handicaps, 40 targets per man, the prizes being respectively a Parker gun and an L. C. Smith gun. In No. 4 there is an optional sweep of $2, and in Nos. 7 and 8 there is an optional sweep on each 20 targets of $2. The programme is faulty in that it omits any mention what the entrance is for either of three handicap events, neither does it state how the moneys in the ordinary 10- and 15-target events are to be divided. It does, however, make the following statement: "The club reserves the right to place a handicap in the sweepstake events."

Trap-shooting is not such a very new sport in this country after all, yet it is a fact that the reports of events at the traps which appear in 99 out of every 100 daily papers are peculiarly weak, and that the salient points of the match or sweepstake are generally either missed entirely or only slurred over. Trap-shooting is now about as popular a sport as any, save horse racing and baseball, and has as many devotees as any other, save the two mentioned above. Yet any sort of a reporter is usually considered enough for a shoot, unless it is something like the Grand American Handicap or a society match at one of the swell clubs. And why is it that in reports of yacht races a boat can be said to luff, gybe, set her spinaker to starboard, etc., without the words being quoted? And in golf reports, the writer uses the word iron, cleek, putting, etc., without the use of quotation marks? But take a report of a shoot and a whole lot of quotation marks are thrown in haphazard, thus: "drivers" "miss-and-outs," "quarterers," etc. These words are just as well understood by those who read the reports as the term "out-curve" is in a baseball report, yet you never see that word quoted.

Capt. Money made what we believe to be a new record on Wednesday of last week, Aug. 4. On that date he went to the Riverton Gun Club, having to defend his title to two trophies. Each of these matches was a 100-target race; he also shot for the club trophy, another 100-target race. In addition to this total of 300 targets, he shot at another 265 during the day in sweeps and in practice, making a total of 565 targets for the day. The three trophies he shot for were three guns, and he holds the title to each one of them, winning both the matches and the club shoot. Ordinarily 565 targets would satisfy anybody for a week or so; but Capt. Money was on hand at Boiling Springs on Saturday afternoon, Aug. 7, and did rather more than his share in breaking targets. As a result of the 565 targets in one day, he said that his shoulder was "a little sore"; but it didn't seem to bother him at all on Saturday.

Mr. E. A. Jackson, secretary of the Bergen County Gun Club, of Hackensack, N. J., asks us to make the following announcement: "The regular monthly handicap contest for the E. C. cup of the Bergen County Gun Club will take place on the grounds of that club at Hackensack, N. J., on Saturday, Aug. 21. The conditions are 50 targets, unknown angles. Handicap to consist of extra birds to shoot at, 15 being the maximum. This cup is open to members and friends of the above club, and must be shot for until won three times by one person. Entrance, price of birds. At the conclusion of the cup shoot there will be a team race between the Endeavor Gun Club and the Bergen County Gun Club, ten men on each side, 25 targets per man."

The Ontario Rod and Gun Club League's shoot on Aug. 26-27, at Waterloo, Ont., may have the effect of keeping a few Canadians from attending the Interstate shoot at Montpelier, and for that reason the clashing of dates, the Montpelier shoot being set for Aug. 25-26, is to be deprecated. The Montpelier dates have been in the fixture columns of all the sportsmen's papers for some months, and a little care in selection of dates by the Ontario R. and G. C. L. would have avoided any clashing. The Montpelier shoot is, however, all right anyway, and, according to our way of looking at things, will be another success for the Interstate Association to brag about in its annual review. The club is a popular one, and there is plenty of trap-shooting enthusiasm in Vermont and neighboring States.

We have received the following note for publication: "The Chatham, N. J., Fish and Game Protective Association will hold a target shoot on their grounds on Saturday, Aug. 14. The principal event will be a handicap sweep for a new Winchester repeating shotgun, 1897 model. This prize is offered by the club, and will be contested for without any charge for entrance other than the regular charge for targets, namely, 2 cents each. A consolation prize will be offered for the second highest score. A good deal of interest has been shown of late in target shooting at this club, the fine grounds being largely answerable for this. A large contingent of the local trap-shooters is expected to participate in this event."

In our report of the Gilbert-Heikes match for the target championship of the United States, a grave error was made by the compositor who set up the type in the unknown angles. The totals were carried out correctly, and the targets lost by Gilbert, his 39th and 41st, were also shown correctly in the score. The mistake was in Heikes's score, where his total shows 47, but the lost targets are made but two in number, and are also placed in the wrong position. Heikes lost his 7th, 17th and 20th targets, just as stated in our report, which said: "Heikes commenced with a loss of 3 out of his first 20, finishing strongly with 30 straight." In all other respects the detailed scores are perfectly accurate.

Mr. Charles E. Morrison, secretary-treasurer of the Mountain State Gun Club, of Parkersburg, W. Va., sends us the following notice: "On the evening of Sept. 14 a meeting of the representatives of the several gun clubs of West Virginia will be held here for the organization of a State Association, election of officers, adoption of constitution and by-laws, etc., etc. On Sept. 15 and 16 following said meeting, the Mountain State Gun Club will give a bluerock target tournament, with both State and open events. Our club has recently put in a magautrap, and also has a full set of expert traps, so will be able to please all who may attend our shoot."

Charlie Young, of Springfield, O., has made a record for the season of 1897 that it will be hard for anyone to take from him. On July 30, at the grounds of the Springfield Gun Club, he made the great run of 151 straight, unknown angles. Altogether he shot at 175 targets, losing his 8th, 13th, 21st and 173d, a remarkable piece of shooting. Our correspondent does not state whether the shooting was practice work or not, but we conclude that it was. About two years ago (it was on Thursday, Sept. 26, 1895,) Captain Bartlett made a precisely similar run of 151 straight, on the third day of the Rochester, N. Y. Rod and Gun Club's tournament. Capt. Bartlett's run, however, was "unfinished," being made on the last 151 targets on the programme. The events were scheduled as follows: 20, 20, 20, 50, 20, 25, 20, 20. Bartlett's scores were: 19, 17, 19, 50, 20, 25, 20, 20. He lost the fourth target in event No. 3. Bartlett did not continue his run, as he had to shoot Jack Parker a 100 target race for the Schmelzer trophy before it got too dark to see. The Schmelzer trophy crops up again in connection with this run of Young's, as he is at present "one-third reversed order champion," Rolla Heikes and Ferd Van Dyke respectively owning the other two-thirds interest in the Schmelzer trophy. On the same day that Bartlett made his long run, E. C. Meyers, of the Rochester Club, made a run of 129 straight. Young's load was 3drs. E. C., 1¼oz. 7½ chilled shot, U. M. C. factory-loaded ammunition, Smokeless shell. We understand that he was using a gun of his own make.

Tuesday next, Aug. 17, will be a gala day at the grounds of the Brooklyn (N. Y.) Gun Club. The main event, which will be started at 2 P. M., prompt, will be a 30-target handicap for a gold watch, $2.50 entrance. John Wright will be on hand to boss things, while Eddie Morehouse will turn the crank that churns out targets from the club's magautrap. The grounds are easily reached from New York and vicinity, being located at the terminus of the King's County Elevated, in Brooklyn, Liberty avenue and Enfield street, 30 minutes run from the Brooklyn end of the bridge, or 35 minutes from the ferry terminus at Fulton street, Brooklyn.

Owing to the clashing of dates between the Elliott-Glover and the Elliott-Budd matches, Charlie Budd has named Aug. 28, 2 P. M., and the grounds of the Eau Claire, Wis., Gun Club, as the date, time and place for the match, instead of Aug 14, as previously stated in Budd's acceptance of Elliott's challenge. The Elliott-Glover match will come off at Rochester, N. Y., on Saturday next, Aug. 14, at 2 P. M. There will be an all-day live bird shoot as well; and on the day previous, Aug. 13, a tournament at targets will be held under the auspices of the Rochester, N. Y., Rod and Gun Club.

The Lewiston, Me., interstate shoot was another success to be added to the list of those made by the Interstate Association this season. An average of over thirty-one entries on the first day, and of over twenty five on the second day, are figures that must be counted as extremely flattering. It should be remembered that there was no added money to attract shooters; it was simply a shoot under the auspices of the Androscoggin Gun Club, but managed and run by the Interstate Association.

Dr. Gagnon seems to have struck somewhat of a snag in the matches he has made recently. In his match with D. J. Bradley at Elkwood Park, on Monday, Aug. 2, he met defeat by the score of 95 to 84. Again, in his match with Fred Hoey at the Hollywood grounds on the next day, he also lost by a wide margin. The conditions of this race were 50 birds per man, Hoey to stand at 31yds., Gagnon at 30, Hoey conceding him two misses as kills; 21yds. (Hollywood) boundary. Hoey scored 44 to the Doctor's 37.

The W. J. Healey Hardware Co., of Mitchell, S. D., writes us under date of Aug. 3 as follows: "Our shooting tournament, the dates of which have heretofore conflicted with other tournaments, will be held in this city this fall, Sept. 21, 22 and 23. The list of prizes and events will be out soon, and will include many valuable prizes; and the shoot will, no doubt, attract a large number of sportsmen."

We are informed by Mr. L. W. Cumberland, of Kokomo, Ind., secretary-treasurer of the Trap-Shooters' League of Indiana, that the League has granted to the Erie Gun Club, of Huntington, Ind., a sanction for a tournament on Oct. 22-23. Further information in regard to this tournament may be obtained by addressing Mr. J. L. Brown, secretary of the Erie Gun Club.

At the Central Gun Club's tournament at Duluth, Minn., Hirch, of St. Paul, won first average with 225 out of 250. Bennett, of St. Paul, and C. E. Robbins, of Fargo, tied for second and third with 221 breaks. Wilson, of St. Cloud, was fourth with 212, Dr. Day, of Duluth, being fifth with 210. Mrs. Shattuck, of Minneapolis, led the ladies with 182 out of 250; the Duchess was next with 163, Mrs. Johnson, of Minneapolis, being third with 154.

A man very seldom knows when he is well off. One week ago we were feeling very sore that we could not be present at the Lewiston shoot, threats having passed between Rich Hunnewell and ourselves that we would do each other up at targets. As Rich stands third on the list of general averages with something like 92 per cent. to his credit, fate was perhaps not so unpropitious after all.

The fifth contest for the Recreation cup takes place at the Bergen County Gun Club's grounds, Hackensack, N. J., Wednesday of this week, Aug. 11. Both Sinnock and Remsen will be on hand without a doubt, each having two wins to their credit, with only three more contests for the cup to be accounted for. The man winning it the greatest number of times out of the seven shoots is to become the owner of this handsome trophy.

Frank Hall won the third heat for the silver tea service, donated by the Boiling Springs Gun Club for competition on the first and third Wednesdays of every month. The "147 handicap" was brushed aside, and a return was made to the old system of extra targets to shoot at. Hall shot very strongly, and had no trouble in scoring a 50 straight with the aid of 6 handicap. He broke 23 out of each 25, and 4 on his handicap allowance, with one target to spare. Ferd Van Dyke has two wins to his credit.

Jack Winston may use this for advertising purposes without any extra charge. On Thursday last a passenger on the Fall River line jumped overboard, according to the daily papers. Some of the other passengers saw him jump, and informed the captain. Search was made to find out who was missing, and it was found the occupant of stateroom 147 was the man who had jumped into the Sound.

It is proposed to make a special feature of a 25-bird race on the fourth day of the tournament of the New Jersey State Sportsmen's Association at Clifton race track, Passaic, N. J., Sept. 28-Oct. 1. The race will be 25 live birds, $25, birds extra, with at least $500 guaranteed to the three high guns. The tournament will be two days at targets and two days at live birds.

We learn from Elkwood Park that, on account of the Horse Show at Hollywood this week, the shoot for the cup presented by Mr. Max Bleiman has been postponed until Friday, Aug. 20. On Saturday, Aug. 14, there will be special handicaps, with conditions made on the grounds to suit shooters.

The Trap-Shooters' League of Indiana has granted to the Terre Haute, Ind., Gun Club a sanction for a tournament, to be held under the auspices of that club, Sept. 8-9. Mr. Albert Neukom, secretary of the Terre Haute Gun Club, will gladly supply any further information.

The Many and Robeline, La., gun clubs have joined forces and will give joint shoots on Aug. 26-27 and Sept. 11-12. Trap-shooting is said to be on the boom in Louisiana this year, and both these tournaments are likely to be well patronized.

Aug. 10. Edward Banks.

Western Traps.

IN MINNESOTA.

Chicago, Ill., Aug. 7.—The following scores were made at last week's shoot of the Minneapolis Gun Club. There was a good turnout of members and visitors:

Val Blatz badge, 15 singles: Maybe 8, Whitcomb 11, F. A. Richter 15, Marshall 11, Bush 10, Neely 14, Nelson 7, Noslen 6, Paegel 10, Sully 9, Biffton 7, Staples 9, Billy 7, McQueen 11, Weeks 9, Shep 6, Edgar 7, Steele 4, Parsons 6, Miss Bader 6, Mrs. Chamberlin 5, Rex 10, Bifton 6, Brown 10.

Richter won the badge in the shoot-off.

Schlitz Diamond Badge, 25 singles: Maybe 15, Whitcomb 19, F. A. Richter 21, Marshall 20, Bush 16, Neely 21, Noslen 19, Miss Bader 14, Pargel 12, Sully 14, Biffton 14, Stokes 18, Bert 20, Nelson 15, McKay 18, Billy 8, Weeks 16, Genevy 13, McQueen 17, Parsons 16.

Noslen wins diamond badge, with a handicap of 4 birds.

Club badge, 10 singles and 5 pairs:

Maybe	0111111111	00 11 01 10 11—15
Whitcomb	1111010110	10 00 10 10 10—11
F A Richter	1110111111	10 10 11 10 10—15
Marshall	1111011111	10 10 01 11 10—15

Parsons	1110001111	10 10 00 10 01—10
Noslen	1110001111	00 10 00 00 01— 9

McQueen won the senior badge; Neely the junior badge, and Biffton the amateur badge.

IN NEBRASKA.

Omaha, Neb.—The Omaha Gun Club made the following records in its last week's shoot:

Parmelee	11111111111111111111—20	Squirrel	11111111111101110110—17
Latshaw	10111111100101011111—15	Kuhn	10111010001010001011—10
Loomis	00111111011111101111—16	Read	00101110111111111101—15
Townsend	11110101111101111110—16	Smead	10111100010111101101—13
Kenyon	01100110010111011111—13	Johannes	10111011111111100111—16

IN TEXAS.

At San Antonio, Tex., Aug. 1, members of the San Antonio Gun Club made the following scores:

Regular medal shoot, 30 targets: Shields 20, Grossmann 21, Wilkins 17, McCormack 22, Marx 22, France 21, Vollbrecht 25, Epp 17, Prescott 18, Thiele 26. Thiele won in first class, Epp in second and Marx in third class.

IN OHIO.

At Cleveland, Ohio, Aug. 2, the Cleveland Gun Club held its quarter annual shoot for the country badge, the latter being won by Chic. with 25 straight on the shoot-off. The badge carries the title of champion of Tiacuyahoga county. Scores:

Thomas 43, Williams 48, Johnson 42, Redwing 38, Doolittle 37, Mack 43, Chic 48, Grant 47, Snow 47.

Chic won in the shoot-off as follows:

Williams	1111111111111101110111111—23
Chic	1111111111111111111111111—25

IN SOUTH DAKOTA.

The Sioux Falls Gun Club, of Sioux Falls, S. D., had a good attendance at its last club shoot Aug. 3, the shooting being at live birds and targets with the following results. At 18 live birds the scores were as follows:

Hutchinson 13, Burgess 9, Brown 13, Ray Hutchinson 11, DeGood 11, Snyder 7, Marson 5.

In the second event targets were used. The score, out of a possible 25: Hutchinson 18, Burgess 19, Brown 15, Ray Hutchinson 14, Snyder 6, De Good 11. Walking match: Burgess 15, De Good 11.

IN MONTANA.

The Rod and Gun Club, of Butte, Mont., at its last shoot, Aug. 3, had a pleasant meeting. Walker won the medal for the third time. Scores, 25 bluerocks: Walker 24, Christensen 22, Wright 22, Morse 21, J. Trudgeon 19, Smith 18, Spargo 18, Nichols 16, Westphal 16, W. Trudgeon 15, Jenkins 11.

IN KANSAS.

At Salina, Kan., members of the Salina Shooting Club made the following scores at its last weekly shoot: Ollinger 9, Gates 12, Stevenson 13, Cravens 7, Gemmill 10.

At the last weekly shoot of the Hutchison Gun Club, of Hutchison, Kan., B. E. Allison made top score, 21 out of 25; Will Allen next with 20. Next week Will Allen and T. A. Bavington, of Lyons, shoot a match at 50 bluerocks.

IN LOUISIANA.

At Thibodaux, La., on Aug. 2, the Lafourche Gun Club held a little shoot with the following results:

Twenty-five targets: A. Perrin 21, F. Sureau 21, John Leche 20, S. Foret 19, C. Caillouet 19, C. R. Beattie 18, E. Riviere 17, A. J. Clement 17, John Guardia 15, Henry Lejeune 14, Thomas Riviere 13, E. Le Blanc 13.

The City Park Gun Club, of New Orleans, La., is in a prosperous condition, and last week admitted twenty-six members, making its membership to day fifty-five. It is holding regular shoots at bats and targets, and bids fair to become the representative shooting organization of that city.

DULUTH SHOOT.

At Duluth, Minn., the fifth annual shoot of the Central Gun Club was brought to a successful close last week. Nine events were run off the first day.

The Jay Anderson event, No. 7, with $10 added money, went to Catamaran, Bennett and Hirschy, all of St. Paul, who scored straight kills of 15 birds. The ladies' event was won by Wojeck with a straight kill of 10 birds. A ladies' special was won by the Duchess and Mrs. Shattuck, of Minneapolis, with scores of 7 each, and Mrs. Johnson, of Minneapolis, with 6 birds killed. The merchandise prize event was a tie between Nelson, of Duluth, Hirschy and Leonard, of St. Paul, and Hill, of St. Cloud, all grounding 19 out of 20 birds. The four drew cuts, and Hill, of St. Cloud, won out. The special prize given for the highest average for the day was won by Hirschy, of St. Paul, who killed 113 birds out of a possible 125. The other high averages of the day were as follows: Robbins, of Fargo, and Bennett, of St. Paul, 110; Nelson, of Duluth, Hill, of St. Cloud, and Warren, of Duluth, 104; Holt, of St. Paul, 103; Catamaran, of St. Paul, 102; Shattuck, of Minneapolis, 102; Wilson, of St. Cloud, 101; Wojeck, of Duluth, 101. The tournament will be continued at 8:30 to-morrow morning.

Three ladies participating are Mrs. S. S. Johnson and Mrs. W. P. Shattuck, of Minneapolis, and Mrs. D. H. Day, of Duluth. Among those present from outside the city are: H. C. Lawrence, Dr. Lyons, F. Novetney, H. C. Hirschy, John Burkhardt, C. Thompson, Paul H. Gotzain, D. F. McLure, of St. Paul; W. P. Shattuck, S. S. Johnson, J. G. Parker, of Minneapolis; Dr. Harwood, of Tower; C. E. Robbins, of Fargo; H. B. Jewell, of Wabasha; Thomas O'Shaugnessy, of Bismarck; F. E. Ebner, of Aitkin; E. S. Hill, W. Thielman, A. L. Cramb, Dr. W. H. Spratty and F. B. Flynn, of St. Cloud; Phil Murray, L. E. Towne, W. H. Bean and E. M. Conrad, of Stillwater; P. E. Hauson and P. J. Boland, of Superior; J. A. Duncan, of Chippewa Falls; and C. C. Williams, of Sault Ste. Marie.

On the second day the most important events were the 6th and 7th. The 6th was worth a guaranteed purse of $50 to the winners, and in the 7th twelve cans of Gold Dust powder went to the twelve highest guns. The 6th event resulted in a tie between Murray, Bennett, Novotney and Wilson. All four succeeded in grounding 19 birds out of a possible 20. The twelve high scores in the 7th event were made by Robbins with 15, Hill, Wilson, Ransier, Wojeck, Phillips, Hirchy, Bennett, Bean, all with 14 birds; Wallace, Loud and Hard, with 13 birds.

The special prizes offered for the highest averages for the entire two days' shooting went to Hirchy, of St. Paul, who was high, with 225 out of a possible 250; Bennett, of St. Paul, 221; Robbins, of Fargo, 221; Wilson, of St. Cloud, 212; and Dr. Day, of Duluth, 210. The special prize offered for the highest average score made by the ladies was won by Mrs. Shattuck, of Minneapolis, who scored 182 birds out of a possible 250. The Duchess was second with 163, and Mrs. Johnson, of Minneapolis, was third with 154.

CALUMET HEIGHTS GUN CLUB.

At last week's shoot of Calumet Heights Club, the club medal contest was won by Patti with 24 in Class A. The weather was warm and the turnout of members rather light. A strong southeast wind made the targets low and hard, but Patti seemed to have his eye on them. Bathing was indulged in by many of the ladies and children who come each week to spend a few days at this pleasant country club. Scores:

Medal contest, 25 targets—Class A: Patti 24, Metcalfe 20, Young 19, Booth 17.

Class B: Norcom 17.

Class C: Morgan 15, Schmidt 14.

Fifteen targets, known traps, unknown angles: Booth 15, Patti 13, Norcom 12, Young 12, Metcalfe 11, Schmidt 11.

Fifteen targets, unknown traps and angles: Patti 11, Metcalfe 11, Booth 10, Morgan 10, Norcom 8, Young 7, Schmidt 4.

Five pairs, unknown traps and angles: Booth 6, Patti 5, Metcalfe 5, Morgan 4, Young 4, Norcom 2, Schmidt 1.

The members have formed two classes for rifle shooting, the men being in Class A and the women in Class B. The scores:

Medal contest, 10 shots—Class A: Metcalfe 47, Schmidt 47, Patti 39, Davis 37, Greeley 32, Norcom 24.

Class B: Mrs. Chamberlain 38, Mrs. Schmidt 37, Mrs. Morgan 33, Mrs. Young 31, Miss M. Bird 21, Mrs. Bird 20, Miss Bird 19.

1206 Boyce Building, Chicago. E. Hough.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Aug. 7.—Warren H. Thompson won the Class A badge in the weekly club shoot of the New Utrecht Gun Club, held this afternoon at Dyker Meadow. Dr. O'Brien was the winner in Class B, not having a competitor. Scores:

W H Thompson (A)	11111101111111111111111110—23
D Deacon (A)	11110111101111101011111100—19
P Adams (A)	11111011111011101111000001—18
Dr H L O'Brien (B)	11110111011010000111111100—16

A few sweeps at 10 targets, all at unknown angles, were also shot, with the following results:

G. E. Pool, Sec'y.

Lewiston's Interstate.

Once more, owing to force of circumstances, or perhaps more correctly speaking this time, owing to the exigencies of business, we were unable to attend the Lewiston Interstate, an event we had been looking forward to with high hopes for a pleasant time. Not being present, therefore, we have to do the best we can with notes supplied us by one who was there, and who generally knows what he is talking about.

The shoot was held on Aug. 4-5, under the auspices of the Androscoggin Gun Club, of Lewiston, Me. The grounds are among the best in the country, having a sky background. They are located just beyond the Maine State Fair grounds, six minutes' walk from the street car line. This walk was the only drawback to the location that could be found. Large awnings were erected over the score and the place where the gun racks were placed. As for the other arrangements, Manager Shaner says: "They were about the most complete I ever saw."

The officials were: Cashier, Prof J. H. Moody; Referee, Peter Rondeau; Puller, Ed Lyons; Blackboard scorer, Allen Pratt; Manifold scorer, Frank Reade. Rich. Hunnewell, says our authority, was major domo, and was here, there and everywhere all the time, and managed to solve the problem of working and shooting successfully; he won third average in mighty hot company. Mr. H. E. Doten, of the local club, who shot under the name of Herbert, also deserves special mention for the work he did. In fact, the manager of the Interstate Association says that this shoot was one of the softest snaps he has ever had in his career as manager.

The programme was not exactly one that might be expected to draw a crowd of experts, but they were there; at least some of them. No one could hope to make any money; there was none added to the purses, and all events were at known traps and angles, 15-target events, four moneys, $1.50 entrance. The presence of so many really first-class shots and the average number of entries on the two days, goes to show that a pleasant time and a good shoot, rather than money making, was the main idea of those who attended the Lewiston shoot.

Of course there were several who went for business purposes. Here is a list of trade representatives: O. R Dickey, S. A. Tucker, W. F. Parker and L. C. Parker, Parker Bros.; Noel E. Money, secretary of the American E. C. and Schultze Powder Co.; Ferd Van Dyke, Winchester and W-A; U. M. C. Thomas, of the U. M. C. Co; H. P. Collins, of the Du Pont Powder Co.; B. H. Norton, of the Hazard Powder Co.; E. D. Fulford, Remington gun and Schultze powder.

With known angles some high scores were made, and straights were very numerous. In event No. 9 on the second day, squad No. 3—Fulford, Dickey W. F. Parker, Leroy, Puck and Tucker—were greeted with a round of applause for their totals of two 15s and four 14s, 86 out of 90.

GENERAL AVERAGES.

The table of general averages shows that fifteen men shot through the entire programme of 300 shots, 150 per day. Dickey leads the van with 94 per cent. as his general average, that being his average for each day also, as will be seen by reference to the scores for each day. Noel Money also broke the same on the second day that he did on the first day, finishing each time 3 breaks behind Dickey, with 138 out of 150. His general average is, therefore, the same as each of his daily averages—92 per cent. Rich Hunnewell was third, only one target behind, while Leroy was one target behind him; their respective averages were 91 6 and 91.3. Ferd Van Dyke came next with 90.6 per cent., his first day's scores having given the others too much leeway for him to make up altogether. Puck showed up well with 89.3 per cent, and so did W. F. Parker with 89 per cent. Fulford tied with Parker, but his percentage at this style of shooting shows that he was not in his true form. Tucker and Doten (Herbert) both fell down on the second day, but U. M. C. made a Garrison finish, and came close to taking Herbert's scalp. The figures given below tell the tale of the general averages.

	1st day.	2d day.	Shot at.	Broke.	Av.
Dickey	141	141	300	282	94
Money	138	138	300	276	92
Hunnewell	138	137	300	275	91.6
Leroy	136	138	300	274	91.3
Van Dyke	134	138	300	272	90.6
Puck	134	134	300	268	89.3
Fulford	131	136	300	267	89
W F Parker	136	131	300	267	89
Tucker	132	127	300	259	86.3
Herbert	134	122	300	256	85.3
U M C	121	131	300	252	84
Rowe	112	120	300	232	77.3
L C Parker	116	96	200	212	70.6
Collins	97	99	300	196	65.3
Norton	73	54	300	127	42.3

Berry and Cobb each missed a couple of events on the first day, but shot through the programme on the second day. Their averages for the 270 shot at were respectively 88.1 and 87. Wyman missed three events on the first day, but shot at 255 targets altogether, breaking 217, an average of 85 per cent.

First Day, Aug. 4.

Forty-three shooters took part in to-day's events, there being an average entry list of 31.4 for the ten events. The highest number of entries was recorded in No 9, when thirty-seven shooters faced the traps; the lowest was in No. 6—twenty-six. Dickey was high, with 141 breaks out of 150 shot at, all events being at 15 targets each. Next to him, bunched in a tie for the next three places, came Noel Money, Rich Hunnewell and Wilkes with 138 each; W. F Parker and Leroy tied for fifth and sixth places with 136 breaks. Van Dyke, Herbert and Puck were all a tie for the next three places with an average of 89.3, each having broken 134 targets. Tucker and Chisholm tied for tenth and eleventh places, while Fulford comes along alone in twelfth place, far below where he rightfully belongs.

The table given below shows the scores made by each man, and the percentages of breaks made by every shooter:

SCORES OF AUG. 4.

Events:	1	2	3	4	5	6	7	8	9	10	Av.

Second Day, Aug. 5.

Dickey again led the list of thirty-seven shooters who took part in to-day's events. Of course entries fell off a good deal; the average entry list to-day was only 25.9 as against 31.4 for yesterday. The highest number to-day was thirty, in Nos. 5 and 8; the lowest twenty-three, in No. 7. Dickey's average was 94, the same as yesterday, while Noe Money was again tied for the next three places with two other men, with a percentage of 92, the same that he made on the first day, but those who were tied with him to-day were Van Dyke and Leroy. Hunnewell was only 1 break behind them, but he had to be content with fifth place. Fulford came up to-day and finished in sixth place with an average of better than 90 per cent.

The table below shows the scores and the percentages of every shooter, to day's programme being the same as yesterday's, viz., ten 15-target events, known traps and angles, $1.50 entrance:

SCORES OF AUG. 5.

Events:	1	2	3	4	5	6	7	8	9	10	Av.

A FEW NOTES.

A Parker gun and E C powder won first and second averages at this shoot. Dickey held one of the guns, Noel Money the other.

Maine seems to be Noel Money's State to make a record in. He never shot better last year than he did at the Portland Interstate twelve months ago. Maybe it's the sea voyage by the Maine S. S. Line to Portland that does the trick.

Mr. Doten's figures on the first day (he shot under the name of Herbert) are worth noting; in ten events he scored 7 14s and 3 12s.

W. F. Parker, a comparative scrub shot last winter, is fast blossoming into a crackerjack. On the first day he began rockily with 11, 13 and 12 out of the first events. He then pulled himself together (we can imagine how jauntily he wore his sombrero!) and broke 2 straights and 5 14s in the next seven events, a total of 100 breaks out of 105 shot at.

Chisholm, a good shot from the East, broke 88 per cent on the first day, his average being irreparably spoiled by two 11s in consecutive events, Nos 7 and 8.

It cannot be said that Rich. Hunnewell was right after the topnotchers; he was up on the roof all the time, trotting a clip that it took Noel Money all his time to get away from him. A single break in Noel's favor was all there was between them after 300 shots had been fired.

At the close of the first day of the shoot, the shooters and their friends were the guests of the Androscoggin Gun Club, and enjoyed a trolley party to Lake Auburn. After reaching the lake the steam launch Lewiston took the entire party a trip around the lake. The evening was a most thoroughly enjoyable one in every way.

Bluerock traps and Paul North's electric pull were used to throw the bluerock targets. The magautrap was not used to throw any targets, the vast majority of the shooters being strangers to the *magazine au* omatic *trap*.

No effort was made to make a record at target throwing. The club made things move along smoothly enough, but this was a shoot for fun—not money.

EDWARD BANKS.

Sistersville Rod and Gun Club.

Sistersville, W. Va., July 30.—The following scores were made yesterday and to-day on the grounds of the Sistersville Rod and Gun Club. The very small attendance was undoubtedly due to the extremely hot weather.

July 29:

Events:	1	2	3	4	5	6	7	8	
Targets:	*10*	*15*	*10*	*15*	*10*	*15*	*10*	*15*	Total.
E O Bower	7	11	10	15	9	14	7	14	87
L M Gorham	7	9	7	10	10	12	5	12	72

July 30:

E O Bower	8	15	8	13	7	14	9	9	83
D M Wallace	6	14	10	13	9	12	8	12	84
L M Gorham	5	9	5	7	4	8	3	5	46

SISTERSVILLE.

Missoula Rod and Gun Club.

Missoula, Mont., July 28.—Below are scores made in practice to-day by members of the Missoula Rod and Gun Club:

No. 1, 25 targets, unknown angles: W. E. Graham 18, R. E. Hammond 12, T. T McLeod 10.

No 2, same: W. E. Graham 17, T. T. McLeod 11.

Aug. 2.—The following scores were made to-day in the medal shoot; J. A. Forbes winning the gold medal and W. E. Graham the silver medal:

W E Graham.....1111001001001111110000111—15
Dr Mills.....0010000000110100000100000— 5

J A Forbes.....1011110111111001101011100—17

Practice, same conditions: W. E. Graham 13, J. A. Forbes 18, R. E. Hammond 7, T. T. McLeod 14.

W. E. GRAHAM, Sec'y.

Peekskill Won the Match.

Poughkeepsie, N. Y., Aug. 5.—Below are the scores made to-day on the grounds of the Poughkeepsie Gun Club, in the team race between the home club, Peekskill, Marlboro, Glenwood of Newburgh and Hyde Park. This is the third match of the series. Peekskill won by the extremely narrow margin of one target, Marlboro being right behind with 94 to 95. The storm that prevailed today let up in time to give us good weather, but the light was very puzzling. Scores:

Rike-Raymond vs. Heikes-Craig.

Dayton, O., Aug. 7.—The recent championship shoot in Fairview Park has renewed interest in the Buckeye as well as in the Star Gun Club, and matches are arranged almost daily. To-day there was a team match between Rike and Raymond against Heikes and Zenas Craig, 150 targets to each man, 50 singles, known traps, unknown angles; 50 singles, unknown traps, and 25 pairs.

Dr. L. C. Adams, referee; Capt. Ashley Brown, scorer.

Unknown angles:

Rike.....11111111111111101111111111
11110111111111111111101111—47

C. K. MIZNER, Sec'y.

Pawtuxet Gun Club.

Pawtuxet, R. I., Aug. 5.—The following scores were made by members of the Pawtuxet Gun Club in the Hunter's Handicap series. There are two classes, A and B; Class A shoots at unknown angles, and Class B at known angles. Among the shooters was J. R. Hull, of Meriden, Conn., a representative of Parker Bros. Mr. Hull acted as referee in the main event, but also found time to shoot at 15 targets. Scores:

Glenwood Gun Club, of Newburgh.

Newburgh, N. Y., Aug. 7.—W. M. Stanbrough and A. H. Dickson shot a 50-target race to-day on the grounds of the Glenwood Gun Club, for the challenge cup donated by the American E. C. and Schultze Powder Company, Limited. Dickson challenged Stanbrough, who was the holder, but Stanbrough won with 45 to 42. Dickson has challenged again and the race will be decided Aug 12. Scores of to-day's race were:

Stanbrough.....0010111011111111111111111—21

GLENWOOD.

Scott Gun Club.

New Iberia, Aug. 4.—On July 25 the Scott Gun Club, of Scott, La., entertained the sportsmen of southwest Lousiana in a style that would do credit to an older gun club. The hospitality extended to its visitors will not soon be forgotten.

Mr. Leo Judice, president; Mr Nathan Broussard, secretary; and Mr. S. Begnand, captain, were all unceasing in their efforts to make the day pleasant and a success.

Crowley Gun Club was represented by Sherrif Lyons, L. L. Lyons and Fleet Coleman; New Iberia Gun Club by A. Cousin, Jr., G. Cousin, S. Harry and W. Laudry; New Orleans by R. Steckler, Alex. Voorheis and A. Cardona, Jr.; Century Gun Club, of Lafayette, by Dr. F. E. Girard, J. C. Nickerson, S. R Parkerson and Wm. Campbell.

Following are the scores:

Nathan Broussard 5, Leo Judice 5, R. Roy 3, S. Begnand 4, J. C. Nickerson 1, R. Stecker 5, E. Leger 3, A. Claus 3, L. L. Lyons 6, J. F. Coleman 5, Sherrif Lyons 6, N. Domingeaux 3, J. Begnand 2, S. R Parkerson 5, J Guillote 3, Alex. Voorheis 3, J. Weil 3, Wm. Campbel 4, Alf. Hebert 4, A. Cousin, Jr., 5, Geo. Cousin 5, Wm. Laudry 2, A. Cardona, Jr., 5, Judge De Baillon 3, L. H. Clarke 4, Miss Gertie Cardona 5, J. A. Wagner 4, Doctor Gerard 5, S. G. Harry 6.

Ties were shot at 6 birds: L. L. Lyons 5, Sherrif Lyons 5, S. G. Harry 6.

S. G. Harry won the programme shoot, prize being a handsome imported English saddle.

The second event was a sweepstakes at 10 bluerocks:

J. F. Coleman 9, L. L. Lyons 7, N. Broussard 6, Leo Judice 6, S. G. Harry 8, A. Cousin, Jr., 6, Sherrif Lyons 9, A. Voorheis 5, S. R. Parkerson 8.

On the tie, Sherrif Lyons won with 5 straight.

The third event was another sweepstakes at 6 bluerocks, ten entries, L. L. Lyons winning with 6 straight.

Fourth event, sweepstakes at 5 bluerocks, ten entries. Nathan Broussard and L. Judice tied with 5 straight, Broussard winning on the shoot-off.

On Oct. 10 the Scott Gun Club is booked for another shoot, which, from present outlook, will be a success.

ANODINE.

Team Race at Guelph.

Guelph, Ont., Aug. 2.—Below are the scores of a friendly shoot held between the Galt Hespeler and Guelph gun clubs, at Guelph on Aug. 2, six men from each club. The weather was very hot, but sweepstake shooting (after the match) was kept up till darkness interfered with the scores. Lot Singular, of the Victoria Hotel, catered to the wants of the visitors in his usual interesting style. Everybody was apparently delighted with the day's sport.

Scores:

Amateurs and Experts.

FROM AN AMATEUR'S STANDPOINT.

Buffalo, N. Y., Aug. 6.—Have read recent letters in your paper regarding experts and amateurs at shooting tournaments. I do not know how the experts liked the arrangement of entries and the division of average prizes at the Chamberlin Company's tournament at Cleveland last June, but from an amateur's standpoint the arrangement seemed to me most satisfactory. My shooting was very poor, but when the final division of average money was made I found that I had received within $10 of the amount of entrance money I had paid in. I did not get into any lucky place, just kept in the money most of the time, but had three days most enjoyable shooting for about the usual price of birds.

If the amateurs expect to go to a shoot, shoot poorly and be nothing out, it is time that tournament managers gave up catering to them. If they are willing to pay a fair price fo several days' shooting, with a possible chance of having some one else pay for their sport, as they surely had at Cleveland, then the Chamberlin people seem to have solved the problem. Of course, free birds helped to obtain this result, but the added money at most tournaments will accomplish the same thing. Should another tournament be held under conditions similar to those at Cleveland, the amateur who cannot attend is to be pitied.

AMATEUR.

On Thursday, Aug. 19, there is going to be a big clambake and target shoot at Pine Point, Orange Lake, near Newburgh, N. Y. The "bake" will be held near the Pine Point Club Hotel, Neaf Apgar's hostelry, and is being engineered by Geo. H. Boxer Taggart, of Newburgh. The shooters of Peekskill and Newburgh will have to look to their laurels, as something of a delegation from New York city and New Jersey is going to be on hand to eat clams and break targets. Trolley cars run every hour from Newburgh to Orange Lake, the run occupying about thi ty minutes.

IN NEW JERSEY.

AT ELKWOOD PARK.

July 31.—The Country Club Handicap, 20 live birds, $20 entrance, was the main feature at Elkwood Park this afternoon. This event was won by the Kentuckian, Bland Ballard, with 20 straight. He was chased to the finish by D. Bradley, who lost his 18th bird. Yale Dolan shot well, and finished in third place with 18 out of 20. He lost his 11th and 17th birds. There was a good field for this event, eleven starters being the record.

Several sweeps were also shot. These were: No. 1 and No. 2, $5 miss-and-out; No. 3, $10 miss-and-out; No. 5, 5 birds, $10, ties miss-and-out. Detailed scores of all the events follow:

GRAND NATIONAL PRELIMINARY.

Aug. 6.—The Grand National Preliminary was the feature on the card to-day. The conditions were: 25 birds, $15, handicap; ties shot off at 5 birds, then miss-and-out. Dr. Gagnon (28), Daly (29), Hoey (30) and Murphy (30) tied on 21 each and shot-off, Gagnon winning with 5 straight; Daly and Hoey tied for second money on 4 out of 5, Daly winning second money in the second round. Murphy lost 2 out of his first 3 birds in the tie and withdrew. Scores were:

Murphy (30)	2202202222202220222222232—21
Hoey (30)	2222222220202202220222—21

Patten (28)	22022-02220102210-2212220—19

BRADLEY-GAGNON MATCH.

Aug. 2.—Daniel J. Bradley, a member of the Carteret Club, and Dr. George S. Gagnon, who hails from Chicago, shot a race to-day over the Elkwood Park traps at 100 live birds per man, 30yds. rise, Elkwood Park boundary (50yds.); the stake was said to be $100 a side, but side bets probably raised the limit. Whatever the conditions, Bradley walked away with the match, scoring the great total of 95 out of 100, running his last 47 straight. That he was in great form is shown by the fact that he shot at 138 birds during the day and only lost 7 of them, scoring in all 131 out of 138. Dr. Gagnon was weak at the start, losing 7 out of his first 24; he then braced up and ran 35 straight. The score at the half-way mark showed Bradley 46 to Gagnon's 43. The way the doctor was shooting just then made the match an interesting one, particularly when Bradley lost his 53d bird, reducing his lead to 2 birds. From that point, however, Bradley gradually forged ahead, running out without another miss, while in the last 25 alone Dr. Gagnon lost 7 birds. Scores were:

Bradley	2222202222022222222222?2—23
	2022222222222220222222222—23

BOILING SPRINGS GUN CLUB.

Aug. 7.—There was not a large attendance at the regular monthly shoot of the Boiling Springs Gun Club at Rutherford, this afternoon. The hot weather and vacation time had much to do with the scarcity of shooters. Only eight entries were made for the cup shoot, the number being raised to nine by J. H. Robbins, of the *Sportsmen's Review*, who shot along as the guest of the club. Colin Wise, with 3 handicap, won the cup with a total of 48 breaks out of 51 shot at. Capt. Money, with 2 handicap, and Banks, scratch, were next with 46 each. The scores in this event are given below in detail:

C R Wise (3)	1111011111111101111111111—23
	1111111111110111111111011—22

	0101000011000110 — 6—27

* Guest.

After the cup shoot a couple of 15-target events, unknown angles, were shot. Then, there being only six shooters left on the grounds, a series of team races, the teams being chosen by Huck and Banks, respectively, were agreed upon, the losing team to pay for the targets. The conditions were rather unusual ones, and were designed as much to kill time as anything else; they were: 5 unknown angles, 5 reversed order, 5 expert rules, and 5 pairs per man; each man shot his 5 targets by himself, while the rest of the shooters and spectators sat by and guyed or applauded. These races were very close indeed. The first was won by Huck's team with two breaks to spare, the captain of the other team dumping his men by losing 4 out of 5 at reversed order. The second was a victory for Banks's team with 3 breaks to the good. The rubber was won by Huck's men with 58 to 56. The totals of the three races show that Huck's team led the other team by just one break out of the 450 targets shot at. The scores in these races follow:

No. 1, Huck's Team:					
Huck	01110	11111	11010	01 11 11 11 11	—20
Money	01110	11110	11111	10 11 10 11 11	—20
Paul	01111	10110	11011	10 01 10 01 10	—16—56
Banks's Team:					
Robbins	11101	11110	10111	10 11 11 11 10	—20
Banks	11111	01000	11111	11 11 10 01 11	—19

Huck	8	8	12	12	..	..	16	Frank	..	..	..	..	..	..	13

Nos. 1, 2 and 5 were at expert rules; Nos. 3, 4 and 7 at unknown angles; No. 6 at reversed order. In a match at 10 pairs Capt. Money broke 19 to Banks's 12.

The tie on 19 in No. 7 was shot off at expert rules in blocks of 5. Capt. Money dropped out in the first series of 5, losing his fourth target. In the second series Banks lost his second and Robbins his third; in the third series Banks broke straight, but Robbins lost his first target and retired.

Aug. 4.—Below are the scores made to-day in the regular semi-monthly shoot for the silver tea service donated by the Boiling Springs Gun Club. Frank Hall (who shoots under the name of Hyde) won a heat for the cup by scoring 50, the highest possible, with a target to spare. Asmus was the only other man who had a chance to tie him, but he had to break 15 straight to do it. He withdrew after losing 2 out of his first 5 on the handicap. None of the others shot out their allowances. Scores were:

No. 2 was at 5 pairs; all the rest at unknown angles.

W. H. HUCK, Sec'y.

PIERCY DEFEATS HEFLICH.

Aug. 6.—Geo. H. Piercy, of the Endeavor Gun Club, shot a 25-bird race to-day with H. M. Heflich, of Secaucus, N. J., the match resulting in a win for Piercy by 2 birds, with a score of 22–20. The conditions were: 25 live birds, $25 a side, 30yds. rise, A. S. A. rules. The match was shot on the Secaucus Polo grounds. Scores:

Piercy	2212212222202•2122022222—22
Heflich	212•121102211012220101111—20

WM HEXAMER.

AT THE HOLLYWOOD TRAPS.

Aug. 7.—There were only four entries in the Hollywood Grand National Handicap, shot to-day on the grounds of the Hollywood Club. The entries were: Phil. Daly, Jr. (29), Fred. Hoey (30), Edgar Murphy (30), and Dr. Gagnon (25). Daly was the winner, with 45 kills to his credit. Murphy and Hoey tied on 44 each, while Gagnon brought up the rear with 43, losing his last bird. Daly started out badly, losing his 2d, 8th, 9th and 10th birds. He then took a strong brace and killed 33 straight before losing his 44th dead out of bounds, his last loss, as he killed the last 6 straight. Fred. Hoey scored 22 out of each 25, but Edgar Murphy seemed to have a cinch at the halfway mark, when he had 24 out of 25 to his name. He then killed 9 out of the next 10, having a score of 33 out of 35. The loss of his 36th, 40th, 46th and 48th put him behind Daly, and tied him for second money with Hoey. Gagnon scored 23 out of his first 25, but could do no better than 20 out of the last 25. Knowlton won the Red Top prize, a case of champagne, having to score 9 straight to do it. There were nine entries for this race. Scores in the Grand National were as follows:

Hollywood Grand National Handicap, 50 birds, $100;

Paid Men at Tournaments.

CLEVELAND, O., Aug. 2.—*Editor Forest and Stream:* There has been quite a little discussion recently in the FOREST AND STREAM in regard to the paid shooter, and whether he shall be allowed to continue attending tournaments in the future, and shoot on the same footing as the rest of those who attend, as has been the case in the past.

We have heard both sides of the question ably argued, and from the paid shooter's position it would appear that the salvation of the sport of target shooting depended largely upon the present method being retained, while the rest of the shooting contingent believe that the time has come to call a halt.

It looks as though being in the minority and not running the tournaments, that the ideas of the paid shooter would have to give way to those of the others; and that the coming season would see the majority of the tournaments held under the conditions that the paid shooter could not participate in any division of the purses.

The success of the Sioux City tournament—where they were barred entirely—and that of the Chamberlin tournament—where they were taxed for the privilege of shooting are evidence of the fact that there is a demand from the majority of shooters for a more even adjustment of affairs. There is no question that the paid shooter has to a large extent increased the interest in shooting and the attendance at tournaments in the past; but it is also a question that can only be answered by actual trial, if these same shooters would not do more for the promotion of the sport, if they were not allowed to compete for the prizes at the tournaments they attend, and were only permitted to shoot at the targets, paying for them, of course: and in that way show the merits of the goods manufactured by the different houses they represent.

Looking over the cashier's books for the Chamberlin tournament we find that the highest entry in any event was seventy-three and the lowest was sixty three, and there is no question that the high average was obtained only by the pro rata division of the tax that was levied on the paid shooter, and which amounted to $225, and which gave each of the amateurs that shot the programme entire a bonus of $8.75 at the end of the shoot. We also find that in recalling the attendance at other tournaments we cannot recall any tournament whose largest entry was so very little more than the average. In our former shoots we have had a high entry of nearly 100 shooters, but not so high an average for the entire shoot. The cashier's books also disclosed the fact that in round numbers $5,700 was taken in and paid out, no charge being made for targets, all that was taken in was paid out, and that out of that amount fourteen of the paid shooters in attendance drew out $1,300. That is, about one-fifth of the average number of shooters drew out about one-third of all the money, or $300 more than they put in, including the tax; and in addition to that they were paid a salary for shooting and furnished all their ammunition and expense money.

In view of the above facts, it is our present intention at our 1898 tournament to invite all the paid shooters to attend our shoot, and we will throw for them all the targets they care to shoot at free of charge, but we will bar them from passing any money either way at the cashier's office. They will be welcome to shoot the programme through so as to show their skill, and can run a little shoot of their own on the side, but they will not be allowed to compete for the purses in the programme events.

We have run four tournaments in the last four years, at two of which they were allowed to compete on an equal footing with all others, and at two they were handicapped in one way or another, and we know they can take no offense if at our next one we see fit to try the experiment of barring them entirely.

As we have said above, it is our present intention to run our 1898 tournament on these lines, but we are open to conviction, and would like to hear from both sides interested through the columns of your paper.

THE CHAMBERLIN CARTRIDGE AND TARGET CO.,
Per PAUL NORTH.

Answers to Correspondents.

No notice taken of anonymous communications

F. W. W., New York.—For striped bass fishing go to Asbury Park, or Barnegat, New Jersey; or to Port Deposit, Md.

H. D. A., Princes Bay, N. Y.—For snipe shooting communicate with Asa Tilton, Forked River, N. J., or C. Robinson, Lindenhurst, Long Island, N. Y.

O. E. S., Stromsburg, Neb.—The model '73 Winchester ammunition is adapted to your rifle, and you may apply to any of the Winchester agencies for it.

E. S. A., Clinton, N. Y.—You will find all the changes in the New York law in the *Game Laws in Brief*. The woodcock season will open Aug. 16.

S. A., New York.—Fox squirrels have been introduced on Long Island by the Wyandauch Club, of Smithtown. Can you inform me if this is the first attempt to put out some fox squirrels on Long Island? Ans. We have no record of any previous enterprise of the kind.

J. V. G., Allentown, Pa.—Will you kindly inform me through the columns of FOREST AND STREAM what is the best bait to use for catching German carp? Ans. A good fat worm is as good as anything; or make some of the toughest possible bread dough and bait with that. They are shy, and hard to take.

C. A. T., Whitinsville, Mass.—Please tell me how to treat a setter dog for distemper or "dog sit"? Ans. Keep him indoors. Allow no exercise. If appetite is not good feed three times a day, giving little at a time. If he will not eat administer nourishment, such as raw meat juice, milk, lactated food, eggs, etc. Give 5grs. of salicylate of soda three times a day.

W. H. T., Butler, Pa.—Will you kindly advise me the weight of the largest trout caught in United States waters, exclusive of lake trout? This is to settle a dispute that has arisen with a friend of mine. Ans. The FOREST AND STREAM's big fish record gives 12lbs. as the maximum authenticated weight; this fish was netted by an employee of the Maine Fish Commission in Rangely stream.

W. E. G., Missoula, Mont.—My setter bitch, almost four months old, has a swelling on the throat as large as an apple. It is soft to the touch. When she stands on her hind legs the lump does not show. Is it serious, and will it disappear of its own accord? Ans. Treat for worms. Apply tincture of iodine to it daily until skin becomes sore. If the swelling does not disappear after this it may be necessary to open it.

C. H. B., St. Paul, Minn.—To settle a controversy, please state whether trout can be caught with a hook and line during an ordinary night without artificial light or anything of that sort. It is alleged that certain trout fishers in Wisconsin do not start out to fish for trout until after dark. Ans. Yes, trout can be taken with bait or fly by night. The subject was discussed in our angling columns recently.

A. B. H., Philadelphia.—Will FOREST AND STREAM kindly inform an old reader if it is necessary to have a license to shoot in New Brunswick, and also the time of the open season for trout, etc., fishing. I understand there is such a license law in Quebec and Nova Scotia, but I have camped in Quebec for ten years, and no one ever said license. Ans. The New Brunswick non-resident license fee is $20. See full particulars on page 61 of the *Game Laws in Brief*. There are also license exactions in Quebec and Nova Scotia.

C. H. W., Bay Shore, N. Y.—We have here what I call a wild dove, but some of the boys call them wild pigeons. Nothing is said in the *Brief's* Long Island game laws about them. But on page 2 it says: "If no close season is named for a species, the law prescribes none," and in general provisions, "Birds other than game (except of prey) are protected at all times." Kindly inform me as to the law for wild doves. Ans. Where no special law for Long Island is given in the *Brief* the general State law applies; and doves are protected by Sec. 78 (page 44 of the *Brief*) which forbids the killing of all wild birds other than those named in the law.

H. P., Grand Rapids, Mich.—I had a discussion with a friend the other day as to the color of the meat of prairie chicken (pinnated grouse). He claimed it was white, and that he had shot a great many. I have never shot any, but have had the pleasure of eating my share, and I claim the meat is dark. Please let me know if you have ever heard of any white-meated ones? Ans. As the question is presented, you are right. Your friend's contention would apply to the ruffed grouse, which has white meat. Young prairie chickens have lighter-colored meat than that of the matured kind, but, young or old, it would be classed as dark.

W. M., Greenwood Depot, Va.—Can you give me any information concerning the care, management, feeding and breeding of skunks for their hides? I have some, and want to do something with them. I have made them quite tame, and they do not attempt to use their objectionable powers in any way. I have written to four skunk farms, enclosing stamps, but they have not condescended to reply. Ans. We have experienced a like difficulty in our endeavors to elicit information concerning the breeding of skunks. Dr. R. W. Amidon has undertaken to send us some particulars which may be of value, and which we hope to have for publication shortly.

E. A. V., Greenville, Miss.—At this season of the year several of the would-be sports are having fun shooting "bull-bats," a local name applied to the night-hawk or whippoorwill. A friend of mine stoutly avers that they are not whippoorwills but bull-bats, and entirely different. They have white bars on the wings and fly about in the evening in search of insects. I have never heard of any bird except the whippoorwill so marked and with like habits. Ans. Your description answers to the bull-bat. The bull-bat or night hawk (*Chordeiles virginianus*) and the whippoorwill (*Antrostomus vociferus*) belong to the same family, *Caprimulgiæ*, or goatsuckers, but are distinct species. You may distinguish them, too, by their note, the bull-bat's is a *peent*. The bull-bat is not a game bird, but for its services as an insect destroyer deserves immunity.

J. B. W., Haverstraw, N. Y.—There is a lake stocked from the State hatchery. The lake is a private one, but the Assemblyman from this county procured stock for it. Can the public fish in this lake, which is in private property? If so, must there not be a public road to enter? If there is not already a public road to enter should a person enter to fish, can there be brought against him a suit for trespass? Is not this pond or lake open to public fishing, from the fact that was stocked with fish from the State hatchery? What should be the area of lake to have it stocked from State? Ans. According to the law, all waters stocked by the State are open to the public for fishing. There is no restriction as to size. The lake described by you is, according to the law, public fishing water, but we are not aware of any provision for public access to the lake through the private property surrounding it.

PUBLISHERS' DEPARTMENT.

Yellowstone Park.

A COMPLETE TOUR VIA THE PENNSYLVANIA R. R.

THE Yellowstone National Park is unquestionably the most interesting region on the globe, for within it is displayed the greatest collection of nature's manifold wonders. Indeed, this mountain-bound plateau, high up on the summit of the everlasting Rockies, is a veritable playground for the world's giant forces. To stand and gaze upon them in all their marvelous manifestations, the great geyser upheavals, the fierce steam blasts, the terrible leap of the river, and the awful cañon, is a revelation—an experience to be had at no other point on the earth.

The personally-conducted tour of the Pennsylvania R. R. Co., which leaves New York on Sept. 2, affords the most satisfactory means of visiting this wonderland and viewing its marvelous features. Tourists will travel by special train of Pullman smoking, dining, sleeping, and observation cars in each direction. Eight days will be spent in the Park. Stops will also be made, returning, at St. Paul and Chicago. The round-trip rate—$235 from New York, Philadelphia, Baltimore and Washington, $230 from Pittsburg—covers all necessary expenses.

For detailed itineraries and full information, apply to ticket agents, Tourist Agent, 1196 Broadway, New York, or address Geo. W. Boyd, Ass't Gen'l Pass. Agent, Broad Street Station, Philadelphia.—*Adv.*

Through Buffet Parlor Car between New York and Cape May.

THE Pennsylvania Railroad Company announces that, beginning Tuesday, July 27, from New York, and Wednesday, July 28, from Cape May, a through Pullman buffet parlor car will be placed in service between New York and Cape May daily except Sunday. This car will be attached to train leaving New York, West Twenty-third street station, at 12:55 P. M.; Desbrosses and Cortlandt streets, 1:00 P. M., stopping at Newark, Elizabeth, Rahway, New Brunswick, Trenton, Bordentown and Burlington. Returning car will be attached to train leaving Cape May at 7:00 A. M., making same stops.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 21, 1897.

VOL. XLVIX.—No. 8. No. 346 BROADWAY, NEW YORK

One grumbler in camp will destroy the pleasure of the whole trip. The man in camp is a very different being from the man in society, as a rule, therefore, look well for genial companions, as very much of the pleasure of the trip depends upon it. It may be a delicate subject, but should be talked over earnestly, and squarely, by parties starting out on a camping tour for the first time. It will go a long way toward preventing much unpleasantness, if you have a clear understanding that no petty quarreling, grumbling or fault-finding will be indulged in by any member of the party. This kind of an understanding will put each man on his guard; in other words, put him to thinking, and by just thinking a little, many trifling affairs could be turned to fun that might otherwise irritate. Col. Horace Park.

SNAP SHOTS.

THE statement in the papers called forth by the recent stage robbery in the Yellowstone Park, that this is the first hold up that ever has taken place there, is untrue. Stages have been robbed in the Park at least twice in the past, though these occurrences took place at long intervals, and the perpetrators, in one case, we recall, were apprehended and punished. The first incident was when Handsome Charley, otherwise known as Long Red, with a companion held up the stage between Gardner and the Mammoth Hot Springs. If we recollect aright, the total amount of their plunder was about $15, and for the offense Charley at least spent fifteen months in Deer Lodge. The pay he received for the year and a quarter's work cannot be considered munificent, even if we take into consideration the fact that his board and lodging cost him nothing. Occurrences such as these are unfortunate, because they tend to keep up in the East the notion that the West is still wild and woolly, while as a matter of fact it is deplorably commonplace and tame. A man is much more likely to be held up in the streets of New York than in the Yellowstone Park.

Speculation as to the outcome of the Massachusetts anti-birds' plumage law has been set at rest by a decision just rendered by Attorney-General H. M. Knowlton. The law, which is Chapter 524 of the statutes of 1897, provides that "whoever has in his possession the body or feathers of any bird whose taking or killing is prohibited by Section 4 of Chapter 276 of the acts of the year 1886, or wears such feathers for the purpose of dress or ornament, shall be punished as provided in said section." The Attorney-General contends that the birds whose killing is prohibited by Section 4 are, and only can be, birds which are within the Commonwealth of Massachusetts and subject to the protection of her laws. The birds referred to in the anti plumage statute are the same; and hence he says: "I am of the opinion that the Statutes of 1897, Chapter 524, is not to be construed as prohibiting the having in possession or the wearing of the body or feathers of birds taken or killed without the Commonwealth."

Taking into consideration the spirit, text and enforcement of the Massachusetts game law, we are inclined to the opinion that the Attorney-General's interpretation of the new statute would be sustained by the courts. For many years Massachusetts, while seeking to protect her own game, has thrown the doors wide open for the market reception of game from the rest of the country at all times and seasons. Like the District of Columbia, New York, Missouri and some other States, she sordidly, brutally, shamefully ignores the rights and interests of others. Boston is as New York, Washington and St. Louis, a dumping ground for the game of other States unlawfully taken and dishonestly exported. The game law of Massachusetts being thus, in letter and spirit, confined strictly to prohibiting the sale of Massachusetts killed game only, we take it that the anti-plumage law must be interpreted as having a like restricted purpose. And more is the pity, since, on the testimony of Chief Wade of the State Police, the actual working of the law has been to bring practically to a stand-still the bird-feather millinery business. In other words, if properly worded the law would accomplish precisely what its promoters intended it to effect, namely, it would stop the sale of birds' feathers. If Attorney-General Knowlton's opinion shall go unchallenged by appeal to the courts, the law, as it stands, will be worse than a farce, and it will remain for the honest promoters of an honest anti-plumage law to renew their efforts at the next session of the Legislature.

An interesting trespass case has come up in this State which has a direct bearing upon the point of law discussed by Mr. J. S. Van Cleef recently in our columns, respecting public fishing rights in private waters. A clause of the fish law provides that when private waters have been stocked by the State they shall thenceforth be free to the public for purposes of fishing. Mr. Van Cleef has pointed out that this would be an invasion of vested rights which probably would not be upheld if brought to test in the courts. The case in point, which offers an opportunity for making just such a test, is the suit instituted by Mr. George J. Gould, as owner of Furlough Lake in the Catskill Mountains, against Hiram and Aaron Graham, of Hardenburgh, for trespass on the lake for fishing. The case came up before Judge Hill, of Pine Hill, last week, and the defense was a general denial and the allegation that the lake was first stocked by the State, and that therefore the right to fish in it belongs to the public. The trial was postponed.

The anti-hounding deer law, which goes into force in the Adirondacks this season, has been received in various sections of the North Woods with approval and disapproval. Antagonism to the statute is found mainly, of course, in those sections which have been resorted to by visiting sportsmen for deer hounding, and is based largely upon an apprehension that the enforcement of the law will deter many visitors from making their customary Adirondack excursions, and that instead they will go to Maine or Canada or elsewhere wherever the chances of killing a deer with or without hounds may be considered superior to those of New York. There is no question that in some measure at least this apprehension is well founded. We have knowledge of a number of deer hunters accustomed formerly to visit the Adirondacks who are planning to go elsewhere and who have engaged their guides in Maine or New Brunswick. In some parts of the Adirondacks where opposition to the new order of things is most intense the antagonism has been manifested in a general defiance of the deer law. We have received and published communications showing that deer have been killed out of season with little regard for legal restrictions, and we have conversed with those who have been in the North Woods and who have the same story to tell. It is reported that all available game protectors of Major Pond's staff have been sent to the Adirondacks to enforce the anti-hounding law, now that the open season has come. It will doubtless require all the vigilance and circumspection and ability of the force to execute the law in those districts where it is unpopular.

If Justice of the Peace E. Biller, of Glenflora, Wisconsin, held forth in the classic purlieus of the Bowery, he would, we are sure, be termed a peach. Justice Biller has got his name in the papers because of his connection with a deer-hunting case in Chippewa county. The facts as disclosed on the trial were in brief as follows: On June 9 of this year John Fintzen, of Glenflora, visited the house of a Mr. Howell, where he remained over night preparatory to going deer hunting the next day. He told the two boys of the household, one thirteen and the other eleven years old, of his purpose, showed them his Winchester rifle and promised that if he got his deer he would give them half of it. On June 10, returning from his deer hunt, he told the boys that he had killed a young buck, took them to the place where he had left the deer, and skinned it and divided it up while they stood by watching him. He then gave the boys one-half of the venison and parted from them, first cautioning them against saying anything about what he had done. The game warden, having been notified by Mr. Howell, the father of the boys, arrested Fintzen and brought him up before a justice of the peace at Bruce. Several continuances were secured by the defendant; and the warden, learning that Fintzen's friends were determined to secure an acquittal, discontinued the action, and procuring a warrant from the court at Chippewa Falls, rearrested him for trial there. Meanwhile, Justice of the Peace E. Biller and his brother, Constable Biller, of Glenflora, approached the two boy witnesses with bribes and threats; and fearing that by these inducements they might not be prevented from telling the truth on the trial, the Biller who is a justice of the peace wrote this letter to their father:

"GLENFLORA, Wis., July 26.—*Mr. Howell, Friend and Brother:* As I may not see you, for my sake as a brother in F., L. and T., do all in your power to help John Fintzen in his trouble. Post them boys up so they can have their story well learned. Tell them to say in a few chosen words, that they never saw him have in his possession or shoot a deer. Yours in I. O. O. F., E. BILLER.

In spite of the exertions of this unworthy public officer to induce the boys to perjure themselves in Fintzen's behalf, all the facts of the case, including Biller's own activity in it, were developed in the course of the trial at Chippewa Falls, and Fintzen was convicted and sentenced to sixty days in jail. The case discloses not only a woful condition of public sympathy with respect to the violation of the game laws in Chippewa county, but a much more serious demoralization as exhibited by this man Biller, in comparison with which game laws and their observance are of altogether minor importance. A community sunk so low as to have for its presiding justice an individual of Biller's stamp is less in need of game wardens than of missionaries and schools and churches. For the good name of the county, the prosecuting attorney or the Grand Jury should take action in the case of Biller, J. P.

The recent tour of the New York Fish Commissioners through the Thousand Islands of the St. Lawrence River, for the purpose of selecting grounds to be purchased by the State for public camping sites, has so far come to naught. The Commissioners found no difficulty in selecting desirable sites, but they have not as yet been successful in coming to an agreement with the holders on the important question of price. Landowners appear to be possessed of a notion that as the State is the purchaser they may improve the opportunity to get fancy prices for what they have to sell. The Commissioners, on the contrary, are disposed to do business for the State as they would for themselves, and on like business principles. For the time being, then, the St. Lawrence park interests are in abeyance, but in time, it is altogether likely, the State will acquire its lands on reasonable terms.

The satisfaction and benefit of an outing do not depend upon long distance traveled, nor large expense incurred. If you cannot afford the time to go far, nor the money for an expensive trip, take the short one and go cheaply. Make the most of such outing opportunities as may present themselves. Many of us would get more enjoyment out of this beautiful world if we took the good things legitimately within reach. The actual trouble with many men who profess themselves irrevocably chained to business is that they have not the will or the resolution to relax the confinement when they might. There is a false estimate which leads one to believe that if he steps aside from the rut and the grind, things will incontinently go to smash; and so the unhappy victim of the delusion plods along year after year and knows neither the sheen of the bass in the landing net nor the velvety feel of a bird's plumage brought from flight to hand. It is a notion foolish and cruel, because it cheats one out of so much of the good of living. He finds a larger and fuller and richer life who takes his share of the innocent pleasures of woods and streams and plains and mountains.

The Chicago Fly-Casting Club's tournament last week was notable for the character of the work done, and the promoters of the tournament are deserving of much credit for their exertions and of congratulations upon the success of the meeting. The record achievement was that of Mr. W. D. Mansfield, of San Francisco, who in the long-distance fly-casting over-topped his own previous performance of 108½ft., with a noble cast of 111¼ft. The work done on the Garfield Park lagoon last week sets the pace for fly-casting emulation.

At the Sportsman's Exposition in Madison Square Garden, last March, Mr. T. B. Mills, in single-handed fly-casting for distance, made a cast of 110ft. 9½in., but the loss of his fly prevented his scoring the performance as a world-beating record. Mr. R. C. Leonard has cast 111ft. in practice, and Mr. Cooper Hewitt 112ft. in practice; neither of these count as against Mr. Mansfield's public cast of 111¼ft. which stands as the best of record.

The Sportsman Tourist.

VESPERS IN THE WOODS.

FAR, far away, toward the dawn of day,
Is a land where pine trees grow;
The summer winds through their branches play,
And their voices blend as they gently sway,
In music sweet and low
Sweet and low, soft and low,
Like the ghost of a song heard long ago.

In that far land is a silver strand,
By a wild lake's lonely tide;
And beyond the belt of shining sand,
Where the mountains rise on either hand,
The grim old pines abide.
Low and sweet, soft and sweet,
They sing to the waves that kiss their feet.

At eventide, when the mountain side
Grows black in the twilight gray,
When night steals over the forest wide,
And moon and stars in the heavens ride,
The pine trees croon and sway.
Croon and sway, sough and sway,
As I rest in camp at the close of day.

The moon's pale wake, on the rippling lake,
Is gilding the waves afar;
A loon's wild calls the silence break,
And a buck comes down his thirst to slake,
Where the floating lilies are.
Low and soft, sweet and soft,
The wind in the pine trees sighs aloft.

The wavelets woo for my light canoe,
And out on their pulsing breast,
With noiseless paddle I guide it through
The jeweled night, on a pathway true,
To enchanted realms of rest.
Sweet and low, soft and low,
The pine trees sing, and the night winds blow.

I listen long to the weird, sweet song,
The hymn of the mountain pine,
And know, the eternal hills among,
I am close to the Master, far from wrong,
And nearer the One divine.
God is love, God is love,
The pine trees murmur and chant above.

* * *

Far, far away, are my thoughts astray
In that land where pine trees grow;
Fond memory brings to my ears to day
Their vesper song, as they sough and sway,
And bend to the waves below.
Soft and low, sweet and low,
My heart is there where the pine trees grow.

WELLESLEY HILLS, Mass.

MUSKOKA WANDERINGS.—II.

What the Wanderers Saw and Did in Lake Muskoka.

In solitude sweet in this forest tall,
Thus I spend in the lonely wood,
From leafy June to leafless fall,
Till verdant woods bear winter's pall—
Summer days in the lonely wood.

For here I find a safe retreat
In my home in the lonely wood,
Away from the world, with its sham and cheat;
A place where God and the heart may meet,
Is my home in the lonely wood. J. W.

LIFE to us now took on a more conventional aspect, not that the level of ordinary life had been reached, but that a compromise had been effected between the Robinson Crusoe life of camp and the social code governing more fashionable resorts.

For the first time we came within the reach of churches, of which no less than three were near at hand to choose from.

Shall I ever forget the warm Sunday afternoon we sat within the walls of the little doll's house—Church of the Holy Cross, at Fairmount—listening to the white surpliced expounder of the apostolic claims of his church or watching the droning wasps in the windows! The quaintness of the tiny building pleased the eye, with its unplastered lath and unpainted woodwork, its point-device equipment of organ and pulpit, litany desk and credence table, altar and reredos and all the paraphernalia of ritual; and yet nothing but husks—no word in season to offer to the drowsy tourist or apathetic settler.

Not far away, on Keewaydin's breezy point, stood a small marquee, and here on Sunday evening gathered a small congregation to listen to the words of a local preacher or some traveling divine, while the lambs of the flock sat outside and watched the sunset glow fade into twilight and the evening star shine out in the darkening sky.

I have listened to the softened harmony of a hymn as I paddled slowly with noiseless blade through the quiet channels of the Seven Sisters, watching the reflections of their rocks and trees deep within the bosom of the dreaming waters, and the utter rest and the peace of nature sunk into my heart like a divine benediction.

Set a prophet of the wrath to come upon a rock overlooking the watery mirror, with the glory of dying day shining on his face and the last soft breathings of Shawondasee* still faintly stirring in the foliage, and the awful words of everlasting damnation would choke between his lips. No place this to talk of a wrathful God and atoning sacrifices; Love alone is here enthroned.

Muskoka is not always a land of sunshine, and times come when the rainy Hyades are in the ascendant, and cold, bleak winds lash the lakes into choppy, foam flecked waves. Then, with book in hand, we sat under sheltered verandah or in the opening of our tent and watched the swaying pine tops and the shifting tints running through the birch and maple as the strong wind turned their leaves, or else lost ourselves in the printed page, listening dreamily the while to the rain pattering on the roof like the footsteps of departing summer.

*The south wind.

On such a day, clad in waterproofs, we faced the rain and wind in our canoe, and called on friends we knew would scarcely care to brave the weather and leave a fast closed door and deserted verandah to face a weather-scorning visitor. Once beneath their roof, a cordial hospitality would not hear of our leaving till the hour was late; indeed, it needed small persuasion to cause us to linger later, and yet later in the hope of an abatement of the storm.

At last the rain ceased, and a merry party escorted us to the water's edge, where lay our craft. Then regretful adieus, a waving of lanterns, and the darkness swallowed us up—a darkness that blotted out the earth as though it were not. The shadow of night lay on us like a pall, and a spirit of

LOOKING FROM MY BEDROOM WINDOW.

brooding mystery seemed hid in its muffling folds. Instinct alone seemed our guide, rather than sense, as we stole from point to point, the dim outlines of one vanishing long ere another disclosed itself to our straining eyes. How like we seemed to yearning souls striving to penetrate the mystery of life, seeing but one tiny arc of the vast circle of knowledge and yet seeking, with intensest effort and with agony of spirit, to construct the whole of the vast unknown from the fragments their senses have explored.

Truly, the darkness of ignorance was upon us, but past experience and the quickened perception it begets won us through in safety.

In life-giving breezes, Muskoka has few rivals; fresh, strong and impetuous, they sweep over the land from the west, bearing color for the cheeks and health to the tired frame.

In the morning, looking from my window toward the half-hidden opening of Milford Bay, I was generally sure to see light ripples running across the water from the southeast or south. Toward the middle of the day a dead calm fell upon the land, and trees and shrubs quivered through the heated air rising from the rocks.

Then came faint stirrings of breeze from the southwest or northwest, and before long a steady pouring of wind till, the noon-tide hour well past, strong squalls were chasing changing shades across the water and singing with insistent note through the waving trees. What sailing days these were, and how the sun and wind seemed to penetrate your very tissues till a glow of life ran through the pulsing arteries.

On such a day we visited Bala Falls, pushing through the constantly turning stretches of the lake with a boil of white under the bow and an eddying swirl astern that well betokened the power of the pouring wind upon the straining canvas.

To me that sail was a shifting panorama of rocky points, changing isles of green, fleeting cloud shadows ever throwing magic transformations over the landscape, and a blazer-clad crew distributed along the gunwale brimming over with a very exuberance of life as they watched the bubbling water flashing along an inch below the lee gunwale.

Bala Falls are merely pretty rather than grand and picturesque, yet I love to watch the tumbling water of the main

MUSKOKA LIFE.

fall with its spurting jets of spray, and fierce quick rush through the water-darkened rocks at its base, and to take the dash of its cooling spray in my face. This was our first glimpse at the more rugged and stirring scenery to be found on Muskoka rivers, and which contrasts so well with the quieter beauties of the lakes themselves

When we said good-bye to Bala it was with genuine regret, for the ceaseless, sparkling life of rushing water has a charm that never palls. Quietly enough we slid down the bay to the narrows, the wind seeming to have exhausted its strength, but after we had drifted through the little strait the mighty west wind, *Muojekeewis*, awoke to find a fragile skiff braving his power, with butterfly wings, and in his very home. Then, with the war club with which he slew the mighty *Mishe Mokwa*, the great bear of the mountains, he smote us as we lay scarce moving. Like a high-strung horse stung by the spur of its rider, our good boat shivered to the blow, and then keeling over till the water trickled over the straining rail, sprang northward with a rush. Fierce and fast then fell the blows of *Mudjekeewis* and fast and faster flew the boat, dashing the chop of water into spray with her nose to be hurled in showers over boat and crew. A spirit of merry madness seemed upon us, and without thought of fear the girls sat up to windward with glowing, waterwet faces, and laughing eyes framed with blowing, tangled, spray soaked hair. On we dashed, past Sandy Point, with its white tents and huge dinner bell looking so like the bell of the Inchcape Rock that one might well expect the stout craft of Ralph the Rover to be near at hand. On, still on! past Shaw's and Bassett's, and into the steamer channel, where the waves boil angrily around the Kettles, half submerged in menace to the unwary. The wind was then astern as we swung into the channel and far too strong for our narrow skiff to run dead before it without fear of dangerous rolling or unexpected jibe.

"Take a zigzag course, then run down toward the Kettles on the south, then shoot across to the Isle of Skye on the north, then, with an easy quarter run, the channel can be cleared." "Done!" and toward the Kettles we go.

"Is it safe to run so near? Are there no hidden rocks?" A clatter and bang down beneath us and the centerboard gives answer.

"Down with the helm! In with the mainsheet! Quick! No place this for slow coaches. Shove the boom to windward! Let draw!" and we are off again with the wind on the other quarter On the Isle of Skye side the performance is repeated and we run clear well into the channel, running north to the Indian River before going about and heading homeward.

There is no abatement in the wind, and Mortimer's Point, Cooper's Point, Gibraltar, Hiawatha, Crown Island, Raspberry, Idlewild and the Seven Sisters, are passed at such a pace as our boat had never done before.

And so we reach the finish—wet and wind-dishevelled, but happy—the girls on the gunwale like the rest and leaning far out to windward, proud to show their sailorly skill to watching friends ashore.

No one who sailed with me that day from Bala will ever forget that experience of rushing, breezy, gladsome life.

"Parting is such sweet sorrow," said Juliet to her lingering lover, and truly when leaving valued friends and well-loved scenes there is much truth in the words, if we can but say "Auf wiedersehn," for memory will recall their charm

"SO LIKE ONTARIO'S GRAND OLD MAN."

and anticipation seize the future to ease the pain of parting.

I said Good-bye to Donald at Keewaydin, and the 'Nut-brown Maiden" stood beside him on the wharf and waved me a long farewell and God-speed!

Donald was hearing other voices than those of nature, for love was whispering in his ear, and very pleasant was the sound.

It seemed as though the steamer knew my longing to take a parting glance at the familiar places where I had been sowing the seeds of reminiscence, for after leaving Beaumaris she circled past Gibraltar, past aspiring Crown Island, and brought again into view the distant Point of Keewaydin with Winona beyond, and then turned south to Mortimer's Point to meet the Bala steamer.

Then whispered memory in my ears—Was it not behind yonder rock on Raspberry Island that looks so like Ontario's grand old man, that you came upon Donald and the maiden hand in hand? How they blushed, and how the sly joke and merry laughter passed around.

There it was that you caught that huge pickerel, the one that got away How she watched with parted lip and flushing cheek your struggle with the darting fish, and when, with a flash of his golden belly and a sweep of his tail, he broke from you, when victory seemed a certainty, was not her vexation as keen as yours. It pleases you to think of it, though other eyes have attracted you as much.

You were just about here when the black squall struck you the day you went to Bala. How well the girls jumped to the gunwale, and then watched your face to gather from your set mouth and watchful eye the extent of the danger, while you, with sheet in hand and finger on tiller, leaned far over the water as the boat careened to the blast.

It was there your tent was pitched the night you watched the spirit dance in the northern sky, the aurora that lit the heavens with trembling green and rosy light, and the whip-poorwill uttered its mournfully plaintive cry in the dark woods behind you.

Do you not remember how you stood on Crown Island's summit and looked around on Muskoka's breezy panorama of lake and island stretching far and wide at your feet, and how you strove to set in definite thought the feelings that welled up within you; how you longed to find words to express Muskoka's charm and could not; how you longed to set on paper the words that burn and could not?

Some day when reading a great poet's work, you will come across lines that seem to you so beautiful and true that you will straightway commit them to memory. The poet has put into the words the feelings that struggled within you for utterance, and found none. Then you will know how true the saying is that the poet is the word maker, the man who finds language for that which other men have only dumbly felt

All this and much more had memory to say to me, but as she spoke the steamer was churning the miles astern, and

almost before I was aware of it Muskoka wharf was in sight, and Muskoka life the memory of a dream.

J. Edw. Maybee.

LOBSTER FISHING.

On the shore of Massachusetts Bay, in a little place eight or ten miles south of P., is a little settlement, the chief support of which is farming and lobster fishing. As you sit down to a lobster salad or broiled link, do you ever think of the work, and the people who work that we may enjoy these dishes?

Let us look the thing over a little. In the place of which I speak, nearly every man, young and old, is engaged in this business some part of the year. Now, what about this fellow called a lobster, and where is he?

In cold weather he goes into deep water to keep warm, and in the spring, as the weather and water become warm, he crawls inshore again to breed, and also to find a place to shed his shell. Do you know what I mean by this?

Well, a lobster begins life on his own account with a shell that is one or two sizes too large for him. In the course of time he grows to fill it, and then looks about for a place to cast it off. Before he gets ready to make the shift, there is a soft skin which forms under the shell; this hardens after the old shell is cast off and becomes the new shell. When he is in this condition, he is worthless except for bait, and is called a "black skin" or "shedder." When he sheds, the old shell cracks down the back and he manages to crawl out. He is now a soft, flabby fellow, and must hide himself somewhere out of reach of his enemies; for while he will live on them when his shell is hard, he, as a shedder, is a prey to every fish that swims.

After his shell gets hard, he then comes out looking for food. As you will see, the best time to catch him is when his shell is full, or just before he becomes a shedder. Now let's see how he is caught.

In the early spring the traps or pots must be put into condition. A pot is made with an oak frame about 4ft. long and 2ft. wide, with slats nailed lengthwise, forming the bottom. Then there are four bows bent from one side over to the other, with slats nailed the same as on the bottom.

It now looks like a chickencoop without ends. We now take a small, wooden hoop about 5in. in diameter and knit a coarse net around it until we get to the rim of the trap. These are tied to the rim and then the hoop is fastened inside, one at each end. Now make a door in the top and you have a lobster pot ready for line and buoy. The line is about 100ft. of the common clothesline, and the buoy is a piece of wood shaped and painted to suit the fancy of the fisherman.

After a man has selected certain colors for his buoys he is known by these colors; or, as they say, "paint." Should you ask one of the fishermen who owns a trap, the buoy of which you hold in your hand, he will answer: "That is Wen's paint," or whoever owns the trap. He knows the colors at a glance.

After fastening in the hook on which the bait is placed, the pot is ready for sea. A lobster crawls up on the net in the end, goes through the hole after the bait, and drops down inside the trap. He does not know enough to go out the same way, so there he is.

As everything is ready to set the traps, let's get our bait and go out. We put six or eight pots on our 15ft. dory and take a bushel of bait—but let me tell you what the bait is: Fish of any kind is good, and to be first-class it must be "stale"; and the staler it is, the better the bait. Our friend the lobster is not particular what he eats.

Uncle G. says the best catch he ever made in one pot he got with a dead hen on as bait. The most common bait is herring and sculpin, while hake, skate and dogfish work very well. These they cut into pieces weighing about 2lbs., and then set them in the sun to ripen. As the fishermen say, this gives them a good land flavor. It is well for us who like lobsters that they do not get the same flavor.

But we will get back to our dory, and should the water be rough we find that it requires all our skill to handle her. I found this out to my sorrow when I tried it at one time. After we have gotten out from the shore about half a mile we put some bait on the pots and throw one over. We go about 30yds. further along shore and put over another, and so on until we have put out sixty or more. The next man goes outside and makes another line, or "string," as they call them. We must now catch bait for the fishing to-morrow, and on the "low water" get the "cars" out, into which to put the lobsters which we expect to catch. These are anchored close inshore, in some sheltered spot, by a strong chain and rope. We are now fixed, and in the morning we will go out and "haul."

At about 4 o'clock in the morning Wen is on hand. Taking a seat in the dory we watch the ease and skill with which he "pushes" us out to the first buoy. I say "push," for these fishermen stand in the boat facing the bow and push the boat along with the oars instead of rowing her. We reach the first buoy and Wen takes it with the boat hook. Putting on his "oilers" and a pair of thick woolen mittens to keep the line from slipping through his hands, he begins to pull. You cast your eye over the side and try to see what he "has on the string."

Soon you see the pot coming out of the depths with seaweed and kelp clinging to it, but before you have had time to look he has it at the side of the boat. With a quick pull, which takes practice to get, he has the pot on the rail, and inside you see a variety of "game." There may be lobsters of different sizes, crabs, sculpin, cod and perhaps other kinds of fish; and then again, it may be as bare of everything as a billiard ball; but this is "tough luck," so we will have a catch on this trip.

Lobsters of various sizes, and as the fish go into the bait tub and the crabs go overboard, we will confine ourselves to the lobsters. In one corner of the pot is a large dark green fellow trying to back out through the slats, but the door is opened and he is seized by the back and placed carefully in the boat. He is a counter. There are two and perhaps three of these; the rest are "snappers," or "shorts," as they are called.

To explain what I mean by "counter" and "snapper." The law in Massachusetts is that any one catching or having in his possession a lobster under 10½in. in length is liable to a fine of $5 for such lobster. They are measured from the end of their beak to the end of the tail. If they are over the required length, or even the exact length, they are called "counts"; if under, they are "shorts" or "snappers." One trick of this trade is to get a snapper that will almost go and then stretch him. Talk about "leg pulling," it isn't in it to what some of the lobsters get.

We have an egg-bearing lobster in one pot. This must go overboard, for the law protects these as well. In my opinion, these laws are right, but of course they are hard on the fishermen.

We have a measure stick in the boat, and the catch is measured—if they are long enough they go into the boat; if not, they go overboard. We have taken the lobsters from the pot, put new bait on the hook, and now we throw her over. This we repeat at each pot, and find that our catch is sixty count. We get in shore to the car as fast as possible, and put them in; there they stay until the smack comes for them.

You may not know what I mean by this kind of a smack. She is a small schooner, with what in other vessels is called the hold fitted watertight on the inside, and then the bottom is made full of holes to admit the sea water, and really makes a large floating car with sails. The place where the lobsters are carried is called the "well." The smack goes along shore, picking up the lobsters from the fishermen, and pays for them at the rate agreed upon in the spring. She has a regular time and route, and often acts as express messenger for the boys.

The smack which goes to the place of which I write is the Evelyn Adams, of Boston, and I have spent some pleasant hours with her captain and crew. When she is sighted, the lobster men get their nets, and there is a grand hustle to put the catch aboard. The dories flock out to her with their loads, and the men joke each other about their catch. The lobsters are counted as they go into the well, and after a dory is unloaded, the man takes his money and sits down to a little smoke. To start a "jolly" he sings out: "Say, Tom, how do you like fishing my pots?" "What the blazes do you suppose I want to fish your traps for? I can get fish enough in my own." "Well, I notice I get more when I get out earlier than you do" —but here comes a boat with an extra large lot. Then there is a lot of whispering among them, and you hear: "That's where they go," "I'll move my string in the morning," "Strange how he can catch them and we can't."

A TYPICAL LOBSTER FISHERMAN.

Taking their case, jug, box, or whatever it comes in, they go over the side into their dory and home. This is the work of these men, and it is work, I can assure you; but they become accustomed to it, and manage to keep nice farms besides. The fishing begins in March and continues until June; then the traps are taken ashore until August, to dry and be repaired.

July is the month our friend takes to cast off the shell that has stood by him for a year, and the fishermen give him a chance. By Aug. 1 he has got into his new shell and got acquainted with himself, as we might say; and now the fishermen get after him and keep it up until November, or until he goes off into deep water for the winter. Such is the lobster fishing in Massachusetts, and it is the same everywhere along our coast, with the exception of the season of fishing.

In some places they go after our friend in his winter quarters, and in this way we have them in the winter. We get the most of our lobsters in the winter from Maine and the Provinces, and the fishing there at this season of the year must be something that you could not call fun.

Our fishermen say that it is hard work to clear $600 a year lobster fishing. Not very big pay for such hard work, is it? And these are the things of which we do not think when we order one on the shell. While at the beach I have had some traps for my own use and have taken pleasure in the work of running them. One day a friend, not having seen a lobster caught, went out with me. I pulled the traps and threw the lobsters into the boat. They were crawling around her feet and, in fact, were all over the boat. She stood it for a time and then said: "Say, can't we drive these things up into the front of the boat?" After we got them fixed she took one in her hand, and after looking at him for some time said: "What kind of an opinion do you suppose the man had of himself who first tackled a lobster?" Do you blame her? He surely looks the least like something eatable of anything I know.

I learned one thing during my fishing, and that is that to be a success as a lobsterman one must be able to get out early in the morning "to hear the birds sing," as the fishermen say. There is more or less of the "early bird," etc., about this fishing, and in this case it is not worms but lobsters which are caught. As a rule, the fishermen respect the "paint" of one another, but there is quite a temptation to pull them all, and I am sorry to say "some go down."

I think at one time I had the pleasure of taking out two of the most sleepy passengers that ever fell to any one's lot. I had been asked to call them early, and so at about 4 o'clock I gave their door a gentle rap. Talk about the seven sleepers, I will back these two against anyone in this line. They came to the conclusion after awhile that some one was calling them, and I can hear the answers to my calls now. They saw lobsters caught and "heard the birds sing," however, and I guess they saw the sun rise for the first time and I fear the last, if they depend on being called by anything short of an earthquake. I was repaid, however, when I listened to the sweet strains of Mandalay and tried to convince Miss B. that the boat would not be upset.

The fisherman works every day in the week, resting Sunday, and goes out sometimes when you and I would think that we had no use for lobsters. They are a tough, hardy set, and as a rule good fellows. Uncle G. has been in the business forty years and some of the stories he tells are good ones. I may at some time tell of a fishing trip taken with him to his trawl, but enough, do I hear you say?

F. C. Woodward.

SHEEP AND SNOWSHOES.—IX.

A Winter Hunt on the Summit of the Rockies.

When it comes to reading a hunting story, most men like to hear about a little hunting now and then, so probably it will not be of interest to go on telling what we talked about in camp on days when we could not hunt. Yet from the continued story telling of our lodge, one may get a very good notion of what he himself must expect if he ever starts out to go hunting in the Rockies in the winter. It is very much a case of the fortune of weather. If it storms, he cannot hunt; and it usually does storm.

We lay about camp two days more, March 17 and 18, eating and telling stories. John Monroe and his woman came up from their camp below, and we had an addition to our staff of *raconteurs*. From John I learned something about trapping otters and beavers with bait in the winter time, and one time he and I went out to the creek where Schultz and I had found an otter drag. Here we spent over an hour making a most cautious water set for the otter (with no result within the time we spent in that country, the otter seeming to have left the vicinity on his travels). We had a good tramp that day along the creek in search of sign, and visited a big beaver meadow, of which John knew. Here we saw the winter home of this industrious animal, and I learned more of its habits than I had ever known before. The whole creek bottom was covered with the houses and dams of the beaver, all hid under the snow. Once in a while we saw an open place in the water, and at one such spot found the trails of several beaver which had come up out of the water and gone far out into the willows and aspens to cut wood for themselves. John said he could trap a beaver or so easily enough if he wanted to. He could also get a moose, or almost anything else, he said; but all this he was going to do "bime-by." So long as immediate want did not stare him in the face, he was willing to postpone his operations very comfortably. He said he was going to wait till we had left the valley, then he would go hunting. Madame Monroe was not consulted in these plans to any very great extent, though her spouse evidently counted her in as a factor. "My hwoman, he strong," said John, with much comfort in that thought. But Madame, who spoke English even better than her husband, once told me in a swift aside, as they say in the novels, that her private opinion regarding her lord and master was, "Him heap lezzy." But this state of affairs did not in the least detract from the interest attaching to John.

No Cat Yet, but Another Sheep.

Meantime McChesney was faithfully hunting at every opportunity, so that he and O-to-kò-mi got thoroughly acquainted with the big mountain on which I had killed my first sheep; yet try as they could, they could get no further chance at a sheep. Billy Jackson also had bad luck, for the first day he went up to the carcass of my sheep to gather in his big cat from the snares he had set, he found that the cord of one of his snares had been cut clean off by some sort of animal, which had then departed for unknown country and had not come back. He thought the cat, lynx, lion, or whatever it was, had been caught by the foot instead of the head, and so had had a chance to break away. "Never mind," said Billy, "I've got another snare up there yet, and we'll get that cat sure. He can't stay away from that sheep till it's all eaten up. Give him a day more and he'll be back there."

On this day Schultz and Mrs. Monroe, who were left to keep camp, fixed up the lodge in beautiful shape; so that after that we had much less trouble with the smoke and could keep warm with less trouble. On the evening of March 19 we had quite a comfortable reunion. John and Mrs. Monroe dropped in for tea, by the merest accident, and McChesney and O-to-kò-mi get in a little late and very tired and hungry. Billy and Schultz and I all rounded up in time for supper, and the prospector, Riley, from Midvale, whom I have earlier mentioned as visiting at the lodge of John Monroe, also came in after a long day's hunt. And of all the men about the fire, Riley alone had killed his meat that day. Going up the mountain with McChesney for a little way, Riley then swung off to the right toward the Cut Bank Creek, and in the afternoon was lucky enough to kill a ram, a beautiful four-year-old, with long, perfect, sharp-pointed horns. He brought the head and part of the meat into camp, and told us where we could get the rest of the meat, up near the top of the ridge leading down into our valley. The head of Riley's sheep was a singular and beautiful one, being in perfect coat and in color almost snow white. I have never seen any other mountain sheep so white (I never saw a specimen of the Stone bighorn from the far North), and none of my heads were anything like so white, though very much lighter than the heads one ordinarily sees, killed at other than the winter season. Riley said he had had a long and dangerous climb for his sheep, and had first wounded it and then followed it a long way before he was able to finish it. He was justly very proud of this head, and announced his intention of having it mounted.

March 19 broke warm and fair, and Billy Jackson seized this opportunity to break out for the settlements. We were now nearly out of grub, and besides Billy's rheumatism was growing worse, so that he had no comfort in camp. Much as we disliked losing him, he had to go. He said he would send up some grub to us by the team as soon as it could get in. As he had to walk only about eight or ten miles to the first ranch we had no fear about his getting in all right, as indeed he did without incident.

A Side Trip for Sheep.

It had now become obvious to all of us that it was use-

less lying at our big main camp and trying to make a successful hunt from it, for the game was getting wild, and it was too far to go and get back each day. McChesney was getting tired out, though I had hardly made a day's hunt since I got my sheep, as we all wanted Mac to get his head sure. Under the circumstances we determined to make a side trip further up into the country, lying out for a night or so and trying to get in where the sheep were without alarming them so much. Schultz, McChesney, O-to-kò-mi and I made up this party, and we had no easy task ahead of us, for camping out in the winter with only what you carry is no light job. McChesney took only a part of his sleeping bag, and I split my blankets. Schultz and O-to-kò-mi took no blankets at all, only their heavy overcoats. We had a small lodge made of light stuff, and this with our scanty grub and selected small belongings made up a good load for each. We pulled out early in the morning and shoed it up through the creek valley to a place where John Monroe and I had found the creek nearly frozen across. Here we cut a little tree and went over the gap in the ice bridge. From that time on, across Sheep Creek up to the upper Two Medicine Lake, we had an awful climb, uphill all the way and most of the time on a grade like a house roof. In places it would take many moments to get over the drifted snow which lay across the easiest place of ascent on some sharp ridge, and often we had to tack up a long steep hill, where the slope was too sharp for the web shoes to hold. It was straining, breath-taking work, and we were glad when we topped the summit and saw out over the second lake.

But what a prospect that was! The whole face of the lake as we looked became swallowed up in a shifting shield of white, which cut off all sight of the opposite shore. The wind was cutting in its cold, and the mountains were black and threatening. Rarely have I seen a more forbidding corner of the mountains than this about the upper Two Medicine, as it seemed to us that day.

Camping in the Snow.

We bent under our packs as we faced this sharp wind, and at last got to the cover of the woods on the other side of the frozen lake. Here we hunted for a long time for a place to make our little bivouac, but had trouble to get a suitable spot. We needed plenty of firewood close at hand, for we would be obliged to keep the fire going all night. We needed plenty of boughs, of course, and we required a sheltered corner, where the wind would not strike us, and where the smoke would be carried away and not into our camp. We took nearly an hour exploring before we set upon a location, finding a likely-looking spot under a big, leaning spruce which topped a short and steep little bank. As it turned out, this was about the worst place we could have found, though we could not tell that until we had taken away the deep covering of snow. When we did get it dug away, some 5ft. deep, we discovered that we had pitched upon the bottom of a little creek, which carried a covering of a foot or so of solid ice. It was too much labor to change, so we decided to camp on top of the creek. We cut away the ice with the axe, and so built a fire on the bottom of the creek. Back of this we made our pile of boughs for a bed, and soon our fire was eating away at the snow bank opposite, till we could see twenty different strata of snow and ice showing in the cut face of the hole, annotating the effect of so many snowfalls and so many different Chinooks. In the snow pit we put up our little lodge roughly, simply using it as the back for an open-faced camp, the fire being in front of us at the bottom of our den. It was well on in the afternoon before we got ready for the night, for, though we were not more than eight miles from the main camp we had left, the morning march had been a long and slow one, and the making of a camp dare not be slighted when the weather is far below the zero point. We were tired that night as we sat down to a rather dismal supper in the snow. It had snowed all the afternoon, and snowed and blew incessantly almost all night. Our Indian was glum and silent and Schultz was not very chirk himself. Yet, though he had no dishes, no spoons and no forks, Schultz went about the task of getting supper as though he has always done it under just such conditions. He dug the frozen pork and beans out of the vessels and placed them on the snow, while he was frying a slapjack or two in the single pan. He got a pot of tea done meantime, and in a while we all felt a little better, after a meal of beans, bannocks and tea. Night fell very dark and stormy and forbidding, and we did not do much talking. Neither did we do very much sleeping, Schultz and the Indian least of all, for they had no blankets, and so had to keep close to the fire, which was constantly in need of replenishing.

Before we had our supper eaten—and indeed within a short time after we got to camp—O-to-kò-mi had espied on the far-off face of Rising Wolf Mountain a pair of mountain sheep, which fed in view for some time. The sight of our game was the only cheerful thing we had to think about in camp that night. All around us was a cold, grand prospect. We were in the depth of the Rockies in midwinter. Our little camp was pitched within two miles of the summit of the main ridge of the Continenal Divide. That country in the winter, I may say, is not an inviting one. The impression is rather one that a fellow is not wanted there.

All night the soft snow fell, and in the morning spits and squalls and determined storms came rushing down the front of grand old Rising Wolf, blotting out at times all the view of the steep and ice-covered rocks which were to be our hunting grounds. At breakfast we were silent, O-to-kò-mi only saying something to Schultz in Piegan. I asked him what the Indian was saying, and Schultz replied, "He says it makes a man feel mighty poor to sit around an outfit like this after sleeping cold all night." In truth, our breakfast was not very heavy; and by some reason it appeared that breakfast was about all we were going to get, for Schultz said our grub was nearly out, as it had been impossible to pack any more than we did. This was news to me, but it seemed very likely we would have to kill some game that day or go hungry.

The Medicine Birds.

As we sat at breakfast, each man covering his plate of broken bannock with his arm to keep the snow out of it, O-to-kò-mi suddenly smiled and talked fast in Piegan, pointing out over the lake. There was a whole flight of his medicine birds, the ravens, all calling and pitching and tumbling, a couple of dozen of them. This, O-to-kò-mi said, was a certain omen of good luck, and he brightened visibly. He said that these ravens were young ones, and that the old birds were teaching them to fly. At this I was surprised, but he said that the nesting time of the raven is in midwinter, the eggs being laid at about what is our Christmas time. How the young birds live thus in the middle of such a winter is a mystery to me, but this makes only further proof to the Indian mind of the wisdom of this bird.

After breakfast Schultz told me that he and McChesney were going to hunt together, and that they were going to take the Rising Wolf country for their field, trying to get to the two sheep which had been seen the day before. Therefore, O-to-kò-mi and I were to have our first day together, and we drew the opposite side of the lake for our country.

When the Indian and I started out I saw him look long and carefully at the peaks which shut in the upper part of our little valley. Just above our lake the valley divided, and off to the left arose a series of singularly ragged and abrupt needle peaks. Here John Monroe and O-to-kò-mi said was a splendid place for sheep, and more especially for goats. O-to-kò-mi evidently wanted to try this, but concluded that it was too icy, or too far, or too something; at any rate he turned away and struck out in another direction, directly up the face of the big mountain which faces Rising Wolf across the upper Two Medicine. By what signs and words I could understand, I inferred that he thought the sharp peaks too stormy for us, but in any event I thought it would be best to trust absolutely to his judgment in all matters of the hunt. So I did not say anything, but followed him as best I could up the mountain. It was a long, hard, snowy, icy climb, and when we got up pretty near to the rim rock on top of the peak we were obliged to cut steps in the ice, one at a time, in order to get along at all. A little slip would have meant a very long and rapid slide about then, with no choice place for a bringing up. At the edge of the rim rock we stopped again and looked about us and below us. Never have I been more impressed with the wild grandeur of the mountains. The scene was startling—almost oppressive. I remember the chief impression I gathered was that a man did not belong in there—that it was the country of the sheep and goats, and that they should have it all their own for at least a portion of the year. Not the first quality of invitation existed in this frozen-faced, impassive calm, for now, for a brief moment, the storms had stopped and the glare of the sun lay over all the icy world.

Searching for the Game.

O-to-kò-mi stopped all my surmisings by starting on down the mountain again, telling me to come on, as it was useless trying to get over the peak at that point, since the ice was too bad on the slope of the mountain face. So we slid down the ice the best we could till we got to snow again, and then began a long tramp in the edge of the woods to skirt around the peak. I had no idea where we were going or what we were trying to do, but it seems that the Indian hunter was trying to get across into the upper valley of the little creek which ran back in the mountains. I asked no questions and bent all my energies to keeping in sight of him, for he was a demon in the mountains. Finally we came out at a high ridge where the view was not broken, and I saw that we had got around our ice mountain and could see a widish valley lying on ahead of us. At this O-to-kò-mi pointed calmly, saying, "Plenty sh'ip." By this I understood him to really mean that maybe we might see a sheep after a while, not taking it as literally true that plenty of sheep were to be found so easily.

Down a sharp and long bank we slid and plunged through the snow, and so reached the bottom of our valley. Then we began to climb again, the red hunter all the time searching sharply along the sides of the flat cañon as they unrolled before our progress. On ahead I could see a great, dome-shaped, bare mountain top, apparently not more than a mile or so away. This, I learned later, was the summit of the Rockies for that portion of the range. My red man could not tell me that, nor did he pause to tell me anything, for now he began to act as a dog does which expects soon to be upon its game. Once or twice he showed places where we had expected to see sheep feeding, and also pointed out spots where he had killed sheep in earlier hunts. O-to-kò-mi, as I have said, is one of the few men of his tribe who hunt sheep now, and I presume there are none better in the tribe than he.

Sighting the Game.

We had gone up our little flat cañon or valley for about half a mile or so above the timber, and were tramping along up steadily, though slowly, on the noiseless snowshoes, when all at once O-to-kò-mi, who was leading, quietly dropped back and touched me on the shoulder.

I looked up. The eyes of the Indian were set and glaring, yet he had himself in perfect control. I did not then know it, but it later transpired that Schultz had told him not to do any shooting, but to keep cool and give the white man the shot always. What hardship this must have been, no one but a hunter can know. O-to-kò-mi's eyes glared as he looked on ahead and above, whispering as he touched me:

"See! see! See um? see um?"

Presently I "saw um." On a little jagged rock, about 150yds. above us, and high up on the side of the cañon, was the front of a bighorn, which stood motionless, directly facing us, and looking steadily down at us as we toiled on up the valley. Had I been alone I should never in the world have seen this sheep, for in color it blended perfectly with its surroundings, and it was half concealed by wreaths of snow, which curled and blew along the mountain side around it. Yet the infallible eye of this hunter had seen it, and now he stood pointing it out to me, never looking at me, but with his own eye fixed on the sheep. "Shoot! shoot!" he whispered, eagerly. "Shoot um, quick!" His English became more obvious under stress.

Shooting the Game.

The situation now was this. The Indian had his rifle ready to jerk from the canvas case slung over his shoulder. I had no canvas case, so kept my rifle covered in a cloth case, which was now slung across my back on a knotted thong. I at once kneeled down and pulled the case off over my head; but fearing that the sheep would move, and knowing that it would be a moment before I could get into action, I whispered to O-to-kò-mi to shoot. I saw the head was not a large one, and was willing to give the Indian the chance as it was. But he very calmly, by this time having grown quiet and free from any excitement, replied: "Me no shoot." He was remembering Schultz's injunction, I suppose.

It seemed a very long time before I could get the little rifle out of the case and get the wiping rag out of it, and get my glasses off and get a rapid estimate of the distance for the shot, all of these things being necessary under the conditions of snowshoe hunting. Really, it may have been a very small part of a minute, but all the time, whatever it was, the ram stood looking at us, never moving a muscle. In the shifting loom of the storm his head sometimes looked larger, and I thought the horns would sweep well back and half forward in their crescent. I knew the animal was not a ewe, and concluded that I wanted it. As to being excited, I had not thought of that, and the Indian also was now absolutely quiet waiting for the shot. The target offered was not large, for the ram was directly facing me. I did not touch the sights of the .30-30, but fired quickly as soon as I caught hair on the rise.

At once the sheep drew its head back and up, and gave a stiff jump around the rock, disappearing completely. I was very much annoyed at this, for though the shot was not an easy one, it was one which I should have made. It was comfort, however, to hear O-to-kò-mi say in a matter-of-fact tone of voice, "Mebbe hit um." I did not urge him to give reasons for this belief, and as he did not revile my marksmanship I let it go at that. At once he led on out up the valley a little further, around the point of rock where our sheep had disappeared. Then he stopped again, and in the same perfectly calm and emotionless voice said, as he slowly dropped back and pointed up the cañon wall, "See um?"

I looked and looked up the face of the mountain, trying to "see um," but for the life of me could not. All the side of the mountain seemed to me gray or brown or white, covered with the shift of the flying snow. But the other was patient, and at length got me to see, far away up the side of the mountain, over 250yds. distant, not one, but four sheep standing huddled together, and looking down at us, motionless as had been the first one. "Mebbe hit um," said O-to-kò-mi; and then he with difficulty made me understand that the dark-colored sheep, the one almost hid in the middle of the bunch, the one with its head down, and with the dark stripes up its legs, was the one I had shot. "Him buck," said O-to-kò mi. "Mebbe you hit um."

A Dilemma.

But alas! though this might be a "buck," it was clear that the others were not. Not a horn could I discover in the other three, though it was so far to where they were and the storm was driving so much snow ahead that I could not make out much with certainty. The four sheep, lapping each other like the fingers of one's two hands laid together, stood looking down from their far-off perch, not making a move to split apart and give us a better look. I recall at this moment the peculiarly silent, the tragically motionless character of this drama of the winter mountains. It was so still that one felt uncomfortable. For one minute, two, three, really I think without exaggeration more than five minutes, the sheep stood looking at us, and we stood looking at them. I would not shoot at the bunch, for I was almost sure I would kill a ewe if I did. I asked Ot-o-kò-mi if he wanted to shoot, but in the same absolutely indifferent tone he replied, "Me no shoot." After a time he again said, "You hit um." Then it occurred to me what was the real explanation of this action of the sheep. The "buck" was really hit when I fired, and it was standing still because it was hurt, the others not running away because it did not.

What to do then I did not know. It was folly to try to split the sheep apart, for a jump or two might take them where we could not go, and so perhaps the cripple would escape after all. We could not get any closer, and from where we were the shot at the crippled ram was a very hard one, the light bad and the distance at least 250yds. In my dilemma I once more asked O-to-kò-mi to shoot, knowing he had no scruples about killing a ewe. I offered him my rifle or his own, but he was dead game and declined like a gentleman. "Buck," he said, however, pointing up. "You hit um."

At last, with some desperation in feeling, I concluded I would risk another shot at the crippled ram. So I took off my snowshoes and sat down on them, carefully cleaning up the rifle sights and taking a steady rest with my elbows against my two knees—a very good way to get a rifle rest. I did not raise the sights to 200yds., for I had never tried the rifle out thoroughly with any elevation to the sights, though I knew about what it would do with the sights as they were set—for 100yds. I held full and strong midway up the body of the dark-colored sheep, which I knew was my ram, and at the crack of the rifle the band of sheep fell apart as though a shell had burst among them. It was like the breaking of a spell, and now, instead of silence, all was action. To my horror I saw my "buck" start off to the right, evidently hit, but not the only one hit; for in the opposite direction, with its head held high in pain, stumbled a second sheep, without any horns, its hind leg hanging flapping. A big gulp came in my throat then, for it appeared that after all my care I had shot a ewe, and that in the springtime—an offense heinous, no matter what the law of the land where the shooting was done. With one look I saw this, and the next instant I ran the rifle sight on after the stumbling ram, and at the second shot he fell all in a bunch, the sound of the bullet proclaiming him hit full. Then, as the two unhurt sheep ran and again paused at the sight of their fallen companions, I turned the rifle on the remaining cripple, knowing that the sheep could not live and that it was mercy to finish it, ewe or ram. I was angry and chagrined at this ill fortune, which at the time I laid to my bad shooting. I was careless then of aim, and do not know how I held, but I had gotten the range so perfectly at the first shot that it seemed I could no longer miss the sheep if I tried. At the next shot down it went, but struggled up again. This time it was a foreleg which went off. Again the spiteful nitro crack, as the sheep rolled and tumbled down hill toward us, and yet again I got a leg—the remaining hindleg. O-to-kò-mi, caring nothing for the suffering of the poor sheep, laughed at its antics, calling gleefully his word of: "You hit um! You hit um!" But though the sheep was now hit three times, it was not dead. It rolled down and lodged against a bush, and following it quickly I struck it again, this time midway in

the body—the best I could see it. Yet again, even after this shot, which brought a sad blotch of red out upon its white coat, the sheep raised its head, and yet again I fired and struck it, this time laying it out still at last. On my forehead the sweat was standing, cold as was the day. I felt wretched over the whole business, and kicked myself for a blundering idiot all around.

The "Forest and Stream" Luck.

Not so O-to-kò-mi. He joyfully ran to the edge of the slope, and then fast as he could, began to climb, I following at less speed. He got up to my first sheep, and pulling it from behind a tree, where it had lodged, kicked it down the mountain to me. I saw it was a very decent little ram, a three-year-old, I think, though the horns were by no means so large as they had seemed in the shifting light of the storm. Meantime O-to-kò-mi worked across to the other sheep, which was some 60yds. further to the left and a little further down. As he stopped to kick this sheep also down hill he paused, and then called out to me aloud, "Him buck!"

And so it proved! The FOREST AND STREAM luck, and nothing else, had saved me from the killing of a ewe! I had killed two more rams, and so finished the pyramid of sheep needed to show the bigness of the monarch in the FOREST AND STREAM office at home. Now I had four sheep, running down from the biggest head in America to about the smallest. My last sheep was a little yearling ram, with horns only about as long as my finger. Sorely I wished he were back in the hills alive, but I was right glad it was no ewe!

Now came on one of the swift changes of the mountains, and it grew cold all at once, so that we hurried on with our butchering, pulling the sheep down to the bottom of the cañon. When we skinned out the bodies we found that my first shot at the ram had apparently struck on the edge of the chest as he faced me, but had not centered the body, and so had not proved fatal. The next shot, fired at him as he stood in the bunch, had gone low through the brisket, passing through and cutting off the leg of the little sheep beyond, whose position I could not see. The third shot at the ram had hit him just back of of the shoulder, and dropped him at once. All these bullets, soft-nosed, passed through the body, and the front of the animal was well shattered up. The fourth shot, at the little cripple, had been low, probably because I was then holding finer than I knew, and this had cut off a leg, in this case, as in the other, taking it off as though it were cut off with a cleaver, only a strip of hide remaining. One shot in the foreleg smashed the knee joint all to pieces. The last two shots were through the paunch, and churned the interior of the body all up, though the hole on the opposite side was only about as large as a quarter or less. Thus I had fired seven shots to kill two sheep, apparently not a very brilliant performance for either rifleman or rifle. Yet of these shots not one, except the last one at the larger ram, had been placed in such position as would make it fatal. So far as the accuracy was concerned, it was enough to outclass me as a rifle shot, for the distance was long and was a changing one, in part at running shots. I figured it out that had I been shooting the .45-70 I should likely have missed my sheep, and that the effect of the .30-30 was just about the same where it hit as would be an expansive ball in the .45-70. Then and there I determined that for any game up to sheep or goats I should shoot no rifle but this .30-30. Of course, in the story books I should have shot each ram through the heart with a single ball, but I notice things don't go that way when it comes to actual shooting in the winter, or in the fall either, for that matter. I was well satisfied with the shooting and with the results. So was O-to-kò-mi, who flattered me openly about the accuracy.

The Trail Home.

We got out the heads and hides and a good bit of the meat of the two sheep, making them up into packs, which proved pretty heavy before we got to camp, and then we started home for our main camp, O-to-kò-mi saying that Schultz would not go back to the upper bivouac, but would surely go home that night. As we had a down-hill course, we soon made it down to Two Medicine Creek, crossing at our fallen tree, and thence we had a good, stiff plugging time through the level woods. It grew very cold and began to snow heavily. O-to-kò-mi was tired, and so I broke trail for a good slice of the time, and as the snowshoe trail we had made coming up was now entirely obliterated, I often lost my way, much to the Indian's disgust. "White man, all time he get lost," said O-to-kò-mi, in superior fashion. "Me no get lost. I go camp. Night, day, I go camp." He showed me how to distinguish the hidden trail by the look of the snow on ahead and by the feel of the snow under foot. We were nearly frozen about the face, and were tired and staggering when late in the afternoon we got to the door of our blessed lodge and threw off our burdens of meat. Inside the lodge was cheerless and empty enough. Billy's blankets were rolled and strapped, but Billy himself was gone. No fire and no food awaited us. O-to-kò-mi and I were very tired, but we were hungrier than we were tired, so we paused not till we had a pot of coffee and a steak of sheep meat ready, and then we ate and visited with each other, O-to-kò-mi being now very friendly and talkative with me, and recounting as best he could the incidents of the day. He was willing to admit that the little rifle was not so bad as he had thought.

Fortune of the Chase.

After O-to-kò-mi and I had eaten a sort of breakfast and lunch combined we thought things over for a while and then ate dinner. Then we were content to rest a while, and went out and got up wood for the night. Dusk came, and still no sound to announce the arrival of the others of our party, whom we had left eight miles away on the savage front of Rising Wolf. It was dark and very cold when, as we lay on our blankets by the lodge fire, we heard a shuffle on the snow outside. The flap of the door opened, and through it stepped, or rather fell, Schultz, his face white with hanging ice and snow, and his voice faint and weak. He fell forward upon the blankets, with his pack still on his back, too weak to move or get out of his pack. "For God's sake, get me something hot!" he said, "I'm nearly dead."

"Where's Mac?" I asked, not seeing anything of the latter.

"I don't know," said Schultz, "he's back somewhere on the trail, about half a mile, I guess. One of you go out and get him in."

This I started to do, but as I was putting on my things we heard McChesney outside, calling out that no one need go out after him, as he was there all right. Then we got some hot chocolate ready for them as soon as we could. I was almost ashamed of myself for having such good luck again, on what was practically the second day of my hunting, for McChesney was still unfortunate. He and Schultz had gone clean to the cap rock of Rising Wolf, and they had seen the trail of a band of sheep, one of them a very big ram track. They had got almost in range, when in the storm the sheep winded them and went off away over the mountain out of any sort of reach. Then they had gone back to our camp on the upper lake. Nothing was left to eat there, so they had to face the long trail home. Thinking that we would not want to go to that camp again, Schultz had concluded to bring my pack out with him, and to leave the little lodge standing where it was, as he and McChesney would have enough to carry without it. So the lodge was left there, keeping silent camp on the storm-swept bank of the upper lake of the Two Medicine. And there I doubt not it is to-day, for certain it is that we never went back there after it. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Natural History.

MORAL SENSE IN BRUTES.

Editor Forest and Stream:

In Mr. Adams's notice of my communication he defines morality as "obedience to the laws of society." So far, very good. Natural laws pertain to all things, and certain laws govern the conduct of brute society. But that the actions of the lower animals are ever prompted by a sense of duty is not only extremely hypothetical, but altogether doubtful. The hen has strong maternal affection, but that she has the least idea of the virtue of that affection any more than of the virtue of doing good for evil is in the extreme conjectural. If Mr. Adams's account of the storks be true, it is manifest that antipathy existed toward the mother stork, but its existence does not necessarily imply a knowledge like that with which man regards moral good and evil. It is often hard and even impossible to account for the likes and dislikes of animals. The hen will sometimes destroy certain of her brood, and the sow devour her own offspring. Much of the cruelty is practiced upon the brutes for the lack of thought that they are not morally responsible. They are treated as if they are conscious of wickedly, selfish acts. I once saw some men looking at a drowning mouse in a pail of water. I rebuked them, and one of them—a man, perhaps forty years old—turned to me and said: "The mouse deserves it." Why deserved it? Pray tell us. Shall we say it was conscious of the sin of thieving? Others may try to view it in that way—I do not. I knew another man who would hold rats with a tongs and roast them alive in the fire. If he could not prove that they deserved their torture, he certainly wished to believe they did. If we recognize a Creator is it not most rational to suppose that he has created the brutes morally irresponsible, and would have us thus regard them, that our inclination to torture them would be held in restraint? N. D. ELTING.

CENTRAL CITY, W. Va.

Rooster Acephalous.

IT was once thought impossible that a human being could live and walk with a broken neck, and perhaps still more doubted that a rooster could live, stand, and be fed after the hatchet had severed its head from the body. But such are the real hard facts The phenomenal rooster was exhibited some years ago in Huntington, W. Va. The exhibitors said they got the fowl from a farmer who had decapitated it, after which it got upon its feet. However this may be, the headless, living rooster was not a deception. It was fed through a tube inserted in its throat. It is obvious that the farmer's stroke was a little too high, and that a portion of the back brain still remained, and partially performed its functions. How long the fowl lived I did not hear. One thing is certain—he died "game."

A negro, seeing "millions in it," then experimented on the gallinacious tribe, and succeeded in turning out a fair duplicate of the aforesaid acephalous curiosity (for whom I made a picture of the rooster with which to advertise), and he started on a tour of exhibition. He returned not long after and told me he was doing well, and could have made some money at decapitating roosters for other parties who wanted them for exhibition, but that he was prevented by the authorities, upon the accusation of cruelty.

N. D. ELTING.

Coyote and Dog.

MISSOULA, Mont., Aug. 2d.—*Editor Forest and Stream:* Yesterday, while out driving with my wife and another lady, we had quite an experience, as follows: While driving along the road my dog (a female) was running along inside a field, when all at once a coyote jumped up, and I set the dog after it; but she soon tired and came back, and the coyote after her. It followed the dog at about a distance of 15ft., and within 25ft. of the carriage, for fully a quarter of a mile. Once I got out and threw a stone at it, but it came back at once, and followed along for quite a distance until we came to some thick timber, when we lost sight of it for good.

The bitch was not in season. W. E. GRAHAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which. Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

GIVEN AWAY.

ONE day in September, many years ago, I was hunting with very poor success along the border of one of the few tracts of original forest that then remained in our township. The glassy channel of the Slang, a sluggish watercourse that crept along the edge of the woods, was not wrinkled by the wake of a solitary duck, nor did the further curves and reaches of Little Otter show more sign of life. It seemed as if the widespread bounty of the rice marshes offered no attraction to the waterfowl, for I saw another hunter, a marsh hawk, commanding a far wider range than I, beating the broad levels with as little success.

The skirt of the old woods frayed out into a fringe of brush and berry briers, which was ordinarily the haunt of ruffed grouse, was to-day as deserted as the marsh. Now and then a noisy jay or a silent cedar bird flitted out of the thicket before me, and from the marsh on my left arose at every sudden sound the outcry of unseen rail, but neither thicket or fen offered anything that I was in quest of.

Upon coming to the landing where John Cherbineau's log canoe lay with her nose upon the bank, I took the path which led through the woods to the clearing and home of the owner of the craft. Beyond these, a wood road, much used in winter by lumbermen and woodsmen, offered a sure and easy thoroughfare to Louis Creek, where I hoped to find the ducks that must be somewhere With an eye to a possible partridge, I cautiously followed the path, deep worn in the mould by the frequent feet of John and his fat old wife, till the sunlit clearing shone before me between the dark hemlocks.

Stumps, young saplings, raspberry and blackberry briars held a far larger part of the deforested acres than did John's potato patch and cornfield, in the midst of which stood the little log cabin that, with its whitewashed walls and notched eaves, looked as little native to the soil as its tenants. I had not gone far toward it when a wide-brimmed straw hat appeared above the blackberry bushes, and as it moved slowly toward me in a halting, devious course, I discovered beneath it the broad, unctuous visage of John's "femme." Intent upon securing the last blackberries of the season, she was not aware of me till I called out to her, "Good morning, Marie. Where is John?"

My unexpected salutation did not startle her from giving chief attention to the heavily-laden bush before her, and her eyes and hands were busy with the berries while she answered: "Good mawny! Mah man? Ah do' know 'f 'e an't peek hees onion. Ah do' know 'f 'e an't po'n' baskeet, prob'ly. Yas, Ah hear it," and listening, my ear caught the regular, resonant strokes of splint pounding at the further edge of the clearing.

Gathering and vending the various kinds of wild berries in their seasons, fishing and fish peddling, making baskets and braiding straw hats for the neighbors and store keepers were the chief industries of this old couple, except when they once set forth on a grand begging tour, outfitted with horse and cart and a dolorous fiction of sickness and losses by fire. But they lacked one essential, a numerous, helpless progeny, through which to appeal to the benevolent public, for their own children were all grown up and scattered, and they could borrow but two of forty grandchildren, so the enterprise failed and they retired to private life.

"Lots of berries, aren't there?" I remarked, with a view to the old woman's encouragement.

"Oh, sang rouge; dey a'n't 'mos' any," she declared, in face of the evidence of laden bushes and a basket almost full of plump, dead ripe blackberries. "Dey a'n't honly few for beegin, an' dey all dry up 'cep' dees lee'l place!"

I found old John, the lean and agile opposite of his ponderous spouse, engaged in the primary process of basket making, pounding an ash log and stripping off the thin splints. After an exchange of salutations, he asked:

"A'n't you fan' dauk on Slang?" and when I acknowledged my failure, he continued. "Wal, sah, Ah got mah hol' fusee feex over for cap lock, an' you a'n't never see for beat it for keel dauk, Ah tol' you. Hol' Seaver on Vau'genn' he feex him, an' las' week mah sonny-law come see me, an' he say he shoot him on board for see how he shoot. Ah say, 'Bah gosh, no! we go shoot on dauk.' Wal, sah, we fan' fav' black dauk roos' on de water. Ah shoot on it, t'ree come dead, two go safe. Bah gosh! It better for shoot on black dauk he was for shoot on board, a'n't he? You go on Louis Creek, hein? Wal, prob'ly you fan' some, prob'ly you a'n't. Ah do' know me."

With such doubtful encouragement, I left him grinding a grist of greenish-black, home-grown tobacco for his blacker pipe, and as I entered the shady aisle of the wood road I heard the click of flint and steel, the imperative smack of draft-compelling lips, and then the resonant clangor of the splint pounding, resumed with renewed vigor.

When this sound ceased my way was in silence but for my own footsteps on the dry leaves of last year and the naked tree roots uncovered and wounded by the lumber sleds. These had left more living signs of their passage in the rank tufts of herdsgrass, sprung from seed scattered out of the teams' noon fodder, and looking oddly out of place in the shade of the ancient forest, with orchids, sphagnum and hobblebush for nearest neighbors.

The soft mold and the edges of the long mudholes recorded the recent use of the road by some natives of the greenwood—lineal descendants of original proprietors whose title antedated royal charters and grants of colonial governors. Here was set down in plainest print the passage of a family procession of raccoons; there, in finer type, the nightly wandering of a fox, and the mincing morning walk of a partridge, whom, perhaps, I saw a little later. The clumsy, bear-like tracks of the raccoons held right on through thick and thin, never turning aside for puddles that the dainty-footed fox had skirted, though he utilized for some distance the convenience of the road, while the partridge only picked her way across this bar of nakedness that chanced to lie in the

course of her meandering. So each had recorded not merely a fragment of its life's history, but something of its traits.

With thoughts which were but a boy's thoughts, not dwelling much on either, but more on the duck prospects of Louis Creek, I entered the deepest shade of the hemlocks where the raccoon family had turned aside to their home, and the fox had gone his pathless way into the forest depths, when a large bird flew noiselessly downward, alighted in the road not 20yds. before me, and at once began rapidly picking the leaves of some low ground plants. The bird bore the crest, the ruff, the broad tail, and the colors of a ruffed grouse, yet I could scarcely believe my eyes when these proofs of its identity were forced upon me, against the one fact of noiseless flight which was quite at variance with my previous experience. At any rate it was enough like a partridge to be worth shooting, and to that purpose I sacrificed the rare opportunity of observing a grouse feeding undisturbed by the presence of an enemy. But at my first motion, slow and cautious as it was, the alert bird became aware of me, and burst away with a roar of pinions that dispelled the last doubt of his personality, while with flurried aim my shot went wide of the vanishing mark and I was served as I deserved, though I did not then recognize the justice of it.

No more grouse came to be looked at as I followed the road which led me, in a long, irregular curve, among trees apparently as old as the earth they grew upon, to an old clearing, now reclothed with a flourishing growth of gray birches and an undergrowth of ferns, save on the smooth circular sites of former coal pits. In one of these scenes of a past generation's labor, further memorialized by a level sward of English grass and clover, a fox had made a burrow, and the yellow earth thrown out at the several entrances was mixed with fragments of charcoal—all bestrewn with the litter of Madame Vixen's kitchen middens. Wings and bones of wild and tame fowl, the shanks of a lamb and pads of a hare, showed that the provision for her young family had been abundant and various.

Here I left the road and attempted a short cut to my prospective hunting ground. Stooping to avoid the numerous dead lower branches of the birches as I waded hip-deep through the ferns, I deviated from my intended course, but did not become aware of it until I saw the sheen of water close before me beneath a patch of open sky.

It was not the creek, but a narrower bit of water quite new to me, inclosed on one side by a dense thicket of button bushes, on the other by a sloping bank bearing an undergrowth of alders and some higher wood, most conspicuous of which were an oak and a lofty pepperidge. It was the deadwater of an old channel, but its surface was stirred by something which I could not see moving upon it, and I crept cautiously to a point that gave me a view of almost its whole length.

Then what I beheld nearly took my breath away. The little lagoon swarmed with woodducks, some in rows on the many mossy old logs that lay athwart and along it, some comfortably asleep, with head indrawn or tucked under a wing, some preening their gay plumage, some standing upright to stretch their wings, while the water was alive with others, indolently swimming to and fro, seaming the duckweed with innumerable aqueous paths, or nibbling the water, or thrusting their heads beneath it, and all in abandonment to a perfect sense of security that it was cruel to disturb.

But no emotion of pity softened the youthful savagery of my heart. It beat only with the joy of great discovery—the chance of a lifetime that lay before me. It beat so vehemently that it is a wonder I so much as hit the pool, to say nothing of hitting one of the uncounted dozen of ducks ranged on the nearest log, for whom my aim was intended—yet I saw three tumble helplessly from their perch, and when with a roar of wings that was like a prolongation of the report of my gun, innumerable ducks arose and filled the air before me, I fired wildly into it, two more chance-stricken victims of the aimless shot plunged back into the troubled water. The ducks seemed unable to realize that this safe retreat had been discovered and invaded by a cruel, relentless foe, for they continued to circle and hover over it till with trembling hands, in more haste than speed, I reloaded my gun, and grown cool enough to select single birds, brought down one with each barrel.

Then the last and boldest lingerer reluctantly departed, and the silence of desertion fell upon the place, except as I splashed and poked about it to secure my game; and with a view to future onslaughts, made a path for a stealthy approach, clearing away every sprout and dry twig that might swish or snap a signal of alarm. There was not a sign to show that the place was ever visited by any one else, and I congratulated myself on possessing sole knowledge of its existence.

Many a day thereafter I went to it alone, guided from afar by the oak and pepperidge, which, towering above the second growth, were unmistakable landmarks, whether in leafage of green or scarlet and brown, or in gray nakedness; and while I kept my secret seldom was a visit unrewarded by at least one shot at wood ducks, or later in the season at the larger and warier dusky ducks, which haunted the sequestered slough until it was frozen.

But in an evil hour I disclosed it, under promise of secrecy, to a faithless friend after an unsuccessful day with him on the two creeks. It was not long before the path was worn by the frequent tread of other feet than mine, and ducks began to be shy of a retreat that no longer promised rest and safety. In two years it was common to every gunner in the neighborhood, and worth no one's while to visit.

As one still searches for something lost past all hope of finding, so was I now and then drawn thither, but never to find more than a solitary heron standing like a gray statue in the desolate slough, or a lone sandpiper skirting the low shore, or perchance a muskrat channeling the duckweed with his silent wake. I had given away my discovery only to have it made worthless. Rowland E. Robinson.

A Stupid Blunder.

Harrisville, N. Y., Aug. 10.—*Editor Forest and Stream:* I notice an error on page 43 of *Game Laws in Brief*, just received. Sec. 40 says the open season for deer is Aug. 15 to Nov. 15. Sec. 41 says possession only from Aug. 16 to Oct. 31. How are we allowed to kill and not possess? Please explain and correct. G. W. H.

[The *Brief* gives the law precisely as it is in the original. The last Legislature amended the dates in Sec. 40 relative to hunting season, but neglected to amend Sec. 41 relative to possession. If the *Brief* had the original drafting of the game and fish laws they would be free from many other blunders quite as stupid as this one in the New York deer law.]

LAYING IN WINTER'S BEAR GREASE.

Editor Forest and Stream:

I have read in your paper many bear, moose and other hunts, where tracks in particular have been plentiful; but the writers have never been in the bears' paradise, which is between the mouth of the Smoking River and the Rocky Mountains on the Peace River. The banks of the river run from 800 to 1,500ft. high, and are formed of small bluffs of poplar, jack pine, and prairies covered with the saskatoon berry. Along the banks of the river is any quantity of the red willow, the berries of which the bears are very fond of. In places the river is full of islands covered with raspberry and red willow.

To show what can be got there, I will give a short account of a hunt I made there in 1869, my object being a supply of bear's grease for the winter, as the fur was worth little or nothing. I remained from the 12th to the 27th of August, and during that time killed sixteen black and brown, and seven grizzly bears. I took a Beaver Indian woman and her daughter with me to make the grease and cook. I camped on a small island at the mouth of the Pine River, a few miles below Fort St. John, and hunted early in the morning and late in the afternoon. Most of these bears were killed in the usual way without any excitement. I would approach them and shoot them with one or two shots. Two, however, gave me a little more fun.

The first one was a large, white-maned grizzly, which is always plucky and on the fight. One evening the Benner woman and her daughter had gone across the river to pick berries. Shortly after I left and landed a little below them, intending to cross the point and hunt below. The point was very narrow across, and I had only gone a short distance in the woods when I heard a bear, so I approached him within about ten steps and then I saw a large, white mane. As I was between him and the hills and the two women, I thought I would not open the quarrel in case of an accident, so I stood up and left it to the bear to decide what would be done. He got on his hind legs and for a short time was undecided about it, finally he thought berries were better than bullets, so he very quietly walked off, going rather in the middle of the point and I felt sure he would get around me and take up the hills, so I ran across and cut him off. I soon heard him coming along, so I waited for him and he found me in his way again. He got up on his hind legs and gave a snarl or two and then came a little closer and got up for another look. He was then about 6 or 7yds. away, which is a little further than I like. At last he thought he would decide on peace, little thinking that I had gone out on the war path and would not agree to anything like peace, but was only choosing my ground. I knew he would now cross the Peace River, so I ran to my canoe and threw in a few stones and then saw the bear take the water. I got up to him in a minute and began pelting him with stones, so he put after me and forgot all about going ashore, at last, having spent the stones, I shot off first one ear and then the other. You may imagine what a rage he was in. I then gave him a few grains of small shot by way of a finish, and by this time we had got quite a way down the river, as the current is pretty strong, and I had to cut him up and paddle up stream again before dark to the camp, so I decided to end up the fun. I took good care to see the powder well up in the nipples and put on a good cap, and then landed a little below, hauled up my birch bark and waited for him. I could see the very look of pleasure in his face when he saw me ashore—he was determined I would never get him on the water again. As soon as he landed he rushed straight on, and as he rose to jump the canoe my bullet was inside of his brain, and he remained on one side of the canoe and I on the other.

The other one was in a different way. I had been shooting beaver in the afternoon and had got water splashed on my gun and had not properly dried it. Late in the evening I went among some of the islands where the channels were dry, the water being low at this season I heard a bear coming my way, so I got up the bank and lay down until he was almost on me. I was expecting nothing but a black bear, but when I got up here was a large grizzly at just the right distance; so I pulled the right trigger. It hung fire a little, and down he went only stunned. I ran on him with the left barrel, and it snapped. Just then he began to rise. In two steps I was down the bank, and ran three or four steps down wind and up the bank again. Just as I got up, down he came as mad as could be; but he took my back track across the channel, which gave me time to get the gun in order before he found his mistake. When he did I was ready, and as a natural consequence I had more bear grease for winter. I only use a doublebarrel muzzleloading gun, 28-bore. H. I. M.

BAITING DUCK GROUNDS.

Memphis, Tenn., Aug. 5.—*Editor Forest and Stream:* I send you two letters I have received in reply to inquiries about the profit of baiting duck grounds. The first comes from Wide Water, Va., ex-President Cleveland's favorite duck shooting grounds, and the second from your contributor, Mr. James Norris, of Maryland. Guido.

Wide Water, Va , May 26.—*Mr. W. A. Wheatley.*—Dear Sir: Your letter received in regard to baiting duck. I think from your description of your property it best to feed with sheaf oats and wheat.

Have the sheaves tied with wire to a small stake, also pour out a good large quantity of shelled corn.

Liberal baiting will insure good results.

We use corn mostly poured out in about 4 to 5ft. of water. Ducks feeding here are whittle wings, blackheads and mallards.

Mallards can be taught to dive as well as any other ducks.

We feed upon an average 300 to 400 per day, and kill, when we shoot, from twenty to fifty in a half day. We shoot only three times a week and then only about half the day.

Will be glad to give you any information in my power.

Withers Waller.

Magnolia, Md., July 24.—*Mr. W. A. Wheatly.*—Dear Sir: Yours duly received. I am unable to give you any additional information to what you have in Mr. Waller's letter from Wide Water, in reference to feed for the purpose of attracting waterfowl. The only grain I know of being used in this vicinity (near the mouth of the Gunpowder River) is wheat and corn, and not very extensively. Some of the deep-water divers—blackheads, redheads, and perhaps some other classes—feed on the grain as an auxiliary, when their natural food becomes scarce, and when that is exhausted, I do not think any substitute will prevent them from leaving the locality. It appears to be an inherent attribute in them, particularly those which invariably feed in deep water—canvasbacks, redheads and blackheads—to migrate annually further south about the same time (the middle of December), without regard to the quantity of food remaining or the condition of the weather, and then to return to their previous locality in the early spring, preparatory to their northern flight and breeding place.

The marsh ducks do not appear to be governed by such an imperative instinct in their migrations. They feed in the shallow creeks and lagoons, and remain until the ice compels them to leave, and return when it thaws. It is in those haunts where the grain is distributed, over which the decoys are placed, which are in gunshot of a well-constructed blind, composed of a substantial, watertight box sunken in the mud at the margin of the water about 3ft., with about the same projecting above, which is covered with the tall marsh grass indigenous to the vicinity. It has a capacity sufficient for three or four sportsmen, who deliver their fire as the ducks are in the act of alighting among the decoys.

Chesapeake Bay Ducks.

Twenty years ago this locality, from the mouth of the Gunpowder seven or eight miles up, was one of the finest feeding resorts on the Chesapeake Bay for canvasbacks and redheads, and during October and November acres in extent could frequently be seen feeding, with flock after flock winging their way in different directions. This immense feeding ground is intersected by a peninsula extending a mile out in the river and terminating with Maxwell's Point, which at that time was considered one of the most celebrated shooting points on the Chesapeake. The shores of this peninsula and also the margin of the river along the mainland afforded an abundance of food suitable for swans and geese, to which they resorted in great numbers, and still continue to come, as their food is abundant.

This is not the case with the canvasback and redhead; the species of marine plant which furnished their food is nearly obliterated from some cause, supposed to be the great amount of sediment uncongenial to its growth, working down from the cultivated lands above. Therefore, this once beautiful and extremely animated and exciting scene is now completely silent and gloomy. Apparently with the view of tantalizing the old sportsmen of the past, an itinerant flock of redheads may occasionally be seen flitting over the surface of their deserted haunts and vanishing in the distance.

Swans and geese are nearly as numerous, but not sought after by sportsmen to any extent. They are extremely wary, and feed invariably at night. They leave the shores at early dawn, swim out in the river about a half mile, and remain during the day. They are not considered an edible luxury, therefore not a great many are killed; yet their presence adds beauty and animation to the scene, which would be exceedingly monotonous without them, since the departure of the canvasbacks and redheads.

Maxwell's Point, when in the acme of prosperity as shooting grounds, was also the home and breeding place of the Chesapeake Bay dogs. The kennels of Edward Lynch (now dead), the manager of the property, bred and preserved the purity of those dogs up to the highest standard. Bunco, the dog you mention, was bred here. Here he made his initial plunge in the surf; and here he gained his unsurpassed reputation as a retriever of water fowl, and also of wonderful sagacity. James Norris.

Game Protection and Sensational Journalism.

I deem it only proper to call the attention of the board to malicious and frequently willful misrepresentations made in certain newspapers concerning the work of the wardens and deputies. Although the press generally is in favor of the proper protection of fish and game, there are instances in which unscrupulous persons in the employ of newspapers seize upon prosecutions for the purpose of villifying the wardens and bringing their work into disrepute. The most glaring instance of this kind took place during the last week of July. Mr. Orrin Vanderhoven, a deputy fish and game warden, ascertained that two Italians living in Passaic were in the habit of robbing birds' nests for the purpose of securing the young, either for the table or for the market in New York. These Italians were in the habit of robbing nests, principally of robins; the young birds were either boiled and eaten or they were kept a few weeks and then disposed of to dealers. Mr. Vanderhoven reported the state of affairs to me, and I advised him strongly to prosecute at once. Mr. Vanderhoven did so, and the result was that two Italian men were arrested and each fined $20 and costs, certainly a light enough punishment for their misdeeds. On the following day the New York *World* and *Journal* came out with sensational articles, declaring that the persons arrested were two young school girls, who had run across a nest of robins and had appropriated two of them as pets. Mr. Vanderhoven was denounced in bitter language for his alleged heartlessness in arresting two little girls, the *Journal* going so far as to produce the alleged pictures of two weeping little misses mourning over empty cages, declaring the pictures to be those of the persons arrested. Mr. Vanderhoven at once communicated with these two publications, and the *World* sent an emissary to Passaic to work up the story. The emissary apparently pursued the matter no further than to see the original liar, and then dished up another article, worse than the preceding. The *Herald*, which apparently did not have the story until a few days later, then came out with a bitter denunciation of Mr. Vanderhoven and game wardens in general, making up for its neglect to obtain the story the first day by increasing the number of "golden-haired" tots from two to four. The *Herald* had the decency to publish a contradiction of its untruthful statements, but the *World* declined to pay any attention to letters of protest sent to it. This is not by any means the only instance of this kind where sensationmongers have willfully distorted facts for the purpose of creating a sensation and to the injury of the good work in which the officers of the State are engaged. A great many of the deputies are men of means and of high standing in the communities in which they reside, and they have secured their appointments only for the purpose of decently protecting fish and game. The work they do is a labor of love; they are actuated only by noble impulses, and few ever receive any pecuniary reward; the share of the fines to which they are entitled is more than expended by cash outlays, for there is no way in which their expenses even can be paid. These are the men in many instances who are selected as victims by the vampires who have attached themselves to the honorable occupation of journalism.

PARK STAGE ROBBERY.

(Special Dispatch to the Baltimore Sun.)

MAMMOTH HOT SPRINGS, Wyoming, Aug. 15.—Five stage coaches were held up and robbed yesterday morning near the Grand Cañon Hotel, in Yellowstone Park, by two masked highwaymen.

When the news first reached here it was not credited, but a telegram to the stage office removed all doubts. Intense excitement prevailed, as such an occurrence has never happened before. The arrival of the stages were awaited with the utmost anxiety. They rolled up at Mammoth Hot Springs Hotel about 4 o'clock in the afternoon, and the passengers, as they alighted, were besieged by impatient inquiries.

There were about sixty passengers in the five coaches, of whom more than half were guests. The robbers had sacks over their heads, with holes for eyes, and sacks also over their feet. The first coach was stopped by the highwaymen with bullets from six-shooters, and the male passengers ordered to get out and hold their hands up. The ladies were quieted with promises that they would not be disturbed. There was nothing for the gentlemen to do but comply. They were totally unarmed, as the carrying of arms within the park limits is prohibited. One by one the unfortunates were compelled to disgorge.

As the stages which were in the rear came up the same road in turn they were all put through the same experience and drivers ordered to remain still until told to move on. The ladies in the last coach did not fare as well as those in the first, as they were also roughly ordered to deliver up their valuables.

The robbers were after money and did not care much for watches and jewelry. The watch of one man was taken and then thrown back to him.

When the highwaymen stopped the first coach the passengers thought it a joke, but were not long in realizing how serious it was. The ladies all behaved beautifully while under cover of the weapons of the robbers, but when out of harm their strained nerves gave way and some of them became hysterical, and when they reached the hotel here they had to be put to bed.

An army ambulance, with two officers, was just behind the stages. The officers were also without means of defense and had to hand out their money the same as the coach passengers.

The robbers did not realize more than $700, as it is not customary to carry much money through the Park, and many of the passengers found an opportunity to secrete their purses. A gentleman threw unobserved into a bunker a fat pocketbook, which he recovered after the robbers walked off. A lady in a bicycle suit secreted in its recesses a big roll of notes handed her by her husband as he was getting out.

The highwaymen were scarcely out of sight before soldiers and scouts were on their trail, but as these were on foot the chances of catching up with the robbers are not promising. Colonel Young, in command at Fort Yellowstone, ordered out every man possible. He also telegraphed the Interior Department at Washington asking permission to offer a reward for the capture of the robbers, but was informed that the department had no authority to do so. Naturally, the affair has put in a flutter of apprehension tourists preparing for the trip through the Park. This alarm is doubtless without reason, as a repetition is as one chance in ten thousand.

Camp-Fire Flickerings.

"That reminds me."

Twice-Told Tales.

Editor Forest and Stream:

FOREST AND STREAM of August 7, under "Camp Fire Flickerings," has a practical illustration of the variations through which a fishing legend may run. In this case, as it happens, the variation is in FOREST AND STREAM itself. J. S. Van C.'s "What Are We Here For?" is the same story which, I think, was better told of the bishop in FOREST AND STREAM of March 31, 1894, and there credited to *Harper's Magazine*. H. S. D.

Forest and Stream, August 7, 1897.

"What Are We Here For?"

Some two or three years ago a party of anglers, including a minister as one of their number, were fishing in the North woods, and when Sunday came the question arose whether the party other than the minister should not refrain from fishing, out of respect to his feelings.

One of the party, however, made bold to ask him whether he thought that it was wicked to fish on Sunday, and he declined to express any opinion, on the ground that he was there as an angler and not by virtue of his calling, and that every person must act according to the dictates of his own conscience. He referred, however, to the following incident which had occurred not long before within his personal knowledge.

A man and woman called at the house of a minister for the purpose of being married. After going through the preliminary part of the service, the minister asked the usual question, "Do you, John, take this woman to be your lawful, wedded wife?" This was met by the rejoinder, "What in thunder do you suppose I came here for?"

The party other than the minister went fishing, while he remained at home with ample opportunity for rest and meditation. J. S. VAN C.

Forest and Stream, March 31, 1894.

Sunday Fishing.

Some years ago a number of gentlemen visited the mountains of Colorado for the purpose of fishing. Among the party was a bishop of an Eastern diocese of the Episcopal church. Fishing was the sole occupation and amusement of the visitors; so when Sunday came, as there was nothing else to do, the laymen of the party got out their rods, preparatory to casting a line. But they were in a quandary as to the bishop. They did not want to hurt his feelings by leaving him behind, nor did they want to offend his religious principles by inviting him to go fishing on Sunday. Finally one of them plucked up courage and told him of their dilemma, whereupon the good man said that he would tell them of a happening in his earlier life which he thought rather apropos. "Some years ago," he said, "when I had charge of the affairs of a parish, I was awakened about 2 o'clock one morning, and upon inquiring who was there, heard a man's voice reply that he was there with Miss Blank, and that they wanted to get married. I reasoned with him about the untimely hour, but to no avail; he meant to get married right then and there. So I put on my clothes and gown, and went down stairs and began the marriage service. Everything went along as dictated in the service till I asked the man, 'Wilt thou take this woman to be thy wedded wife?' to which he replied, 'What 'm I here fur?' "

They waited for the bishop. H. S. D.

A Dead Bear and a Dude.

IN one of my spring hunts for bear in York county, New Brunswick, I had for a short time as visitor in camp a city young man, whose highest ambition was to shoot a bear, one fast in a trap even. His desire had been gratified, and one day only remained of his stay, which was spent on a line where I had set up a deadfall. As the deadfall came into view a huge bear was seen fast under the fall. The young man was delighted, and offered his assistance to set up the prop, when I raised the fall-log. There had been twenty-four hours of very warm, humid weather, so that the carcass was greatly swollen with gas. The front of the deadfall being on the height of a knoll, the carcass, when released, at once rolled away, the pent up gas at the same time finding vent through nose and mouth, made a hissing, guttural noise, startling to a novice. At the movement and the alarming noise the youth sprang away, shouting: "Great Cæsar! the bear's alive. Run for your life." And acting up to his words, he sprinted to camp. MADAWASKA.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

AN AFTERNOON IN JULY.

"SAY, Bob, what do you say about giving the bass a little whirl this afternoon?"

"All right. Where?"

"Out on the creek. It's too late to go anywhere else, and by the time we get there we will just about catch them coming up from the lake to feed."

"Well, I'll go you. You go and get into your clothes, and I will dig some worms to catch minnows; and, by the way, you can hitch up the mare."

In short order everything was in readiness, and we were on our way to one of the best bass stream for its size in the State of Michigan.

It is an inlet to a lake that was in the past noted for its great bass fishing, but for some unaccountable reason has been abandoned for years and left to the frogs and turtles.

I have often heard my father tell of the great bass and pickerel he had taken out of it in days gone by. Yet I never remember seeing any one, with the exception of some boys, fishing on it. The lake at one time was very large, but it is now well overgrown with bog land, and the water space wouldn't cover an area of four acres at the most, yet it is very deep and clear.

The stream is from 10 to 12ft. wide, very crooked, and running very deep at each bend. The nearer you go to the lake the deeper it gets. The banks are hard and clear in places, and there is no timber to bother one when casting. As you approach the lake, it gets very mucky, and is full of muskrat and mink holes, some of which are very large and covered with tall marsh hay and weeds, consequently one must keep his eyes open or out of sight he goes. It was while hunting mink on this stream that my brother and I discovered that bass were running up here and using it for a feeding ground.

Bob and I arrived at the small bridge about 4:30 P. M., and in short order had about fifteen good minnows of a medium size. We started down stream. I was to fish to the first bend, Bob to the second, and so on.

Before going any further, I must tell you of our different opinions in regard to tackle. Bob believes in the old-fashioned outfit. A good strong cane pole (not rod), with a line as heavy as possible and about 3ft. longer than the pole; and as to the hook—well, on a pinch it could be used for a gaff. On the contrary, I use a light outfit—a 10oz. rod, leader and reel to correspond. Mind you, I believed as he did, until I was laughed out of it while on a fishing trip in the northern part of the State last year.

Well, after this brother of mine had relieved his mind of some remarks about the dude fisherman and his fine tackle, and had promised to show me how to hook and land bass, we each hooked on a minnow and started for our different parts of the stream.

Swash goes the bait, and I draw it slowly toward me without a strike. Again and again I send it down stream, each time walking toward it and fishing very slowly.

I had gone probably 30ft. without getting a ripple, but on the next cast the minnow barely touched the water when a two-pounder jumped clear a foot for it. He hooked himself well and away he went, making the line sing as it cut through the water. I held him up as short as possible, wishing to land him as soon as I could. After throwing himself out clear of the water a couple of times, he turned on his side. Getting a net under him was but little bother, and he was landed in no time. My fishing friend asked to see him, so I held him up, and got for my trouble the remark that he thought it was a ten-pounder by the fuss I made in landing him. I said nothing, as I knew my time would come; and putting on a fresh minnow was just about to cast, when I heard a whoop, and turned in time to see Bob throwing a poor bass almost out of sight, by giving him one of his famous jerks. Fortunately, the fish was well hooked, otherwise he would surely have torn his head off. I had an opportunity then to make a few remarks about butchers slaughtering fish, etc., which I did in the finest way possible. Feeling that I had, in a measure, repaid him for a few of his past remarks, I sent my bait well down stream and got a strike at once; foolishly I pulled too quickly and lost minnow and all. Quickly putting on another bait I sent it after him, and found that he was still in the same spot and open for business, as he struck it the minute it touched the water. Thinking that now I would square accounts, I tried to set the hook, but failed, and again lost my minnow. I returned to the bucket, and while fishing around in it for another bait saw a small grass frog and took him instead, hooked him on, and walking carefully to one of the deep holes in the bend of the creek dropped him lightly over the edge of the bank. He gave just one kick and the water boiled around and under him. The result was another bass of about the same size as the first one. Upon returning to the minnow pail I found that Rob had exhausted our supply and had a dogfish, pickerel and bass to show for it. I told him of my experience with the frog, so we both set about it, and in a few minutes had a dozen or fifteen good ones with one of unusual size. For the rest of the afternoon the fishing was good.

In all we had a dozen fine bass, averaging about 2lbs. One of them was what we call a "whale." I must tell you about him. We were well down toward the lake and just about to return, when looking ahead a few yards I saw a particularly fine piece of water which looked very fishy. (Have you ever seen water like that?) Wishing to try it I made a long back cast, for the purpose of reaching the spot, and just as I was about to cast forward there was a swirl and swash behind. My line went out of the reel and set up an unusual buzzing. For a moment I was dumfounded, and just as I was about to return to earth the villain, on my hook, made straight for me, trying to get into the lake. By some unknown power I managed to keep the line taut, and away he went headed for the lake, taking out 100ft. of line before I knew it. I had to stop that, so I made the old fellow fight for every inch after that, and it was a fight, I tell you. Backward and forward he went, first on one side of the stream and then on the other, then again he would turn and run directly toward me, then, as quick as a flash, for the lake he would go. Bob looked over and asked if I wanted any help. I said no, but if I landed this one I would show him a corker. This remark and my struggles rather excited his curiosity, and he began to run toward me. He plunged on, regardless of danger, and just as I was about to caution him about the bog holes, he made a whoop and disappeared under the grass and muck. He reappeared as quick as he went under, covered with lily roots and mud. By this time I had to look after my own troubles, as the bass was just churning things. I knew he was a good one, as he wouldn't start my way at all. Zigzag he went across the stream, and then again he made a terrible plunge for the lake, as the old beggar knew if he got there the friendly shelter of pond-lily roots would save him. My only way of meeting these rushes was to run him into the bank. I was fishing with a single 6ft. leader and did not want to tax it too much.

Bob arrived at this moment, and, grabbing the net, made in the direction of the bass. He worked up carefully so as not to frighten him, and, looking over the bank, fell back and hollowed that it was the largest one he had ever seen. He cautioned me about losing him, and suggested that I should allow him to go in and get him. All this time the struggle was going on in earnest. Bob was dancing like an Indian, his eyes standing out like two onions and his hair full of muck and weeds. Inch by inch and foot by foot the old warhorse was disputing the ground with me, but finally I felt him turn, and then, for the first time, he was coming my way. Very slowly I worked him in and felt that, barring accident, the battle was mine; yet now and then he would show a little fight. After I got him well up he turned over on his side, and, for the first time, I saw him. Well, I must confess, my heart stopped for a moment, as he looked like the side of a dried codfish and was a monster, to be sure. Bob got the net well out into the stream while I worked him up toward it, and just as Bob was about to raise it over him the old fellow caught sight of it and make one more break for the lake. It was a grand effort, as he had out a bunch of line and was pulling like a mule before I knew it. Suddenly there was a slack, my rod straightened, and my heart went into my shoes. I said: "Bob, I have lost him."

For a minute he said nothing, then turning, with a look of pity, said: "It serves you right for fishing with such an outfit. If I had had him hooked as you did, he would have been out and we on our way home by this time. Don't ever talk to me again about fishing tackle."

I couldn't say a word, as my grounds for argument were very small, so I began to reel in my line, which, by the way, felt rather heavy. Thinking I had a bunch of weeds on, I began to walk toward my hook, reeling as I went. After almost reaching the spot where it was caught, I gave the line a slight upward jerk to free the hook, and to my surprise, received a jerk in return. With renewed hopes I tightened upon it and called to Bob, who had started for the road in disgust. He turned, and in a few jumps (this time looking out for the holes) was on the spot, net in hand. Running to where I directed, he let out a shout of joy as he saw the old veteran lying on his side, with just a spark of life left in him, but still fighting. His last effort had nearly killed him. The net was slipped under him and he was hauled to the bank and out.

Well, Bob and I shook hands—I don't know why—and stood and admired the old fellow, for he had given us a noble fight. He was an old veteran, to be sure, as he had two buckshot in his back, and a long scar on one side, caused by a spear, no doubt. His tail was cut, and part of it was missing. As he lay on the grass, gasping now and then, I must say I felt sorry to see him die, and to think that he was at last landed. We put him into the pail and started back. Bob took the last frog—the big one—hooked him, and threw into the stream to drag as we returned to the road. We had almost reached it, when there was a commotion about the bait, and away went his line. Bob straightened for the task, of course expecting to lift him right out, but he found that his poll wouldn't stand it.

The bass ran up stream to the end of the line, then he started back Again my friend tried to raise him out, but had to give it up, and away the bass went for the lake. It was but a short run to the end of the line, and we never knew when he came to it, as it parted so easily. Bob fell on his back and the bass is running yet. My time had come at last, and maybe I didn't say a few things about his fishing-tackle and ability. He made no reply, I therefore knew that I had struck home. The next day he sent out an order to one of the best tackle houses in the country for a complete outfit.

The bass I took weighed, after being out of the water nearly two hours, 5¾lbs. I expected him to weigh more, and he would have done so had I lost him, as my friends would have heard a 10lbs. bass story. BEAR CREEK.

ANGLING NOTES.

Bullheads.

As a food fish the bullhead occupies an important position in the State of New York. In 1895 nearly 200,000lbs. of bullheads were caught in State waters, dressed and sold there, and four times as many pounds as of any other of the fishes from the interior waters.

As an economic food supply the bullhead is not to be despised, and in some waters its propagation should be encouraged by laws to protect it during its breeding season, and there are other waters from which it should be exterminated—cleaned out, root and branch, as in those waters it serves no useful purpose, but, on the contrary, destroys the food of other fishes and the fishes themselves.

I refer to trout waters in the Adirondacks as waters from which the bullhead should be removed, as a deleterious fish. This may not apply to all Adirondack waters in which the bullhead is found, but it undoubtedly applies to many of the trout ponds and lakes in that region. It is not a hasty judgment when I say that I believe that the bullheads have practically destroyed the trout fishing in a number of the lakes in the Adirondacks. One lake that I visited last spring contains a few very large trout, but a small trout is unknown in it, and for years not one trout has been caught from it weighing under 3lbs. In this lake the bullheads fairly swarm, and at times when they swim near the surface they present the appearance of a solid mass of moving fish. They have apparently eaten everything that will serve as food, and are themselves so dwarfed in size that they will not pay for dressing. In fact, when they are skinned there is scarcely anything left to eat, for they are only from 3 to 5in. long. Bullheads are notorious spawn-eaters, and not only do they eat the spawn, but they eat the food of the trout. In the lake to which I refer, about 2,000 of these little bullheads were caught in part of one day by my companions, who visited the pond with me. We went there to find out, if possible, what the reason could be that no small trout were ever taken. We had not far to look. With a piece of meat tied to a string, as many as seven bullheads could be taken at one time. Three, four and five at once was not unusual, and with two men in a boat, each armed with a string and piece of meat, it was not a question of how many bullheads could be lifted into the boat, but it was a question of how long one could keep his arm in motion, first dipping the meat into the water and then lifting into the boat as many fish as could get hold of the meat during the two seconds or such a matter of time that the meat was left in the water.

When the fish were brought to the shore we found a boy that consented to take a few, comparatively, of them home, picking out the largest of them, and the balance could not be disposed of among the people living near the pond, for they were really too small to pay for dressing, and there is no prospect of their being any larger, for they seemed to have cleaned the pond of all manner of food, and must in great measure live hereafter upon one another. Under such circumstances we had no compunctions of conscience when we took from the pond all the fish possible during the day. This pond is not a solitary example of too many bullheads for the welfare of the trout, and I am quite positive that the increase in the bullhead tribe is largely accountable for the dearth of trout in many Adirondack waters, and I would suggest that the Fisheries, Game and Forest Commission be applied to for permission to destroy the bullheads in such waters as I have described. It will be worse than useless to attempt to cultivate trout in such lakes until the bullheads are routed out. Under the law the Commission has power to remove deleterious fish when they interfere with the growth of trout, and there can be no more deleterious fish than the bullhead when he destroys the spawn of the trout and its food as well, and then becomes a dwarfed fish unfit for food. Fish Commissioner Hughes, of New Hampshire, told me last spring that he examined the spawning beds of lake trout in his State last fall, and found on the beds bullheads so stuffed with trout spawn as to be utterly helpless and lying at the bottom on their sides. In fact, the appearance of some of the bullheads indicated that they would not survive their feast—or gorging—of trout spawn. Commissioner Hughes was of the opinion that the bullhead was far more destructive of trout spawn on the beds he examined than the eel or sucker, and both are bad enough.

Bullheads watch their nests after spawning and the young after they are hatched, and the young can be netted out of a pond when the brood rises by using a shallow net of mosquito netting, if consent is obtained from the Commission to do so under the direction of a game protector. In many lakes the trout are sought persistently (trout do not guard their spawning beds or young and are naturally less prolific than the bullhead, as the trout is a fall spawner, taking from 90 to 150 days to hatch their eggs, while the bullhead is a spring spawner and hatch their eggs in a few days), and fished for constantly. The bullhead is not sought for food to the extent the trout is, and has little to do but thrive and multiply until it overruns the pond, destroying the young trout and its food and remains in sole possession of the water.

In another bullhead-infested pond in the Adirondacks I found that the trout had been feeding (this was a pond restocked with yearling trout) on the larvæ of the May fly; but when the time came for a rise of the fly there were few on the water. The swarming bullheads had been devouring the larvæ which should have gone to feed the trout. As in the first-mentioned pond, the bullheads were small, too small for food; and as they were never or rarely fished for, they had simply increased at the expense of the trout. I venture to predict that, if the New York Commission or its agents should net one of these ponds and remove as many bullheads as possible, it would be a comparatively easy matter to once more repopulate it with trout; and I believe something of this kind will have to be done with the smaller lakes before trout fishing in them is as it once was. There is another thing to be considered in this connection. When bullheads swarm in a pond with insufficient food to sustain them, they are more than likely to be infested with internal parasites, which unfits them for human food.

A correspondent wrote me a few weeks ago from western New York, saying that the bullheads in a pond that he had stocked were dying, and he had picked up dead or dying fish with their fins gone. He wishes to know what caused the "epidemic." I told him that his fish were starved, as evidently the pond contained no food for them, and they were preying upon one another; for once a hungry bullhead gets hold of the fin of another fish he does not let go of it until he has eaten that fin. This was the first case that had come to my knowledge in a wild pond, but it is characteristic of bullheads in an aquarium. I suggested to the correspondent that if he could get a dead fish that was reasonably fresh, he should send it to Prof. Surface, of Cornell University, as he was near at hand, for a microscopical examination.

Returning home after an absence of a week, I found a letter from Prof. Surface in which he said he had received a bullhead and had written to the sender as follows: "A careful examination has revealed the undoubted fact that the bullhead died of a superabundance of tapeworms and an insufficient supply of proper food. From the condition of this specimen, which is an adult female, I feel sure that there are but very few mollusks, small crustaceans or insects in your pond." Prof. Surface adds to me: "Of course you know how unsafe it is to judge general conditions from an examination of one specimen, but in the first place this fish was starved. What the pond needs just now is fewer fish and more fish food."

Prof. Surface did not know what I had told my correspondent or the conclusion I had arrived at, in fact, knew nothing about the matter in any way except that a fish had been sent to him for examination and cause of death, but he confirmed in every particular my opinion.

Just thirty years ago I caught in the Adirondacks the finest lot of trout I ever caught in one day in that region. They were taken with the fly from a small lake, and afterward the lake came into possession of the bullheads, and it was a rare thing to get a trout, so rare that it was scarcely fished. Means were taken to destroy the bullheads so far as possible—means that would not be tolerated under the law, and with which I have no sympathy—and trout were planted from an adjoining lake, and the first lake again became famous for its trout fishing. We live and learn, and one thing we are learning is that the bullheads must be kept down if the trout in the same water are to thrive and increase.

Sunapee Trout in Lake George.

FOREST AND STREAM has told of how the Sunapee trout were transplanted last autumn from Sunapee Lake, N. H., to Lake George, N. Y. The State fish car brought forty-two adult trout, half male and half female, and planted them in the last-named lake. When the car reached the end of the railroad, at Lake George, I employed the steam yacht Olive, Capt. Raphael Patten, to take the fish down to a shoal near Diamond Island, where they were released in good order, so far as we could see. There were left in the car four of the Sunapee trout for the New York aquarium and ten for the State hatchery at Caledonia. The fish that were left developed fungus, as they had rather severe handling when they were spawned just before starting for New York. Salt water baths saved some of them, but most of them died from the fungus, and it has been a matter of speculation how those in Lake George have fared. A few weeks ago Capt. Patten was trolling for lake trout in Lake George and caught a golden or Sunapee trout. He recognized the fish before he got it to his boat and released it uninjured. This is good news, for if one fish survived it is reasonable to suppose that more of them are alive and well and that they will spawn in the lake next fall. Capt. Patten's fish looked to weigh about 2½lbs. and was in excellent condition. It is the only one of these fish known to have been caught. They have been so well described, and the fishermen are so much interested in them, that I feel that they will be returned to the water if more should be hooked.

Landlocked Salmon in Lake Champlain.

Lake George has always seemed to me an ideal water for the propagation of landlocked salmon, or, as I believe, they should be called ouananiche, as the water is pure, cold and deep, and it abounds in "frost fish" (the round whitefish) for food, but it lacks in one particular, large tributary streams for fish to run into for spawning purposes. The late Col. McDonald, then U. S. Fish Commissioner, told me if I would recommend the stocking of Lake George with salmon he would furnish the fish. It was some time before I would take the responsibility of making the recommendation, and then not until I had visited Sunapee Lake, and found similar conditions as to spawning streams existing there where salmon do well.

In the spring of 1894 I did make the recommendation, and the U. S. Fish Commissioner sent me two car loads of fingerling salmon in October of that year. Twelve thousand were planted in Lake George streams and 10,000 in streams flowing into Lake Champlain between Port Henry and Bluff Point. The next year two additional car loads were planted one in the stream of each lake. So far as known the first salmon to be killed as the result of these plantings was killed in Lake Champlain near Port Henry on July 29 of this year. Commodore W. C. Witherbee, who has taken an active interest in planting fish in and about the lake for many years, and who rendered material aid in planting all the salmon, wrote me of the capture of the fish in question and said that it weighed 3½lbs. The salmon must have been three years old last spring, as the first plant was of fish hatched in the spring of 1894.

It is believed that a salmon was caught in Lake George early in the summer, but nothing positive is known, except that it was not a lake trout. The men who caught the fish had never seen its like, and from some of the things said about it I was inclined to think it possible that it was a salmon. Lake George, as I have said, furnishes whitefish food for the salmon, and Lake Champlain furnishes smelt food, and it will be interesting to watch developments and discover in which lake the salmon do the best. Probably other fish may be taken in one or both lakes before the season closes. Anyway, the prospect for salmon fishing next year is promising.

Yearling Brook Trout.

About a year ago I had something to say about the growth of trout fry at a private hatchery of a Long Island club, at one of the State hatching stations, and at a hatchery in Massachusetts, where trout are reared for sale. All the trout showed rapid growth, but none were equal to some trout that have been reared at the Cold Spring Harbor station of the Fisheries, Game and Forest Commission of New York this year. In the fry ponds I saw last week (Aug. 5) fry that were 5½in. long from eggs hatched this year, and there were plenty of fry in the same pond that measured 5in. In the yearling ponds I measured trout that were 10 and 10¼in. long, from eggs hatched a year ago last spring.

If any one is curious about these fish, let him take a foot rule and mark on it 5½in. for fry of this year's hatching, and 10¼in for yearlings of last year's hatching, and they will get an idea of what size trout grow to on Long Island. The trout were deep, well conditioned fish, and not specially grown for record of length, in other words, they were simply such fish as are raised there for distribution in State waters. In one of the yearling ponds containing 6 000 fish I noticed a trout much too big for a yearling. I caught a glimpse of him in the mob of trout as they circled around the pond, but was sure my eyes had not deceived me, although the men said there were nothing but yearlings in the pond, and they had been recently sorted. I insisted that a search should be made for the trout, and finally he was discovered and netted—a two-year-old trout. As he was being removed a fish dropped from his mouth, partly digested. It was one of the yearlings, and how many he had eaten no one could tell. Fortunately he had been there but a few days, for the yearlings had been counted into the pond when they were sorted a short time before. How he got there was a mystery, for the screens were nailed fast and the raceway boarded over, and there were no two-year-old anywhere near the yearling pond. Probably some bird of prey had captured the fish from the two-year-old ponds and in flying away with him lost him in the yearling pond, where he was found.

Sponge for Bait.

In writing of bullheads I intended to say that their voracity has a limit, although it may not be suspected where they are found, as I have narrated, in some of the small Adirondack lakes.

A friend whom I was visiting at his camp on the shore of one of the lakes that contain more bullheads than are needed, proposed one evening to go out and reduce their number. His henchman, forester, fisherman and educated story-teller (educated in part, I suspect, by my friend for the entertainment of his guests), I have already introduced in my notes by his name Hank. Hank was told to get ready a big flat bottomed boat and my friend, his two sons, Hank and myself went out at dark to wage a small war on the bullheads. Hank had a rod, but no opportunity to use it, for no sooner were we anchored than there was a fringe of bullheads dangling about his head to be taken from the hooks and the hooks rebaited. The bullheads came so fast that sometimes they got in Hank's face or down his back, for one could not see very well in the dark. Hank never uttered a protest, for he had been well trained, and simply waited to get even. My friend passed over a bullhead and Hank took it off by the light of a lantern, but did not rebait the hook. In a moment my friend caught another bullhead without a bait; possibly a small piece of worm adhered to the hook. When the fish was removed Hank baited the hook with a piece of sponge and my friend continued fishing, with no bites. He thought it strange and passed over his hook for an examination, but Hank told him he had a good, full bait on his hook, and the fishing continued, until I was obliged to laugh, and caused suspicion and an examination of the hook. Hank stoutly maintained that as we had been trying all sorts of experiments he wished to try a piece of sponge, but as he had no chance to fish he had been forced to put the sponge on his employer's hook, but he was satisfied that bullheads drew the line at a piece of boat sponge, although they would take a bare hook that had recently had a worm on it. The only thing which surprised me was that Hank did not contend that he had often caught bullheads with a piece of sponge; perhaps he did not think of it. A. N. CHENEY.

NEWFOUNDLAND ATTRACTIONS.

THE railroad in Newfoundland is going across to new game and fish resorts. Dr. Wilfrid Grenfell, Superintendent of the Royal Deep Sea Mission to Labrador Fishermen, writes in the Toronto *Globe:*

"I have cruised the coast now five years in succession, navigating my own boat, and am by no means inclined to consider it as dangerous as is generally supposed for yachtsmen. True, the cliffs in many place look forbidding, but there are such an enormous number of islands and excellent natural harbors to run for, in some of which the fleets of the world could lie in safety, that though my voyages have been in an 8 ton and then in a 34-ton steam launch, we have never found any difficulty in getting from harbor to harbor. There are hundreds of rivers, not a single one of which is private property, and also innumerable lakes, well stocked with trout and salmon. Many of these are still innocent of an artificial fly. The shooting to be obtained is excellent. The wild geese, ducks and sea birds are naturally abundant. The willow grouse afford excellent sport also. They are plentiful and strong flyers. Snipe are abundant in places, and plover also. Reindeer, larger than I have met in Norway or Labrador, or indeed anywhere—for I believe them to be the largest of their species—are simply innumerable. But the stranger must purchase a $100 license before he can shoot them. Bear, wolves, otters and beavers are also to be found. The large Arctic hare and rabbit are in plenty.

The country should offer the archæologist also an excellent field for work. The aboriginal tribes of the island have only recently disappeared, and next to nothing has been done to obtain traces or records of them. The ornithologist, botanist and entomologist have also a great field open whence to gather knowledge and fresh laurels. Very little has ever been done with the entomology of the island. The agricultural prospects of the country seem limited to the western part of the island, but there appears to be there good grazing land, and in places good agricultural land. The fogs so associated with the country I have not failed to experience, and that more than once, but they are limited to the sea almost entirely. Many times, making the land in foggy weather, we have found a glorious day with lovely sunshine on the land. As a matter of fact, the climate of the interior is a dry one, is extremely healthy and bracing, and if only good hotels existed on some of the large inland lakes, such as Deer Lake and Grand Lake, from the standpoint of a physician I should say that persons with weak lungs and tendencies to tuberculosis could do far worse than spend the summer months in Newfoundland. Until now it has almost been impossible to get into the country at all. Very few persons had ever been across it, and even its own inhabitants knew next to nothing about it. But the new railway is solving the problem. By next June it will be open in its entire length, and a fine steamer now being specially constructed for the service will transfer mails and passengers in six hours from Sydney on the Intercolonial Railway to Port au Basque. Whether the current of passengers to the mother country will be diverged to run through this channel is still to be seen. Certainly the time on passage will be very considerably reduced, and fast steamers from St. Johns, Newfoundland, to Liverpool, which is the shortest trans-Atlantic course, should accomplish the journey in little, if anything, over three days. Thus bad sailors should all eventually go this way. Let us hope that this will not be a stigma attaching to everyone choosing

this route. The Newfoundland Government are certainly to be congratulated on their pluck in this matter, and it is sincerely to be hoped that success may attend their policy.

The scenery on the west coast of Newfoundland is magnificent, and compares well with the fiords of Norway, which are well known to me, and which people travel from the ends of the earth to see. The neighborhoods of Bay of Islands and Bonne Bay are especially fine. The people are hospitality personified as far as I have found them; they are always ready to place at a visitor's disposal themselves and anything they have. They remind one largely of the unsophisticated days of Norway, when every countryman took his hat off to every visitor, and did not expect 10 cents in return. There is a charming simplicity about these children of the sea—the race who for centuries have "done all their business on great waters and have gone down to the sea in ships." It is a refreshment, if not a revelation in itself, to the wearied and worried brain of a city man to spend a few weeks among these delightful people."

MEN I HAVE FISHED WITH.

LII.—Dr. Spencer M. Nash.

THE storm had begun before sundown and raged throughout the long winter night. It was still raging as we looked out on the great snowdrifts on Christmas morning, 1866, and as we gathered at breakfast each remarked, "It was a fearful night," and father rejoiced that no cattle trains were due that day, for he had charge of the live stock department at the eastern end of the New York Central Railroad, and would not have enjoyed having several stock trains stuck in the snow. His men had shoveled a path from the office to the house, and as we finished breakfast one announced that a passenger train had been stuck in the snow half a mile above and the passengers had neither fire nor food. Everything eatable in the house was put in baskets, pails of milk and of coffee were prepared, and half a dozen men were sent wallowing through the drifts to the relief of the passengers. Many of the men on the train came down to the West Albany Hotel, and left the provisions for the women and children. Two of them were acquainted with one of our family and stopped with us for two days until the roads were opened. We improvised a cribbage board, and put in the time as well as we could; for there was no stock coming through, and, therefore, nothing to keep us clerks and bookkeepers busy.

Seventeen years later, in 1883, at Blackford's annual trout opening in Fulton Market, New York, I was introduced to many gentlemen by the late Frank Endicott, who then knew every angler worthy of the name in the city. Among them was Dr. Nash, who, after some conversation, remarked:

"I know some people of your name in Albany. Have you relatives there?"

"Yes, that was my boyhood home."

'Is Capt. Joseph Mather, of West Albany, a relative of yours?"

"Yes, we are slightly related; he's my father."

"You don't say so!"

"I do say so."

"Well," said the Doctor, "I have a pleasant memory of a couple of days in your father's hospitable home years ago, when I was snowbound on the Central road, coming East; we played cribbage, and after the old folks went to bed we went down in the office, where we sat by a roaring fire and told stories. A brother of yours had a banjo in the office and played all the old time songs and jigs, that I thought had long since been forgotten. What has become of him? Is he living?"

"What was his front name?"

"I forget just now, but I'd know it if I heard it."

"Was it Fred? He was there then."

"Yes, yes; Fred; that's it. I'd like to meet him again. Is he living?"

"Wait a moment, till I feel my pulse—yes, I'm alive."

"You don't mean it!"

"I do mean it. I made a cribbage board, played the banjo and sang:

Ole Mister Coon's a cunnin' t'ing,
He ramble in de dark;
Noffin seem to 'sturb he's min'
Till he hear ole Ringo bark.

"Does that sound familiar? If it doesn't, I'll give you a dozen or more verses of it until your memory gets wide awake."

I wish I had a photo of the genial Doctor with the surprised look he wore when he put out his hand and said: "Well, I'll be durned!"

As I took the proffered digits I merely replied: "And so will I;" and we have never forgotten each other since. He has several times basely deceived me by saying: "Hold still, now, it won't hurt," while he was preparing to run some abominable device up a hollow tooth and drag a quivering nerve from away up behind my eyeball. The vengeance which I then vowed could now be repaid (for is not the pen mightier than the forceps?), but when I look back from a more pleasant chair in my den and try to borrow some of the enchantment which distance is said to lend—without collateral security—I relent. Perhaps he meant that his instruments of torture would not hurt—him. That's a dentist's view of the case.

As an item of interest concerning the feeding of the soft-finned pickerel on the spiny black bass, I will quote from a letter from Dr. Nash, written May 20, 1885: "I caught several pickerel (*E. reticulatus*) on the artificial fly and one had a little black bass in its throat, still alive. I placed forty bass, small and big-mouth, in the lake two years ago, and this is the first evidence I have had that they have bred. The size puzzles me. The young bass seems too small for a yearling and too large for fry of this year, for the fish was nearly 2in. long."

Once he wrote me a critique on my monograph, entitled "Adirondack Fishes," and among other things said: "I was surprised at your saying that you preferred bullheads to brook trout for the table, but on reflection must agree with you. Every summer I have tired of trout but have never had a sufficiency of bullheads. To be sure I have never tried to eat so many of the catties as I have of trout, and have never been confined to them as a steady diet as we are to trout in the woods. And this reminds me of a story. While making a trip through the Adirondacks with a friend and two guides we stopped at Ike Kenwell's, on Raquette Lake, for dinner. My guide, Ike Stone, and I were standing on the wharf anxious to get away when a boat came to the landing. A gentleman seated in the stern, said to be a clergyman, remarked to one standing near us: 'Come, brother, get your tackle ready, I have found where we can get splendid fishing, for my guide thinks we can get some bullheads to-day.' My guide never got over it, and he speaks of the 'splendid fishing' at Raquette Lake every year when we meet."

There may be no moral to this story, but it points to the fact that the flesh of all fishes of the salmon tribe, not family, for I only mean the salmon and the different trouts, is very cloying after a short time. A man will tire of salmon after a few meals, yet an occasional dinner of it is an ichthyophagian treat, and the same is true of trout in a lesser degree, for its flesh is not so rich in oils as that of the salmon.

As one of Fish Committee of the Blooming Grove Park Association, Dr. Nash arranged with me for professional advice in locating and arranging a trout hatchery for the Association, and I visited that famous park in 1883 and afterward had their hatching troughs made on Long Island, sent by rail to New York, where they went to their journey's end by canal and wagon over the mountains, and I was surprised to learn that they were watertight on arrival. I saw quite a little of the park then and was impressed with its wild, rugged character, which fitted it for a grand game preserve, and for little else. Its 17,000 acres, with 4,000 more leased, contains eight mountain lakes and over twenty-five miles of trout streams. This, and a square mile fenced in for a breeding park for deer and other game, made it a sportsman's paradise, surrounded as it is by a wild, mountainous country in Pike county, Pa., only 140 miles from New York City.

A year or two after this first visit Dr. Nash invited me to fish in the park with him. The trout season was poor just then, because the streams were swollen, and the only fishing at the time was for black bass. We left the handsome club house in the morning in a two-seated carryall drawn by two sturdy and stubborn little mules, named Or and Tor. When Bob, the driver, took up the lines and started his team he lighted his pipe and polluted the air behind him. Nash did not seem to mind it, and I, being a guest, pretended not to notice it. In no other country that I know of would such a thing be tolerated, even if a driver should so far forget himself as to attempt it, but it is an everyday occurrence among our free-born American drivers of stages and other vehicles in the rural districts. We were bound for Lake Laura, which is about six miles in a direct line from the club house, but fully nine by the mountain roads. The trees were gorgeously tinted with all the varied greens of early summer, for the leaves of the hard woods were still quite young, and when Bob's pipe was replaced in his pocket the air was glorious.

There was a little house and stable at Lake Laura, and I was glad to get from the wagon into a boat. The lake is nearly square and is almost a mile across in both directions, with a shelving, rocky shore, which was washed clean of mud or vegetation as far out as one could see the bottom. It was now nearly 9 A. M., and an occasional bass was breaking here and there. Their nests were plentiful and plain to be seen, and many schools of baby bass that had just risen, but had not scattered to seek their individual fortunes, were also to be seen.

"What flies do you propose to use?" asked the Doctor.

"Just what I was about to ask you, because this is strange water to me and you've fished it before. Tell me what you think best to start in with?"

The Doctor cast his weather eye aloft, sniffed at the wind and said: "The morning is fairly bright and there is sufficient breeze to make a ripple and hide the fall of the line and leader. I think that rather sober-colored flies should take, don't you?"

"That's the theory, a dull fly for a bright day and bright colors for an overcast sky, but I've often found exceptions to the rule."

"Naturally," said the Doctor, "the exceptions prove the rule; if there was no rule there could be no exception."

"Well, here's a ginger-hackle and a March-brown," I replied, "and if they don't suit I'll give 'em something else, and reserve any tilt at your philosophy until we adjourn to take a rise out of the luncheon," and I was soon casting.

Nash selected a stone-fly and a brown-palmer, and then he put the boat to the western side of the lake and let it drift back as we fished. We had a rise or two, but no strike, and contrary to all expectation the bass were rising about the lake more freely than when we started to fish, for we generally look for them to stop feeding as midday approaches. I said something to this effect, to which the Doctor replied:

"All black bass rules are violated by the bass in Bloomingrove Park. There's that fine lake just in front of the club house, Lake Giles; it's about the size of this lake and contains thousands of large bass, but they refuse to rise to fly or bite at bait, durn 'em, and we don't know what to think of them. We can see dozens of them swimming by, great fellows, of four, six, and nobody knows how many pounds, but they decline all offers. What do you think of that?"

"The bass are a recent importation, for they are not natives of the eastarn parts of New York and Pennsylvania, and they are at present finding all the food they want in the native suckers, shiners and other fish, but when they clean this food up they will then have appetites for what you have to offer. Now, when we start again from the western shore I'm going to try brighter flies. Here's a red ibis and a queen-of-the-water all ready. Let me take the oars while you change your cast."

A coachman and a yellow sally was the Doctor's choice, and we did quite well with these, even if the day was bright We had eleven fish in the next drift across the lake, most of them taken on the yellow-sally and the red-ibis. The bass were small, none going above 1lb, but they were lively and strong fighters. Nash said that they did not grow larger in Lake Laura. That was another strange thing. One more drift with a like result and it was time to go ashore.

We had appetites befitting anglers on a mountain lake. We had a wealth of appetite that would have been of rare value to men who are chained to business, but we had acquired it easily, and we squandered it so thoroughly that none of our wealth was available to take home.

* * * A voice said: "Come, wake up if you want to do some fishing this afternoon," and as the "dull dense sensation of recurring sense" rolled back, I gradually got a grip on life and became conscious that Lake Laura was the place on this planet where I was "at," and fish once more seemed worth the fishing.

The same flies served for the afternoon fishing, although the sky was not so bright and nothing unusual occurred except that a bass took one of my flies below and the other fly became entangled in something that was stronger than my leader. The bass was lost and my other hook broke; on reeling in I found that the broken hook was one of those side-bent "sneck" hooks which are my abomination, and how I ever came into possession of a queen-of-the-water tied on a sneck hook is more than I can say. I don't know of any fly-maker or dealer who sends out or sells flies tied on these hooks, and I was surprised to find that I had such a fly.

Before we quit fishing I told the Doctor that I would like to take a hundred or two of the baby bass to Long Island, for by the way, all the bass in Lake Laura were of the small-mouth persuasion, and we got a quart fruit jar from the house and put some baby bass in it. They were less than half an inch long and blacker than they would ever be again. We started. Bob lighted his pipe and a hind wheel collapsed and he went over the dashboard among an indistinguishable mess of mule's heels, while his young life was saddened by the loss of his pipe, which suffered a compound fracture. I was sitting over the wheel whose spokes, without a request from one of its felloes, let the hub fall on the ground, to the great surprise of the men and mules. As Nash sailed over me, after the manner of a flying squirrel, there was a momentary glimpse of a fruit jar following him, and then we arose and saw hundreds of baby bass struggling for life in the road. "And forty miles from a wagon maker," said the Doctor, as we shook hands and assured each other that we were unhurt. "I don't mind the walk back," said I, "but I am so sorry about the driver's pipe."

That driver crawled out from under the mules and looked at the wreck of wagon and of pipe. Which was the greatest calamity, from his point of view, he did not say; but he looked dazed, until Nash said to him: "Come, wake up; go to the house and get an axe, and we'll fix the wagon and go on." He went, brought an axe, and the Doctor cut a long pole, put it under the hind axle and lashed it fast to an iron on the front of the wagon body; and so, trailing on the ground like the lodge poles of a Sioux, that pole sustained the axle, and we put our rods and fish in the wagon and started over the mountain on foot, while Bob, seated over the front wheels, drove on without his pipe.

As we started ahead of the team, Nash advised that we cut some good strong gads in case of meeting rattlesnakes, and we did. They were chestnut sprouts, tough, and about 15ft. long and perhaps 1¼in. at the butt—most formidable things for a snake to meet while enjoying life in a sun-bath on an unfrequented road, "Now bring on your snakes," said my companion, and "There's one," said I, as we made a short turn and a rattler came into view while taking his siesta in the middle of the road. There was a rush, a yell, and the gads went whack, whack, on the vertebræ of that snake just as he threw himself into a hollow coil to resist the charge. It was no use, our artillery was too heavy for him. Some one said that Providence was always on the side of the heaviest artillery, thereby either paraphrasing or antedating a similar remark ascribed to Napoleon regarding the best disciplined troops. Be that as it may, we had the heaviest artillery and were the best disciplined troops, because we acted in concert, and our whacks reduced the enemy to such an extremity that he was quiescent, merely wiggling his tail to show how glad he was to see us.

"Seven rattles and a button," remarked my companion snake-killer, "and this fellow is eight years old, at least. No one can say that some rattles have not been lost, and that he may be a hundred years old. What do you think of that?"

"I think that I don't know the first thing about it. There are men who deny that the snake produces only one rattle a year, and others who assert that the rings on a cow's horn may indicate age, but not necessarily her exact age; and other men claim that in favorable years a tree will make several rings in a season, if the growth is checked and proceeds again, according as the months may be alternately dry or wet."

"You don't believe in these things, I take it," said my friend, in a manner that denoted a question.

"They may be so; I don't deny them," I answered, "but the question seems to be an open one, one in which the evidence is not all in, and as either a judge or a juryman I believe nothing until it has been proved. I have counted over a dozen wrinkles on the horn of a cow that I once bred and knew to be only four years old, and I've seen rings of growth on clam and oyster shells that would make them appear to be octogenarians when their size belied the wrinkles. I once hatched oysters from the egg, and under the microscope saw them fasten on shells, and then suspended them where there was plenty of food in tide water. In the fall those oysters were as large as a quarter of a dollar, and showed sharp rings of growth, I can't say how many, perhaps twenty. That is as far as my positive knowledge goes. What are you carrying that snake on your gad for?"

"For no reason that I can give," said the Doctor, "but you must know that a man does many things for which he can give no good reason—I mean a sound commercial reason; this thing is a trophy; only this and nothing more. It may serve to scare the mules into greater activity if they ever catch up with us, or it will serve to feed the ants if we ever find a hill of pismires."

We soon found what had been a hill, but which had been leveled by a bear, who provoked the inhabitants to attack him and then devoured them as they swarmed on his tongue. The trouble had occurred so long before that the pismires had partly rebuilt the mound, and when Nash dropped the snake across it with a thud, it was fun to see the hordes swarm up from below to resent any attack upon their outworks. They came by battalions, brigades and divisions of army corps, and they emitted a peculiar odor, which cannot be described. They covered the snake 1in. deep, and any man who has ever aroused the ire of a colony of this kind by disturbing their mounds, and has had the experience of only one of these wingless insects up his trouser's leg, will know just how they nipped that dead snake. "If you come along here to-morrow," said the Doctor, "you will find the skeleton of that rattler picked clean enough to set up in a museum; there will not be a bit of flesh or skin left; the few scales and the skeleton will remain because the ants can't eat them."

The mules came up while we were watching the legions attacking the dead snake, and the driver said that since the pole had replaced a wheel the mules had refused to go faster than a walk, and showed his whip worn to a stump, in evidence that he had used all his powers of persuasion. Then we tried our arguments, one to each mule, but those gads which had made a rattlesnake look as though he had been run through a threshing machine were shed from the backs of those mules as a duck's back sheds water. They squirmed as we yelled and whaled, but our arguments had no effect. It was not fear of Mr. Bergh that made us desist, but that muscular incapacity which accompanies severe laughter. The mules were the best disciplined troops in this engage-

ment, and they tired us out; they carried their point, and walked the whole way home.

"I tell you," said the Doctor, "a mule knows a heap. That team knew that if they should trot another wheel might break down, and it is their duty to get the wagon and Bob home safely. Yes, a mule knows more than some men."

"Present company not excepted."

"Correct; the more you study a mule—whoop! There's another snake!"

The gads were playing on a rattler like flails on a barn floor a second later and the dissertation on mules was never completed, and thus much knowledge which might benefit mankind—or mules—was irretrievably lost, all on account of a miserable little rattlesnake which was valueless as food, of no account as a motive power, whose oil is of doubtful value for rheumatism, and whose sole mission seems to be confined to scaring huckleberry pickers, causing some sportsmen to carry "remedy for snake-bites," and furnishing inspiration to Ed. Mott to write "Old Settler" stories for the New York *Sun*. Perhaps this is reason enough for its existence. Who will deny it?

It was in 1888—I like to be exact—that the B. G. Park Association, through Dr. Nash, invited me to be the judge in its fly-casting tournament in October, and Nash and I fished Lake Giles with fly, minnow, dobson and fiddler crab—which I brought from salt-water—for two days and never took a bass, although we saw them in great numbers and of large size nosing around our baits. It was a new experience to me, but Nash talked as though it was the usual thing on Lake Giles.

I have no record of the fly-casting at hand. Memory has only recorded the fact that the distances and accuracy compared favorably with such amateur casts as had been made at Harlem Mere, but the measuring line was unique, and the device of Dr. Nash is worthy of record, for it is the best thing of the kind I ever saw. It was made of wooden strips 3 or 4in. wide and 12ft. long; the ends dovetailed together and secured by a bolt which allowed them vertical motion. On these strips were the distance marks. When we consider that our cotton lines would shrink when wet, and that the wood only shrinks or swells across the grain, to any appreciable extent, we get the value of this measuring line and of its record in tournaments.

Some seven years ago Dr. Nash organized "The Fresh Air Club," of a dozen or more members, and they would go by rail to some place twenty or thirty miles away and then start for the city on foot and across lots, over hill and through meadow on a straight line, and each season they visited me on Long Island, shook hands and were off, with the motto: "The hind wagon pays the toll." This and an annual vacation of three months in the Adirondacks, where he is at the present writing, keeps the doctor in rugged health and strength, and he is naturally a strong man.

As we sat in the boat on Lake Giles, trying to induce the bass to take flies and various baits without getting them to notice our lures, he said: "I took my first fishing lessons from Reub. Wood, when a boy in Syracuse, N. Y., but even Reub. couldn't catch a bass in Lake Giles, and those boyhood days with 'Uncle Reub.' are so long ago that I begin to think I'm as old as the hills or as the valleys between them, for I think they are twins, but, anyhow, I'm getting old."

"Yes, you are old. Old enough to be called in. When did you fish with Uncle Reub.?"

"In 1861, when I was sixteen years old, and that's a long time ago."

"Well, yes," I answered, "it's long for a boy like you to remember, but I fished with him in 1840, when I was seven years old, and that's only a short time ago. Please never speak about your getting old in my presence. Even the fish refuse to bite when you talk in that way."

The Doctor thought a moment and replied: "Old is a comparative term which changes its meaning as we advance in life. When I was thirty-eight and just a trifle gray I revisited the village of Cazonovia, where I lived between the ages of eight and sixteen, and chanced to see two boys fishing at a spot where I fished when about their ages and caught the grandest suckers and bullheads that ever made a little boy's heart glad. I mentioned the fact to the boys that I used to fish at that spot when a boy and passed on, but before I was out of hearing I heard the question: 'Say, Johnnie, who is that old duffer?' I did not get the reply, but never regretted it. If I was an old duffer five years ago I must be an older one now."

Thinking this over after writing it, I can only hope that if I organize a party to go to the gold fields of Alaska and the Klondike next spring, that one of the party will be Dr. Nash. Not that I fear a need of his professional services, for my wisdom teeth have not only been cut, but shed some weeks ago, but for the sake of his genial companionship, his knowledge of camp life, and his unfailing good nature in the presence of misfortune or incident. Our acquaintance began in storm, ripened into a warm friendship in later years, and at the rare intervals when we meet we are boys again.

FRED MATHER.

AN IOWA OUTING CENTER.

EDITOR C. H. Loomis, of the Bellevue, Iowa, *Herald*, sends us his illustrated souvenir, "Where Proudly Flows the Mississippi," devoted to setting forth the commercial, residential, and outing characteristics of Bellevue. The town is on the Mississippi River, in northeastern Iowa, and is reached by the Bellevue-Cascade branch of the Chicago, Milwaukee & St. Paul R.R., and by the Chicago, Burlington & Northern Railway. Of the fishing and shooting, Mr. Loomis writes:

"It has been said—and truly—that there are no better fishing grounds along the Mississippi than at Bellevue. Here is caught every species of fish known to the river—and in abundance; a fisherman with an empty string being of rare occurrence. Nearly every variety of bass is caught here, the best season for them being from June to September inclusive. Some of the best spots for bass fishing are in the sloughs and small lakes opposite the city—especially at the mouths of Lilly and Yonkers lakes; excellent bass fishing can also be had at the new government dams below town. The spoon and live minnows are preferable as bait, and as the bass is a capricious fellow, his prospective captor will do well to provide himself with each. A species of the bass family locally known as 'croppies' will take worms.

"Another of our best game fish is the pickerel, frequenting about the same localities as the bass, and taking the same bait. Jack-salmon and pike are caught in greatest abundance in the fall of the year; they take the minnow readily, and some of the best places for catching them are the rock bars north and south of the city, and on the Illinois shore a short distance south. The several varieties of catfish, perch, sturgeon and eels are also caught here in numbers. Bellevue and vicinity certainly affords plenty of sport for the piscatorially inclined outer, whether he be of indolent or ambitious disposition.

"From 1842 to 1869 this region was the resort of wild game of all sorts and varieties indigenous to the country and climate. Our veteran sportsman, M. G. Hyler, has to his credit over 500 deer, hundreds of wild turkeys, and numberless ducks, geese and prairie wolves killed during that period and later; and Mr. Hyler, as may be imagined, is not the only one who killed game. This country, however—like all other sections of the United States where primitive nature has fallen back before the advance of the woodsman's axe and the plow of the husbandman—is in the wane of its glory as a game country. Yet good shooting can still be had here, as in their proper seasons the sloughs and lakes are the home of thousands of wildfowl, such as ducks, geese and snipe, while quail, pheasant and woodcock are found in the Iowa bluffs and on the Illinois side of the river. The recently enacted Iowa game laws place some restrictions, however, upon the killing of the last mentioned class of game. In furred game—rabbits, squirrels, coons, foxes, prairie wolves and wildcats are yet to be found in abundance by the sportsman who will learn their haunts.

"The Mississippi River has been termed the home of the camper, and anyone who has taken a journey of any length upon it, or upon one of the lines of railroad which follow its curves, will fully appreciate the truth of the saying. During the camping season its shores and islands are dotted with the white tents of campers, and the pleasant odor of fried eggs and 'sow-belly' is wafted upon the breeze to the nostril of the passer-by. And, while generally speaking, the Mississipi is the camper's home, it is peculiarly so in this immediate vicinity; scenery, climate, the excellent facilities for boating, fishing and hunting, the nearness of the camper to supplies—all combine to make this one of the most pleasant and convenient of localities for the spending of a few days, weeks or months amid the scenes of nature. Suitable spots for locating a summer camp are so numerous in this vicinity that a detailed description of them would occupy pages of this pamphlet; suffice it to say that anyone coming here for that purpose can readily secure any and all necessary information on the subject. In closing, we say: Come to Bellevue, the ideal summer resort of the Mississippi River."

A DAY ON BEAR BROOK.

CHARLESTOWN, N. H., Aug. 10.—*Editor Forest and Stream:* Looking over my last epistle as to bait fishing, size of hooks, etc., etc, and recalling the question as to closing waters entirely for a period, and then opening them on a fixed day to be raided by every angler for miles around, has brought back to my memory a day on Bear Brook many years ago, when a couple of hours changed the score of the day.

I had often heard of Bear Brook more than fifty years ago, when living in Lowell, Mass., as a young man, and where some of my piscatorial friends from the English colony which first settled in Lowell, went up to Hooksett, N. H., quite near the brook, for a week, and sent home some beautiful trout; but I had never seen the brook myself until the first year of the late Civil War, when, in the general stagnation of all business which followed the outbreak of the war, the works in which I was engaged were partially stopped for a short time, and one of the employees, who was an ardent angler, proposed to me to go up to the brook and try for some trout.

Another of the engravers joined him, and, piloted by a friend of ours, the market-man, who supplied us all with beef and mutton, and who knew the brook well, we started one bright morning in May for our drive up the Merrimac, and then up the Simcook River, some fifteen miles to the mouth of the brook.

We arrived at the old Ely Place (a huge farmhouse with numerous and enormous outbuildings, which had once been the headquarters of a great lumber industry) somewhere between 8 and 9 o'clock in the morning, and putting up our horses, started for the brook.

By the advice of our guide, we did not begin in the meadow near the house and the road, which he thought had been too much fished "by the boys," but bore up a pasture road, reaching the water about a quarter of a mile above. Here we began, and scattering, worked up the brook. As I always fish new waters rather deliberately, I got behind the rest of the party for some time, and had very poor luck, until I overtook them at the head of the meadow, where the brook made a number of short turns under the shadow of a piece of old woods, along whose edge it ran and made a number of deep holes, filled with old logs, where they were having a great time and had got some fair fish. They had "skimmed the cream" of it though before I reached them, and soon we all worked on up the brook. It came out bright and hot with no air stirring, and by noon, when we reached a sawmill far up the brook, we were very willing to sit down on the logs and rest.

The men at the mill told us that the meadow above was good fishing, but there was not a sign of a tree or bush, and the sun was blazing down with full power, so we concluded not to go any further, but ate our lunches at our leisure, and smoked our pipes, and then set out homeward down the stream, which is the way I always prefer to fish with bait, and in so doing added a few more fish to our creels.

When we reached the deep holes under the shadow of the woods—but not in the shadow then, for the sun had "swung half round the circle"—my companions all "slacked speed," to work them over again. Now, I never like to fish the same waters over again the same day, unless the weather changes, and do not believe in waiting for trout. I have always found that if they were at home, and "on the feed," they would respond as soon as you "dropped them a line." I accordingly worked slowly on down stream until, just as the sun was setting, I reached the bridge where we had begun in the morning. Now, as I said in my last, I was "loaded for bear." I had on a 1.0 hook, with plenty of bait, and the first cast I made in a bend of the brook, a few yards below the bridge, where it swirled under a hollow bank, was answered by such a tug as I had not felt all day, and resulted in placing a ½-pounder in my basket. Then my fun began. Every fresh bend in the brook gave me a fine fish from 6 to 8in. long, and when my companions overtook me in the meadow just below the house, when it was so dark I could scarcely see my line, I was trying vainly to get another rise from a big fellow which I had once lifted just out of water, and probably pricked, from striking too quick. We all concluded that it was too dark to fish longer, and went up to the house, where, to the surprise of my companions, the contents of my basket overbalanced their three.

So much for an hour after sunset on a bright, clear day. Suffice it to say that we had a pleasant drive home by moonlight, and that two of my neighbors enjoyed a bountiful trout breakfast the next (Sunday) morning, as well as my own family. I shall never forget that last hour's sport

VON W.

BASS IN THE VIRGINIAS.

The Potomac River.

THERE is a fact which seems to have escaped the notice of a majority of the fishermen coming here from a distance which I would call your attention to, for the benefit of a very few.

The Potomac is touched by the Baltimore & Ohio R. R. at Harper's Ferry, W. Va., and Hancock, Md., where it is fished by city anglers. Between these two points there is, I should judge, about thirty-five or forty miles of water that is seldom fished by any except local fishermen, and a very few who come from Hagerstown, Md.

There are some places on this river one could safely call virgin waters, between the two places mentioned. Numerous dams make deep waters. The principal one being dam No. 4, about five or six miles west of Shepherdstown, W. Va. A camping party could find excellent sport and recreation along this stream.

Persons desiring hotel accommodations and fishing could secure about what they want by application to the Entler Hotel, at Shepherdstown, W. Va.

Harper's Ferry, W. Va.

This historic town is located at the junction of the Shenandoah and Potomac rivers, and can be reached by the Baltimore & Ohio R. R. Anglers can find any kind of water desired, as they have the two rivers to choose from, and either one is good.

First-class accommodations can be had at Hotel Courier, kept by Shepherd Gatrell, who will kindly answer any questions. There are a number of parties who take fishermen out there and furnish good boats. The Blue Ridge Rod and Gun Club have their club house on the Virginia side, one-quarter of a mile east of the ferry.

Riverton, Va.

The village of Riverton, Va., is situated at the junction of the Norfolk & Western and Southern railways, being at the point where the north and south forks of the Shenandoah River joins and forms the river proper. It is a favorable place for black bass fishermen. On account of the Shenandoah River being muddy at times this point will recommend itself to all anglers, for the reason that on account of the two forks coming together here one is reasonably sure of clear water at all times. When one fork is muddy the other is usually clear, and when both are clear one has the preference of either fork or the main river below.

There is a small hotel at Riverton where fishermen can find accommodations at reasonable rates.

Overall, Va.

This little village is situated on the southern fork of the Shenandoah River, about eighteen miles south of Riverton, and on the line of the Norfolk & Western Railway, and can be reached either via Riverton, Va., or Shenandoah Junction, W. Va. This point is recommended for bass fishing, as the water is remarkably deep and the natural advantages there render it all that could be desired for angling. The deep water is skirted above and below by fine riffle water. Fine strings of bass have been taken there by Baltimore and Washington anglers, some of the bass being remarkably large. Boats and lodging can be had by addressing Mandy Tripplett, Overall, Va

I would recommend this place above all others, either on the Shenandoah or Potomac rivers, but would wire the railroad agent at Riverton regarding the condition of the south fork before starting.

EDW. C. DRAWBAUGH.

THE WALLKILL RIVER AGAN.

Editor Forest and Stream:

I have just finished the articles of Messrs. J. S. Van Cleef and Fred Mather, taking me to task for my criticism of Mr. Mather's forty-ninth "Men I have Fished With."

Mr. Van Cleef undertakes to convince the readers of FOREST AND STREAM that I have made some "serious errors," and that I have charged Mr. Mather with making statements not contained in his article. In my article of July 15 I said. "The Wallkill rises in the township of Wantage, Sussex county, in the State of New Jersey, and flows thence in a northerly direction through Orange county and empties into the Hudson, or rather Rondout Creek, at Rondout, Ulster county, N. Y." Mr. Van Cleef says: "But it is incorrect that this river runs through Orange county until it empties into the Hudson, as argued by Mr. Wilkin;" and this is the manner in which he says I err: "The fact is that the Wallkill River runs through both Orange and Ulster counties and finally joins the Rondout Creek a mile or two above Rondout and empties into the Hudson." That's what I call a distinction without a difference, and most other people would say the same thing upon a comparison of the two statements.

I acknowledge that I was mistaken in my statement that Mr. Mather was to meet Mr. Ziegenfuss at Zach Dubois's hotel at New Paltz, and right here tender to Mr. Mather my humble apology. I was three or four miles up stream too far. Zach kept tavern below New Paltz, while Hank held forth right at New Paltz.

It seems to be the prevailing opinion and sentiment among the brotherhood of anglers, especially up this way, that some day we will have Mr. Mather's very readable articles collected and published in book form; if this is so, we want it corrected before it gets into that shape.

Mr. Van Cleef is right when he pays his respects to old Wallkill's superiority as a bass stream. The provision of the game laws which permits nets, fykes and the like in the Wallkill only relates to that portion or end of the stream at or near Roundout, and it is unfair to hold all the members of the Legislature who happen to live in the districts through which the stream runs, responsible for such a condition of things; Mr. Van Cleef should be more explicit in his charges, and put the responsibility where it belongs.

Mr. Van Cleef also reads with regret that I have placed a large number of bass in the stream this year, and thinks it hardly possible that among the lot there will be some large-mouthed bass. He may rest easy. They were all large-mouthed bass; and he need have no fears as to the future of

old Wallkill; it is all right, and has been for a great many years. If the planting of this fish will practically ruin the stream, it has been ruined a long time, and is wrong to lay so much blame at the doors of our Legislature, and particularly the members thereof from this end or rather the middle of the stream.

Our local fishermen have been taking both large and small-mouthed bass from the stream for years with bait, fly and flat and dip nets. The net fishing has been stopped after a hard struggle and several arrests. Flat net fishing ought to be prohibited. I saw last April at one time over forty flat netters at Phillipsburgh, and everyone was taking bass (mostly large-mouthed) at every lift of their nets, some weighing as much as 4lbs., and none less than 1lb.

I saw one man raise fifty-two in less than an hour, and many of them were very large fish. I am of the opinion that large-mouthed bass spawn earlier than the small-mouthed, for the reason that the netters were lifting them almost exclusively, three weeks earlier than the small-mouth.

The bass were all returned to the stream, as a strict watch was kept upon the fishermen, and they only took suckers and perch.

The pike-perch plant may be a failure; I doubt it, as last fall from a planting of 50,000 a young man brought me two nearly 6in. long which were taken in bait nets, and this season I have had one over a foot long; if they will live in the Delaware and Susquehanna rivers, they ought to thrive in the Wallkill.

I will let you know the result of the planting this fall, after they have had a chance for four or five months.

I hope sometime in the near future to find a good "fishin' hole," and will then invite Messrs. Van Cleef and Mather to take a whack at it with me, and if, after the day's sport is over, we've not had a good one it won't be the fault of.

JOHN WILKIN.

MIDDLETOWN, N. Y., Aug. 7.

CHICAGO FLY-CASTING TOURNAMENT.

CHICAGO, Ill., Aug. 13.—*Editor Forest and Stream:* The open tournament of the Chicago Fly-Casting Club opened to day on the North Lagoon of Garfield Park, with a fair attendance of local and visiting anglers to take part in the contests and a crowd of interested spectators. The lagoon, a body of water 160ft. in length, affords excellent opportunities for the sport, and the club committees had provided piers and buoys and marks for the casters, boats for the judges, and tents and seats for all. There was a strong wind in the earlier part of the work which seemingly handicapped much of the competition. The judges were Messrs. Fred A. Coyne, Dr. Chas G. Fuller, Henry L. Stanton, W. F. Eames, of St. Louis, and Matt Benner, with G. A. Stevens referee. The timekeeper was W. A. Church. I inclose from the official programme the full text of the conditions; from them the character of the requirements may be well understood. The work was of a high order of merit throughout, and the prize winners earned their rewards. It was a subject of frequently expressed regret that the actual force of competitors was not so large as the preliminary entry list had promised, but it is believed that the Chicago Fly-Casting Club may with warrant count this as the beginning of a series of interesting and popular annual competitions.

Rules and Regulations.

RULE I.—All persons competing for prizes shall pay an entrance fee as follows: One event, $3; two events, $5; three events, $7; all events, $10. Entries to each event close thirty minutes before contest commences.

RULE II.—The captain shall be the executive officer of the day, and shall examine all tackle used in the events. The secretary-treasurer shall receive all entry fees, and issue cards to contestants designating their number in the order of competition. The time-keeper shall start and close all events. He shall signal the judges with a flag, and call time to the contestants.

RULE III.—The contests shall be governed by two judges and a referee. In case of disagreement, the referee shall decide. The decision of the referee shall be final, except as to a question of intepretation of rules. In such a case, contestant shall have a right of appeal to the executive committee, provided that notice of such appeal is given to the captain before the close of such contest.

RULE IV.—All casting shall be done single-handeed only.

RULE V.—Competitors may consult their own wishes in choice of reel and line, but lines must not be knotted, leaded or weighted, and bait-casting reels must be free running.

RULE VI.—The leader shall be of single gut, and shall not be less than 6 nor more than 9ft. in length. One fly only shall be used, of a size not smaller than No. 12 or larger than No. 6. Snell must not exceed 6in. in length. Hooks shall be broken off at the bend. Half-ounce rubber frogs used in the bait casting events will be furnished by the captain.

RULE VII.—All ties shall be cast off immediately after the contest.

RULE VIII.—Contestants or visitors shall not be allowed nearer the judges or casting pier than 10ft.; and any contestant distracting the attention of the judges, time-keeper or contestant in any manner whatever, shall forfeit all rights or claims, and be barred from any future contest of the club.

Aug. 13, 10 A. M.

FIRST EVENT—FLY CASTING—FIXED DISTANCE AND ACCURACY.

At buoys 50, 55 and 60ft. Rod not to exceed 8½oz. There shall be made five casts at each buoy. One minute shall be allowed in which to extend line to 50ft. buoy. When the contestant has extended his line and is ready, he shall call "score," and the next cast thereafter shall be counted. When five consecutive casts have been made at 50ft. buoy, the judges will announce "next buoy." Contestant, if he so desires, can make not to exceed five dry fly casts before dropping his fly at the 55ft. buoy. A like procedure shall be followed between 55 and 60ft. buoys. If the fly falls upon the buoy cast at, the cast shall be considered perfect; for each foot or fraction of a foot from such buoy a demerit of one shall be made. The sum total of such demerits divided by three shall be considered the demerit per cent.; the demerit per cent. deducted from 100 shall be the percentage. The contestant having the largest percentage shall be declared the winner. Should contestant whip off the fly at any time after calling "score" at 50ft. buoy, he shall be allowed one re-entry only, to be taken immediately. His score shall not be counted, nor any additional re-entry allowed, if his fly is lost a second time.

The club diamond medal for this class was won by H. A. Newkirk, a club member, with an average of 91⅓ points. Capt. F. N. Peet came second with a score of 87. Then followed:

W. D. Mansfield, San Francisco, '85⅔; B. W. Goodsell, 79⅔; C. A. Lippincott, 79⅜; I. H Bellows, 76⅓; W. H. Babcock, 73; J. E. Strong, 64; G. W. Stroll, 63⅔; C. G. Ludlow, 62⅓; L. F. Crosby, 59⅔; G. A. Murrell, 53⅔.

SECOND EVENT—ACCURACY BAIT-CASTING.

At buoys 60, 70, 80, 90 and 100ft. One cast shall be made at each buoy with half-ounce rubber frog. The order of buoys to be announced by the captain. All contestants to finish casting at first buoy before the next is announced by the captain, and a like procedure throughout the contest. If frog falls upon the buoy cast at, it shall be considered perfect; for each foot or fraction of a foot from such buoy, a demerit of one shall be made; the sum total of such demerits, divided by five, shall be considered the demerit per cent.; the demerit per cent. deducted from 100 shall be the accuracy per cent. Free running reel only allowed.

Capt. Peet and C. H. Chadwick laid out stints for each other at a lively pace and ended with a tie, while others were not far behind, Messrs. Hascall and Bellows scoring a tie for fourth. On the cast-offs Peet won. The scores:

F. N. Peet, 95⅘; C. H. Chadwick, 95⅘; G. A. Murrell, 95⅗; H. G. Hascall, 94⅗; I. H. Bellows, 94⅗; C. G. Ludlow, 94⅖; F. Gardner, 94

After a delay of several hours, caused by the unfavorable weather conditions, the third contest was called.

THIRD EVENT—DRY FLY CASTING FOR DELICACY AND ACCURACY.

At buoys 35, 40 and 45ft. Rod not to exceed 5¾oz. There shall be made five casts at each buoy. Contestant allowed thirty seconds to extend his line by dry fly casting to 35ft. buoy. Scoring shall begin the first time fly strikes water. When contestant has made five casts, judges will announce "next buoy." Contestant must then lift his line, and in not less than one nor more than five dry casts, reach the 40ft. buoy, scoring to begin the first time fly strikes the water. A like procedure shall be followed between 40 and 45ft. buoys. If the fly falls upon the buoy cast at, the accuracy shall be considered perfect; for each foot or fraction of a foot from such buoy, a demerit of one shall be made; the sum total of such demerits divided by three shall be considered the demerit per cent., the demerit per cent. deducted from 100 shall be the accuracy per cent. In addition there shall be kept an account of delicacy, 100 per cent. being considered perfect. The delicacy percentage shall be determined by the two judges and referee; if necessary to this event, more judges shall be appointed, each of whom shall mark the per cent. in which, in his opinion, the contest is entitled. The sum total of such percentage as so marked, divided by three, shall be the delicacy per cent. The delicacy per cent and accuracy per cent. shall be added together and divided by two, and the result shall be the percentage.

A perfect cast is: 1. Fly to fall by its own weight without a splash. 2. On first cast fly must float. 3. Leader to fall on the water with no apparent disturbance of surface. 4. Retrieve must be made without cutting the water by leader or fly. Demerits are: 1. Slash of fly, 5 to 15 off. 2. Failure to float fly on first cast, 5 off. 3. Splash by leader, 2 to 5 off: 4. Bad retrieves, 3 to 10 off. 5 If fly strikes water on first cast between buoys, 25 off; two or more demerit charges may be added together on each cast to obtain total demerit. In case of loss of fly one re-entry shall be allowed. Loose line on platform, or coil of line in hand, is not permitted in this event. All casting shall be done from the reel.

First, W. D. Mansfield, of San Francisco, 86⅔ per cent.; second, F. B. Davidson, 84 5/12 per cent.; third, B. W. Goodsell, 83¾ per cent.; fourth, F. N. Peet, 82½ per cent.; fifth, C. A. Lippincott, 82⅙ per cent.; sixth, W. H. Babcock, 81⅓ per cent.: seventh, J. E. Strong, 79⅙ per cent.

Saturday, Aug. 14.—The competition was continued to-day with perfect weather conditions. The event of to day was the casting of W. D. Mansfield, of San Francisco, in the long-distance fly-casting. Mr. Mansfield made a cast of 114¼ft., which is believed to be a world record. The day opened with contest No. 4.

Aug. 14, 10 A. M.

FOURTH EVENT—ROLL FLY-CASTING FOR ACCURACY.

At buoys 50, 45 and 40ft. Rod not to exceed 8½oz Five casts shall be made at each buoy; for each foot or fraction of a foot from the buoy cast at, a demerit of one shall be scored.

Rules for Roll Casting—One minute shall be allowed to extend the line in usual manner of overhead casting to the 50ft. buoy. The contestant will then announce his readiness. The line shall then be retrieved to a convenient distance without lifting the leader or fly from the water. No backward cast to be made in the air. Five roll casts will be made at the 50ft. buoy, then five roll casts shall be made at the 45ft. buoy, and then five at the 40ft. buoy.

The winner was W. H. Babcock, who made a record of 90⅔ per cent. The place winners were W. D. Mansfield, 90 per cent.; C. A Lippincott, 89⅔ per cent.; I. H. Bellows, 89⅓ per cent.; B. W. Goodsell, 87⅔ per cent.; G. A. Murrell, 82⅓ per cent.; H. A. Newkirk, 79 per cent.

FIFTH EVENT—BAIT-CASTING FOR DISTANCE AND ACCURACY COMBINED.

Casting to be on a lawn within a court 30ft. wide. Tape line extending down the center. Five casts shall be made with half-ounce rubber frog; for every foot or fraction of a foot the frog first strikes the ground from tape line a demerit of one shall be scored from the distance cast. Free running reel required. No limit to rod or line.

F. B. Davidson won with a record of 98ft. ⅘in. in four casts. This was a remarkably good showing considering the fact that it was made in four casts. The fifth landed on the outside of the court and was not scored. The place winners were: E. D. Letterman, 93ft. 4in.; G. A. Bluhm, 89ft. ⅖in.; H. G. Hascall, 84ft. 11⅕in.; C. A. Lippincott, 84ft. 9⅖in.; M. D. Smith, 79ft. 10⅘in.; G. A. Murrell, 79ft. 5⅘in.

SIXTH EVENT—LONG DISTANCE FLY CASTING.

No limit to rod or line. Ten minutes shall be allowed to extend line to greatest possible distance. Only those casts where the line has been retrieved shall be recorded. In this event it is permitted that in case the contestant cannot execute a full back cast, a retrieve shall consist in a back cast that will lift the fly clear of the water from the point where it first strikes to any point between first buoy and casting platform. Automatic reels barred in this event.

W. D. Mansfield, of San Francisco, won, with a record of 111¼ft., beating the world's record of 102½ft., which has stood for seven years. The place winners were: F. N. Peet, 92ft.; I. H. Bellows, 87ft.; B. W. Goodsell, 83ft.; W. H. Babcock, 81ft; C. G. Ludlow, 78ft.; G. A. Murrell, 77ft,

From the programme of the tournament we take this interesting outline of the history and work of the club:

"The Chicago Fly-Casting Club was organized in 1891. Its objects are to encourage the art of angling in a scientific manner, the use of artificial lures in the capture of game fish, to promote good-fellowship and social intercourse among its members and the angling fraternity generally, and to assist in the protection and propagation of fish. In February, 1892, the club was incorporated. Weekly contests were held during the year, and it was noticeable that an interest was awakening in fly-casting. As bait casting was much in vogue in bass fishing, and to cast bait correctly and accurately considerable practice and the application of set principles were found to be necessary, the club decided to include bait-casting as one of the events of the club contests. This was done in 1893.

"Interest in fly and bait-casting had grown apace, and the contests for supremacy at the weekly meetings was keen. The club then decided to invite anglers from any part of the world to a contest of skill in scientific angling.

"An open-to-the-world tournament was decided upon, and it proved to be the largest open tournament ever held. Handsome gold championship medals were awarded by the club, one in each event, as well as many other valuable prizes. All the events, with the exception of the long-distance fly-casting, were original with the club, and were operated the same as at present. There being no previous records to base skill on in the events, outside of the long-distance fly-casting, those established at the Chicago Fly-casting Club's Columbian Exposition tournament are the only open records on which to base calculations.

"The best score in the amateur distance and accuracy fly-casting event was 87 per cent., made by H. G. Leavitt, of Grand Island, Neb. The best in the dry fly-casting event was 103⅓ per cent., made by W. H. Babcock, of Chicago. The best in the amateur bait-casting for distance and accuracy combined was 106⅛, best average made by F. B. Davidson, of Chicago. His longest cast was 152ft. perfect, and stands to-day as the best on record in an open event. The best scores in the expert events, and which stand as records, were as follows: Long distance fly-casting, R. C. Leonard, of New York, 96½ft.; accuracy fly-casting at 75, 80 and 85ft., R. C. Leonard, 88 per cent.; bait-casting for distance and accuracy combined, E. E. Wilkinson, 134⅛ft.; average largest cast, 139ft. perfect. In long distance fly casting there was a world's record of 102⅛ft, made by R. C. Leonard, of New York, at Harlem Mere. The club offered a special $25 prize if this record was broken, but it was not, and 102⅛ft. stands to-day as the best open record.

"President W. D. Mansfield, of the San Francisco Fly-Casting Club, in a contest at Stow Lake, San Francisco, on Feb. 14, 1897, made a record of 108½ft., but as this was not done in an open-to-all tournament and under the same rules and restrictions the other records were made, it does not stand as a world's record. The Chicago Fly Casting Club did much in 1893 to arouse enthusiasm in fly and bait casting in a scientific manner. The club reproduced on the shores of the lagoon near the Art Palace in the Columbian Exposition grounds the Isaac Walton Lodge, and here every day during the exposition anglers assembled, and from the pier built in front of the house members gave exhibitions of fly and bait casting. The World's Columbian Exposition Scientific Angling Tournament was such a pronounced success that the club may well look back to it for all time with gratification and pride. The succeeding years, '94, '95 and '96, were uneventful outside of club contests. This year, 1897, the club decided to give a second Open to the World Scientific Angling Tournament and to add two more events than were given in 1893, viz.: Roll fly-casting and bait casting at buoys in the water, of which this official programme will give full particulars.

"The Chicago Fly Casting Club feels that its labors have not been in vain, that the sport of angling has received an impetus which is lasting, and that the gentle art is becoming better understood every day. It is the hope of the club that this, its second open to the world scientific angling tournament, will induce a large attendance, for the prize list is the most liberal ever given by any club of its kind, and that it will be the forerunner of many similar tournaments in other sections of the world."

Netting in Barnegat Bay.

From State Protector Shriner's Report for June and July.

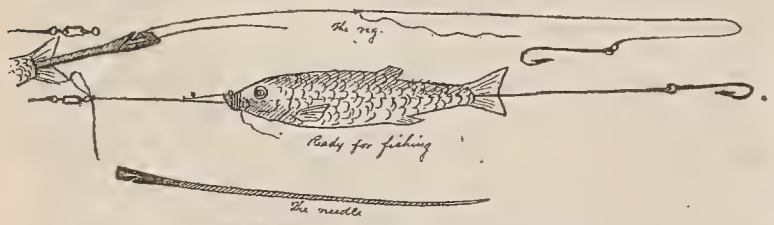
CONSIDERABLE attention has been paid during the past two months to violations of the law in Barnegat Bay, but despite the vigilance of wardens who were sent to the bay from other parts of the State, no prosecutions have resulted. A number of nets have been confiscated, and there is reason to believe that the violations of law have not been as numerous as in past years. That violations of the law still continue cannot be gainsaid, and this is due principally to a determination on the part of the lawless element to net fish and to evade the wardens, and I regret very much to say that they meet with considerable support on the part of hotel proprietors and others whose interest lies in a proper enforcement of the law. In one case a hotel proprietor complained of frequent violations near his place; he, however, not only refused to indicate who the violators were, or where they plied their unlawful business, but declared that they were men in his employ, as he supplied them with ice and bought fish from them; he did not want the men punished, and refused to assist the wardens in any way. Another hotel proprietor, having become acquainted with the fact that wardens were in the vicinity, coolly warned violators of the law to that purpose, and thus thwarted the efforts of the wardens. The boatmen who are employed in taking anglers out on the bay are in league with the violators of the law, and on several occasions wardens have found it impossible to secure boats for the purpose of putting a stop to netting. It will be seen that under such circumstances the enforcement of the law is attended with great difficulty. It is hoped, however, that continual vigilance will result in the proper protection of the bay.

A Rainbow-Brown Trout Hybrid.

SOUTH SIDE CLUB, Long Island, Aug. 11.—*Editor Forest and Stream:* The fish about which you inquire was a rainbow and brown trout cross, taken in our waters. It weighed 10¼lbs, and was 25in. in length, with a girth of 7in. We have preserved it in alcohol. JAMES RILEY.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

SOME WEST COAST TACKLE.



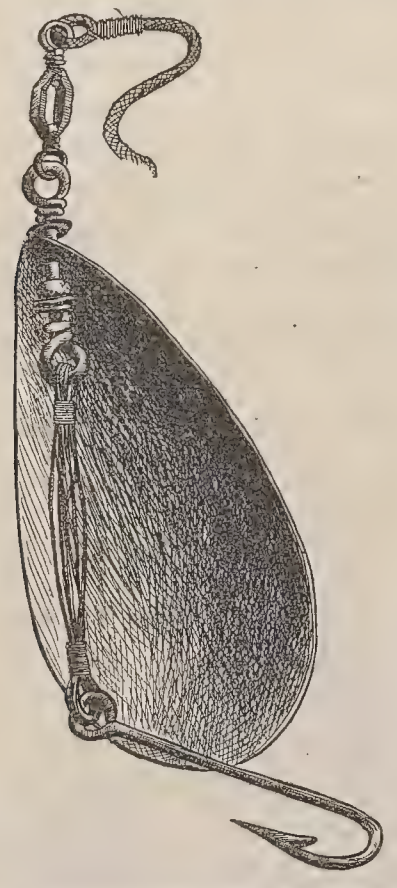
Editor Forest and Stream:

Knowing that any new device for luring fish or killing game is always hunted for and tried by the sportsmen, I have taken the trouble to sketch a few that I have never seen used away from this coast, but which have possibilities in other localities as well as here.

The Siawash salmon spoon is the rig used here by the Indians in trolling. They do not depend entirely on the spoon, but always put the hard, muscle-like "foot" of the cockle on the hook, too, and they catch more fish than the whites, who troll on the same ground, and use the same spoon, rigged a little different. This may be due to the cockle, and it may be because the Indian knows a whole lot more about salmon than the average white man does.

The other salmon spoon is my own get up and is the one that "rattled," and thereby rattled Ex-Sec. about two years ago. It is made from a piece of the copper which is put on the bottom of seagoing vessels, and turns on a stem of electric light wire with plenty of washers below the spoon, to insure spinning. The hook is fastened to the wire stem by a number of fine strands of line instead of by one heavy, solid line, as the Indian fastens his. I find this to give greater freedom to the "action" of the hook when the salmon does his savage head shake before coming to gaff, and the hook for this reason is less apt to be shaken free and is less apt to be torn or cut by the teeth of the fish. It is a very killing rig for silver salmon, and is my favorite spoon for these fish.

Of the three specimens of trout spoon sent, No. 2 is my favorite, and is the worst thing that ever happened to a trout, sure. The little spinners lie close to the wire stem and work beautifully with a very slow pull in dead water—something that is usually lacking in spoons. With this spoon there is always a glitter and a bright sparkle, no matter whether it moves fast or slow, in a current or dead water, up stream or down, and trout strike at it when they won't rise to anything else that I have ever found yet. The stem is spring brass wire and the spinners are nickel or nickel and



SIAWASH TROLLING RIG FOR SALMON TROUT.

copper alternate and should be rather small, not larger than the drawing sent, and even half that size is all right.

No. 1 is a good killing spoon too, for trout, and is very simple and durable, but I do not find it as good a killer as No. 2. No. 1 is made in nickel or copper or in combination. I find that silver makes the best spoon, and does not tarnish in the water like other metals. Any jeweler can make the spinners and there will be about 50 cents worth of silver used. I am making a new one for my own use from aluminum, and think it will be a good one.

No. 3 of the trout spoons is the Tacoma, and is used some in several modifications of the form given here. It sometimes seems to be just the right thing but more often proves rather a disappointment. It has not the killing qualities of either of the others, especially No. 2.

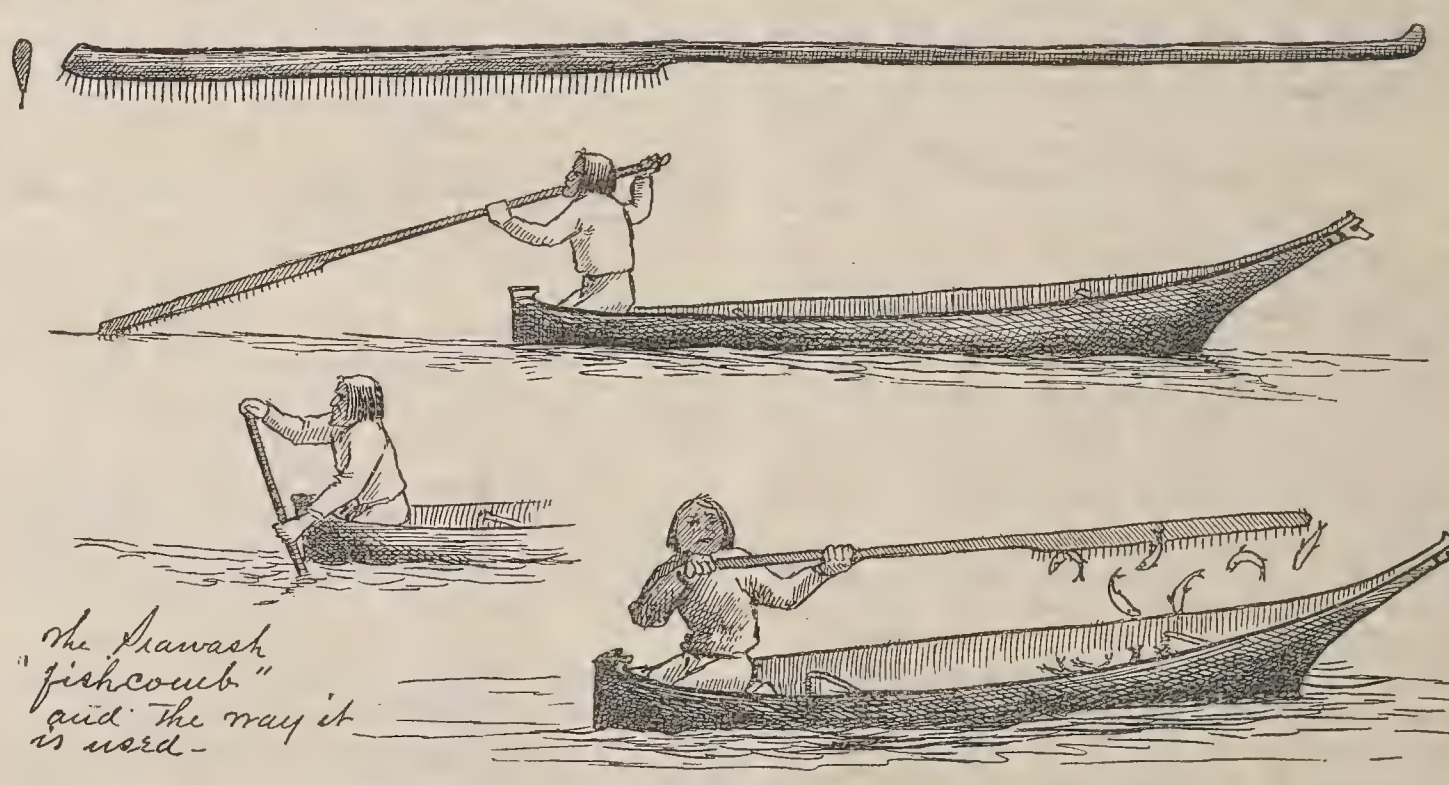
The Siawash trolling rig for salmon trout is the best rig using actual minnow for bait that I have found for salmon trout, trout and bass. I have not tried it on other kinds, but it would no doubt work as well. It consists of a short line about 18in. long below the swivel, into which it is tied with a slipknot that can readily be untied. Attached to this short line, about 1ft. from the hook, is a piece of light line, or linen thread, about 1ft. long. A needle of wire, or any suitable material, is carried by the fisherman, and when the rig is "cleared for action" the angler unties his short line from the swivel, threads it through his needle, and then pushes his needle through the fish from the tail forward along the spine

EL COMANCHO'S SALMON SPOON, ONE-HALF SIZE.

and out at the mouth. He now has his bait "threaded" on his trolling line and ties this short hook line back in the swivel ready for work. Now he threads the linen thread into his needle and runs the needle down through the head of the bait, pulls his minnow up to within 2in. of where this thread is tied to his line, and then wraps the slack tightly about the nose of the minnow, closing the mouth and holding the bait from sliding down the line to the hook, which is left trailing along behind the bait as much as 4 or 5in.

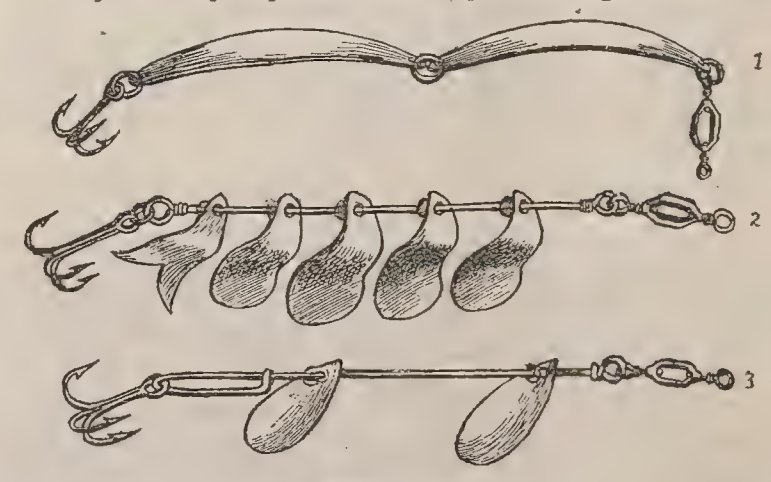
The whole operation can be done almost as quickly as one can hook a live minnow on to the common rig, and it has the advantage of using dead bait.

The bait, when properly arranged, will not whirl in the water, but darts about in the most lifelike way imaginable, and is a better bait than any spoon or other contrivance for the fish named, and, I expect, could be used for any fish that takes a minnow, in suitable water.



The Siawash "fish comb," which is illustrated here, is strictly a West Coast idea, and aboriginal as well as original, and it is a big surprise party for smelt and herring. In useing this queer implement, Mr. Siawash sits in the stern of his

SIAWASH SPOON BAITED WITH COCKLE FOR SALMON, ONE-HALF SIZE



canoe, with his face seaward and his back to the bow. The "comb" is a bit of cedar, about 16 to 18ft. in length, round like a pole about two-thirds of its length, the rest being shaped like the blade of an ordinary table knife—indeed, the shape is similar throughout. Along the thin edge, or what would be the cutting edge of the knife, the Indian drives wire teeth, about an inch apart, and leaves them stick out like the teeth of a comb about an inch. These wires he then files to a needle point, and his tackle is ready for business.

He paddles out in his canoe until he locates a school of

smelt or herring, and then—down goes the "comb" into the water, and is swept backward and upward through the school of fish, impaling them sometimes by the dozen, and the Indian sweeps them on up to the top of the water, deftly swings his "comb" over his canoe and twists it over, the fish falling off into his boat.

They are very expert at this way of fishing, and I have

TROUT SPOONS.

seen a wrinkled old Siawash fill his canoe as full of prime herring as it would hold in half an hour. They catch the smaller fish for bait in the same way.

I have caught herring about 3 to 4in. long with the fish comb myself, to use as bait for salmon trout, and one can procure enough in ten or a dozen sweeps to last for a tide in trolling for salmon trout.

I think with the illustrations sent that any trout or bass fi herman can rig any of this tackle if he wishes to test it in his own domain. If so, let him be sure to try the No. 2 spoon and the bait rig, and see if his catch isn't better than it was before.

There is no patent on any of the rigs, and all are free to use them so far as I know. EL COMANCHO.

LATONA, Washington.

FISHING AT LAKE WINNIPISAUKEE.

WEIRS, N. H., Aug. 7.—Many bass are taken from this beautiful body of water. Owing to the long continued heavy rains, the lake is very high, higher indeed than has been known for many years

Fly-fishing has not been successful so far this season, and the much-despised worm and helgramite are resorted to as lures. Minnows are of use some days.

The first day I caught, in about four hours' time, thirteen, but did not succeed in landing any very large ones, 2½lbs. being the weight of the biggest.

Mr. E. P. Miller, of Boston, now stopping at Hotel Weirs, has been very successful; one day last week he, in company with Mr. G. E Haskins, of Rockport, Mass., and Mr. Galen Cook, of Worcester, Mass., captured nineteen bass within five minutes' row of the hotel. The combined weight of this string was 51lbs. Mr. Haskins is conceded the king of bass fishermen in this region, having taken over 160 in the past five weeks. This figure does not include a large number of small ones returned to the water, as he never retains any of less than 1lb. weight.

Mr. Miller has broken the record as to size, having taken a bass which tipped the scales at 6lbs. 14oz

I learn that a party from Center Harbor, N. H., caught thirty-two bass in one day, which weighed 60lbs.

Of course there are "off days" in bass fishing. Some days they will take any kind of bait and at all hours of the day, while the next day they will refuse the daintiest morsel served in the most skillful way. However, I am sure no one but a "fish hog" would go away dissatisfied with his trip to this delightful place.

Weirs is situated on the western shore of the lake, on the line of the Boston & Maine R. R , and is only about three hours' ride from Boston. The accommodations here are of the best for fishing and sailing, and prices reasonable.

DR. MARSTON.

Anglers' Association of the St. Lawrence River.

MANY important matters came up for consideration at the fifteenth annual meeting of the St. Lawrence Anglers' Association at Clayton, Aug. 11. A report was read showing that the Association has failed to reach an amicable agreement with Ogdensburg regarding the apportionment of the $30,000 recently appropriated by the State, inasmuch as the Association held that the larger part of the money should be expended at the Thousand Islands, while the Ogdensburg people insisted on receiving one-half. The Association resolved to ask of the Legislature the closing of Chaumont Bay against netting, and a second appropriation for the improvement of the reservation. The Association also sent a request to the Fisheries, Game and Forestry Commission that the following islands and points at the Thousand Islands be purchased: Cedar Point, 20 acres, $2,300; Delaney's Point, 60 acres, $4,200; Cement Point, 3 acres, $500; De Wolf Point, 10 acres, $500; Island Mary, $5 000; Kring's Point, 30 acres, $2,500; Inside Point, Chippewa Bay, $2,500; and one of the Day points.

The following officers were elected for the ensuing year: President, William C. Browning, New York; First Vice-President, H R Heath, Brooklyn: Second Vice-President, Hon Charles R. Skinner, Albany; Secretary, W. H. Thompson, Alexandria Bay; Treasurer, R P. Grant, Clayton; Executive Committee: A. C. Cornwall, George H. Strough, Hon. Charles W. Hackett, A G. Staples, George C. Boldt, R E. Waterman, G. M. Skinner, Charles G Ewing, T. A. Gillispie, John Foley, Walter Fox and R. H Pullman.

The treasurer's report showed expenditures during the year of $290.52, leaving a balance of $266 26. At the invitation of A. G. Staples it was resolved to hold the next annual meeting at the Thousand Island House, Alexandria Bay.

Sullivan County Fishing.

LIBERTY, Sullivan County, N. Y., Aug. 2.—*Editor Forest and Stream:* Trout were plentiful in this section early in the spring, but during June and July poor catches were the rule. The largest fish I killed during July tipped the scales at a trifle less than 1lb.

During the hot weather the best fishing is obtained in the small, cold brooks, while the larger streams give, as a rule, poor results. A few fine bass have been taken from White Lake, and I have found plenty of large and gamy pickerel in Black Lake

Bass are scarce in this region, most of the waters abounding in perch and pickerel. Stevensville Lake still furnishes good sport for the angler and some fine strings of pickerel have been killed there this year. The white belly of a perch is the favorite bait.

Game promises to be unusually abundant this fall. I never fail to flush a covey or two of partridges while trout fishing, and rabbits are even more common. The whistle of the Bob White may be heard in the fields, and altogether there is promise that plenty of powder will be burnt during the coming season. MOHICAN

BOSTON ANGLERS IN MAINE.

BOSTON, Aug. 14.—Mr. Freeman, of Somerville, has recently returned from an extended fishing trip to northern Aroostook county, Me. To his friends he is very enthusiastic concerning the country and the fishing He visited Portage Lake and Big Fish Lake, and Big Fish River. Trout of 4 and 5lbs. on the fly were not at all uncommon. Small trout, that is trout of from 1 to 2lbs. were common, and could be caught by the hundreds in very many places. In one pond he tried the experiment of attaching his friend's leader to his own line, giving him two leaders, with six flies in all, just to see how many trout he could hook at one cast. Frequently, he had six on at once, all the way from half a pound to a pound or two. The sport was great, though the most he succeeded in landing at any cast was two. The trout were too lively, pulling every way at once, and actually breaking away and destroying his flies. At length his companion objected to having his casts spoiled, and Mr. Freeman had to be contented with the ordinary cast of three flies.

Some of the late fly fishermen are getting ready for the fall campaign at the Rangeleys and other waters. At the Upper Dam, T. B. Stewart is reported as having landed the biggest trout of the season, with a fly, at those waters, 6½lbs. Mr. Stewart has spent a great many seasons at the Upper Dam. This year his son, a college student, is with him. Both are enthusiasts with the trout rod. Mr. Stewart allows every trout not wanted to eat to escape, after being caught and weighed. Would that others would do likewise!

Mr. Eben E. Rand, of Portland, with Mrs. Rand and a couple of friends, has been on a fishing and camping trip for the past two weeks They have been quartered at Camp Stewart, Richardson Lake, and have fished the ponds in that section. Fishing they have found very poor indeed, and with hard work only have they been able to get trout enough for their table. To do this they have frequently been obliged to resort to bait; the fish rising to the fly only very sparingly. But with that quantity they are entirely satisfied. Some large trout have recently been taken in the lake there, by deep fishing.

L O. Crane sends a good trout story from Round Mountain Lake. On Aug. 6, with a fellow fisherman, he took 210 trout from Little Alder Stream, generally small, but five of the number weighed 4lbs. They had cans or some sort of vessels with them, and every trout was kept alive and brought down to Round Mountain Lake and liberated. Mr. Crane only desired the pleasure of taking the trout on the fly, he was very glad to contribute his share in transplanting the fish to the lake. His partner here, Mr. Hemmingway, thinks it a good idea, and that the trout should "grow larger and give somebody some good sport in the lake."

Still the gunners in this section are doing next to nothing with the shore birds. Among quite an extended acquaintance with the gunners here I am not yet able to hear of anybody who is taking much of an interest in shore-bird shooting. The market men say that the market gunners are doing next to nothing, and that they are not getting their usual supply of plover, summer yellow-legs and other summer game. Great pity, isn't it? Should the sportsmen mourn at this lack of rotting birds in the markets?

SPECIAL.

Western Camping Grounds.

GRAND RAPIDS, Minn., Aug. 11.—Capt. J W. Hague, of the Rover Fishing Club, arrived here last evening with the following gentlemen from Pittsburg, Pa.: Judge James Fitzsimmons, Henry Brant, F. C. Miller, F. W. Gill and A. N. Hunter. Capt. Hague first made his appearance in this region two years ago. He has bagged so much game and struck such fine fishing up here that he is in for another round of pleasure. The party struck out this morning for Deer Lake, and will go through the chain of lakes to the Big Fork country. They are assured of bass in Deer and Bass lakes, which have been favorites with Messrs. Hague, Salisbury and others of the united (or consolidated) hunting, fishing and camping clubs, and they feel confident of finding fine muscallonge in these northern waters. They took a liberal supply of provisions from here, and expect to be gone two or three weeks

Moose are too numerous to suit the settlers in the upper Mississippi basin. Its northern lake region is particularly well stocked with them. They tear down fences, destroy gardens and grain fields and give the agriculturists a great deal of trouble. Some people have shot at them in self-defense, but it is likely that the annoyance will soon be materially decreased. For five years past there has been a fine of $500 for shooting a moose, but the new game law of Minnesota will allow sportsmen to hunt antlered moose and caribou from Nov. 5 to 10, and deer from Oct. 25 to Nov. 15. Thus the settlers will be relieved from some of the dangers from moose, and as the deer are very plenty, the good shots will have first-class fun here this fall. A cruise up the Mississippi and into Bass, Deer and Moose lakes this week shows that the tracks of these animals are more numerous than usual. Strings of nice large bass were seen at several points, and the campers report that they are having splendid luck. Eastern people keep coming to this region and they make side trips to the Big Fork and Leech Lake hunting grounds, but they are not anxious to let the outside world know what good luck they are having. They are a pleasant crowd, however, and they make Grand Rapids, Minn., their center of supplies, for they can always get what is needed at Itasca's county seat.

WILLIAM H. DUNNE.

It is the Sheephead.

IN the issue of FOREST AND STREAM of July 3 is a letter from Chas. M. Honey, of Newton, Ill., who gives his experience about the noise made by what he calls the "white perch."

What he calls the white perch is the fresh-water sheephead, known also by the names of croaker, stone perch and drumfish. That these fish do make a croaking noise of considerable volume is beyond dispute. Several years ago, at our club house at Moredock Lake, our party caught several large sheephead, and, more out of curiosity than anything, put them in the live box. While sitting on the platform near the box, I heard the peculiar croaking, and approaching cautiously I distinctly heard the sheephead, which were prisoners, making this noise. Before this, I had been skeptical as to the source of the noises heard so constantly in the late afternoons as we were fishing on the lake.

A few weeks ago I was fishing on Black Lake, at Holland, Mich., and as we rowed the boat home about sundown, the noise made by the thousands of sheephead actually resembled the roaring of a distant railroad train. The noise was so striking that I called the attention of my companions in the boat to the fact so that it could be verified.

It may not be generally known that the channel catfish when taken out of the water will make a distinct, grunting noise. I presume there are other fish which also have use of a vocal apparatus.

Some time ago a contributor to FOREST AND STREAM said he would tell how to cook fresh-water sheephead so as to make them palatable, but I have never seen his recipe.

The sheephead were not unknown to the pioneers of this country, as the following extract from "Life Among the Indians," published in 1857 by Rev. J. B. Finley, will show. The incident related happened in 1821, when he was floating down the Sandusky River, in Ohio. He writes: "We started about noon, and the Sandusky being very full, our bark canoe went over the rapids almost with the swiftness of a bird. But when we got down to eddy water, which we reached a short distance below Lower Sandusky, we met schools of fish called sheephead, and they much annoyed us by sticking fast to the bottom of our canoe. Once in a while one of the Indians who steered for us would take his knife out of his belt and slip down his arm into the water and stab one of them, and it would almost jump on board; but they not being good to eat, we cared not to take any of them."

ABERDEEN.

ST. LOUIS, Mo.

Sharks in Long Island Sound.

GREENWICH, Conn , Aug 13 —*Editor Forest and Stream:* I witnessed the capture of two sharks in the Sound this week. One was speared in Indian Harbor on the morning of Aug. 9 by Stanley and Garfield Chard.

Next day, while sailing on the Sound, William Chard called my attention to a large fish floundering on the surface. It proved to be another shark. Mr. Chard rowed to the fish in the tender and struck it a blow with the boat-hook. Instead of trying to escape, the shark seemed to turn on the boat. Mr Chard finally managed to spear him under one of the forward fins. He then grabbed the fish by the tail and hauled it into the boat.

The first one was 5ft. long, and the other 5ft. 6in.

Oystermen and others say these are the only sharks that have been caught near Greenwich Harbor in over ten years.

We took a shot at them with a camera, and if it should prove that we have secured a good picture, I will send you one later.

WILLIAM H. AVIS.

New Jersey Trout Fry Distribution.

APPLICATIONS to have streams stocked with trout should be sent to the Fish Commissioners at once. They may be addressed to Howard P. Frothingham, President, Mount Arlington, N. Y.

SCHOOLING THE DOG.—X.

THE pointing instinct, possessed by setters and pointers, assists them in obtaining a food supply when thrown on their own resources. It is a necessity to their existence in a wild state. In domesticity, the dog does not lose the desire to pursue his prey. While he is affectionate and loyal to his master, his master's family, and is on friendly terms with such of his friends and acquaintances as he comes directly in contact with, he in most instances is unfriendly to all others and at times hostile. Man also has the hunting instinct strongly developed. He, observing that the dog would gladly go with him to the woods and fields in search of fur or feather, was pleased to assert that the dog sought birds, rabbits, etc., for his master's benefit. Observing further that setters and pointers made a pause when they had located birds — an act called pointing, setting or standing — it was an easy matter to convince himself that the point was made for man's benefit. Man can show no proof that he was directly or indirectly the cause of the setter's or pointer's hunting instinct. He can neither force nor induce a dog to seek birds or anything else if the dog does not wish to do so; he is quite as powerless in respect to a dog's pointing. However, the voluntary efforts of the dog in search of prey he can restrict in such manner that he can interpose and appropriate to himself the fruits of the dog's labors. And here is where old and new writers took note that the dog could be so trained in his own seeking that man could derive all the benefit therefrom, and therefore they did not hesitate to assert as a fact the instinct to hunt, and particularly the instinct to point, were implanted in the dog for the benefit of man. As man in his egotism has claimed, first and last, that everything in the universe was made for his direct and personal benefit, the small matter of claiming a dog's pointing instinct was no serious obstacle. There seemed to be some proof to sustain the claim in a way, for did not hundreds of men really shoot over dog's points?

"The Dogs of the British Islands," by Stonehenge, gives the following as the explanation of the origin of pointing: "The setter is, without doubt, either descended from the spaniel, or both are offshoots from the same parent stock. Originally—that is, before the improvements in the gun introduced the practice of 'shooting flying'—it is believed that he was merely a spaniel taught to 'stop' or 'set' as soon as he came upon the scent of the partridge, when a net was drawn over the covey by two men. Hence he was made to drop close to the ground, an attitude which is now unnecessary, though it is taught by some breakers, and notably to very fast dogs, who could not otherwise stop themselves quickly enough to void flushing. Manifestly, a dog prone on the ground allowed the net to be drawn over him better than if he was standing up; and hence the former attitude was preferred, an additional reason for its adoption being, probably, that it was more easily taught to a dog like the spaniel, which has not the natural cataleptic attitude of the pointer. But when 'shooting flying' came in vogue, breakers made the attempt to assimilate the attitude of the setting spaniel—or 'setter,' as he was now called—to that of the pointer; and in process of time, and possibly also by crossing with that dog, they succeeded, though even after the lapse of more than a century the cataleptic condition is not so fully displayed by the setter as by the pointer."

It would be difficult to crowd more trashy nonsense into the same space than is contained in the foregoing quotation. A labored and far-fetched theory is painfully worked out, though not a single instance of tangible proof is adduced to sustain it. The instinct, which had such an artificial origin in the setter, is conceded to be natural to the pointer, and why it should be natural to the one and not to the other the reader is left to solve as best he can. The point is treated as being cataleptic when it is neither such nor remotely related to it. The pointing dog is keenly alert; his eyes glow, nostrils play, and his muscles are tense for the instantaneous strike to seize his prey. It is strange that the conjectures and maudlin theories of a past age should be the basis of much of the fact of the present. As to pointing, any cur of good hunting ability may be taught to hunt birds with more or less success, and he learns to draw carefully and silently on them because he must do so to be even moderately successful. The method of pursuing a rabbit would be wholly unsuccessful if applied to birds, and *vice versa*. Setters and pointers naturally employ distinct methods in pursuing fur and feather. They are openly vigorous and dashing in pursuit of rabbits, give tongue merrily and trust to their swiftness to capture; after birds, they are silent, painstakingly cautious, and draw as close as possible before making the final spring to surprise and capture These different methods are a necessity. Foxes draw on grouse in this manner. Cats have a similar method of drawing on birds or vermin, but as they venture to capture birds in the openest places, they are forced to use even greater degrees of caution.

We may safely conclude that if it was a natural trait of the pointer, it was equally a natural trait of the setter; that it being a trait more or less common to all dogs and wild animals which hunt birds, it was natural to the setter; that if the trait became instinctive from education, all his other education would have become instinctive at the same time; that the conjectures of one man are very poor data for the facts of another; and, lastly, the pointer or setter display the pointing act in pursuing birds whether their masters are with them or not.

Young puppies will draw on little birds and point them by sight. As the puppies grow older they begin to use their noses more, and catching scent of game birds they draw stealthily on them, point, then dash in to capture. Their first efforts are very awkward and unsuccessful, for they require experience to determine the exact whereabouts of concealed birds. If a dog presses too close on them he flushes them; stopping too far away, he is outside of the limits wherein he can make a successful attempt at capturing. After a time his nose and judgment become so developed and trained that he can discriminate between the body-scent and foot-scent, and estimate with precision the location of the birds. The purpose of the point is to assist in the capture of the birds. They are a part of his natural food. They are palatable and nourishing; why should he not take them?

When he makes his point, every muscle is at its utmost tension; the opening and closing jaw regulates the intake of breath so that the nostrils will not be disturbed in their powers of nice discrimination; the eyes are set with a fixed purpose. He springs in with mighty energy and astonishing quickness, and often captures before the birds can take wing, or, taking wing, before they can rise beyond his reach. He can spring a few feet quicker than a bird can rise from the ground a few feet. Still, he makes many mistakes. Sometimes, through error caused by eddies of wind or bad judgment, he may jump the wrong way, or he may have made his stand too far away from the birds and his spring consequently lands him short.

There are vigor and a purpose in the natural points of the dog, or the points made when he is half trained, that are absent from them when he is fully trained, though few fully trained dogs point rigidly, but there is not the same high-tension placing of the legs for a spring. In time, the point of the trained dog becomes more or less perfunctory; he may become slouchy on it, and may even learn to lie down instead of standing up as he naturally should do. He learns its purpose as an act assisting the gun, and that there is no need of the alert readiness to spring.

The shooter who appropriates the dog's efforts, preserves all the dog's pointing methods as much as he can up to the juncture where the dog has located his birds, stands, and is ready to spring in to capture. The latter part the dog must be taught to forego. The former is useful; flushing is not. Therefore, the shooter permits the dog to search for birds and to find and point them, and there he must stop.

If he springs in and flushes he is punished. And to perfect the stanch point is where some nice judgment is necessary on the part of the trainer. There is a certain difficulty in making the dog understood what is required and what he is punished for. He may fancy that when punished for flushing he is punished for finding the birds at all, so when he is near birds he shies away from them and leaves them. He blinks. He has thus acquired one of the worst faults a dog can have. This should make clear the need of deliberation in training the dog to stanchness on point. Excessive violence defeats its own ends.

No one can teach a dog to point if the dog has no inclination to do so. He, however, can be taught stanchness on points. However, the dog generally has all the natural desire to hunt birds and to point them; the trainer forces him to so restrict his efforts that they will serve the purposes of the gun.

Seeking birds is such an enthralling passion with the dog that he will submit to a great deal of restriction and punishment before he will quit, though he can in time be made to quit; therefore, the trainer should keep in mind that if he punishes him too much, the dog may cease all effort.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

FIELD TRIALS AND FIELD TRIAL JUDGES.—II.

THE field trial kicker's private grievance, when he gave it a public airing, which was not an infrequent occurrence, was always on a broad ground. Privately, it was between himself and the judges or the management. Publicly, it was on the general corruption of field trials, of which his own grievance was but a sample, and this was backed by an affectation of great honesty and candor; so that it was easy for the reader to believe that field trial gatherings were but an aggregation of dishonest persons. The kicker laid great stress on the fact that he had very honestly paid in his money, seeming to think that thereby he had made a purchase instead of merely qualifying to compete. Paying in his money, he had only done what others did. While there might be losers, they should be the some other than the kicker. It never occurred to him that in denouncing field trials as being conducted dishonestly, he raised the question, why, believing them to be dishonest, he took any part in them? He denounced only when he lost. It is easy to conceive that there should be grumblers, kickers, cranks and unscrupulous ranters hanging on to the outer edges of field trial interests; but that the public should attach any importance to their ill-tempered and prejudiced publications is not so easily understood.

The real field trial workers and genuine supporters are so silent in their efforts that the outside world never knows much of them. They are not of the kickers. Most of people consider field trials as being a business venture of some vague kind. The field trial club has all the machinery of a business organization. It has its officer who attends to the correspondence, and its officer who is custodian of its funds. It takes in and pays out money. It seems to be a business body. Although tens of thousands of dollars have passed through the hands of field trial clubs in the past few years, field trial clubs, nevertheless, are not money makers, nor are they intended to be such. Each member pays his annual dues, and the best he can hope for in a financial way is that he will not be called on to pay an assessment. All the monies taken in for entry and starting fees, and all the clubs' revenues besides, go toward paying the prizes and the incidental expenses of the trials.

A trial is a success if it comes out even financially. Often it does not do so, then the club may do one of several things—it may run another year or two in hopes of retrieving its losses; it may disband and go out of existence, or it may levy an assessment on its members and thus make good the deficit. There are few club memberships which will stand an assessment There is no very good reason why they should do so. Organized to promote good fellowship among sportsmen, and to establish a competition which would afford an opportunity to breeders to exhibit their best productions on the one hand, and others an opportunity to see the best that could be produced, a certain element, disappointed at not winning, publicly scoff and vilify instead of praising, while those who do appreciate the good work are apathetic in their expression of appreciation.

Without field trials, there would be occupation for but a limited number of dog trainers, and that at very low prices for their work. There would be a less demand for good dogs, and a good dog would need to be sold at a cheap figure, as there would be no means of demonstrating to the public his excellence.

The financial and general business responsibility assumed by a field trial club is much greater than the public knows or imagines. First of all, it must have a secretary who understands the business affairs of field trials, an expert man who is popular with sportsmen; tactful, industrious, and with some genuine enthusiasm of his own. A club may secure such a man for nothing, or it may have to pay him a salary; it is a matter where the personal equation is supreme Some clubs have paid as high as $500 a year to the secretary, but it is a ruinous sum to take out of the club's revenues, and of itself is certain to produce financial embarrassment in time. Clubs cannot pay such salaries now and live. There are always certain incidental expenses connected with the secretary's office which add from $50 to $100 to the expense account, such as printing the rules, programmes, entry blanks; then there is the expense of postage, stationery and advertising the trials. A large area of ground must be rented for a preserve, and this may cause an additional expense of $100 or $300. Judges must be engaged, and their railroad fare, hotel bills and horse hire is a sum of no mean importance. Much is accomplished by the clubs through personal influence, which could not be accomplished as a mere matter of dollars and cents, and of this is the engaging of judgss and grounds.

A good deal of executive ability is necessary to manage a field trial club's affairs, and no little prestige on the part of its members is necessary to make its competition possible. However, the time of the trial arrives, and a few of the competitors seem to think they have conferred a decided favor to the club by entering at all. They are quick to take offense; quick to see trickery where there is only honest openness, and ready to denounce everything on the authority of their own prejudices, or their own disappointments. There is, as has been stated herein before, a sterling and substantial class of sportsmen, who quietly support field trials, who take either success or failure as a part of the competition, as it is proper they should do. Were all the competitors of the brawling or malignant sort which some writings would seem to indicate, it is more than probable that the last field trial has been run. The kicker, while noisy and active, is but a very insignificant part of the whole.

It will thus be seen that guaranteeing some thousands of dollars in purses for competition with a reasonable certainty of losing and no possibility to gain, puts a face on the matter which few people have ever considered. The field trial members trust entirely to what support may be offered to pay the prizes. If a competitor should so magnify his disappointment as to exaggerate it into a grievance, or if he really have cause for a grievance, the thousand benefits he receives and has received directly and indirectly should be considered before he launches his troubles before the world.

Let us suppose now that the competitors were disappointed, and kicked so hard and withdrew so much support that every field trial club quit and disbanded. Who would be the losers? The members of the clubs? No, for they could still have sport with dog and gun, and while they might miss a little pleasure, they would save a great deal in dues, and care and time—for they give time in attending club meetings, managing the trials, etc. Would the handlers and breeders lose anything if field trials were ended? If they stop to think a moment they should easily perceive the answer

The Quarantine for Dogs.

WE hear, though not officially, that the Board of Agriculture is likely to make certain modifications with regard to the quarantine regulations for dogs which come into force on Sept. 15 next. The full text of the order has appeared in our columns, and its extreme inutility and foolishness have already been pointed out. When notice of the thing first appeared, it seemed to have attracted little attention, perhaps the general public did not believe it would ever come into operation. They know differently now, and although it has been explained how hard such restrictions as the order enforces will be, so far as exhibitors to continental dog shows and field trials are concerned, the arrangements will be even more obnoxious to those who, traveling on the Continent, are in the habit of taking their pet dogs with them. The justness of the grievances of the latter appear to have suddenly dawned upon the Board of Agriculture officials, who, we are told, intend to issue a special license to those who seek such a thing and who wish to take their dog or dogs abroad for a time. This will probably be granted on a statement being made on application as to where the dog is to be taken. On the return the dogs will be allowed to land and to proceed to their owner's destination or residence, muzzled and under control. The muzzling and control will have to be continued for a period of three months. At the end of that time, on the production of a veterinary surgeon's certificate of health, the dog or dogs will then be allowed to go free, or, at any rate, be treated in the same manner as other dogs in the locality. These so-called exemptions will apply equally to show dogs, but, so far as they are concerned, the "quarantine at home" will prevent them being exhibited in England during the three months subsequent to their appearance on the continent.

We are yet unable to find any reason at all for these quarantine regulations, and the suggested modifications thereof, as usual, are completely one-sided, and thus incomplete. In what ways they are so need not be stated here. As already pointed out by us, the Continental dog shows will suffer from the absence of English exhibitors, so will the field trials, an international society for which has been recently formed, and, moreover, those masters of otter hounds, who have occasionally taken their packs over to hunt fresh waters in Brittany and elsewhere on the continent, will be debarred from doing so unless they be contented on their return to keep their hounds in quarantine for the remainder of the season.—*Field* (*London*).

The Continental Field Trial Club.

Editor Forest and Stream:

The citizens of Brown's Valley are determined to entertain those attending the amateur events of the Continental Field Trial Club, *i. e.*, the Minnesota Derby and the Northwestern Cup Stake, which are to be run at Brown's Valley, Aug. 25. A letter just received from there reports a good crop of young chickens, and that the warden is out all the time in the section to be used for the trials. This action on the part of the citizens of Brown's Valley will undoubtedly insure chickens in abundance to run the trials to a successful conclusion. In this same letter we have an invitation to bring our guns along, as every day of the meeting a trap shoot will be given during the noon recess on the grounds of the Brown's Valley Gun Club, open to all comers; nobody barred; everybody welcome—therefore bring your guns and have a good time. My informant thus closes his letter: "We will try and make it pleasant for the whole party."

Mr. S. A. Smart, local secretary in St. Paul, advises me that there are twenty-two entries for the Northwestern Cup, and that he is making arrangements for a special train to leave St. Paul Monday evening, the 23d inst., arriving at Brown's Valley Tuesday morning, 24th, thus arriving one day before the trials begin.

These trials have excited much interest and a good attendance is expected. The hotel and livery accommodations are good, with prices reasonable. W. S. BELL.

POINTS AND FLUSHES.

Mr. Judson S. Newing, Binghamton, N. Y., in a letter dated Aug. 9, writes us as follows: "Having been appointed secretary of the bench show committee, I wish to state that we will give a special to every breed of dogs exhibited at our coming show, Aug. 31 to Sept. 3 inclusive. Also, we will spare no pains to make the show attractive. Every dog sent will be well cared for and returned promptly. Although a little late, we intend to have the best show we have ever had."

Wheeling.

GOOD ROADS.

THE value of good roads has been mathematically shown to be of greater value to the people at large, than has until recently been imagined. And still the people at large rarely consider the matter in a commercial sense. One generation rides and walks and labors over the same roads which served for its ancestors, without giving a thought to their improvement or to the losses entailed by their unfitness. Be they muddy or rough, rocky or hilly, narrow or tilted, lifelong habit reconciles the users to their difficulties and to the losses they entail; the matter of taking energetic action and rebuilding the old, so that it would be the best possible with the material at hand, never originates with the local users of the bad roads.

Good roads multiply many times the commercial value of any locality. In the matter of time, good roads place towns nearer to the outlying farming districts, for a distance which would require two hours to travel over on a bad road may be made in one hour on a good road. The value of a team and a team's services are greatly increased where there are good roads, for the team can haul a very much heavier load on a good road; the wear and tear is much less on team and wagon, and not being subjected then to such severe labor a team can be kept on less food. Horses driven on good roads are less subject to the numerous diseases of feet and limbs that afflict horses which are driven on bad ones. Bills for blacksmithing are reduced; wagons last longer; property increases in value, and the making of a livelihood is easier where good roads are.

The ceaseless agitation of good roads and the energetic efforts of thousands of wheelmen throughout the United States for the establishment of them, is looked upon by the unthinking as simply and purely a selfish measure. They look upon the wheelman as a being who desires the public to build fine highways, so that he may ride comfortably and pleasantly on them at public expense. They fail to take the broad and sensible view that a road good in itself, if good for one person to ride on is good for all others. Also that what is apparently a dude on a wheel may be an able, responsible man in business. The wheelmen are largely of the intelligent, thinking and busy part of the community, and when on a wheel the man is not fulfilling his life work he is but taking his recreation. In striving for good roads, so that he and his brethren may ride in comfort, he is striving for the common good as well, and being a taxpayer he has a right to ask a hearing. Every piece of good road that he is instrumental in building is a benefit to the community at large. The people who walk, or who ride in carriages, or who toil with draught horses over the roads in moving the world's production of food or manufacture, owe a debt of gratitude to the wheelmen, who have done so much in the cause of good roads and good road building.

THOUGHTS I THINK.

NEW YORK.—*Editor Forest and Stream:* The gentleman who is happily favored by being the escort to a lady awheel, will find that there are many more responsibilities in this position than when he is an escort afoot, and that an infinite degree of tact is necessary to avoid misunderstandings. Having the control of the wheel in her own hands, and being frequently forced to act quickly by the ever-changing combinations of passing vehicles, she will many times need advising or prompting so that the easiest course may be taken or danger may be avoided. But if the escort be unskillful as an adviser either by advising too frequently or by using words which imply command, where only suggestion was intended, the odds are a thousand to one that the fair lady will immediatly dart into all available dangers, with the utmost calmness and airy disregard of them, while the escort feels a hair-raising apprehension as to the outcome, coincident with a solemn resolution that he will never offer another suggestion. The majority of acccidents are caused by riding into dangers with deliberation, either from bad judgment, inattention to the surroundings or an apathetic disregard of consequences.

The bi-sexual wheel, called a tandem, has some distinct advantages over the bicycle. It is generally a high-geared mechanism. The lady feels the exhilaration of going swiftly and imagines that she is pedaling the machine herself, while the gentleman steals more rights of way and takes more liberties with the laws of the road because the lady is with him. Every gentleman rider defers to a lady, even though she trundle her wheel directly in front of him to mount it, or if she take the wrong side of the road in passing, or if she dismount 3ft. in front of him, and all this for her sake; but for his own sake it is best to keep out of the way of an electric car and a lady on a tandem.

Cable cars and electric cars ride on wheels, and usage has decreed that they shall have the right of way. Bicyclist in passing cars should turn to the right or left. It is considered bad form to go straight on.

The law limits the diameter of bicycle bells to 3in. or less, but this does not apply to belles on a tandem.

A cross-eyed man should not ride with ram's horn handle bars on a straight street.

Notwithstanding the recent decision of Judge Tooley, of Illinois, in substance that the tax of $1 imposed by the city of Chicago on each bicycle owned in that city was unconstitutional, many resident owners are paying the tax.

When you observe that a lady is very warm after a fast ride on a warm day, never tell her that she is sweating. Tell her that she perspires. Men, mules, horses and cats sweat, but a lady—never. THE IDLER.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

Copies of the FOREST AND STREAM *race report blanks, for recording and reporting races, will be sent to all clubs requesting them.*

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co, 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

THE annual cruise of the New York Y. C. may be considered a success, as the distance laid out was covered within the prescribed time; this distance being greater than in any previous cruise of the club. Apart from this fact, there is very little to say.

As far as the fleet at large is concerned, the cruise benefited the members very little, there were but three squadron runs: to New London, Newport and Vineyard Haven; but one lay day, if the Goelet cup day can be properly called such, and for the great majority of owners, the sailing men in particular, the annual cruise of 1897 was crowded into the short space between Tuesday morning and Friday night.

The failure of the first race, for the vice-commodore's cups, was an accident for which no one was responsible, though the point of rendezvous, at the extreme west end of the Sound, invites such a mishap as a flat calm. The first two squadron runs brought out some twenty-five yachts in the

THE INTERNATIONAL CUP COURSE.

acing division and a goodly attendance of the cruisers; but he numbers in both divisions dwindled down after Newport vas reached, for the reason that, in the absence of the usual ay days and attendant ceremonies at the Vineyard, there vas little to tempt the yachtsmen in a mere sail to the Vineyard for the sake of returning.

One of the great charms of the cruise, the one feature which was prominent above all others in the first cruise of he club over half a century ago, and that has existed in all ntervening cruises, is the social life of the fleet, the meetings on shore and the visiting from yacht to yacht. In the present case this has been reduced to almost nothing, except or the owners of the larger steam yachts. To these fortunate yachtsmen, who can get under way on a level keel at 10 A. M., whatever the weather, and drop anchor by 5 P. M., here is plenty of time and opportunity for social intercourse, but to the racing man, or even the owner of a large sailing cruiser, practically tied fast to the tail of the steam fleet and towed from port to port at a speed appropriate to steam but not to sail, all this is forbidden and the cruise becomes a round of hard and constant work. The fortunate few who win the large prizes may put up with this, but the only effect on the sailing fleet at large must be to force it to abandon the annual cruise.

The racing of the cruise this year was in four distinct parts, that for the Vice-Commodore's cups, for the benefit of the club members who do not accompany the cruise; that for the Commodore's cups, for the larger yachts; that for the Goelet cups, and the squadron runs.

The Vice-Commodore's cups were practically thrown away, being given finally as extra prizes for a squadron run, in addition to the regular prizes. Such doubling of prizes is of no use whatever in encouraging races, the extra prize is never considered as raced for, but merely thrown in. Under the circumstances no other course was easily practicable, but the original programme should have been less rigid and inelastic, so as to admit of a possible resail for some of the very valuable prizes offered.

The Commodore's cup race was undoubtedly a success, but only by rare good luck. In spite of the long calm at the start, which might easily have been disastrous to the whole enterprise, the fleet was favored by fine weather over much of the course, and made a wonderfully good race when the uncertainties of such very long courses are taken into account. The number of yachts to finish, twenty-one in all, was very large when it is considered that few of them had any chance of winning. That such yachts as Montauk, Varuna, Viking, Sachem, Columbia, Gloriana and Sayonara started against Colonia and Wasp does not indicate any general revival of racing among the out built craft, but only bears testimony to the *esprit du corps* of some of the club members, who have done all that they possibly could to make the cruise, and this race in particular, a success. Neither this factor nor the fair weather and favoring winds can be counted on as permanent, and to repeat such an experiment in the future would be merely to invite a conspicuous failure.

The double race for the Goelet cups must unfortunately be set down as a flat failure. In the single-stick division Navahoe and Vigilant made a really fine race, but if this once great event, in which all the cracks of the fleet started, has degenerated to a mere duel, it is no longer worth maintaining. In the schooner division, the case was much worse, as but one yacht out of the immense fleet that crowded Newport Harbor elected to start for the $1,000 cup. If it had been a mere drift, there might have been good reason for none but the few racing cracks, with full light canvas, starting. Or if it had been a howling gale, there might have been some excuse for not facing it; but neither condition existed. On the other hand, there was a fine thimblehead breeze and only a moderate sea, giving at least a fighting chance to the older boats. To be sure, it was raining; but oilers can be had in any of the shops along Thames street at fairly reasonable prices.

It is a disgrace to the fleet of the New York Y. C. that only one of its many yacht owners possessed the spirit to start for the sake of racing; and, what is worse, that not another showed a proper spirit in covering the course, even though victory were impossible, for the sake of the club, out of respect to Mr. Goelet, and to give to Colonia a clear, legal title to the cup, which she deserves.

The Goelet cup race has for years been one of the honored and cherished institutions of the New York Y. C.; some of the greatest contests of modern days have been fought for its double prizes, and it is too great an affair to be allowed to degenerate, as it has unquestionably done at the present time. If it can no longer be made sufficiently interesting to attract at least four starters in each division, it were best abandoned entirely.

The squadron runs have long been an important part of the annual cruise, bringing out some yachts which race at no other times. This feature is well worthy of every encouragement on the part of the club, and it should be made the basis of the cruise programme; all other parts being subordinate to it. Good racing, of such a sort as all may take part in, with reasonable time for rest and social enjoyments in port, will do more than anything else to revive the passing glories of the cruise.

The programme this year was solely in the interests of the steam division of the fleet; in spite of the large sums offered in prizes by way of compensation to the sailing division, the latter has been practically a mere tail to the former. It requires no great amount of foresight to see that the cruise is rapidly succumbing to the influence of steam, just as other branches of yachting have done. The tendency is to make the annual cruise of the New York Y. C. a mere race of steam yachts from New York to Bar Harbor—no doubt a very pleasant excursion for those able to enjoy it, but utterly destructive of yacht racing.

If the interests of the sailing division, both racing and cruising, are worthy of consideration, a material change from this and even previous years is necessary. The programme of the cruise must be arranged by representatives of the sailing yachts, with a view to covering such distances in such times as are adapted to the sailing and not to the steam fleet. This programme must include such lay days as are necessary for the mere rest of the men, and also to afford opportunities for the ordinary social features of yachting; it must also be sufficiently elastic to allow of the resailing of important races in the always possible event of a calm. Managed in this way, the New York Y. C. may hope to restore its famous cruise to some of the old-time glory and to rescue it from becoming a mere tradition.

SEAWANHAKA INTERNATIONAL CUP.

Third Competition.

ROYAL ST. LAWRENCE Y. C.—SEAWANHAKA COR. Y. C.

Lake St. Louis, 1897.

AS IN both preceding years, the contest for the Seawanhaka International Challenge Cup has excited much interest among yachtsmen, both defender and challenger being well known from their racing last year at Oyster Bay. The transferral of the scene of the contest from Long Island Sound to Lake St. Louis, from salt to fresh water, and from under the Stars and Stripes to the protection of the red and blue ensign, all contribute to renew the interest, though the first novelty of this racing of small yachts has worn off.

The trial fleets and races of both sides have been fully described in previous issues. The final struggle may be said to have begun when Momo arrived at Dorval on the evening of Aug. 7, by which time Glencairn had been stripped and hauled out, after the last trial race, for the final finishing up.

Momo and Al Anka arrived together at Lachine, and were towed up to the club house and speedily fitted out. With Mr. C. H. Crane were Messrs. Stackpole and Shaw, while Mr. H. D. Crane had Messrs. Barbey and Peabody. "Andrew," the professional who has had charge of both boats, was also with them.

On Saturday morning Momo was placed in "racing trim" and went under the tape of Mr. David A. Poe, the senior measurer of the Royal St. Lawrence Y. C. The official measurement of the two, Glencairn being measured afterward, were as follows:

	Glencairn II.	Momo.
Length over all	32.15ft.	29.50ft.
Overhang forward	8.32ft.	6.02ft.
aft	6.40ft.	5.31ft.
L.W.L.	17.43ft.	18.17ft.
Sail area	489.10sq. ft.	456.32sq. ft.
½Sail area	22 12ft.	21.35ft.
Racing length	19.77ft	19.76ft.

Momo's hull is considerably heavier than that of Glencairn, for one detail, her Spanish cedar planking is ⅝in. thick, while the Columbia cedar of Glencairn is but 5-16in. Her l.w.l., after all practicable lightening while at the Ogdensburg shops, proved to be 18ft. 2in., and that with her lighter board, of 130lbs., so that the heavier board could not be carried.

The two boats, when lying one just ahead of the other on their trucks, showed a most surprising resemblance below the deck. When seen separately and at different times, there are many differences to distract the eye, Glencairn is 3ft. 7in. longer over all, with about 2in. more freeboard all around, and at least 4in. more crown to deck at the mast, Momo having a 4in. crown amidships for the 8ft. beam. The rigs and the deck arrangements are very different, and while Glencairn shows an unbroken surface of dead black graphite below the heading at deck, Momo's topsides as well as her deck are of bright Spanish cedar, the bottom below the L.W.L. being of white enamel.

With the two boats as they were, however, it was possible to compose the true forms of the hulls, detail by detail, apart from all distractions of fittings and color. The rocker of keel is very much the same in both, save that Momo's keel turns up very abruptly at the fore end. The side lines of the deck are not unlike, except for the same quick snubbing in at the fore end on Momo. Momo's sternpiece has a moderate rake while that of Glencairn is vertical, but there is no material difference here. The midship sections are to all practical purposes identical, both very closely resembling Glencairn I. Of the two Momo flares a little more in the topsides and is a little narrower on the L.W.L. This peculiarity is carried out in all the sections of the afterbody, and is even seen in the sternpiece, the curve of the bilge, even here, is a little lighter than in Glencairn, and the sides above flares a little more.

If the forebody of Momo were carried out about 2ft. further, to the end of her bowsprit, avoiding the very abrupt snubbing of the fore ends of all her fore and aft lines, the bow would be practically identical with that of Glencairn; from a point just forward of the mast on each boat out to the stern piece they are almost the same. Momo looks to be a little more extreme than Glencairn in the elliptical character of her L.W.L. and level lines, and to gain more length in proportion when heeled.

Working entirely apart, it is not a little remarkable that though both started mainly from Glencairn I., that Mr. Crane in his second boat and Mr. Duggan in his seventh should have come so closely together.

The deck arrangements, fittings, sail plan and rig, already described, show more and greater differences by far than the actual forms of the hulls. The sail plans are radically different; while Momo's boom is 22ft., that of Glencairn is 25ft., and on the other hand the former has 3ft. more gaff, with a higher angle of peak.

Quite a lengthy discussion took place last fall over the best method of measuring the head triangle, and it was finally decided to take the line of the forestay instead of, as also suggested, the line of the foremast headsail. In Glencairn the real forestay runs up to the masthead, opposite the peak halyard block, much higher than the head of the jib. For purposes of measurement, however, a second "forestay" of light wire rope is run directly over the luff of the jib. The fore triangle is about the same in both, but Glencairn's excess of sail is in the form of 40sq. ft. more in the mainsail.

The second week of August brought very variable and unsettled weather to the lake, and Glencairn was out but little; her sails were overhauled and a new silk jib was made and she was fitted with a new rudder, of the same rectangular shape as the old, but carried forward into a point similar to that of Momo, and with much more area forward of the center than in any of Mr. Duggan's previous rudders.

Momo and Al Anka were out as much as possible, sailing off Pointe Claire and alone, no attempts being made by the home boats to "get a line" on them. On Friday, Aug. 13, there was a strong N.W. wind and a sea, both Glencairn and Momo going for a time, but keeping apart. Al Anka was stripped and sailed down to Lachine under a jurymast and centerboard loaned by Mr. Duggan, with a spinaker as mainsail. She was shipped on a flat car to be taken to Boston, where she will race in the 17ft. class.

On Friday evening a meeting was held at the club house, the sailing committee being present, with Mr. Crane. Messrs. Sherman, Keas and Dresser, who had arrived during the day, were invited to be present. The final details were discussed, and an agreement drawn up, as is usual.

In the New York races Momo had been steered by Mr. Crane and Mr. Stackpole, one relieving the other from time to time. Article X. of the Declaration of Trust reads as follows: The helmsmen, sailing the representative yachts in the match must be amateurs, and must be residents of the countries of their respective clubs. The challenging and challenged club must name in writing, each to the other or to their respective representatives, at least twenty-four hours before the day appointed for the first race, the helmsmen who will sail their representative yachts; and such helmsmen shall sail such yachts in all the races of the match, unless prevented by illness or other subtantial cause, in which event substitutes shall be allowed.

In naming helmsmen under this clause, Mr. Crane was desirous of naming both himself and Mr. Stackpole, either to handle the tiller at will; but this was objected to by the other side as contrary to the precedent in the previous matches for the cup, and to general usage. After quite a lengthy discussion the following memorandum was drawn up:

It was agreed that one helmsman be named by each club for the coming races, such helmsman not to be unnecessarily restricted, the intention being that the conditions as to helmsman governing the two previous competitions for the challenge cup be maintained during the coming races.

The agreement was then signed, reading as follows:

Agreement covering certain conditions of the match for the Seawanhaka International Challenge Cup for small yachts, to be sailed between Glencairn II., representing the Royal St. Lawrence Y. C., of Montreal, Can., and Momo representing the Seawanhaka Corinthian Y. C., of New York, beginning on Saturday, Aug. 14, 1897.

In pursuance of the provisions of Article XI of the deed of trust, executed by the Seawanhaka Corinthian Y. C., dated June 1, 1896, covering the terms and conditions governing the tenure of the Seawanhaka International Challenge Cup for small yachts, and the competition therefor, it is hereby mutually agreed between the Royal St. Lawrence Y. C., of Montreal and Dorval, Can., and the Seawanhaka Corinthian Y. C., of New York, that the following additional regulations shall apply to the match to be sailed, beginning Aug. 14, 1897, namely:

1. The courses shall be as follows:

COURSE TO WINDWARD OR LEEWARD AND RETURN.

From a line between a buoy with black and white ball capped with bright tin cone, and a stakeboat flying the Royal St. Lawrence Y. C. Burgee in range with the foremast on the committee boat, to and around a mark bearing a black and white ball or disc capped with a bright tin cone, leaving it on starboard hand; distance 2 miles if possible, if not, 1½ miles, and return; course to be sailed over three or four times, as case may call for, making a total distance of 12 nautical miles. At the end of the first and second rounds the black and white ball or disc is to be left on the starboard hand. The direction will be announced from the committee steamer before the preliminary signal.

TRIANGULAR COURSE.

From a line between red and white buoy with disc, capped with bright tin cone, and a stakeboat anchored to the southward in range with foremast on committee boat. W. by S. 1⅛ miles, to and around a mark bearing a red and white disc or ball, leaving it on starboard hand. N. ¾ E. 1⅛ miles, to and around a mark bearing a red and white disc or ball, leaving it on starboard hand. S S.E. 1⅛ miles, to the finish between red and white disc or ball buoy, and the stakeboat, anchored to the windward.

Course to be sailed over three times; total distance, 12 nautical miles.

On the first and second rounds yachts will leave the red and white buoy on the starboard hand.

Note.—The sailing committee may in its discretion direct the course to be sailed in the reverse direction, leaving buoys and marks on the port hand; and the signal for such reversal of the course will be the anchoring of the stakeboat at the start to the northward of the buoy. In this case the stakeboat will be anchored to the southward of the buoy at the finish. The committee steamer will be anchored beyond the stakeboat, so as to bring the signal staff of the steamer as near as practicable in a line with the mast of the stakeboat and the buoy; and for the purpose of determining when a yacht has crossed the line, the committee will be guided by the range between the signal staff and the mast of the stakeboat.

START AND SIGNALS.

2. The start will be a one-gun flying start, with preliminary and preparatory signals, and will be made as nearly as practicable at 10:30 o'clock A. M.

First Signal, Preliminary: Whistle fifteen seconds long. The blue peter will be hoisted on the upper deck signal staff of the committee steamer.

There will be an interval of ten minutes between the first and second signals.

Second Signal, Preparatory: Whistle fifteen seconds long. The blue peter on the committee steamer will be lowered and a red ball hoisted. There will be an interval of five minutes between the second and third signal.

Third Signal, Start: Whistle fifteen seconds long, and the red ball will be lowered.

RECALL SIGNALS.

In case it should be necessary to recall the contestants, a blue ensign shall be displayed from the committee steamer and two sharp whistles given for the recall of Glencairn II., and an American ensign shall be displayed and four sharp whistles for the recall of Momo.

3. If any triangular race is not concluded within four hours after the starting signal has been given, it shall be postponed to the next succeeding day, excluding Sunday.

4. If any windward or leeward and return race is not concluded within five hours after the starting signal has been given, it shall be postponed to the next succeeding day, excluding Sunday.

5. In the event of heavy weather occurring on any day, the sailing committee shall, at the request of both contestants, postpone the race fixed for that day to the next succeeding day, excluding Sunday; but, if in the opinion of the committee and either one of the contestants, the weather is not too heavy, the race shall be started. In the event of a fog or calm, the committee shall have power to postpone the start, provided, however, that no race shall be started later than 3 o'clock in the afternoon.

6. In the event of its becoming necessary to postpone or resail any race, such race shall be set for the next succeeding day, excluding Sunday, provided, however, that in case either of the contesting yachts is injured or disabled, a sufficient time to complete repairs shall be allowed. The judgment of the sailing committee as to what constitutes sufficient time shall be final.

The racing rule of the Royal St. Lawrence Y. C, requiring the carrying of life preservers, shall not apply to this match.

Anchors may or may not be carried, at the option of the contestants.

The Seawanhaka Corinthian Yacht Club, of New York, by
(Signed) CHAS. A. SHERMAN,
Its Representative.

The Royal St. Lawrence Yacht Club, of Montreal and Dorval, by (Signed) J. C. C. ALMON,
Its Representative.

Assented to (Signed) CLINTON H. CRANE,
For Momo.

Assented to (Signed) G. H. DUGGAN,
For Glencairn II.

The marks for the turns were wooden discs, each about 2ft. in diameter, two being fastened at right angles on a mast. The lower half of each disc was painted white, the upper either black or red. Each pair of discs was capped by a cone of polished tin about 1ft. high, this reflecting the sun and being visible at a distance. On Friday afternoon Messrs. Almon and Wickstead went out in a launch and set the three marks for the triangle, carefully logging each side. It was decided, as in the agreement, to shorten the triangle to 1⅛ instead of 2-mile sides. The starting line was in nearly the same position as in the trial races. Mr. Duggan was formally named as helmsman of Glencairn and Mr. Stackpole of Momo, Mr. Crane working forward.

Both yachts were launched early on Saturday morning, and the steam yacht Dama, kindly offered to the committee for the races by Mr. W. Barclay Stevens, took them in tow about 9:45 On the Dama were the sailing committee, with Mr. Riddell as chairman, Mr. Almon as officer of the day, Messrs. Fitz Gibbon and Riley as timekeepers, and Mr. Wicksteed as signal officer. With them as guests were several members of the Seawanhaka C. Y. C.

The steamer Duchess of York took on a large party of members and guests at Lachine, and was off Pointe Claire before the Dama came up. The steamer was in charge of Rear-Com. Abbott. On board were representatives of the leading New York and Boston papers, the hurricane deck being specially reserved for them by the club. Every preparation was made by the Montreal papers for reporting the race; two canal barges were anchored about the vicinity of the course, and cables were laid to the shore.

After a stormy day and a threatening night, with a hard rain toward morning, Saturday was clear and bright, much warmer than Friday, but by no means uncomfortably hot. The wind was from the east and but light. Mr. Crane was desirous of a start to windward, and to obtain this the committee ran up a couple of miles beyond Pointe Claire. Voilina, steam yacht, had come down from Ogdensburgh for the races, and her owner, Mr. W. H. Post, very kindly offered her as buoy tender. With the markboats in tow, she ran up and dropped two boats some 50yds. apart for the starting line, and then started and logged off two miles E. by S. for the second mark.

The scene at the line was a lively one, and well worth a longer description, but that is another story; the fleet of small yachts, skiffs and canoes was most unique, many of the yachts were quite old, long out of racing and forgotten, but they turned up now from all sorts of out-of-the-way places. One had the French tricolor at her peak and a large American ensign lashed to a shroud on each side. At Lachine, on a high flagpole, the Canadian and American ensigns were flown side by side suspended in banner fashion, a very pretty sight.

The preliminary signal was given at 11:31, with the preparatory at 11:41. Both yachts were close to the line, with full sail, the wind being light, with occasional puffs, and the water smooth. The Dama was north of the starting line and Momo lay about the markboat at the south end. Mr. Stackpole had a hand on one leg of a big "wishbone" tiller, a triangular framework about 5ft. long and 3ft. 6in. across the base, a very neat piece of woodwork made by Mr. Young, of the Spalding-St. Lawrence Boat Co., who built the yacht. Mr. Duggan, as usual, had a "dog-leg" tiller, the main tiller about 3ft. 6in. long, with a piece about 2ft long joined to it by a bolt through both. When sitting inside, this upper piece was swung in flat on top of the main tiller, the helmsman's hand on the end of the latter. When hiking out, the extension piece was swung out at right angles to the main piece and held in the hand, the helmsman being thus enabled to put the helm amidships or even down while hiking out to windward. Just before the start, the extension piece, lying on top of the main tiller, slipped off and caught on the deck. In freeing it, an unusual strain was put on the bolt, a piece of 3-16 brass rod, and it broke, the main tiller slipping to leeward out of reach for a moment. While Momo, beautifully timed, went over just after the gun. Mr. Duggan was thus in trouble with his tiller; while the new rudder, with an excess of balance forward, was acting very differently from the old. Glencairn was headed for the line, but as she crossed she swung in and struck the markboat, smashing a hole in her starboard wale just forward of the chain plate. While she went off in chase of Momo her crew was busy trying to patch the hole with a piece of thin wood, and after this proved impossible, in stopping it with a jersey.

Momo also met with a slight mishap on the line; her throat halyard block, with a wooden shell, split and went to pieces, leaving her wire halyard with a short nip across the edge of the sheave. The throat was down and could not possibly be meated up, but the peak halyard was set taut and the tack was hove down, thanks to the spring gooseneck, so that the sail was made to sit very well.

Though hopelessly out of it through the foul, Mr. Duggan took the wisest course under the circumstances, and continued the race. Momo from the start was evidently doing the best of work to windward; with her sails drawing beautifully, she was pointing very high, and at the same time footing fast. The beat out was made without special incident, save that Glencairn was dropping steadily astern of Momo. They were timed at the first mark:

	Time	Elapsed.	Gain.
Momo	12 15 40	0 29 40	0 02 02
Glencairn	12 17 42	0 30 42	

Momo's spinaker was broken out to starboard just 1m. 15s. after she turned, and Glencairn's in 1m. 8s. Both set balloon jibs, Glencairn spilling her spinaker into hers. They ran down wind with a light breeze and smooth water, but against the Ottawa current, the first round being timed:

FIRST ROUND.

		Elapsed.		Gain.		
	Time.	Leg.	Round.	Leg.	Round.	Lead.
Momo	12 40 00	0 21 20	0 45 00	0 00 53	0 02 55	0 02 55
Glencairn	12 42 55	0 25 13	0 47 55	.. ..	.. ..	.. ..

The two were so far apart now that there was nothing but straight sailing, with no possible maneuvering. Momo tacked whenever it was necessary to keep Glencairn under her lee, but she was too far away to hurt her opponent. The breeze freshened a little and the boats moved as though they had some life, but still it was but moderate. The outer mark was timed for the second time:

	Time.	Elapsed.	Gain.	Lead.
Momo	1 10 45	0 30 45	0 00 10	0 03 05
Glencairn	1 13 50	0 30 55	.. ..	.. ..

The times show that Glencairn had made the windward leg in but 10s. more than Momo. She had made a little water, but not enough to hinder her much, and her crew had evidently had time to recover from the demoralizing effects of a very bad start.

They ran home much as before, the times being:

SECOND ROUND.

			Gain.		
	Time.	Elapsed.	Leg.	Round.	Lead.
Momo	1 36 30	0 25 45	0 00 45	0 00 55	0 03 50
Glencairn	1 40 20	0 26 30	.. ..	.. ..	.. ..

As on the first run, under conditions in which the known differences in the boats and all of Glencairn's ill-luck were most minimized, Momo was beating Glencairn badly off the wind. They started again, and beat out to the weather mark with more wind, being timed:

	Time.	Elapsed.	Gain.	Lead.
Momo	2 04 06	0 27 36		0 3 14
Glencairn	2 07 20	0 27 00	0 00 36	

It is impossible to discern any difference in the work of the two, but the timing showed that while Momo had made better time by 3m. to windward with the stronger breeze, Glencairn had covered the course in 36s. less time. Running down, however, Momo showed a substantial and important gain, making a full minute on Glencairn in but two miles of running.

The race had long since ceased to be exciting, but the finish of Momo was greeted by an enthusiastic outburst of cheers and whistles that could not have been more discordant and ear-splitting if Glencairn had been the winner. She, too, was greeted noisily when she finally finished. The times were:

Start 11:46:		Elapsed.			Gain.	
	Finish.	Leg.	Round.	Course.	Leg round.	Lead.
Momo	2 46 25	0 22 19	0 49 54	2 40 25	1 01 25	0 04 15
Glencairn	2 30 40	0 23 20	0 50 20	2 44 40		

Voilina passed a line to Momo, and Dama took Glencairn in tow, the procession of larger boats moving down for Dorval and Lachine, while the small craft scattered in all directions. As soon as Glencairn reached the club house her rudder was unshipped and taken into the shop, and she was hauled out. Mr. Duggan and Mr. Poe went to work on the rudder, which had made trouble all day, and a good sized triangle was cut off the fore side, the new edge being drilled, riveted and filed up before dark. Meanwhile the hole in her side had been turned over to her builder, who cut out a couple of feet of the upper strake and set in a new piece of planking, though there was all next day for repairs, but practically all of the work was done before she was covered over and left for the night.

Momo was quite as carefully looked after, being hauled up astern of Glencairn.

Sunday was hot and sultry, with an overcast sky and threats of rain. During the day there were many visitors to the club house. Mr. and Mrs. J. H. Crane were on the Duchess of York during the race, but stopped in town, and on Sunday morning both the Messrs. Crane went into the city.

Glencairn was launched in the afternoon, her rudder shipped, and she went out in a moderate breeze to try it.

The second race was sailed Monday in a reefing wind, the Glencairn crossing the line a winner by 4m. 24s., the summary being:

	Start.	Finish.	Elapsed.
Glencairn II	11 35 00	1 31 35	1 56 35
Momo	11 35 00	1 35 59	2 00 59

The third race, sailed on Tuesday, resulted in another victory for Glencairn II. The run was in a driving wind and rainstorm.

A New Measurement Formula

Editor Forest and Stream:

The following is in response to the invitation to yachtsmen, in your issue of July 31, to discuss the proposed measurement formula: $L+\frac{L\times S.}{10\text{ (cubic contents)}}$. The validity of all the propositions stated by the author of the rule is here conceded except those which are hereinafter specifically challenged:

Suggestion Third. "The subject of classification is entirely distinct from the subject of measuring."

This is stated rather broadly. These subjects are ordinarily distinct; but they may have some relation. A measurement rule that would work very well under the ordinary classification might work badly if, for example, there were only two classes, say 15ft. to 40ft. and 40ft. to 95ft. Thus it is possible to lessen some of the difficulties incident to measurement by proper classification.

First Head.—(*a*) "A measurement rule is intended to encourage the development of a safe, roomy, speedy and easily handled boat."

Of the importance of the development of all these features there is no question; but safety, accommodation and ease of handling are not necessarily to be sought through the means of a rule that is also to be used for measuring speed. Heretofore the influence of such rules upon design, in respect to these desirable qualities, has been uniformly bad, actually encouraging the opposite qualities. In view of this experience, and of certain strong *a priori* objections to the plan of using a single formula for purposes so logically different as measuring speed, and developing a "safe, roomy and easily handled" yacht, the expediency of such a scheme is not to be assumed; and he who proposes it should give reasons therefor. If these were entirely new problems to be solved in the first instance, it is inconceivable that any engineer would think of solving both by the application of the same formula.

(*b*) "To equalize the chances of winning prizes between boats of different types and characteristics."

By a system of empirical handicapping, all the boats of a fleet, old and new, may be raced together for a prize, and afford good sport. The handicaps in such cases are presumably so imposed as to put all the boats on an equal footing, the winning of the prize depending upon the skill with which the boats are sailed. The sole question here is a day's sport, no regard being had for the development of the yacht through the testing of different models for the best speed, and the interests of yacht racing in general being ignored. Clause (*b*) may be interpreted to refer to such contests only.

There is an entirely different kind of racing, viz.: speed contests between yachts of different designs and unknown merits of form, to determine which is the speedier form, the competing boats being all relatively fast and usually similar in size. The main purpose here is entirely different from that in the first case, though they have much in common—the day's sport, contests of personal skill, etc.

Handicapping in the ordinary sense would defeat the prime purpose of such races. Here speed obtained by meritorious form of hull is rewarded and not handicapped as before. It is uncertain whether the author of the new rule intended to cover this case by (*b*). If he did the statement is not sufficiently explicit, and it may be said here that one measurement rule will not suit both cases. In the last case there should be no handicaps except for the utilization by one boat more than another of certain speed factors that are independent of the lines of the design, and for which the designer or the boat should not be credited, such as horsepower in a steam vessel and sail area in a sailing yacht. It is undoubtedly difficult to determine the speed factors that do not depend upon the form of the hull, which being taken in excess should be taxed, and to decide how much they should be penalized. But this difficulty should not be ignored in a discussion of measurement rules nor assumed not to exist.

Probably all would agree that any excess of sail on one yacht over another should be taxed in order to make a fair race. There is a relation between length and resistance, but it cannot be definitely stated in terms of speed; and, furthermore, in the speed that comes from length, sail area is an important and inseparable factor. The difficulty of assessing an appropriate tax on the element of speed that depends upon length, after sail has been duly taxed, may be avoided without substantial inconvenience by making numerous classes, and requiring all the boats in a class to be built to the maximum length; or, what is the same thing, by giving shorter boats no time allowance on account of length—that is to say, by leaving L out of the formula.

It seems obvious that in speed contests nothing should be rewarded that interferes with speed, whether it be displacement or barnacles. A proper amount of displacement and topsides suitably proportioned for safety and accommodation may well be arbitrarily required in all yachts; but to make size of hull a measure of speed between yachts of the same length is as unphilosophical as giving the Marathon race to a cripple. Displacement being a hindrance to speed, enough only should be required or encouraged to insure safety and accommodation. This precise minimum amount cannot be secured by means of a formula in which the coefficient of any factor may be changed at will. It can be secured by taking D out of the formula; and by making a supplementary regulation stating in plain terms how much breadth, draft, cubic contents, displacement of hull, etc. are deemed inseparable for a given L.W.L.

(*d*) "To leave owner and designer absolutely free to produce anything they please."

This section is repugnant to the terms of (*a*), and both cannot stand; (*a*) should be insisted upon, and (*d*) should be modified so as to read: "To leave owner and designer free to produce anything they please, provided it be a safe, roomy and easily handled boat."

Fourth Head.—The specific objections to the formula $L+\frac{L\times S.}{10\text{ (cubic contents)}}$, are:

(1) The inclusion in the formula of terms to influence design, because the "development of a safe, roomy, speedy and easily handled boat" can better be reached by a rule supplementary to the measurement formula.

(2) On a given L.W.L. cubic size of hull is detrimental to speed, and only enough should be taken to insure safety and

internal accommodation. The formula credits superfluous size as equivalent to speed.

(3) The formula gives to topsides and deck house equal credit with immersed body. In the matters of safety and general desirability they are of very unequal worth.

(4) Under this type of rule, in which all of the functions are included in a formula which permits any dimension to be unduly enlarged by reducing others, the elements of safety and accommodation cannot be controlled with certainty, and a "racing machine" is sure to result.

(5) The formula is not suitable for measuring speed, for its factors (save one) have no numerical relation to speed that can be definitely and accurately stated.

(6) Under this kind of rule the cleverest interpreter of the formula wins, not the designer of lines to give the least resistance.

(7) The inclusion of L. in a formula that contains S. is objectionable for the reasons heretofore stated.

(8) There seems to be nothing in the formula to discourage the building of light-displacement fin-keels with monstrous topsides and unlimited draft.

Finally, it is suggested that the merit of any measurement formula may depend largely upon the scheme of time allowances to be used with it, and that to properly criticise the proposed formula the time allowance scheme should be known.

If, for example, yachts are measured by L.W.L. alone, allowances based upon theoretical speed proportionate to $\sqrt{L}$ may be satisfactory. If sail alone were measured, such allowances would not be suitable.

When yachts are rated by a racing length which is a compound of L.W.L., sail area and cubic contents of hull and deck house, it may be found to be a nice matter to logically and fairly apportion time allowances between boats of different racing lengths. Take a concrete case:

If two yachts 40ft. l.w.l. have 2,000ft. of sail each, and one has 10 per cent. more cubic contents of hull and deck house than the other, how many seconds per mile ought the smaller boat to allow the larger, and why? SEXTANT.

The New York Y. C. Cruise.

AFTER reaching Bar Harbor on Sunday night, the fleet lay at anchor over Monday, and on Tuesday the last race was sailed, the course being from off Egg Rock Light to Schoodic Point, thence to the whistling buoy off Baker's Island, and home, 21 miles. The race was a sealed handicap, the allowances being: Queen Mab allows Wasp 5m. 15s., Gloriana 8m. 54s., Sayonara 8m. 55s.; Colonia allows Emerald 49s., Sachem 1m. 25s., Marguerite 5m. 51s., Amorita 9m. 2s., Alert 11m. 39s., Fenella 29m. 45s.

The early morning was very foggy, with a S.W. wind which shifted to S.E., the fog lifting. The start was made at 11:55, with Wasp first away. The first leg was to windward, but after a short time the dense fog rolled in, and the boats lost sight of each other; they were not timed at the Schoodic mark, but it was passed at about 12:50.

They ran to the second mark, still in the fog, and were timed:

Wasp	2 04 50	Marguerite	2 32 00
Amorita	2 10 07	Alert	2 39 00
Queen Mab	2 14 15	Sachem	2 48 00
Emerald	2 17 20	Fenella	3 02 30
Gloriana	2 19 30		

Queen Mab was compelled to lower her mainsail for a time near the mark.

The fleet was not visible on the last leg, but the finish was timed:

	Start.	Finish	Elapsed.	Corrected.
SCHOONERS.				
Colonia	11 53 08	3 19 45	3 21 57	3 21 37
Emerald	11 58 57	3 22 05	3 23 08	3 22 19
Sachem	11 58 37	Not timed.		
Marguerite	11 57 07	3 49 20	3 52 13	3 46 22
Amorita	11 56 29	3 17 13	3 21 44	3 12 37
Alert	11 57 51	4 01 14	4 03 23	3 51 41
Fenella	11 52 52	Not timed.		
CUTTERS				
Queen Mab	11 59 40	3 31 20	3 48 40	3 43 40
Wasp	11 50 34	3 20 18	3 29 44	3 24 29
Gloriana	11 51 56	3 39 37	3 47 41	3 33 47
Sayonara	11 52 33	Disabled.		

Amorita beat Colonia 9m., Emerald 9m. 42s., Marguerite 33m. 45s., and Alert 33m. 7s. Wasp beat Gloriana 13m. 18s. and Queen Mab 19m. 11s.

On Wednesday a very heavy rainstorm kept all below decks, and the rowing races were postponed.

Pewaukee Lake Y. C.

PEWAUKEE, WIS

Saturday, Aug. 7.

THE regatta held on July 31 was a failure, as the yachts were unable to complete the course within the time limit. Nine yachts entered, but the wind failed entirely on the second leg of course. Idle Hour had a lead of half a mile, and would have won the race had the wind held out.

At the annual fall meeting of the Pewaukee Y. C. it was decided to challenge the Pine Lake Y. C. to sail a regatta for the Pabst challenge cup, now held by the Pine Lake Y. C. This cup, one of the most beautiful and expensive trophies ever offered to Wisconsin yachtsmen, was presented by Capt. Fred Pabst of Milwaukee, on Aug. 31, 1895, to the Pine Lake Y. C., in trust, for friendly competition between the yachtsmen of the inland lakes of this county. The executive committee of the Pine Lake Y. C. have set Aug. 21 as the date on which the regatta will be held, and the event, when it takes place, will be second in importance to the Interstate regatta, sailed on Pewaukee Lake, July 17.

The Pewaukee Y. C. has picked out the five yachts that are generally admitted to be the swiftest of the fleet to represent it at Pine Lake. They are as follows:

Class A—Sirrocco, Wallber Bros.; Idle Hour, R. E. Giljoham; Lorraine, Schiller and Bauch.

Class B—Kite, Geo. Poppert and Robt. Rowe; Sophia, W. H. Meyers.

Twelve yachts entered in to-day's race. The wind was brisk from the southeast; start was west. Yachts of both classes got away at 4 o'clock. Lorraine, Sirrocco and Tempest led the Class A yachts, and Martha and Hualpa the B class boats. Sirrocco fouled Lottie on the second leg of the course and was disqualified. Kite overtook and passed all B class boats on the second leg of course, but lost her lead to Aida on the last leg.

The race as a whole was a very close and exciting affair, and was one of the prettiest of the weekly Saturday series of this season.

CLASS A.	
Lorraine, Schiller & Bauch	0 58 50
Sirrocco, Wallber Bros.	0 59 50
Lottie, L. G. Wallber	0 59 58
Tempest, C. F. Hase	1 01 40
Idle Hour, R. E. Giljohaun	1 02 26
Carmela, S. P. Fachutar	1 04 10
Gretchen, Wm. Gerlach	1 21 22
CLASS B.	
Aida, A. C. Zinn	1 04 51
Kite, Poppert & Rowe	1 06 45
Hualpa, Silverman & Kipp	1 07 51
Sophia, W. H. Meyers	1 08 05
Martha, A. H. Slemman	1 18 11

Winners: Class A, Lorraine; Class B, Aida.
Time-keepers, Geo. M. Conway, A. G. Miller, John C. Spencer.
Judges: Judge Emil Wallber, G. M. Conway, A. G. Miller.
Course sailed, four mile triangle, once around. Race under the direction of Com. W. C. Clark.

Canoeing.

The A. C. A. Meet.

GRINDSTONE ISLAND, A. C. A. Camp.—The early arrivals on the opening day of the annual meet found the grounds well studded with tents, the official flags flying and the caterer ready with a satisfying breakfast. Even at that there were some who claimed to be the oldest inhabitants of the point. C. C. Hodgman and his party were settled in July, as was Wm. M. Carpenter, of Sing Sing. Friday there were a few scattered arrivals during the day. At 9 P. M. a large contingent under the command of Vice-Com. Harry M. Stewart with many canoes, including that most sociable of war canoes the Huff, reached the camp, and at 9:30 P. M. nine weary men were stretched on cots in the "Home for the friendless," a 20×40 tent stretched at headquarters.

At 7:30 Saturday morning the New York contingent came in with the schooner Glad Tidings, loaded down the Plimsol line with canoes and duffle and *et ceteras*.

Camp site committee Morse had matters so well in hand that at 10 A. M. there were no "anxious inquirers" at headquarters.

Sunday at noon the camp was besieged by two war canoes containing twenty-six men, from the Brockville C. C. The pickets reported the enemy in sight. The alarm was sounded on the bugle, the cannon loaded, and preparations made to give them a warm reception. Caterer McElveney's face was a study as he saw the twenty-six hungry Canadians besiege his caravansary. He succeeded in satisfying them in good time, and the freedom of the camp was extended to them. A crew of warriors, under command of the Commodore, manned the Huff, and a sight that has not been seen in Elk Bay for centuries was much admired by those on shore. Three full-manned war canoes in line, with the signal cannon and official bugler, under command of Vice-Com. Stewart in the bow of the Huff. A parting salute was given the visitors, who promised to return before the camp breaks up.

In the evening a crew of singers on the Huff floated about in Front of headquarters, and gave a most pleasing sacred concert.

Monday the camp was deserted—Gananoque was the destination. It was "Gananiquity" when they returned.

The sailing men are already feeling the winds of Eel Bay, and many new men with new boats are already on the course.

The change in the arrangement of the camp has gained general approval. Headquarters being next to the mess tent. An official swim was ordered for 5 P. M. Monday, and under command of ex-Com. Huntington the reed bed in front of headquarters has disappeared.

The Buffalo contingent are beginning to arrive. Their war canoe and several others are here. The club fours are being formed and considerable rivalry is already shown, each club represented by four men having decided to enter.

At present writing everything promises for the largest and most active camp we have had for years.

Many letters have been written to friends at home to induce wandering members to come, and come quickly.

The W. C. A. Meet.

FIVE boats and a half dozen men would cover the tonnage and *personnel* of the W. C. A. meet of 1897. The most of the rest either had no money or a good excuse. The experiment of another meet on an inland lake proved unsuccessful. It would probably have been unsuccessful to practically the same extent in any other locality that could have been chosen. The sport of canoeing, at least in the West, is at low ebb, and it is useless to attempt to deny it. Other sorts of sport have broken into its ranks. Some of the first active members of the W. C. A. have outgrown their interest or have been weaned away to other interests. In addition to this, the long stretch of hard times, in which many men, young and old, have been too anxious to enjoy fundamentally any form of sport, has put members out of the habit of taking the rather cumbersome and expensive trip to the summer meet, which, above all things, is the business of a man care free and unfettered of finances. Whether time will bring about again the older and stronger meets of the W. C. A. is at this writing purely a matter of idle speculation.

Those present are, with exception of Mr. N. B. Cook, of Chicago, all from Milwaukee and all members of Mahn-a-wauk C. C. Com. E. H. Holmes, canoe Milwaukee; Dick Merrill, canoe Bluebill; F. W. Dickens, canoe Avis; F. B. Huntington, canoe Norma, are all from Milwaukee. Members from other cities have sent the customary large promises, and brought the customary small performances. While it will be impossible to elect officers or to sail more than one event of the regular regatta, the meet of these friends and fellow members is a most enjoyable one, and has in miniature all the attributes of a rattling good canoe camp. The arrangements are good, the site is at least fair, the mess (at the tables of the Highland Hotel) is the best the W. C. A. has ever had, at least in an experience dating back to 1892. The water is pleasant for bathing, and the winds, while at times baffling and variable, as they always are on a high-shored inland lake, have been quite good enough for all sailing purposes. We could have a good camp and a good regatta if we had but the one additional qualification of more boats and men.

Lake Delavan is a deepish body of water, shaped something like a boomerang, perhaps six miles long and a mile or so in width. The camp is located on the inner angle of the elbow, in a heavy grove of young forest trees, and about half a mile from the pleasant grounds of the Highland Hotel. The lake is lined with cottages and hotel, and is a summer resort of the most virulent type. As a place for a meet, it is fully as good or better than Madison, and as pleasant as Oshkosh, though the sailing is better on Winnebago. It is not as good a place as Mullet Lake for a canoe camp, and is indeed in many attributes merely Ballast Island moved west, without all the sailing advantages of Ballast, though with rather a higher type of summer girl, and, if possible, more of her. This exotic is not often to be found in greater profusion or of greater excellence than at Lake Delavan. All members present expressed great surprise and delight at this discovery. Those who remained away have cause for regret. The tents of the camp are but a few yards back from the beaten path which follows the whole shore line of this lake, and along this path, hourly, and almost momentarily, day and night, pass large schools of summer girls fit for the pages of literature or the calendars of art. Every prospect for a meet here pleases, and only man, man in short togs and sunburn, is wanting. Alas! for the absent ones.

Messrs. Holmes and Huntington located this camp, and Messrs Holmes and Dickens established it. On Monday, Messrs A. W. Friese and Dick Merrill came on from Milwaukee (the former staying only one day in camp and then returning home), and that afternoon the boats and dunnage were brought out. The next day the dock was built at the foot of the bluff, and by Friday the buoys got put out. Life at a canoe camp is not strictly a struggle in hustling for the most Mahn-a-wauk part. We have one large tent, the private tents of Mr. Merrill and Mr. N. B. Cook, and the small tent of the FOREST AND STREAM. The latter is the only one having a cooking outfit; but with the primitive appliances there afforded we have cooked a number of meals, at which all have had a turn, and a few of us have thus messed about as much in camp as at the hotel.

Mr. Cook, the much respected father of the W. C. A. in this immediate vicinity, showed up in camp with his well known Carrier Pigeon late Monday evening. It was very good of him not to miss the W. C. A. meet this year, and the boys all appreciated his attendance. He at once went to work in his methodical way, and was the first man to have a boat in the water, and the first to have a sail. So long as Mr. Cook comes to a W. C. A. meet, it cannot be written down as a failure in all that pertains to high class standards of canoeing, of canoe ethics, and of canoeing skill. The younger men of course do not say much about it to his face, but they are very proud and very fond of Mr. Cook, who is now, I believe, past seventy five years of age.

The summer people about the lake took great interest in the canoe meet, and repeated inquiries were made as to the date of the races. These were postponed for a variety of reasons. The Gardner cup and the Longworth cup could not be sailed under conditions, and though the W. C. A. trophy might have been squeezed in had all five of the boats present started, there was no time when this was possible. The wait brought in no reinforcements of boats or men, but only added clamor from the lake dwellers, so a special scratch race was got up for Friday afternoon, free for all classes, for the Mahn-a-wauk loving cup. This brought only three entries, canoes Milwaukee, Avis and Norma. The wind was too high for Carrier Pigeon to enter as it was, and Mr. Merrill, skipper of Bluebill, had no adequate ballast for a wind which kept a boat buried under seas more than half the time.

This year a novel and tasteful innovation was made in canoe rig which added very much to the spectacular effect of the spectacular sport. Each man had his sails dyed a distinctive color. Avis sported orange-colored canvas, and Milwaukee heliotrope and Norma cerise red, while Bluebill hoisted a vast spread of robin's egg blue. When the boats were out on the lake in some of the little cruises made from time to time, or more especially when they were racing with all canvas drawing and the foam flying from the cutting bows, the picture was the prettiest that has ever been seen among the many lovely pictures afforded about the camps of these tidy little craft.

The sailing as it was offered considerable interest, although but three boats took part. The wind continued strong and steady all day Friday, and at 3 P. M., the hour at which the skippers finally got away from the dock, there was a stiff sea rolling. Norma was first out; and it was seen at once that Huntington would have his work cut out to carry all the sail he had up. While he was making a short trial reach just off the dock a good puff laid her over flat, though he pulled her up and went off flying again with every inch drawing; much to amazement of the spectators, who were not accustomed to canoe racing, and who greeted Grandpa with long cheers of applause. Skipper Holmes got Milwaukee spinning soon, and Dickens methodically and calmly raced back and forth across the front of the beach, his weight and smaller sail area keeping Avis steadier than either of her rivals. The men all had much to do to keep their craft in hand in the half-gale wind, but at the starting gun got off close packed together and shaving the buoy, in the prettiest start ever seen in a canoe regatta. Such a grand stand spectacle as this again brought out excited applause from the tiers of spectators on the bluff above.

The run on the first leg was sharp to windward, and Norma could not make the buoy with her sail, but heeled over twice, and finally fairly tired out her skipper, who let her drift in and apparently got fouled among the rowboats at the Highland pier. Avis and Milwaukee had a close bout at the buoy, and made a fast second leg of it. At the second buoy Dickens did not attempt to jibe, although evidently that meant a long lead into the home leg. Milwaukee was jibed sharply, and at first it appeared that the plucky maneuver would be successful, but Holmes could not keep her up. He lost his seat on the board, and in the mixup of getting aboard again hurt his leg badly. This second accident gave Avis a cinch for the heat, for she came about handsomely and reached for the home with her canvas stiff in the quartering wind, leaving Milwaukee still for the moment in irons after her mishap. Half-way down the home leg, however, accident No. 3 occurred. A big cat called Ariel, and manned by a large crew and cargo of persons apparently little acquainted with the courtesy of sailing, came directly across the course and nearly cut Avis down, the captain of the catboat apparently making not the slightest effort to keep off and let the racing boats have a chance. The point of collision was all but reached when Avis was brought sharply up, barely clearing the cat as she swept by. The act of the catboat's captain was severely condemned by all who saw it, for though he, strictly speaking, had the right of way, he knew perfectly well the race was in progress, and had been beating back and forth across the last leg for the purpose of seeing the finish. When Dickens pulled up so sharply he fouled his mizzen sheet with his steering gear and for the moment drifted crippled, though he got in with his dandy useless just after Milwaukee, who made a grand spurt as soon as she was righted. Both boats then pulled up at the dock and declined the second lap, Dickens, a little wroth at the treatment the Delavan cat had given him, and Holmes suffering a bit with his leg. Meantime Norma was still visible down among the bank of rowboats, and gradually it became apparent that she was not crippled, but was going under reef.

All the men were now very tired, and were not anxious to continue the work, but as so much interest had been shown in the sailing by the large crowd of spectators, all agreed to start again. As only one lap had been sailed in the first heat, no time was taken, but all were notified that two laps would constitute the next heat. The three got off at 4:07:05, again bow and bow, in a most spectacular style. Milwaukee, at the gun, racing down back of the buoy and coming up into the wind on her heel apparently not a fathom's distance from the stake and just in time to take the windward of Avis and Norma, who crossed the line as if lashed together. Milwaukee held her windward position clear to the first buoy, which she made handsomely. Avis stood too far on and dropped back, Norma still to leeward. They held this order, making an exciting and pleasant picture as they dashed through the combing sea at the second buoy. Here Milwaukee did not again attempt to jibe, but both she and Avis wore, Milwaukee actually turning the buoy twice. Norma is an exceedingly hard one to bring up, and at this juncture, reefed well down as she was, proved extremely broncho for her light skipper. She hung for an instant and finally drifted, fouling her bow with the buoy. By this time Avis was reaching home, but far inside the course, it seeming later that the steering gear had once more been fouled. Apparently Avis was headed back to the buoy where Norma hung fouled, but soon the latter swung free, and Milwaukee and Avis, the two fin-keels which have often created argument in the Mahn-a-wauk Club, joined issue in a pretty finish. Avis holding her advantage and finishing first very handsomely. Norma had by this time gone drifting far inside the triangle and did not finish. Again all the men pulled up and declined to go on for the second lap, saying that the work in such wind and sea was too hard. There was, therefore, no race and not even a heat, and no time was recorded; but a very pretty exhibition of canoe sailing in stiff weather had been given, much to the edification of many who previously had no idea of the capabilities of the little craft. The W. C. A. has held no races in the last five years in weather so rough as it was this day at Delavan, except that on Lake Winnebago meet some squalls were sailed out in a sea as nasty, if not so steady. Many of the yachts reefed down pretty well, and the wise men of the lake, old sailors raised here, laughed shrewdly at the idea of those little boats going out. In short, there was a little popular education done in

the pretty sport of canoeing, by all odds the prettiest of all amateur sports. After the first experience of it, there was much clamoring among the cottagers and hotel guests for more of it, and they would have been willing to keep the boys out afloat all the time.

On Friday, the skipper of canoe Carrier Pigeon, the venerable Mr. N. B. Cook, who divides with Grandpa Gates the honor of being the oldest sailor of the Association, was taken with an indisposition which forbade the thought of his sailing, and he hardly felt able to sit up and watch the sailing from the bluff. During the evening he felt still worse, and on Saturday morning was not well enough to get up for breakfast. There is very little hope that he will be able to sail again during this meet, as he feels weak and not inclined to effort. This removes the last hope that any of the regular regatta events can be sailed off, as not enough other boats can qualify. It is likely that Monday may see the practical end of the meet, though a few more members may come up for Sunday in camp. Word has been received from Mr. W. H. Crawford, of Dayton, O., that he cannot come, and that skipper O. A. Woodruff, of canoe Wood, will also rank among the absentees. With such standbys as these away, with Nat Cook and W. H. Yardley away, and a lot more of the regulars, the W. C. A. meet for 1897 has something of a void, which one can only hope may not be again experienced in 1898. The very character of the sport shown, even in the half-completed scratch races of Friday, proclaim loudly enough that so good a sport as this should not be allowed to languish in the West.

A fuller story of the meet and its surroundings will follow in the next issue of FOREST AND STREAM. E. HOUGH.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Aug. 9.—The members of the Columbia Pistol and Rifle Club found yesterday at Shell Mound a day of sunshine and shadow, as this is our season of fog. All the club's matches were open.

Great interest is manifest in the Glindemann military medal match. Several scores above the average were shot—Bushnell, Jacobsen and Young making 48, Creedmoor count. The scores on the class medals, for members only, and the re-entry matches were as follows:

Rifle—Class medals for members only. One 10-shot score.

Champion Class—A. H. Pape 65, F. O. Young 66, F. E. Mason 69.

First Class—O. A. Bremer 71, E. Jacobson 83, A. B. Dorrell 90, C. M. Daiss 101, G. Schultz 109.

Second Class—J. E. Gorman 89, F. H. Bushnell 97, G. M. Barley 109, M. J. White 137.

Third Class—A. Hintermann 80. G. Mannel 118, E. Woenne 158, Mrs. M. J. White 159, C. F. Waltham 164, B. Jonas 196

Rifle, re-entry matches, open to all, F. H Bushnell rifle medal and cash prizes, 3-shot scores: A. H Pape, 13, 13; F. O. Young, 11, 12; D. W. McLaughlin, 12, 17; E. Woenne, 38.

William Glindeman military medal and cash prizes, 10 shots, Creedmoor count: F. O. Young, 48; E. Jacobson, 48, 47; F. H. Bushnell, 48, 47; C. F. Waltham 44.

F. O. Young rifle record medal and cash prizes, 10-shot scores: F. E. Mason 61, D. W. McLaughlin 104

Pistol, 50yds., class medals for members only, one 10-shot score. Championship class: J. E. Gorman 42, F. O. Young 49, C. M Daiss 51, Ed Hovey 54.

First class: M. J. White 37.

Second class: F. H. Bushnell 73, Mrs. M J. White 77, G. M. Barley 94.

Third class: C. Hinteman 70, Mrs. E. L. Crane 102, L. W. Forrest 109, O. M. Pratt 121, Mrs. C. F. Waltham 211.

Pistol, re-entry matches, open to all comers, 10-shot scores, diamond pistol record medal: F. O. Young 41, H. C. Friday 100.

Gordon Blanding pistol medal and cash prizes, 3-shot scores: F. O. Young 8, J E Gorman 9, 10; C. M. Daiss 10.

Howard Carr any revolver medal and cash prizes, 6-shot scores: A. B. Dorrell 35, 40.

Achille Roos, .22cal. rifle medal, ladies' medals and cash prizes: Mrs. E. L. Crane 15, Mrs. M. J. White 16, Mrs. C. F. Waltham 17.

ROEEL.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 24-25—BUFFALO, N. Y.—Tournament of the Bison Gun Club. Targets C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club. $200 added money.

Aug. 26-27.—WATERLOO, Ont.—Tournament of the Ontario Rod and Gun Club League. W J. Marshall, Sec'y-Treas.

Aug. 26-27.—MANY, La.—Tournament of the Many and Robeline Gun Clubs.

Aug. 28—EAU CLAIRE, Wis.—Elliott-Budd match for the Du Pont trophy.

Aug. 31-Sept. 2.—SUTTON, Neb.—Tournament of the Sutton Gun Club. $150 added money, as well as merchandise prizes. E. E. Hairgrove, Sec'y.

Sept. 1.—HAVERHILL, Mass.—Third shoot of the Massachusetts State Shooting Association, under the auspices of the Haverhill Gun Club.

Sept. 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 6—MARION, N. J—Annual Labor Day tournament of the Endeavor Gun Club. A. R Strader, Sec'y.

Sept. 7-10.—DETROIT, Mich.—Jack Parker's annual tournament.

Sept. 8-9.—TERRE HAUTE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Terre Haute Gun Club.

Sept. 11-12.————, La.—Tournament of the Many and Robeline Gun Clubs.

Sept. 14-16—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs.

Sept. 14-16—DES MOINES, Ia.—Tournament of the Capital Gun Club. S. C. Quimby, Sec'y.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 15-16—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club. State and open events. Chas. E Morrison, Sec'y.

Sept. 21-23—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

Sept. 22-24.—WATSON'S PARK, Chicago, Ill.—Tournament at live birds and targets Programmes ready about Sept. 1. Write to John Watson, Station R, Chicago.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—PASSAIC, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. Main event on last day is at 25 live birds, $25 birds extra, handicap; $500 guaranteed to three high guns. W. H. Huck, Sec'y, Rutherford, N. J.

Oct 4-5. WARWICK, N. Y.—First annual tournament of the Warwick Gun Club Open to all. Targets. $50 average money to four high guns in all programme events. John M Servin, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Oct. 22-23.—HUNTINGTON, Ind.—Tournament of the Trap Shooters' League of Indiana, under the auspices of the Erie Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

On July 8 last Jim Elliott apparently sat down in an office in Kansas City and made out a list of challenges "to a number of the shooting princes of America," as he put it in the letter of that date, which appeared in the issue of FOREST AND STREAM for July 17. He challenged Glover for the *Star* cup, Charlie Budd for the Du Pont trophy, Charlie Grimm for the cast iron medal, and Peter Murphy to a one-barrel match such as Peter loves to shoot Glover and Budd promptly accepted, and Glover's match came off on Saturday last, the result of which is now known to all readers of FOREST AND STREAM who take interest in such things. Budd's match is set for Aug. 28 at Eau Claire, Wis. Murphy has, we understand, refused to accept Elliott's terms, so that match will go by the board. But what we want to know is, What's the matter with the cast iron badge? FOREST AND STREAM received Elliott's forfeit of $50, but so far it has heard nothing from Mr. Grimm. It is true that since that challenge to Grimm was made public in our issue of July 17, Elliott has had other designs on Grimm's pocketbook, and has left the medal out in the cold. On July 22 he took hold of Mr Rice's offer, which was authorized by Grimm, but twisted the terms around and altered them materially; and Elliott's terms do not suit Mr Rice. Nothing, however, has been done by either party beyond the posting of a $100 forfeit by Rice and the posting of another forfeit of $100 by Elliott. It seems hard to get these two men, Elliott and Grimm, together. According to what we can gather, here has Elliott posted two $50 forfeits and Rice a $100 forfeit, all three forfeits for ostensibly the same purpose, viz, a match or a series of matches between two of the best live-bird shots in the country; but nothing has come of them yet. Possibly the sporting press may receive a few more circular letters before long.

In a letter to us, dated Aug. 13, Mr. George B. Walton, secretary of the Montpelier, Vt., Gun Club, says, among other things: "I also inclose clippings from different Vermont papers in regard to our coming tournament, which may be of interest. Manager Shaner's outfit is here, and Dr. Fiske reports several cases of shells as having arrived. We notice an article in one of the local papers which refers to our coming tournament as the 'first Interstate tournament ever held in the State,' and would like to have it corrected through FOREST AND STREAM, for the first tournament given by the Interstate Association in Vermont was held under the auspices of the Lakeside Rod and Gun Club at Burlington last season, and was by far too pleasant and successful a shoot to be ignored in that way. The mistake was not ours, but we shall feel like making an apology to the Burlington boys just the same." The clippings referred to run as follows: "This tournament will be held on the grounds of the Montpelier Gun Club, about ten minutes' ride from Montpelier on the suburban line of the Montpelier & Wells River Railroad. The club has there spacious quarters and ample room to accommodate all who may come. The house and platform are in the shade of five large elms except in the early morning, and are comfortable for shooting in warm weather. The targets are toward the northeast, which gives the sportsmen strong light on the targets and not on their faces. The grounds will be open for optional shooting on the afternoon of Tuesday, Aug. 24." Another reads: "A neat little station has been erected on the line of the Barre Railroad at the entrance of the preserves of the Montpelier Gun Club for the convenience of its members and guests, and is designated by a sign bearing on its face the words, 'The Shoot.'"

Jack Parker has written us at length in regard to Ben O. Bush's letter to us which appeared in our issue of July 31. In that letter Mr. Bush stated that Mr. Parker's claim for King's Smokeless and Peters's cartridges of first and second averages at the Detroit shoot of the Michigan Trap-Shooters' League, June 29-30, was not based on fact. Mr. Parker now writes us contradicting Mr. Bush, and backs up his statement with a certificate from Mr. W. H Brady, secretary of the League, that proves beyond question that Mr. Parker's claims were correct. In regard to Mr. Graham's use of King's Smokeless at that tournament, Mr. Parker says: "I know Mr. Graham thoroughly, and know, as all his intimate friends do, that he shot King's Smokeless at that tournament; and that he also pays for all of that powder that he uses." The following extract from Mr. Brady's letter is to the point: "The winners of the three highest averages at this tournament (the one referred to above) were: Thomas Graham first, John Parker second, Henry Waruf third." A reference to the scores shows us that Messrs. Spross and Snow, being non-residents of the State, did not shoot through the programme events on either day of the shoot, being barred from certain events. Mr. Snow's shooting was excellent, however. On the first day he broke 112 out of 120, or 93.3 per cent. On the second he broke 138 out of 150 shot at, another average of 93.3 per cent. making his average for the two days, a total of 270 targets shot at, just 93.3.

If the Chamberlin Cartridge and Target Co. adheres to the present plans for its tournament next June, namely, not to allow any paid men to compete for the amateurs' money, the scene of the tournament might be very aptly termed: "An Amateurs' Alaska." The expert amateur would have a Klondike cinch on the bulk of the money; the semi-expert might be able to get over the Chilcoot Pass, but the poor novice would be stranded at Dyea. He always gets left and must always expect to, until he can shoot as well as the semi-expert or the professional. The only option for him at present is to either stay away or buy his amusement at a rather high price. The matter of handicapping shooters is rather a hard one to tackle. The experts and semi-experts of the present day have paid—and paid dearly—for their experience, and many of them say that it would be unjust to change the conditions now they are beginning to be able to enjoy their sport without cost to themselves, just as they themselves paid for their more expert brethren's fun in the past. Of course, this does not apply to the professional; the money he expended in learning how to shoot live birds or targets may be likened to just so much capital invested in his business; he is earning a living at very little trouble to himself; he is paid to do what thousands of other trap-shooters pay big money for. We should like to hear what some of our trap-shooting readers think of Paul North's scheme for the next Cleveland shoot.

The Brooklyn Gun Club, of Brooklyn, N. Y., is one of the most energetic clubs in this section of the country. It holds monthly target shoots for a club cup, and also has a practice shoot every afternoon during the year. It will make a new departure this fall, and will hold a monthly live-bird shoot during the fall, winter and spring months. Unlike most Long Island clubs, this organization will not hold its live bird shoots at Dexter Park, but will go over into Jersey, and for, live-bird shooting, use the grounds lately occupied by the Carteret Gun Club at Bayonne (Bergen Point), N. J. As stated in "Drivers and Twisters" of our last issue, Phil Lumbreyer, late manager of the grounds for the Carteret Club, has secured the grounds for his own use, and has both target and live-bird traps, with plenty of targets and good live birds always on hand. The grounds can easily be reached from Cortlandt street ferry in thirty-five minutes, taking the Bayonne trolley to within two blocks of the grounds, Nineteenth street, Bayonne. By water and rail from the Liberty street ferry to West Eighth street, Bayonne, Central Railroad of New Jersey, is rather shorter, but hardly as convenient, and nothing like as cheap as the trolley from the Jersey City side of the P. R. R. ferry.

The Lake Charles, La., Rod and Gun Club announces a "State shoot" on its grounds on Wednesday, Thursday and Friday of this week, Aug. 18-20. The tournament is announced as open only to residents of the State, professionals being barred. So far as we can see, the club adds $245 to the purses, but only charges 2 cents for targets and 25 cents for live birds. There is only one live-bird event each day, an 8-bird affair, $5 entrance, nothing added to the purses. The target programme for each day calls for 185 targets, and as we figure it out, allowing 1 cent as the probable cost of each target when trapped, the club will have to throw 24,500 targets to come out even on the cost of the targets and the added money—not to mention other incidental expenses, which generally cut quite a figure. This means that there will have to be an average entry list of forty-four shooters in every event on the three days. The fact is the programme is a very generous and sporting one, and we don't suppose the club or its members care whether they come out even or not; they are in it for the sport.

W. H. Wolstencroft is just now shooting in grand form. At the shoot on the grounds of the Florist Gun Club, Philadelphia, Pa, held Aug. 7, he made quite a record, losing only 11 targets out of 195 shot at, as follows: Team race, 21 out of 25; programme events, 140 out of 145; extra event, 15 singles and 5 pairs, 23 out of 25. Again, on the first day of the Keystone Shooting League's tournament, Aug. 13-14, he broke 154 out of 160 shot at, an average of 96.2 per cent. On this same day Capt. Money and John J. Hallowell were tied for second and third places with 139 out of 160 shot at, or 86.8 per cent., while E. D. Miller (who has not been before the traps for a year or more) and Hood Waters, of Baltimore, were tied for fourth and fifth places with 137 breaks each, an average of 85.6. These figures show just how well Billy was shooting. His work on the second day can be seen by referring to the scores given elsewhere in these columns.

A Rochester (N. Y) paper of the 15th inst. is authority for the statement that Fulford will challenge Elliott for the cast iron medal, if the latter succeeds in wresting it from Grimm.

Paul North's letter in our last issue, which appeared under the head of "Paid Men at Tournaments," informs us that at the Cleveland shoot last June, "about one-fifth of the average number of shooters drew out about one-third of all the money, or $300 more than they put in, including the tax; and in addition to that they were paid a salary for shooting and furnished all their ammunition and expense money." In other words, fourteen paid men, according to Mr. North's statement, divided up $300 as a result of three days' shooting—an average of a little over $7 per day for each day. The figures sound large at first, but when analyzed, if our conception of his meaning is correct, they are by no means formidable. It must be remembered, too, that at this tournament all bluerocks were thrown free. Had it been "all targets out of the purses," the proportion would probably have remained the same, but the figures would have been materially lessened.

Jim Elliott has won the first of his "free-for-all" series of matches. On Saturday last, Aug. 14, he defeated Simon Glover, of Rochester, N. Y., by the score of 92 to 84. The contest was for the Kansas City *Star* cup, which Glover won at the Missouri State shoot held at Kansas City, Mo., May 17-22, 1897. The *Star* trophy was shot for on May 21, sixty-three entries being made for the great match. Glover, C. C. Herrman, Lamb and Crabill tied for the cup with 25 straight. On the shoot-off at 5 birds, Glover won by scoring his 5. Crabill dropped his third tie bird, Lamb his fourth and Herrman his fifth. Among the entries were Charlie Budd, Fred Gilbert, Rolla Heikes, Harvey McMurchy, Jim Elliott, the previous holder of the cup, Frank Parmelee, Chris Gottlieb, and many other rattling good ones. Elliott's score in that race was 23, losing his 6th and 24th birds, the latter falling dead out of bounds. Jim's next important match is with Charlie Budd for the Du Pont trophy; this match will take place at Eau Claire, Wis., Aug. 28, at 2 P. M.

The last week of September and the first week of October are going to be busy ones in this section of the country. Sept. 28-Oct. 1 are the dates for the New Jersey State shoot; Oct. 6-8 have long been claimed as the dates for the annual open-to-all fall tournament of the West Newburgh Gun and Rifle Association of Newburgh, N. Y., a popular fixture in this part of the State. From the following letter, written us by Mr. John M. Servin, secretary of the Warwick, N. Y., Gun Club, a new organization, we gather that the dates of Oct. 4-5 are going to be filled up, too: "At a meeting of the Warwick Gun Club, held Aug. 12, it was decided to hold an open-to-all bluerock tournament on Oct. 4-5; $50 will be divided as average money between the four high guns who take part in all the programme events."

The past two weeks have indeed been dull ones in the trap-shooting world. There is always a dead season for a few weeks during the extreme hot weather and vacation time, but this year the dead season is somewhat deader than usual. For the next few weeks—that is, until the game season sets in in earnest—matters will be livelier. Jack Parker's shoot at Detroit will brisken up things in the beginning of September. The New Jersey State shoot at the end of September will be about the last important shoot until the Grand American Handicap next March. The Interstate Association closes its tournament season with a target shoot at Portsmouth, N. H., Sept. 15-16, and the prospects are that this shoot will get a large share of the patronage of the shooters of the New England States.

The Parker Gun Club, of Meriden, Conn., has gotten out its programme for the annual shoot of the club on Labor Day, Sept. 6. Eight 15s, two 20s, and one 30-target event are on the programme The 30-target event will have $10 added to the purse if twenty or more shooters enter "for all day"; if twenty-five or more enter for all day the club will add $20 to this purse. There will be four moneys, Rose system, in all events except in No 9; if twenty-five or more enter in this event there will be five moneys. The programme will be started at 9:30 prompt. Shooters can enter "for targets only" in any event.

In a recent issue of one of our contemporaries some remarks were made relative to the close and hard shooting qualities of a new gun built by Parker Bros., for George S. McAlpin, the well-known live bird shot of this city. While the patterns made by this gun, together with the penetrating qualities of the shot at long ranges, are correctly treated of, a mistake was made in referring to the barrels as made of "Whitworth fluid steel." We learn from the best authority that the barrels are of "Bernard steel, browned black." This sounds rather like a bull, but it's the way an expert put it to us.

The Haverhill, Mass., Gun Club expects to have a large number of shooters in attendance at the third shoot of the Massachusetts State Shooting Association, which will be held on the Haverhill Gun Club's grounds, Wednesday, Sept. 1. The officers of the Association are: President, Capt E. B. Wadsworth; Secretary, O. R. Dickey. The programme is a lengthy one and calls for 240 targets, including the three-men team race and the "individual match." Mr. George F. Stevens, secretary of the Haverhill Gun Club, will be pleased to furnish any further information that may be desired.

The Lewiston, Me., papers gave the Interstate shoot on Aug. 4-5 quite a send-off each day. One of the papers had a special artist on the ground, sketching some of the prominent shooters present, the portraits appearing in the evening edition. They also wrote up the shoot quite intelligently, judging from the specimens we have seen; and it is no easy matter for a lay reporter to get sporting matters down on paper in such a shape that it is hard to pick flaws in it Rich Hunnewell has sent us a copy of two of the local papers, and in sending them, says: "We had a fine time, good attendance and lots of shooting."

Montpelier, Vt., is the scene of the last target tournament but one on the 1897 circuit of the Interstate Association. The Vermont tournament will be held on Wednesday and Thursday of next week, Aug. 25-26, under the auspices of the Montpelier Gun Club. The local club has gone to work in earnest to make things pleasant for its guests during the tournament, and we are sure that the pleasant shoot at Burlington, Vt., last August will be satisfactorily duplicated. New York city will be well represented, a goodly party leaving that city on the evening of Aug. 23 by way of the Albany night boat, making the trip to Montpelier, via Lake George, Lake Champlain and Burlington.

The junior partner of the firm of Von Lengerke & Detmold, Mr. E. Detmold, made his first appearance in the firm's new store, 318 Broadway, the uptown corner of "Sporting Goods Row," on Monday of this week, Aug. 16. Mr. Detmold has just recovered from an attack of appendicitis, having successfully undergone the operation necessary to remove the cause of the trouble. He looked well, and was kept busy receiving the congratulations of his friends, who complimented him both upon his general appearance and upon that of the new store, which is a vast improvement on the firm's late location, 8 Murray street.

Major J. M. Taylor, who has been identified with the trap-shooting and kennel columns of the *American Field* for some years, has severed his connection with that paper, and has accepted an offer from the *Sportsmen's Review*. The many friends of the Major will be glad to learn that, now that he is relieved from the handicap under which he has been laboring for some time, he will be seen more frequently at trap-shooting tournaments.

The Lake City Gun Club, of Warsaw, Ind., is booked to hold a shoot on Wednesday and Thursday of this week, Aug. 18-19. The main event on the programme is No. 6 on the second day, a 25-target event, for the medal which is emblematic of the target championship of northern Indiana and southern Michigan. The sweepstake is open to all, but the medal can only be won by a resident of either of those sections of Indiana or Michigan.

The Keystone Shooting League of Philadelphia, Pa., held a tournament on Friday and Saturday last, Aug 13-14. Philadelphia is enjoying quite a boom in target-shooting just now, mainly owing to the efforts of Mr. J. K. Starr, the promoter and the energetic secretary of the Philadelphia Trap-Shooters' League, but the first day of this tournament was not a success in point of attendance, the shoot having been poorly advertised.

We learn from Secretary Walton, of Montpelier, Vt., in a letter written Aug. 14, informing us that he had engaged rooms for the entire New York delegation to the Interstate shoot, Aug. 25-26, that: "A letter from Sherbrooke, P. Q., to-night, tells me to expect *six* from there. If straws are any indication of the direction of the wind, we are going to have a great shoot; and I assure you that we up here feel that FOREST AND STREAM is to blame for a part of it."

Jim Elliott is a great hand to lose his first bird in an important match. He followed his usual custom, and lost his first bird in the match with Glover on Aug. 14. After that he departed from precedents and lost his second bird also, thus giving Glover a big lead at the very start. He finished strongly, however, and soon had the victory clinched.

We have received a postal card, printed in red ink, that conveys the following ambiguous information: "There will be a hot time in Grand Rapids, Itasca county, Minn., Oct. 29 and 30, and Nov. 1 to 10. Write to Dr W. P. Brown, secretary of the gun club, for information." What does it all mean? A twelve days' shoot? Perhaps Dr. Brown will enlighten us in a few days.

The Cleveland Target Co.'s advertisement in our issue of Aug. 14, gives a list of thirteen clubs in New York and one in New Jersey, to whom it refers intending lessees of magautraps for information as to the working of the traps. We note that the Oneida County Sportsmen's Association is lessee of magautrap No. 100.

Watson's Park, Chicago, is to be the scene of a three days' tournament Sept. 22-24. Live birds and targets will be trapped. Programmes will be ready for distribution about Sept. 1, and may be had on application to John Watson, Station R, Chicago, Ill.

"Paid men and the amateurs' money" is a subject that is at last attracting the attention it deserves at the hands of the sportsmen's press. For more than two years FOREST AND STREAM has been digging away at the shooting public in regard to this matter, and has been doing it single-handed. It is with pleasure, therefore, that we listen, even at this late date, to the intermittent chirps that come from our brethren It took our brothers some time to realize he true merits of the Rose system, but they have come to it finally. We don't claim for the Rose system the approval of all shooters; there are some who don't approve of it, but we think we know the reason why; again, there are others who don't approve of it, and who don't really know the reason why For our part we are of the opinion that it is the fairest and most equitable way of dividing purses that has been devised to date, and under it a few experts do not run off with all the money.

A fairly strong team representing the Boiling Springs Gun Club, of Rutherford, N J., will try conclusions on Thursday next, Aug. 19 with the Peekskill-Newburgh combination at Orange Lake near Newburgh N Y. The pretext for the team race and target shoot is a clambake at the Pine Pine Club Hotel, Orange Lake, where Neaf Apgar is installed as proprietor. Team races and clambakes are a great combination. Whichever side loses can always lay the blame on the clams.

The Fairbank (Ia.) Gun Club announces that it will hold a target shoot, open to all, "10-gauge guns and cannons handicapped," on Thursday Aug. 26. The programme is varied and should be interesting. There are 10, 15 and 20-target races, four moneys in all such events, with an event at 5 pairs, and another at 9 singles and 3 pairs, thrown in for variety A. S. A. rules govern all points, except that it will be "no bang, no bird."

A tournament will be held at Algona, Ia., Aug. 24-25, under the auspices of the local club The Algona Gun Club looks for a good attendance of shooters, and is certain to give everybody who goes to the tournament an exceedingly pleasant time, as the Algona boys know how to entertain their guests.

Single-trigger guns are getting to be all the rage, and most of the prominent gun firms in this country are working on them. The Lefever Arms Company, of Syracuse N. Y., will shortly have one of these single-trigger guns on the market.

The Martinsburg, W Va, Shooting Association will hold an Interstate trap shooting tournament at Inwood Park, W. Va., on Aug. 18-19, Wednesday and Thursday of this week.

AUG. 17. EDWARD BANKS.

Keystone Shooting League.

PHILADELPHIA, Pa., Aug. 14.—The first day of the invitation target tournament, announced by the Keystone Shooting League for yesterday and to-day, was poorly attended, owing to lack of due notice. To day's shoot, however, was fairly well patronized, among those from a distance being Capt A. W. Money, of the American E. C and Schultze Powder Company (L't'd); Hood Waters, of Baltimore, etc. To-day's scores are given below. It will be noticed that Billy Wolstencroft was in wonderful form, losing only 10 targets out 175 shot at; 4 of the 10 lost in one 20-target event. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	10	20	15	25	15	15	25	20

Leighton	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	8	7	..

Events 11, 12, 13 and 14 were shot gun below the elbow till bird was in the air. GEO. F. STEVENS, Sec'y-Treas.

Glenwood Gun Club, of Newburgh.

NEWBURGH, N. Y., Aug 12 In addition to the practice events shot to-day by members of the Glenwood Gun Club, of this city, A K. Dickson and W. M Stansbrough had a 50-target match, as a result of Dickson's challenge for the Schultze E. C cup, now held by Stansbrough. The conditions were 50 targets, unknown angles. Both men broke 38 and tied. On the shoot off at 25 targets Stansbrough won with a straight score to Dickson's 21 Scores follow:

Dickson.....11101011101111000011111111 10111011111111110110011 38
Stansbrough .....11000111011010111110111001110110111111111111111011—38

Shoot off:

Dickson.. .....11111111111110101111101011—21
Stansbrough. .....11111111111111111111111—25

The above event was followed by the Lewis prize shoot, in which Dr. Stansbrough broke another 25 straight, making a continuous run of 50 straight. The scores in the prize shoot were:

Stansbrough 25, Henderson 24, J Rhodes 23, Dickson 18, Carr 18, Hobbs 17, Moores 16, Hoppenstedt 12, Hoffman 10. GLENWOOD.

Sandwich Gun Club.

SANDWICH Mass., Aug. 7.—The following scores were made at the last shoot of our club. We hope to continue our weekly shoots when the weather gets a little cooler The scores below were made in a scorching sun, with no wind, but we enjoyed the sport nevertheless. Two of our members shot a match to see which was the best man. Both were so anxious to win that the score suffered terribly, and would not look well on paper

Conditions of club shoot: 25 bluerocks per man, unknown angles:

G O Arnold.....1000010000111100010001100— 9
J McArdle.....0010 0 10011010010 001100— 8

GEO. H. HAINES, Sec'y.

In Chicago.

EUREKA GUN CLUB.

Aug. 7.—The regular weekly shoot of the Eureka Gun Club was held this afternoon on the club's grounds Seventy-ninth and Vincennes road. Twelve members and two visitors faced that trap, most of the active members being over at the Garfield Gun Club's grounds, taking part in the ten-men team race between these two clubs. The new magautrap worked very well and as soon as the members become better acquainted with it the scores will improve In addition to the medal shoot, 25-target events were also shot, the scores in these events being as follows:

No 1: Felton 9, Morgan 11, Neta 11, Porter 7, Stanley 17, Spreyne 17, R. B. Carson 12

No. 2: Morgan 15, Porter 16. Neta 14, Stanley 13, R. B Carson 9, Spreyne 21, Felton 11, Hess 18, Walters 13 Dixon 9 Dr. Carson 10.

No 3: Dixon 10, Stone 20, Stanley 12, Porter 11, Embree 12, Levitt 9, Morgan 16, Hess 15, Spreyne 14, Dr. Liddy 12.

No 4: Hess 16, Dixon 11, Stone 14, Morgan 12, Dr. Liddy 10 out of 19.

The detailed scores in the trophy shoot follow:

Trophy shoot:

Sprague.....1111111100111011101100011—18
Hess.....0010111001001010 1111000—13

C E Felton.....1101110001100100000110010—10

GARDEN CITY GUN CLUB.

Aug. 7.—The regular weekly shoot of the Garden City Gun Club was held to-day. The main events on the programme were the Donnelly prize event, the Du Pont and Hazard handicap prize event for two ¼lb. kegs of Du Pont and Hazard powder donated by E. S. Rice, general agent, and the "gun below the elbow" 15-target event. In the first of these, the Donnelly prize shoot, Ruble broke 22 but his average was not increased, so others have yet a chance to win out In the Du Pont and Hazard handicap event, Levi, with a handicap of 12, scored 1 more than a highest possible (41), and took first prize; Ruble, with a handicap of 1, broke 38 and thus scored 39, winning second prize. Ruble was also high man in the 15-target race, gun below the elbow, scoring 14 out of 15.

Scores in these three events were:

	Donnelly prize shoot.	Gun below elbow.
Ruble	1110111110110111111111111—22	111111011111111- 14

SEC'Y.

THE GARFIELDS WIN BY ONE TARGET.

Aug. 7.—The second 10-men team race between the Garfield and Eureka Gun Clubs, both of Chicago, was a close and exciting affair. At the finish the scores were, Garfield 203, Eureka 202. The match was shot on the grounds of the Garfield Gun Club, the conditions being: 10 men to a team, 25 targets per man, 250 to the team. Scores:

The Target Championship.

WE have been asked so many questions in regard to the target championship of the United States; how it originated; who won it first, and what his score was, and what were the scores of the others who competed for it; that we have decided to answer all these questions in a bunch and in type, as it is evident that many people are much interested in this contest. Of course the recent match between Gilbert and Heikes is answerable for much of this show of interest.

WHERE THE IDEA CAME FROM.

In FOREST AND STREAM of Oct. 19, 1895, we gave in full just what our ideas of a championship should be, and particularly laid down the conditions for a target championship We suggested that some large tournament should be held at which, on the four days, a series of races for championship honors Our words were as follows:

"It is a remarkable fact that, although target shooting is more than a decade old, we have no legitimate champion at that branch of the sport. There has never been a real championship contest at inanimate targets that we can find a trace of. The Schmelzer Arms Company's trophy, now held by Jack Parker, represents only the championship at inanimate targets thrown from traps pulled in reverse order, called for the sake of brevity the championship at reversed order. There is no legal champion shot of America, although there may be a moral one Were it put to the popular vote, we think there would be little doubt about Heikes getting the majority of the votes cast, notwithstanding the claims of such men as McMurchy, Van Lyke, Dickey, Bartlett, Noel Money, Upson, Glover Fulford, etc. We could add a dozen more names to the above list, each one of which would denote a man who has *bona fide* claims to a try for the championship.

"To obtain the right to the title of champion target shot of America, it would be necessary for a shooter to prove that he excelled generally at the four branches of the sport now commonly in use: unknown angles expert rules, reversed order and pairs with a view to ascertaining who is the champion target shot, we would like to see some prominent gun club, or some firm interested in the manufacture of sporting goods, adopt some such plan as the following:

"Get up a tournament and offer a valuable cup that shall be emblematic of the championship at targets Let the conditions be as follows: 100 targets, unknown angles; 100 targets, reversed order; 100 targets, expert system, and 50 pairs. The way to shoot the 400 targets off might be thus: divide each of the three first systems into four 25-target events, and the 50 pairs into four events of 15, 15, 10 and 10 pairs, respectively. Make each 25 or each set of pairs a separate event with a solid entrance fee; deduct 5 or 10 per cent. from each purse to form a fund to be divided between the four highest averages made out of the 400 targets. Let the man making the highest average take the cup, title and 40 per cent. of the fund created as above; the three next highest would take 30, 20 and 10 per cent of the same fund, respectively. In a four days' tournament, a 25 at each style of shooting and one of the sets of pairs might be shot off without interfering with a distinct programme, as the contestants in the championship events would be formed into squads, and could shoot right along in all events without disturbing the routine of the tournament. The idea of dividing up the 400 targets into sixteen separate events would, we think, serve to keep the entries from falling off

"Our claim is that the man who made the best general average on the string of 400 targets at the four different styles of shooting would be fairly entitled to championship honors The conditions governing future challenges could be easily formulated.

"A tournament that included in its programme any such championship event would surely draw a large crowd of shooters, and we think the entry list in the championship sweeps would be highly satisfactory. There, why wouldn't such a scheme as the above work? What are its weak points, and where does it fall short? Let us have an all-round champion at targets"

CLAIMED BY THE E. C. POWDER COMPANY.

The first contest for the Du Pont trophy was held at Baltimore, Md, the following week, commencing on Oct 22. It will be remembered that this was Fred Gilbert's *début* in the East, and it was a remarkable one. He won highest honors by carrying off the trophy, but we always held that his handicap was a light one Our confreres on the handicap committee will bear us out in this. He shot splendidly all through the tournament and made very nearly as high an average as the veteran Brewer, even when placed on the same mark.

Captain A. W. Money, of the E C Powder Company, was present at the shoot, and was busy making plans for his company's big tournament that was to come off in the following May. He had read our ideas on the subject of a target championship, and asked us on Oct. 23 to make a note that his company would run a target championship event, upon the lines outlined in FOREST AND STREAM of the preceding week, at its tournament in 1896

To show the popularity of the scheme, and to prove that we had hit the right nail on the head we may say that on our return to New York, we received a letter from the representative of another large powder company asking us to make a similar claim for a tournament purposed to be given by his company. On our writing him of Capt. Money's priority of claim, as we took it to be, the gentleman promptly and courteously withdrew all claims, stating that he would not wish to mix up target championships

REVERSED ORDER LEFT OUT.

After much discussion it was agreed to leave out the 100 targets at reversed order, that style of shooting being so little recognized out West and in the South. Otherwise the conditions were precisely as we had outlined them.

There can be no question as to the success of the shoot. The entry lists were enormous (119 shooters taking part on the first day), although surpassed later by those of the Hazard Powder Company at Cincinnati two weeks later. Twenty-seven shooters took part in the entire series of championship events on the four days of the tournament; fully as many more had started, but had dropped out as the contest progressed The finish was close and exciting enough. This is what we wrote about it in FOREST AND STREAM of May 16, 1896:

"Naturally the list of entries fell off very much to-day. Aspirants for championship honors had fallen by the wayside, and the number left in the race this morning had dwindled to below thirty. Still there was a lot of interest in the final result, the pairs being exceptionally exciting Gilbert went in to shoot his 10 pairs with a bird to the good of Fulford; when he had broken 17 out of his 20 there was a possibility of Fulford's beating him out—18 would tie and 19 would win. Fulford, however, could do no better than score 13, finally tieing with Jim Elliott, the real surprise party of the crowd. As will be seen from the scores given below, Rolla Heikes, although not the winner shot well up, landing in fourth place.

GILBERT, THE WINNER.

"Fred Gilbert, whom Charlie Grimm has now brought twice from Spirit Lake, Ia, to take back cups to that little home of his, should have a long career before him, as he is quite young yet, being only about thirty years of age. Fred is quite a shot as may be judged from his work during the past twelve months. In returning thanks for the cup, he attributed his position to 'luck and the rabbit foot.' We are stanch believers ourselves in the target-smashing capabilities of a rabbit's foot, but in this instance we fancy Gilbert's skill as an all-round shot stood him in more stead.

"The championship events were shot as follows: The 100 targets, unknown angles, were divided into four events of 25 each, one 25-target event being decided each day on No. 1 set of traps. The 100 targets, expert rule, and the 50 pairs were shot on No. 4 set of traps. The 100 expert rule were divided like the 100 unknown angles, but the 50 pairs were split up into two events of 15 pairs and two of 10 pairs. The table below gives the result of each event that was included under the head of 'championship events' The table also shows the grand aggregate and the position of each man at the finish. It will be noted that twenty-six men shot in all the championship events."

The table referred to ran as follows, the pairs being divided into two events of 5 pairs each shot on the first two days, and two of 10 pairs each shot on the last two days:

	Unknown angles.					Expert rule.					Pairs.					Grand total.
Fred Gilbert	21	25	23	24	91	24	22	23	22—91		25	27	15	17—84		266

"The conditions of the championship events called for $3.50 entrance in each of the twelve events, $65 added to each purse. From the purses in these events 10 per cent. was to be deducted to form a championship fund, and this fund was to be divided thus. Cup, value $100, donated by the E. C. Powder Company, and 25 per cent. of the fund to the winner; 50 per cent of balance to go equally among the next four high guns; the remaining 50 per cent. among the next six high guns Under these conditions, Gilbert drew out $48 and the cup; Elliott, Fulford, Heikes and Merrill $48 each; and Barrett, Miller, Leroy, Byer, Wheeler and Budd $42 each"

Standard Gun Club of Baltimore.

BALTIMORE, Md., Aug. 10.—The open tournament given by the Standard Gun Club at Point Breeze yesterday was a success There were twenty-one entries for the chief event, which was at 100 birds, entrance (targets included), $5; handicap, 1 to 5 birds; purse to be divided 25, 20, 15, 15, 12½ and 10 per cent. to the six high guns, and merchandise prizes numbered from 7 to 15.

The best work of the day was done by Hood, of the Baltimore Shooting Association. He broke 97 out of 100. His handicap was 5, and he broke them all In course of the day Hood shot at 145 targets and broke 140 of them. Storr, of the Standard Gun Club, was next high man in the handicap. He had 113 to shoot at and broke 104 of them

The targets, including the handicaps, ran from 100 to 125, and no one could score above 100, though he broke all he shot at. There were no scratch men, the smallest handicap being 5 birds. Hood was the only man who got so few. Hawkins, with a handicap of out 9, scored 99.

The scores were as follows, the figures in parenthesis showing the handicap and the adjoining figures the number broken:

Hood (5) 100, Storr (12) 100, Hawkins (9) 99, Judge (13) 99, Gent (15) 99, Duval (20) 98, Dupont (10) 97, Price (16) 95, Malone (10) 95, Clements (14) 94, Vance (20) 90 Ranger (20) 88, Cross (16) 87, Hobbs (16) 87, Edel (20) 75, N. Offutt (25) 46, Offutt (25) 46

Franklin (17), Jamison (25), Cantler (14) and Johnson (25) did not shoot their scores out.

Oneida County Sportsmen's Association.

UTICA N Y., Aug. 14.—The scores given below were made to-day by members of the Oneida County Sportsmen's Association in the regular club shoot. Fairchilds was the winner to-day.

Club shoot, 15 singles and 5 pairs:

IN NEW JERSEY.

CUP SHOOT AT HACKENSACK.

Aug. 11.—The fifth contest for the Recreation cup was decided this afternoon on the grounds of the Bergen County Gun Club, of Hackensack. Previous to this contest J. S. S. Remsen, of Brooklyn, N. Y., a member of the Bergen County Gun Club, and F. Sinnock, a member of the Forester Gun Club, of Newark, N. J., had each scored two wins. To-day's shoot went to Banks, thus increasing the interest in the two competitions yet to be shot before the final ownership of the cup is decided. The conditions of the cup are: 50 targets, known traps and angles, and 50 targets, unknown angles; seven competitions, one to take place every two months, the shooter winning it the greatest number of times in the seven competitions to become the final owner of the cup. Professionals are barred from shooting for the cup, but are welcomed and can shoot along for the optional sweepstakes of $1 on each 25 targets, and also for the cash prizes of $5 to the second high gun, and $2 to the third high gun. Entrance for the cup is the price of the targets. In case a professional leads the shooters, he perforce takes the $5 prize; the highest amateur taking the cup.

To day's race was shot under favorable conditions as regards wind and weather; occasionally there would come up a little breeze and at times the passing clouds would make the light on the reeds of the meadows rather bad. Targets from No. 4 trap were extremely hard to locate, owing to the poor background for lowthrown targets. All the traps threw rather low the greater part of the race, with the exception of No. 3, which was inclined to give towerers.

The race was close and exciting enough to satisfy everybody up to the conclusion of the third series of 25 targets. At the end of the first 25 there were four 24s—Sinnock, Dudley, Banks and Noel Money- and three 23s- Van Dyke, Capt. Money and Fogarty. When the 50 known angles had been disposed of, four men were tied with 47 each, viz.: Sinnock, Van Dyke, Noel Money and Banks. Fogarty was next to them with 45, Dudley having dropped down to 19 in his second 25. The end of the first 25 at unknown angles found five men tied on 70 out of 75, viz.: Sinnock, Van Dyke, Noel Money, Fogarty and Banks, Fogarty's 25 straight having brought him up into first place. Dudley was next with 66, having broken 23 in his third 25.

The break came in the last 25. Van Dyke broke 24 and finished with 94. Fogarty and Sinnock, who both shot in the first squad with Van Dyke, Remsen, Hyde and Capt. Money, unexpectedly took big tumbles, Sinnock going out with only 19, Fogarty breaking 20 This left the cup practically to either Noel Money or Banks, if they could hold up at all. Strangely enough, Noel Money, who had been shooting very well, and who had broken hard and easy targets without any apparent difficulty, scored only 18 out of his 25. Banks ran 25 straight and finished with 95, 1 more than Van Dyke's total. Dudley also ran 25 straight, his 48 out of 50 at unknown angles just landing him in second place for the cup, but only in third place for money. Remsen's shooting was a source of both regret and surprise. He had come all the way from Bluff Point on Lake Champlain, to see that Sinnock didn't get another win on the cup in his absence, and also to try to get a win on his own behalf. His failure to score more than 30 out of 50 at known angles, and 40 out of 50 at unknown angles, is a remarkable falling off. He was shooting slower than usual, and was not swinging as he should have done, stopping his gun when he pulled the trigger or before he pulled it. He ran the last 12 straight in his third 25 in something like his old style, pulverizing the targets thoroughly, clouds of black dust alone showing where they had been. Capt. Money did not shoot anything like as well as he can shoot, his shoulder being still a little sore from the shooting he did at Riverton one week ago, viz, 565 targets in one day!

There were nine contestants for the cup, Mr. Combs, a Long Islander, shooting along as guest of the club. One often hears it said by shooters: "I can break more at unknown angles than I can at known angles." With 50 at each style of shooting, a fair comparison can be made in to-day's race. Sinnock, Captain Money and Noel Money each broke more at known than at unknown angles; Remsen, Banks, Dudley and Combs broke more at unknown than at known angles; Van Dyke, Fogarty and Hyde broke the same totals out of each 50, viz.: 47, 45 and 44, respectively. The scores tell the rest of the tale.

Cup race, 100 targets per man, no handicap, half at known angles and half at unknown angles, entrance $2 Optional sweepstake of $1 on each 25. Cup to winner of race: the club giving $5 to the second high gun and $2 to the third high gun:

E Banks	1111111111111111111111101111111011111111101111111111	—47

When nearly all the shooters had gone away the two Moneys shot a couple of team races at expert rules, 25 targets per man, against Fogarty and Banks. The first was a tie, but the shoot-off and a second race were both won by the Fogarty-Banks combination. Below are the results in this series of matches:

No. 1, team race, 25 targets per man, expert rules:

Banks	01111	01111	01111	11110	11111—21
Fogarty	10011	11111	10111	11110	11011—20—41
N Money	11101	11101	11111	11101	01111—21
Capt Money	01011	11111	11101	11110	10111—20—41

Shoot-off of tie; same conditions:

Banks	11111	11101	11110	11100	11111—21
Fogarty	11000	11111	11101	11100	11111—19—40
N Money	10110	11111	10111	11111	00111—20
Capt Money	01111	11010	11011	00111	10111—18—38

No. 2, same thing:

Banks	11111	11101	01111	11111	11111—23
Fogarty	10101	11111	11111	11111	10111—22—45
Capt Money	11101	11111	11000	11111	10111—20
N Money	10001	10101	11001	11111	00111—16—36

SWEEPS AT SECAUCUS.

Aug. 6.—Both before and after the match between Geo H. Piercy, of the Endeavor Gun Club, and H. M. Heflich, of the North Hudson Rod and Gun Club, shot to-day on the Secaucus polo grounds, several sweeps were also decided. No. 1 was at 5 birds, $3, one money; all the rest were $1 miss-and-outs. Scores follow:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Piercy	22022	220	222	20	220
Heflich	00220	10	210	..	...
Hyde	11111	112	112	..	...

Harms	....	210	0	..	...
Outwater	....	...	120	..	...
L Piercy	....	...	220	..	...

H. F. SCHILLINGER, Sec'y.

[The score in the Piercy-Heflich match appeared in our issue of Aug. 14—F. & S.]

HAMDEN GUN CLUB.

Aug 6.—Members of the Hamden Gun Club spent a few hours to-day very pleasantly at the club's traps. Andrews and Rose shot at 100 targets, Davidson and Launt at 50, and Peckham at 25; all at unknown angles. In addition to this a 10 target practice race was shot, with the following results: Davidson and Andrews 8, Peckham 6 Scores in the other events were as below:

Andrews	1111111111101111011111111111111101111111111011011011	—44
	0100111111111101111101001111111101000111111101101	—36—80
Rose	0111101111011111011110111111101101101010001110100001	—34
	1111111111101110011111111111111111011111110011110	—42—76
Davidson	1111011110001001111101011100101100110011110101100	—31
Launt	0110100000011001011000101010000110100000101001011	—19
Peckham	0000000110110101011010110	—10

J. ROSE, Sec'y.

AT ELKWOOD PARK.

Aug. 10.—The 100-bird match between W. R. Patten, of Pleasure Bay, N J, and Dr. G. S. Gagnon, of Chicago, for $500 a side, was shot to day on the Elkwood Park grounds, Dr. Gagnon standing at 31yds. and Patten at 30yds. As was generally expected, Patten was an easy winner, the scores standing: Patten 87, Gagnon 69. Scores follow:

W R Patten (30)	1022222122120102202222210—20
	220122222222022222222222—23
	3122022222222222222222—23
	2220201022222222120121122—21—87
Dr G S Gagnon (31)	2022221002120022112022112—19
	2020200020222202222222220—17
	2022202202020220200202220—14
	2222220221000222220202221—19—69

Sweeps were shot as below:

	No. 1.	No. 2.	No. 3.	No. 4.
Daly (29)	22122112221	(30)	1122222110	20122 (29)	22112
Hoey (30)	2112222210	(29)	2202212111	12211 (30)	2120
Morfey (29)	22222210	(29)	22020	.....	.....
Gagnon (25)	2222222210	(25)	2222222222	22220 (26)	0122

No. 5 was at 5 birds $20, then miss-and-out. Daly and Hoey killed straight, but Gagnon missed his 5th bird. Hoey killed 8 more straight and won with a total of 13 straight, Daly dropping his 13th bird.

No. 1 was a $5 miss-and-out; No. 2, 10 birds, $10; No. 3, 5 birds, $10; No 4, 5 birds, $15.

Aug. 11.—Arthur Sussman and A. M. Fielder shot a 50 bird race to-day at Elkwood Park, Fielder retiring in the 42d round, hopelessly out of the race. The match was for $50 a side. Scores were:

Fielder (30)	1121010001010201020000001—12
	10000022210002220w —8—20
Sussman (30)	2222221220102200202122202—19
	22211220220011121 —13—32

The Elliott-Glover Match.

THE CUP GOES BACK TO KANSAS CITY.

ROCHESTER, N. Y, Aug. 14.—As a result of the Elliott-Glover match to-day for the Kansas City *Star* cup, Jas. A. R. Elliott, of Kansas City, Mo., will be able to carry back the trophy with him when he goes South. His victory over Glover by 8 birds in a 100-bird match was by no means expected, and Glover's 84 out of 100 shows that he was clean out of form. His friends here attribute his poor score to staleness, which was caused by shooting too much and at too many targets as recently as yesterday, when the Rochester Rod and Gun Club held a shoot.

Elliott was in fine form and killed his birds in good, quick time. The pigeons, too, were an excellent lot of strong flyers, far better than the usual lot of "match birds" in the month of August. E. D. Fulford, who was a spectator, stated that he had "never seen better birds at this time of year."

A good crowd assembled to see the match, which took place at the Driving Park. Among those present were: Harvey McMurchy, Syracuse; C. L Frantz, Seneca Falls; Charles Wagner, Syracuse; E D. Fulford, Utica; D. Lefever, Syracuse; Dick Swiveller, Batavia; Dr. Benham, Honeoye Falls; Col. A. G. Courtney, Syracuse; W. C. Hadley, E. C Myers, Dr. Weller, L W. Davis, John J. Quirk, John Norton, George Borst, C. Lane, Theodore Lane, J. Lowder, W. Foley, J. Cook, W. J. Mann, E. D. Hicks, T. R. Griffith, C. A. Compton, L. V. Byer and Frank E McCord, of this city.

W. C. Hadley, of this city, was chosen final stakeholder, and he also "rattled the bones" to show the trap puller, who was none other than Harvey McMurchy, which trap to pull. Jack Fanning, of San Francisco, was referee, and L. V. Byer and F. E. McCord, official scorers.

Elliott shot a Winchester repeating shotgun, Elliott model, 50grs. of E. C. in a Leader shell. Glover shot a Parker gun, with 3½ and 3¾drs of Schultze in Trap shells.

The conditions were 100 live birds, 30yds. rise, 50yds. boundary, A. S. A. rules. Below are the scores:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

E. C. Meyer and Dr. Weller shot a match at 25 live birds per man, 30yds. rise, 21yds. boundary. Meyer won by 2 birds, with 22 to 20; had they used the 50yds. boundary the scores would have stood: Meyer 24, Weller 21. The scores at the 21yds. boundary were:

E C Meyer	•2101222112•2122211212112—22
Dr Weller	1120111111120222 1•222020—20

Holland Defeats Grand Rapids.

HOLLAND, Mich., Aug 7.—The Holland Gun Club accepted, on short notice, a challenge from the Valley City Gun Club, of Grand Rapids, Mich., to contest for the custody of the *Shooting and Fishing* silver trophy, representing the 5-men team championship of the State of Michigan. The match took place to day, and resulted in the cup remaining with the Holland (Mich.) Gun Club. The latter club won it from the Grand Rapids club about a year ago.

The Valley City club was represented by Messrs. Bush, Beeson, Davidson, Walton, Calkins, with Mr. Coleman as substitute. The Holland club was represented by Messrs Karston, Van Eyck, Ferguson, Thomas and De Roo, with Mr. Arleth as substitute. As shown by score below, the Holland club were only 3 ahead at the end of the match. These two clubs have run each other very close in contesting for this cup. The first match, which took place last year, resulted in a tie, the second one gave Holland a lead of 6 and gave them the cup; the third match is again in their favor, but by 3 only.

The scores are given below.

Conditions: 5 men teams, 50 targets per man, 30 at expert rules, and 10 pairs:

Holland.

Van Eyck	10111 11011 11111 10111 11010 01110	—23
	10 10 10 10 10 10 11 11 11 10	—13—36

C. J. DE ROO.

Rhode Island Trap-Shooting Association.

PROVIDENCE, R. I, Aug 10.—The Rhode Island Trap-Shooting Association and the Pawtuxet Gun Club recently met in a team race for the State championship pennant. Last year the R. I. T. S. A. won the pennant from the Pawtuxets on a narrow margin, and on this occasion they ably defended their title to it once more. The second victory was won by 26 breaks, each team of six men shooting at 250 targets, half known and half unknown angles. The Rhode Islands broke 181 to the Pawtuxets 165. Detailed scores follow:

J. F. RUSSELL, Sec'y.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Aug. 13.—The Rochester Rod and Gun Club held a target tournament to-day as a kind of introduction for the Elliott-Glover match of to morrow Glover shot a great race to-day, and was easily first. Among the shooters were: Harvey McMurchy, E. D. Fulford, Jack Fanning, Dan Lefever, A. G. Courtner, C. Wagner, C. W. Tuttle, J. J. Carr, etc.

The scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Hazelwood Gun Club.

PITTSBURG, Pa., Aug. 7.—The Hazelwood Gun Club held a shoot at its grounds to-day, among the attractions being several sparrow sweeps and a 50-target race for the W-A trophy. In the latter event Messner came out ahead with the score of 39. Detailed scores follow:

W-A trophy, 50 targets:

Messner	11101011101111111111111111101111001100111111110101 - 39
Pills	01011101111111100101111011010110111010101010110001—32
Parsons	01001001001011001101111003000110111111111111101100—29

Answers to Correspondents.

No notice taken of anonymous communications

J. M. A., Trenton, N. J.—The Pennsylvania law makes no provision respecting doves.

J. E. H., Patterson.—Does your *Game Laws in Brief* have the late game law of Pennsylvania in it? If so will send for it at once. Ans. Past editions contain old laws; last edition has present law.

F., New York.—According to the *Game Laws in Brief* (which no one doubts being correct), under the laws of New Brunswick, page 61, "No person shall * * * kill more than two moose, three caribou, or three deer, etc." I no doubt am very stupid, but would like to know if that means that the limit is two heads of one kind, or three heads of either of the other two kinds, making a total of not possibly more than three heads of game, or if it means that one is allowed to kill eight assorted heads of game proportioned as above. No doubt it is the latter, and I am simply stupid, but I would be much obliged for your opinion. Ans. It means that a person may kill in a season two moose, and also three caribou and also three deer.

J. C. B., Nevada, Iowa.—I have been informed by certain parties that a company or corporation, licensed by the U. S. Government, has complete control of all travel in the Yellowstone National Park, and that no person is now allowed the privilege of hiring a private conveyance or camping outfit and making a tour of the park, camping where he pleases. Is this true? In making a tour of the park, is it necessary that the traveler must employ the conveyances of a corporation, or board at their hotels? Ans. You have been misinformed. A transportation company, licensed by the Government, runs stages, but does not have exclusive control of transportation. You can hire a private conveyance, or a saddle-horse or a pack train, and go where you please. But along the roads there are certain specified camping places. If there were not, the roads, from one end to the other, would be strewn with tin cans, broken bottles, old paper, and the debris of a deserted camp. To answer your last question, we may say that it is not necessary that the traveler in the Park should employ "the conveyance of a corporation, or board at their hotels."

A. C. H., Harrison, Me.—Is there such a fish as a sea trout? Is it a trout that lives in streams near salt water and at times goes to the sea? Has it a square tail, and is it marked same as the brook trout (*Salmo fontinalis*) or more like the salmon trout? Ans. Yes, a local variety of the speckled or brook trout (*Salvelinus fontinalis*) is the sea trout or Canadian salmon trout (*S. immaculatus*), which runs up from the sea in Canadian waters. Says Charles Hallock, in the "Sportsman's Gazetteer": "The sea trout, known as such, are confined to Canadian waters exclusively. They are caught only in midsummer, and seldom under a quarter of a pound in weight. Their average of all localities may be said to reach 2lbs., while in the river Nouvelle (Gaspe), which empties into the Bay Chaleur, they reach 6lbs., an extraordinary weight for *Salmo fontinalis;* though by no means marvelous. The 'strawberry run' or sea trout, as it is called, occurs about the 1st of July on the southwestern coast of Nova Scotia, the fish moving east as the season advances, until they reach the north shore of the St. Lawrence about the 5th of August. Evidently an immense school strikes in from the sea, detachments dropping off as it progresses, into the rivers along the coast. The fishing season lasts about six weeks, the fish meanwhile ascending to the headwaters of the streams, and often surmounting falls of steep ascent." The speckled trout of Long Island streams and other waters flowing into salt water go down into the salt water after breeding, and remain there until the water gets warm again.

PUBLISHERS' DEPARTMENT.

Yellowstone Park.

A COMPLETE TOUR VIA THE PENNSYLVANIA R. R.

THE Yellowstone National Park is unquestionably the most interesting region on the globe, for within it is displayed the greatest collection of nature's manifold wonders. Indeed, this mountain bound plateau, high up on the summit of the everlasting Rockies, is a veritable playground for the world's giant forces. To stand and gaze upon them in all their marvelous manifestations, the great geyser upheavals, the fierce steam blasts, the terrible leap of the river, and the awful cañon, is a revelation—an experience to be had at no other point on the earth.

The personally-conducted tour of the Pennsylvania R. R. Co., which leaves New York on Sept. 2, affords the most satisfactory means of visiting this wonderland and viewing its marvelous features. Tourists will travel by special train of Pullman smoking, dining, sleeping, and observation cars in each direction. Eight days will be spent in the Park. Stops will also be made, returning, at St. Paul and Chicago. The round-trip rate $255 from New York, Philadelphia, Baltimore and Washington, $230 from Pittsburg—covers all necessary expenses.

For detailed itineraries and full information, apply to ticket agents, Tourist Agent, 1196 Broadway, New York, or address Geo. W. Boyd, Ass't Gen'l Pass. Agent, Broad Street Station, Philadelphia.—*Adv.*

"Long Island" and "Summer Homes"

are two books published by the Long Island Railroad Co., which contain much information about the shooting and fishing resorts on the island. They are handsomely illustrated and are well worth the trouble of sending the 6 cents in stamps, which will bring them by return mail from H. M. Smith, Traffic Manager, L. I. R. R., Long Island City, N. Y.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 28, 1897.

VOL. XLVIX.—No. 9. No. 346 BROADWAY, NEW YORK.

But for the practical part, it is that that makes an angler; it is diligence, and observation, and practice, and an ambition to be the best in the art, that must do it. I will tell you, scholar, I once heard one say, "I envy not him that eats better meat than I do, nor him that is richer, or that wears better clothes than I do, I envy nobody but him, and him only, that catches more fish than I do." And such a man is like to prove an angler; and this noble emulation I wish to you and all young anglers. Izaak Walton.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any address which may be furnished us for that purpose.

SNAP SHOTS.

This is the time of the year when rudely civilized cities and towns rid themselves of surplus stray dogs by mayors' proclamations authorizing the promiscuous shooting by the public of unlicensed dogs running at large. In Jersey City, for example, numerous squads of small boys have been holding dog lynching bees. The demoralizing, brutalizing and disgusting character of these methods should render recourse to them impossible in a self-respecting community. The S. F. P. C. A. of this city has shown how the dog, whether with or without an owner and guardian, can be taken care of without outraging decency.

So much depends upon the point of view. While United States Senators, State Legislatures, Audubon societies, sportsmen and others are seeking to discourage the destruction of song birds, the fashion makers and the fashion journals are doing all they can to promote the use of bird feathers for dress. The September number of a widely circulated fashion paper published in this city shows bird adornment of hats as the vogue, and treats its readers to a paper on "home taxidermy for women." "Numbers of our common American birds," the article tells us, "yield wings, tails and feathers, which will serve admirably for the decoration of hats"; and there are named specifically for the various colors, the bluebird, the indigo finch, purple grackle, yellow warbler, goldfinch, and breast of the meadow lark. "Dwellers near the sea or the Great Lakes will hardly require to be told that the smaller gulls and terns afford beautiful material for decorating hats." "Numerous browns and buffs are supplied by upland game birds and shore birds," which "may be purchased cheaply at almost any market." The directions which follow, telling how with a carving knife to "chop off the wings close to the body, and cut off the tail," are so explicit that every woman of economical bent may be her own song-bird skinner, and deck her hat with home-butchered products "in lieu of the costly articles handled by the milliner." It is instructive sometimes to get the point of view from which other people see things.

We hear much about the extraordinary perils of the Klondike trip; but that there are prosaic hazards for Klondikers far this side of Alaska was illustrated the other day by the tragic death of Robert Jarvis Gilbert, in the wilderness of the Algoma district of Canada. Gilbert was a well-known journalist and author, and was numbered among FOREST AND STREAM's contributors. He was bound for the Klondike country, as a correspondent of the London *Graphic*, and was engaged in preparing sketches of western Canada on his way. On Friday, Aug. 13, when he was on a search for game, his revolver failed to work, and while he was examining it, a cartridge in one of the chambers exploded with fatal effect.

Paragraph 549 of the tariff law may originally have been intended to put birds' eggs on the free list; but as a matter of fact it absolutely forbids the importation of any birds' eggs, since it prohibits those of game birds and of birds not used for food. It is a curious jumble; the paragraph placing on the free list: "Eggs of birds, fish and insects: Provided, however, that this shall not be held to include the eggs of game birds or eggs of birds not used for food, the importation of which is prohibited except specimens for scientific collections, nor fish roe preserved for food purposes."

This puts a quietus upon the enterprise of introducing pheasant eggs, capercailzie eggs, or the eggs of any other game species, for the purpose of adding to the stock of a game preserve. For this we are indebted to the well-meaning efforts of Senator Hoar, prompted by evident misinformation, as shown by his statement of the necessity for such a prohibition. "It is a well-known fact," he told the Senate, "that the destruction of the song birds of this continent by the sale of their eggs for mere fanciful purposes is going on at a wholesale rate, and it is so in Europe. It is said that even the nightingales are being totally destroyed in Italy. Of course these birds fly across the Canada line and across the Mexican line."

This is an explanation which does not explain. The destruction of the song birds of this continent by "the sale of their eggs for mere fanciful purposes" is quite as fanciful as are the purposes. The entire proposition is fanciful, fantastic and fallacious. If there were any such traffic in song bird eggs, the true way to protect American-laid eggs would be to admit foreign eggs free, and so lower the price and discourage the native industry. To shut out foreign eggs, on the contrary, would mean a lessened supply, with consequently higher prices and a stronger stimulus to nest-robbing activities.

A pleasant and cheerful form of sport, not indigenous to this country, but extensively practiced in cultured rural communities, is the hunting of snipe with a bag at night. The roughs and toughs, practical jokers and professors of horse play organize the hunt in honor of the new school teacher, a visiting drummer, or some other fresh and innocent subject. The victim is led to a dismally dark, and if practicable, miry spot in the brush or on the marsh, and stationed there to hold open a bag, into which the rest of the party, he is told, will drive the game. Then all the others go home or back to the hotel to await the coming of the bagman when panic, exhaustion, mosquitoes or the realization that he is a fool, shall have driven him from his post. The meeting of the returned simpleton and his instructors is usually considered the most hilarious and exciting incident of the night.

Among the variations of the snipe-hunt they have in Maryland a bee-hunt, participated in by the local humorists and the innocent from abroad. The Port Deposit correspondence of the Baltimore *Sun* one day last week reported the probably fatal ending of such an escapade. The bee-hunts, it is explained, are frequently planned, ostensibly for the purpose of cutting down a bee tree and securing the wild honey, while the true object is to frighten some stranger who has been invited to join the party. This is accomplished by feigning an attack from the owner of the property upon which they may be at the time, running and firing promiscuously, while the stranger who has been invited to assist in gathering the honey is usually glad to get away from the place as rapidly as possible. In the Port Deposit hunt, when the alarm was sounded the party entered into the sport of the occasion with such gusto that one of them inadvertently fired a bullet into the head of the visitor for whose benefit the hunt had been organized.

To allege that a person has been made a victim of the snipe-bagging trick is to say that he has been sold completely and foolishly. No more faithful and effective presentation was ever given of the merits of the Alaskan seal fishery dispute than that contained in a cartoon by Professor Henry W. Elliott, who once published a picture representing Uncle Sam holding the snipe bag while John Bull was making off with the last of the game. Several years have elapsed since then, but every subsequent development in the seal controversy and the regular progressive diminution of the seal remnant by pelagic hunting has demonstrated that Professor Elliott's characterization of the situation was precisely true. Uncle Sam has been holding the bag out there in the dark quite long enough. When will he realize that he is being sold, and refuse longer to submit to the trickery?

Dr. David Starr Jordan and Messrs. Macoun and Thompson, of the fur seal investigating commission, have returned from the Pribilof Islands. Dr. Jordan brings back an encouraging report of the success of seal branding. As is well known, the primary cause of the diminution of the fur seals is to be found in pelagic hunting in Bering Sea, by which great numbers of females have been destroyed and their pups left to starve. Last year Dr. Jordan proposed that when the seals were hauled up on the breeding ground, the cows should be branded in such a way as to disfigure the fur and so render the skin unsalable, when of course there would no longer be any inducement to pelagic fishing. This was done with a number of cows last year, and their reappearance on the islands this year with the brand showing demonstrates that the disfigurement is permanent. The work has already been prosecuted successfully this season with the mature cows, and the branding of the young females will be undertaken next month. An electric branding device is employed, which is painless and entails no injury upon the seal beyond rendering the skin worthless in market. Thus there is promise that branding will render pelagic sealing so profitless that the brand may yet accomplish what diplomacy has failed to secure.

A change has come over that vale of many delights known in prosaic speech as "down by the creek." The day life, from early morn to dewy eve, is as full and rich and joyous as ever in all the seventy years the owner of the ancestral acres has dwelt here on the old farm. Still may one hear Bob White's whistle from the hillside, the liquid note of the thistle bird as it dips from one purple tuft to another and the merry rattle of the kingfisher. The August noon is drowsy with the drone of the locust, the soothing gurgle of the water softly flowing through the dismantled eel weir, and the distant cooing of the mourning dove. All day long the creek is filled with the motions and sights and sounds of pulsing, joyous life, until with the fading light the swallows give way to the bat, him of the fiendish flight and uncanny click, and the full night chorus sets in of crickets, katydids, night-hawks, whip-poorwills and owls. All is familiar and grateful to-day as it has been for the seventy years of the present holder of the domain, and as it was for the years uncounted before him. But one note is missing, one instrument is stilled. No more is heard the bellow of the bullfrog, that prodigious basso profundo, which of all nocturnal sounds is most in keeping with the gloom of the night, and of all most mellow and melodious. The bullfrog is unheard, because there is no bullfrog to hear. He has been cut off. Not untimely, perhaps, for his legs were large and meaty, and for the tid-bit of frogs' legs on toast he was in his prime. He, the monarch of the pool, and all the other monarchs of all other pools, for miles around, have been potted, dismembered, skinned and incontinently devoured. It was surely an evil day that brought to the vale of many delights the city-bred frog hunters whose god is their belly. May a kindlier fortune watch over this season's polly wogs, that they may attain full stature and in the years to come keep up the traditions of the bullfrog race, whose immemorial boast has been that music runs in the family. Then, when of a midsummer night nature shall pull the diapason stop, not a note shall be missed, not a harmony wanting.

The regulations which have just been promulgated for the government of the national forest preserves do not forbid hunting on them. An important rule is that camp fires must be extinguished thoroughly before camp is abandoned. That is a good rule to follow everywhere.

We are not inclined to share the gloomy view as to game protective officials expressed by the correspondent to-day who comments on the story of the double-faced sportsman, as related in our issue of Aug. 14. The tale was of a game association member who talked vehemently for protection while at home, and then when free from observation joined the ranks of the "sooners," who kill birds before the law is off. The story was known to be true. But that it truthfully represents the average game association member we do not for a moment believe. Profession and practice do not always go together in the field any more than in some other walks of life, but the fact that there are hypocrites here as elsewhere is not good ground for discouraged views of game protection. The story referred to had its occasion in the early 80s. That was nearly twenty years ago. Those of us who have been watching the development of right thinking and right acting in regard to sportsmen's practice during this period know that there has been a marked and highly encouraging development of public opinion and individual conviction and conduct on the game grounds.

The Sportsman Tourist.

A TURKEY OF THE WILDERNESS.

Men seek their pleasures variously after their kind, but he who has lived the active life of the hunter in uninhabited lands knows well that in those remote regions there may be found enjoyment that civilization cannot yield him. Wanderers such as he will recall the sharp crack of the rifle on wind-swept mountain sides; in their ears the reverberations yet ring as they sounded in echoing cañons; and clearly do they remember the fainter, hollower reports on those open plains the prong-buck loves so well. With these sounds there come back memories of a hundred scenes in woodland and on prairie, each one, perhaps, marking a red-letter day in the hunter's life afield. The pleasures of the sportsman need no champion, even though other fields of effort offer inviting opportunities for recreation.

But it is not alone the enjoyment of the chase that attracts men to the wilderness. The wild, free life, untrammeled by the conventions of society; the charm of wandering in regions untouched by hand of man; the open, hearty comradeship about the camp-fire—all these combine to draw men to the far-off mountains and the plains. You who are wont to ride straight and hard behind the hounds and to be in at the death when the run is over, know the sharp zest of a

AN INDIAN TERRITORY CABIN.

AN INDIAN TERRITORY FERRY.

place in the "first flight," and the satisfaction of a stiff fence cleverly negotiated; you of the "brassie" and the "driver" are, perhaps, the holder of a score on the links that has won you the envy of enthusiastic golfers, and that gladdens your heart even when snows lie deep; and you, yachtsman, fresh from a battle with the gale, beyond all doubt you felt a thrill of contentment as your staunch craft, storm-racked and ice-sheathed from deck to main-truck, at last swung clear to her anchor in the landlocked harbor. Grant, if you please, that pleasure at least as great may come to him who e rifle brings to earth the gigantic moose, the lordly elk, the agile big-born or the fierce grizzly of western ranges. These are the keenest delights that are known to him who hunts in the United States, but there are lesser triumphs which the big game hunter need not sneer at The killing of the game, as every hunter knows, is but a part of the pleasure of the chase; there are many other factors in the sport. The obstacles overcome, the wariness circumvented, the hardships endured—such are other components that go to make the hunt worth while, and whether the bag be great or small, the satisfaction is, as it should be, a thing apart.

When the cool winds of autumn and the crisp frosts of early winter have worked their changes in the summer landscape; when the football player appears upon his battlefields in the pink of condition; when the coming of the open season has aroused the sportsman to a realization of possible bags to be made in forest land or on the plains, then it is that the wild turkey gobbler, the monarch of American game birds, roams his native heaths in his most kingly manner. It was a fortunate selection that named the turkey as the dish sacred to the day when all the nation renders thanks for divine favors granted; yet the ordinary turkey of the market is by no means the best of his race. Far above the finest of the tame species must the wild variety be ranked as a table delicacy, and as Thanksgiving Day approaches, the mind of him whose chief pleasure is found afield may well hark back to those happy hunting grounds where nature works her will with her own and the turkey of the wilderness thrives upon the food that suits it best. There in some favored regions where the telegraph does not reach and mail sacks do not penetrate, may be found the largest and the wariest of our American feathered game.

Many are the ways in which the wild turkey is brought to bag, but he who would shoot one that has been lured to the "blind" in which he hides by a bait of dropped corn, or he who would attempt to kill more than one at a shot, is a man without the conscience of the true sportsman. An honorable spirit of fair play will permit neither of these methods—the pot-hunter is bred of such as employ them, and of such are the game butchers who here and there in the north wait in their boats to slaughter the deer their hounds have driven into the water. And yet, perhaps, a partial excuse may be offered in their behalf, for vain indeed is the confidence of the tyro who unaided goes after the vigilant *Meleagris americana*. Inevitable disappointment will follow on his trail, and the "phut! phut!" of the frightened birds will tell him, when his hopes are highest, that his efforts are of no avail.

Nevertheless, it is well worth the candle; for of all the game that goes, feathered or furred, on wing or afoot, the wild turkey is the most toothsome. Sing, if you will, the gastronomic virtues of the celery-fed canvasback, the well-cooked woodcock, the fragrant venison steak, or any other dish that may tempt your palate; but of them all there should be granted the highest praise to the wild turkey, that has told off its days in the wooded country it loves so well. Nor is it less beautiful in life than it is delicious to the taste, when the scattered sunrays of its native haunts gleam on its plumage of bronze and green and gold. Gamy it is, too, in the field as well as on the table, and he who hunts it must go with a light tread and a quick eye; for, be it understood, it is no easy task to "call" the turkey within range, and still-hunting it is more difficult than still-hunting deer. Wary and keen-sighted is it, and quick of ear, with a speed on foot that makes fast running for a dog, and a swiftness on the wing, once it is under way, that will astonish him who knows only the domestic variety. Moreover, he who hunts it need be steady of hand and should hold true, since it carries shot well and must be hard hit before it will give up the fight.

All this I learned before a turkey fell to my gun, for on previous hunts I had burned powder vainly in their pursuit. But it was my luck that the first should come to bag on a day when it was least expected. It was a bleak gray morning in late November, and our camp lay at the foot of the Kiamichi Mountains, in Indian Territory. Before us the long line of the first range led to the west; behind us, beyond the wide level of bottom land, the Kiamichi River flowed between its fringes of cottonwood trees. From the crest of the "Kimish" to the river that washed the further extensions of its foothills, a deep stillness was on the land; unbroken quiet brooded over the pine-clad mountainside and the oak-covered outlying ridges, and overhung the sunburned prairie. No breath of wind stirred the trees or moved the vapory clouds that were poised in the sky overhead. The gently rolling country in which our tents were pitched was wooded with stunted oak trees and the ground was fairly well strewn with "mast." It was a morning when our Indian guides urged us to take out the hounds and hunt the country to the west on the chance of getting a deer or two. The region was not the most promising for a successful deer hunt, and moreover our Indians were no exception to the general rule that the so-called noble red men are but indifferent hunters. Had they not shown unusual persistence we should, perhaps, have done otherwise, but be that as it may, our party filed out across the little prairie shortly after sunrise, to follow where the head guide might lead. Past the clay-splashed wagon standing empty in the dried grass, past the picketed ponies munching their early meal, over rocks and through thickets, we tramped after our Indian leader. He took us to the timbered country below our camp, and posted us here and there at runways along which it seemed likely the deer would pass, until he had put every man in position.

My "stand" was at the end of a little stretch of open ground, on a low ridge. On either side the slopes were clothed all about with a rather thick growth of oak and cedar trees, while across the open and to the left lay a jungle of heavy undergrowth that reached off to the northwest, its end just touching the bare ridge down which I faced. It was not primeval forest that surrounded me, for here and there could be seen evidences that lumbermen had penetrated to the place in search of cedar, and it was upon a cedar stump that I took my seat to wait for what the morning might bring forth.

I was almost the last man the guide placed, which put me near the end of the line of guns that crossed the territory in which we expected the deer to run. The hoofbeats of the guide's horse grew fainter in the distance, and I was left alone A great pileated woodpecker, with shining body and brilliant scarlet crest, hammered on a tree above me; a taxidermist would have coveted his skin. The minutes passed slowly. To the man upon a deer stand there comes a time, before the hounds give tongue, when the possibility of shots to be had if he will but remain fights with his restless desire for movement; but after the dogs have taken a trail the pulse quickens and every sense and every muscle grows alert at the promise that is wafted down the wind by the sonorous, irregular baying. Then the chance of recompense, even though it be remote, makes inaction more tolerable. The morning wore on. Delay was fast growing irksome, when from down the line of hunters to the right I heard the clear reports of two rifle shots. What did it mean? The hounds had not opened on a trail, and it could scarcely chance that a deer or a bear would blunder within range of any of our men. I sat open-eyed and ready, looking toward the sound. For the space of two or three minutes there was no movement to be seen; then as I watched I caught sight of the rapidly beating wings of a turkey as it came with a beautiful sweep through the timber.

On it flew, straight toward me. I was almost in the open; only the scattered branches of a fallen tree were before me as cover. Still as a wooden man I sat, scarcely daring to breathe, for I knew that the slightest motion would cause my quarry to sheer off to the right or left. The turkey appeared to grow larger as it approached, until when it came within rifle range it looked to my excited eyes a 40 pounder at least. It was then probably a mile from the point where it had been flushed, and seemed to think it had reached a place of safety. My first intention had been to let it come within easy range, and then try a shot or two on the wing as it went by, but its purpose to light at the edge of the thicket soon became evident. Lower and lower it dropped in its flight as it neared me. I knew that if a moment were given it after I had made my presence known, it would secrete itself in the heavy undergrowth and I should lose it Quickness was necessary; I waited until it had thrown back its wings and stretched its legs to alight, and then tossed up my rifle and fired. It was an easy shot, 70yds. in the open, and the shot went true. The big bird fell over on its back, and for a few moments thrashed about vigorously with its strong wings. I threw another cartridge into the chamber of my rifle, but it was not needed; the first had done the work. The last struggle ended as I stood above it, and with a feeling of such keen pleasure as I think does not often fall to the hunter's lot, I picked up my first wild turkey. It was a very little triumph, perhaps, and luck alone gave me the chance; but luck is a factor that plays a great part in every province of human endeavor, and men sometimes take credit for what is granted them by chance alone.

I have known other Thanksgiving Days since then, but when each passing year rolls on, bringing November with its promise of snow, I like to recall that winter morning when, through the little forest glade, my first wild turkey came sailing almost to my feet. Allan Hendricks.

CAPTURED BY THE CROWS.

The following story was told me by an old employee of the American Fur Company, who had worked for that company and its different trading posts along the Missouri River in the years from 1858 to 1860. The hero of the story is known by the name of Jim, and his stories of the old days, when the American Fur Company traded with the Montana Indians, and also with the Blackfeet, who used to come far south and trade along the Missouri River, would fill a volume of adventures, and also of so strange a nature that the old saying that truth is stranger than fiction is well borne out.

The American Fur Company had, in the year 1858, just finished building their fort on the Missouri River, situated where the town of Fort Benton was afterward built. This fort was built of sun-dried bricks, called adobes, and between each building a high stockade of pine logs was erected, the whole forming a square with bastions at the four corners, these being supplied with small cannon which had, on more than one occasion, to be used against war parties of Indians bent on making a raid on the fort; or to protect trading parties of Indians who were camped round the fort, and who were attacked by some force of foreign Indians hostile toward them. Often, camps of Blackfeet of many hundred lodges would be around the fort at a time, and should a party of Crows or Sioux happen to arrive at the same time a fierce fight would always take place; when the fort would be closed, and a careful watch kept on both parties, who were allowed to fight it out until one or other had enough, and would then sheer off, when the trading would again be resumed.

In those days liquor was traded to the Indians at these forts, but they were never allowed to drink it inside the stockade, and it was seldom that a large trading party left their camp outside the fort without a prolonged drunk, in which many old feuds were remembered, with the result of sometimes many Indians being killed, as the Indian, when drunk, is more like a wild beast than a human being. The number of robes traded during the winters at these forts was astonishing, as often in the spring as many as 20,000 prime buffalo robes would be shipped down the Missouri River in mackinaws, or boats built for that purpose, and these were obtained very cheaply, as goods and liquors of a very inferior quality were held at an exorbitant figure, a sack of flour selling in trade for $30 and tea at $3 the pound; all other goods being in proportion, particularly ammunition, which the Indians were bound to have at any price.

This was before the days of magazine rifles and fixed ammunition, the old smooth-bore guns being used with powder and ball; these went by the name of fulques, and would carry fairly well up to 100yds.

In the fall of 1858 a party of some twenty-five men, of which Jim was one, was sent by the fur company to the Belt Mountains, about forty miles from Benton, to remain the winter cutting timber for the use of the fort, and which would be hauled down to the fort the following spring by bull teams, which consisted of twelve or more yoke of oxen

drawing four heavy wagons; these would draw a very heavy load.

After the party had built a log house and had been in camp for some months, provisions and clothing began to run short, and it was determined to draw lots to see who should go down to the fort for a fresh supply. This was by no means a light undertaking, as it had to be done on foot, all the horses having been sent back after their first arrival; there was also snow on the ground, although not much, and the weather was cold.

The trip down would have to be made in a day, but the return would be on horseback, the provisions being brought on pack horses. The drawing lots was done by straws, the man drawing the shortest being the one to go. The lot fell on Jim, who started out the following morning warmly dressed, with buckskin shirt, leggings and moccasins, taking a little dried buffalo meat with him.

He made the ford the first night without any adventure or meeting any one on the way, and after remaining there for a couple of days to rest and get the packs together he started on the return journey with four pack horses and a saddle animal for himself. He had a good supply of everything required—provisions and clothing, not forgetting plenty of tobacco.

About the middle of the day, and when about half-way to camp, while resting the horses for a short time, in taking a survey of the country ahead, he saw in the distance a party of mounted men on the full gallop toward him. He of course knew in a moment that it was a party of Indians, and there was no doubt that they had seen him. He was well enough acquainted with the state of the country to know that no party of Indians, and it made no difference to what tribe they belonged, were friendly to any white men they met away from the forts and on the prairie. The only hope for him, as he knew, was that the party approaching might not be Sioux. Should they belong to this tribe nothing could save his life, as the Sioux Indians never in those days were known to spare the lives of any white men who fell into their hands. Should they be Crows or even Blackfeet they might be satisfied with taking all he had and then letting him go.

These Indians were not nearly so cruel as the Sioux, although great thieves, and it depended a good deal on the medicine made by the war party before they left their camp. This making medicine was a rite always gone through by the medicine men of the camp to tell each party as to the success or otherwise of their expedition, and also as to whether they should kill on the war path or only steal, and whichever they were told to do by their medicine or familiar spirit, which consisted of sometimes a wolf, crow, owl, or any other animal, was always carried out to the letter. It can therefore be imagined with what anxiety the advance of the party was watched by Jim. There was no chance whatever for him to escape, and resistance was out of the question, his life, therefore, depended altogether on the tribe to which the Indians belonged, and whether their medicine was good or bad.

It was not long before they rode up to where he was standing, yelling like demons. They circled round him for a short while, then coming to a sudden halt turned their horses toward him, and he was greatly relieved to see by their dress and general equipment that he had fallen into the hands of a war party of Crows. He remained quietly standing in the center of the ring, when the chief rode out in front of the rest and spoke to him in the Crow language. Jim made signs (he being well acquainted with the sign language) that he did not understand. The chief then addressed him in Blackfeet, which he understood, and asked him where he was going. He told him to the camp, pointing in the direction. The Indian then told him that the party had camped not far away from there the previous night, and that had they wished they could have killed all the white men, as they never knew that they were in their vicinity.

The chief then made a sign to some of his young men, who left the circle and began to bring in the pack horses, that were grazing not far away.

They had not offered, and did not seem inclined to offer, any violence toward him, and he made up his mind that the loss of his goods would be about all he would suffer—even hoping that they might leave him the horses, as they did not seem to be on a horse stealing expedition, as when out on such the Indians generally go on foot. Several of the Indians had in the meantime unloaded and opened up the packs of goods. These consisted of provisions of all sorts, and clothing, boots, and many other articles.

They divided everything equally, placing them in piles, one for each man. After this was finished Jim, trusting it was now over, spoke to the chief and asked him if he would leave him the horses.

To this question the Indian shook his head, making a sign that the horses were to go with him, and that Jim was to go on foot back to the fort. He at the same time took hold of Jim's coat and made a sign for him to take it off, which he had to do. After this the Indians came up one by one, each indicating by a sign what portion of his clothing they required, and it was not long before he was stripped of every article of clothing he had on, even down to his moccasins, but as each Indian took an article of clothing they returned him one in place of it, giving him their old worn-out and dirty breech clouts and an old, ragged blanket, together with a very dilapidated pair of moccasins. When they were done he stood forth dressed as a very dirty and disreputable-looking Indian.

They then made signs to him to proceed on his way to the fort. After going a short distance Jim felt the want of a smoke, but remembered that his pipe was in the pocket of the coat taken by the chief, while his tobacco and knife were in other articles of his clothing. He therefore returned, and walking up to the chief made signs that showed him what he wanted. The Indian pulled the pipe out of the coat pocket. He had put the coat on and looked at it for a short time, and then handed it over to Jim. He went to each Indian in turn, and they gave him back his knife and also tobacco and matches. He then left them and started to walk back to the fort, about twenty miles away, and altogether well pleased to get off without the loss of his scalp.

But before letting him go the chief spoke to the rest of the Indians for a short time, and then made signs to Jim to remain quiet where he was. The young men then filed past him one by one, and as they passed they each struck him a slight blow on different parts of his body with their ramrods, all traveling off on to the prairie after doing so. The chief came last, and Jim expected a light blow also from him; but he struck him with his full strength a stinging blow on the posterior, which made Jim's blood boil within him, but he had to stand it.

This the Indians call counting their coups, it being a point of honor with a warrior to do something to a captured enemy which they can boast about over their lodge fires in future days.

In case the medicine of a war party is bad this counting coups is done by killing and scalping; but if good, as in Jim's case, a light blow or the cutting of a lock of hair close to the scalp was considered enough for their honor. After a lock was cut off by twenty or thirty Indians, the appearance of a man's head can better be imagined than described.

It was not until midnight that Jim reached the fort. He hammered on the wicker gate with a stone for some time before it was opened by the gatekeeper. Vincent, who had a room near the gate, and whose business it was to tend to it and show any Indians who came into the Indians' room—a room kept on purpose for their accommodation, and where a large can of tea was always kept ready for them, with long Indian pipes and the strongest of tobacco.

This man opened the gate after a while, swearing a good deal in English. He was well up in most Indian languages, and accosting Jim in Blackfoot, asked him where he came from. Jim returned no answer, and was shown into the Indian room, where he seated himself, Indian fashion, in a corner, with his blanket drawn over his head.

Vincent filled one of the long Indian pipes and handed it to him, at the same time changing his language to Crow, and again asking him where he came from, but no answer was returned. He then tried him in every Indian language he was acquainted with—and he knew a good many—but with no result, Jim smoking away as if he was stone deaf.

"What kind of an Indian is it, anyway?" says Vincent, after exhausting his Indian vocabulary and getting rather angry. He then went up to the supposed Indian, and, drawing back the blanket from his face, beheld the smiling countenance of Jim, at which he burst into roars of laughter, and it was a long time before he could recover himself sufficiently to speak, when, without giving him a chance to explain, he shouted: "I know what's the matter with you! You've been held up by Indians!" His knowledge of everything pertaining to Western life telling him this by intuition. On this Jim detailed the circumstances, and they having been by this time joined by Mr. Clark, the chief trader, the whole matter was talked over after Jim had done honor to a good supper.

The only thing to be done was to send another supply of goods to the lumber camp on the morrow, accompanied by a party of well armed men from the fort. All hope of ever recovering any of the horses or goods stolen was given up, and on the following day the party started, reaching the camp without incident.

Nothing was ever heard to identify any of the Indians, as they would seldom tell on each other, and as such an incident was of common occurrence in the West in those days it was soon forgotten. It was, however, not often that a party got off as easily as Jim, as hardly a month went by without some of a party traveling on the plains being killed and scalped by roaming bands of Indians, and it was many years before it became at all safe for even large parties to journey any distance from the forts.

C. E. D.

THE BEACH MYSTERY.

In a quiet little place in a small shanty on the shore lived a man not much over forty years of age, respected by some and considered of no account by others. Weather-beaten and rough, careless of himself and surroundings, he owned a small boat and lobster outfit, and worked hard to earn a livelihood.

He had saved a little money from his earnings, but the most of his pay was spent in foolish ways. Without friends and alone in the world, he had lived here for years. Every spring his pots were put out and taken up in the fall. He had little to say to any one and kept his own counsels. He could be seen 'most any day, rain or shine, rough or calm, in his boat, bare-footed and generally wet to the skin; he never was sick a day, and knew not what a cold was. He would go to town once in a while to get his provisions, then back to his hut and his lonely work by the sea.

Such is the life and history of the man as I knew him, and little did I think when last I saw him that he would come to such an end. I have often heard it said that he would get drowned, for he did not seem to care how hard the wind blew, nor how rough the sea was—he went, just the same.

The bay is as smooth as glass. The headlands to the north loom out of the sea and seem only a mile or so away instead of eight or ten. To the south the water is dotted with the white sails of the mackerel fleet, with here and there a large white gull slowly sailing through the air, and before us the boats of the lobstermen float lazily on the water, which is dotted in long lines by the floats on the nets of the fishermen. They rise and fall as the old swell lifts them, and then it rolls up on the beach with a lazy, sleepy sound, and the songs of the fisherwomen come from the shanties on the shore. It is a beautiful day, as Jim, with his long, careless swing, goes to his boat down the beach, pushes off and paddles away, never to come back and never to be seen again until the sea gives up its dead.

He rows lazily along, with the old sail slanting first one side and then the other by the motion of the oars; there is no wind, and you can hear Jim whistle as sailors often do to whistle up a breeze.

Getting to his traps after a while, he pulls one after another, and we hear him singing as he works. After he has made his "haul" he goes to his net—a common gill-net which he uses to catch herring for bait. He has it not far from shore in shallow water. There are others in the same locality. As he drifts along, with his feet on the sail and his long body stretched out in the stern, his hand over his shoulder resting on the tiller, he makes a picture of perfect rest. At peace with the world and nothing but good-will toward his fellow-men.

He is hailed by a passing boat. "Morning, Jim. How'd ye raise 'em?" "'Bout half," is his answer (meaning about one lobster to every two of his pots).

"Your net looks heavy, Jim."

"Cork line sags some," Jim answered, in his calm, low tone.

"Guess she's full of herring to-day."

He does not hurry nor show signs of excitement in the least. Passing the boat, he catches the cork line of his net. Seeing the fish, he throws off his coat to go to work. The fish are taken from one of these nets by hand. The lead line is pulled up and the fish taken out, then it is dropped back into the water. The fisherman is obliged to reach down into the water to get hold of the net. Jim leans over the side of the boat to reach for a fish, when there is heard an unearthly scream, then another half-smothered cry for help. Then all is still.

The fishermen in the boats start with alarm; the women on the shore stop their singing and rush out to see what is wrong. They see Jim's boat drifting and the water around the net in a fearful commotion. Snatching up the oars, the nearest boatmen row with all haste to the spot. They see the net, but no Jim. They call for him, but he does not answer. Poor fellow, where is he?

They row to his boat and find everything just as he is in the habit of having it. One fisherman looks over the side of the boat and gives a cry that is heard ashore: "My God! Do you see that shark? He is a maneater." The other man looking, sees a large shark of some kind, about 8ft. long slowly swimming around the net. They now try to pull the net and have only taken in a little of it when they see the shark again coming toward them. Seizing the oars they stand ready to give him battle. He sees the boat and slowly sinks out of sight.

Can this thing have pulled Jim out of the boat? This is a question never to be answered. The women on the shore say they saw him at the net and heard him scream and looked to see him in the water fighting with something, then all was over and the water resumed its calm, unruffled surface. Yes, all was over for poor Jim, but what a tragedy on such a pleasant day and what must have been the thoughts that went like lightning through the poor fellow's head as he was taken from the boat by this monster of the deep, and dragged to his death in the sea which had been so good to him.

His body has never been found. They have searched the shore and dragged the bay with nets but of no avail. The "Life Saving station men" have looked in vain for the body of poor Jim. For weeks they have felt that on some of their lonely watches on this bleak shore they might find him, and each man hopes he might not be the one to do it. Their friend in need and they knew it. To-day in their night watches, as they pass the spot where he was last seen they glance toward the sea with a shudder, and hurry along as if in fear that his song or whistle may be heard above the voice of the waves. His boat and fishing gear were sold, and the little money which he had was given to someone who did not care enough about him to look him up when he was alive.

HUNTING THE TAPIR.

The tapir commonly distributed throughout tropical America is at times really dangerous, and its great size, wary habits and untiring strength make it an animal worthy of the highest rank among those classed as big game.

The flesh very much resembles beef, though it is rather coarse in texture, and tapir, or danti steak, as it is usually called, is considered a great delicacy, and on this account these animals are vigorously hunted, and whenever one is killed people come from long distances to secure the prize.

The tapir loves the deep woods, and the hunter to be successful must be prepared for a long chase, and must be philosophical about disappointments, for this animal ranges over a great stretch of country, and a sportsman might visit regions where they are abundant, and go about for weeks without even hearing of them.

I have visited one locality, however, the northern slopes of the Sierra Nevada on Santa Morta Mountains of Columbia, where there is generally a pretty good assurance of success. This region is peculiar, and the tapir, which is unusually abundant there, is confined to certain localities, and is almost as restricted as if in a great park.

The northern slopes and foothills of these mountains are covered with a luxuriance of vegetation rarely met with even in the tropics, and the country is just such as the tapir loves. Surrounding the mountains there is a flat region which is almost a desert, supporting little more than cactus and thorn bushes. The reason for this great difference is that the Sierra Nevada de Santa Morta Mountains were in other days an island in the great pre-Cambrian Ocean, and since that remote period there has been abundant time for a rich accumulation of soil. With the upheaval of the Andes Mountains in cretacious times a gradual sedimentation set in, and during the Testiary period this action extended to and around the Sierra Nevada de Santa Morta Mountains, and a hard, sterile, marly deposit, on which only a poor vegetation can be supported, was laid down around them. A traveler passing from one of these localities to the other cannot but notice the remarkable difference, and it is abundantly evident why game of all kinds collect on the fertile mountain sides. The place where they live is isolated, there is little to disturb them, they enjoy the greatest abundance of food and clear fresh water; and under these favorable conditions animals and birds have multiplied, till at times the place seems almost alive with game.

I was camping at the foot of these mountains engaged geological explorations, and being endowed with the appetite of an ordinary man, I managed to give some attention to the game, and never wanted for meat; yet I was not satisfied. Every night I heard one or two tapirs come tramping down the brook near the camp, but I could never get a shot at one.

During a long experience traveling through little known parts of tropical America, I have often tried for a shot at these wary animals, but always without success; and now that I was in a region where quantities of them were penned in, as it were, by miles of arid country on the east and the sea on the north, it was a shame ever to think of going away without giving at least one day to that most exciting sport of tapir hunting.

I had three men with me well accustomed to the woods, but they did not appear very enthusiastic when I proposed an attempt at tracking down a tapir.

"They are dangerous at this season," said my head man. "One of the boys can sit up to-night and kill a tapir as they go past; and I am responsible, Señor, that you return in safety."

To assume a sort of responsibility for a traveler's safety in order to avoid complying with inconvenient orders is one of the most provoking customs of the South American guides, and I never allow them to play that game on me, at least not now, and after giving my head man a few directions as to what I wanted, combined with a choice opinion as to his personal worth and virtue, he began active preparations to go after tapir the next day.

Our camp was in one of those rare places even in the tropics, where the surroundings were all that one could fancy for such places. We were on a rising ground just at the foot of the mountains, and around us there was a dark, damp woods with palms and a multitude of great trees all growing close together, while over the ground every available space was taken up by ferns, mosses and a bewilder-

ing variety of plants. There was not a mosquito near the camp; there were no fleas at all, and scarcely any of the little gnats so troublesome at most places in the tropics. I lay in my hammock that night listening to the wind among the trees and the strange cries of many animals, birds and insects, while the damp, cool air from the forests blew in my face, laden with that odor of the woodlands which is the same all the world over. This was the home of the tapir, and one could travel many miles in the tropics without meeting another such country

The next morning all the foliage was drenched in a heavy dew, so abundantly that the ground was wet and water was dripping from the trees.

"A fine day, Señor," said my head man, "but if you want tapir it must be a long chase. We had better—" but he never finished what he intended to say, because I picked up the first thing that came handy, and let it fly at his head. "Si, Señor," he said very politely, "we will be ready to start immediately." There were four men in the party, and as we might have to sleep in the woods a good supply of provisions was taken. As we started out, my head man explained that we would go along the base of the mountains till we struck a favorable sign at some of the numerous streams, showing where the animals had come down from the mountains to feed; we would then follow up the nearest stream, and would probably find the game we sought passing the heat of the day in some cool ravine well up among the mountains,

We had not gone far before we struck unmistakable signs of a recent feeding ground; plants and bushes were trampled down, and heavy tracks showed plainly that the animals had come and gone by way of a large stream between two mountain ridges.

The head man looked doubtfully at the place. "I don't like this stream," he said. "The animals are dangerous at this season of the year. Let us look for another."

But I felt quite sure that if "a bird in the hand was worth two in the bush" these good tapir signs in sight were worth any number promised by a doubtful head man, and I insisted in following up the tracks we had found.

"As the Señor wishes," said my head man. "But the animals will go on before us till they are cornered in a ravine. Then if we press them too close they will charge down on us, and we cannot get out of the way. Our best chance will be to return this evening and shoot them as they come out, that is if the señor can hit them." I have to confess that I had missed twenty-seven large turkeys one after the other the last week, still I thought I could hit a tapir if it stopped long enough for me to try; but evidently my men were not quite sure.

I decided that we would push on up the stream, and the work now began in earnest. We made our way cautiously, stopping at the numerous smaller brooks and spring runs that had cut deep into the hills on either side. We had to follow each one to its source because there were no means of telling which might have been chosen by a tapir as its resting place for that day.

It was hard work, but the excitement kept us steadily at it, and as we made our way up a side stream, and found the ravine it had formed growing narrower and narrower as we neared the source, where we would go on between solid walls eroded in the soft earth, expecting that any turn would bring us face to face with an ugly tapir driven up as far as it could go, standing ready to charge the intruders, was enough to keep anyone in a state of excitement and drive all thoughts of fatigue out of one's mind. We kept this up for about five hours, but there were no results as yet. We had to be very cautious, for we were deep among the mountains by this time where jaguars were abundant, and as this animal is particularly dangerous in these mountains, the men were well afraid of them.

The head man thought I had better take a few shots at some of the numerous flocks of wild turkeys that were constantly jumping up before us. But I wanted a tapir, and was determined to follow on till I got a shot at one.

Then the head man said: "I knew they had gone high among the mountains. We must hurry to reach the upper part of the stream, because as afternoon comes on they will begin to move about, and our chances will be spoiled."

For the next two hours we hurried on. A dozen tapirs might have been passed in the little ravines among the hills, but we could not tell. Our best chance lay in pushing along as far as we could go.

After a time the stream began to grow narrower, and ledges of rocks that were difficult to pass were encountered. The air was growing cooler, patches of grass could be seen here and there along the mountain sides, and the trees were beginning to be of a somewhat stunted appearance. The head man stopped, looked about him, and then said: "We have come too far. This is no country for tapirs."

But just then one of the younger men touched my arm and pointed up the stream. The men were all excitement, but I could not see anything, and would probably have walked right up to the animal without noticing it; but after a moment it moved a little, and then I saw its great form clearly outlined among the trees, a wall of dull-gray rocks forming a background which prevented my making it out at first.

To come in sight of the game after a hard day's work gives one a sense of satisfaction equal almost to the gratification of killing it, and for the time being the excitement is intense.

The tapir was evidently resting quietly, and with cautious steps we began working our way closer. Presently it moved uneasily, sniffed the air and then suddenly faced around toward us, evidently angry at the intrusion.

"It's a cross old bull," whispered the head man. "Take care." We went a little nearer, and the tapir lowered its head, sniffing at the ground. I was near enough for a shot, and taking careful aim at the animal's neck just forward of the shoulder I pulled the trigger. There was a crash, and the sound of the report went echoing up and down the stream, and with it came a trampling sound made by the tapir as it disappeared through the woodlands making its way up the sloping side of a mountain that afforded an easy path out of the ravine. Evidently the animal was not at all hurt, perhaps its unusually thick hide had saved it, but than the skin is not very thick on the neck. My head man said in a grieved voice, "What a pity the rifle manufacturers care so little about the arms they sell. Of course the one carried by the Señor is very defective."

I wish I had kicked that head man, but there was nothing to say, and nothing to do, except eat as many of our provisions as we could; and for this the men had so much capacity that nothing was wasted, in fact they ate all we had, and could have eaten more.

Our way back to camp was without adventure, we arrived just after sunset, and as I was well tired out I had something to eat and then went to bed, next morning I found the men busily engaged in preparing some fresh tapir steaks from an animal they had killed in the night as it had come out of the mountains to feed.

"Why hadn't they called me?" "The Señor was so tired," they said, "and perhaps he cared more to hunt the tapir than to kill them, but as for them they wanted the meat for their families"

Then they brought me a fresh piece of steak just toasted before the fire.

I wanted no tapir steak, and I told them that canned corned beef and old salt pork were a great deal better.

"Yes, of course the Señor prefers the things from his own country, but then the fresh meat would be a little change."

But after all, that tapir steak was pretty good; yet I still wish that I could eat some from an animal that I had killed myself.

FRANCIS C. NICHOLAS.

SHEEP AND SNOWSHOES.—X.

A Winter Hunt at the Summit of the Rockies.

SUNDAY, March 21, was a glorious day, bright and calm, and fully fit for a day of rest. Schultz and McChesney were tired enough to stay in the lodge. O-to-kò-mi went down to the lodge of John Monroe for a visit, and here I joined him later in the day, armed with a camera and in search of pictures. Madame Monroe asked me to eat with the rest of the family, and gave me a very good piece of trout. John Monroe entertained me with bear stories, telling me, among other tales of the chase, of the fight he and his wife and little boy had had with a grizzly in a berry patch not more than half a mile from where his lodge then stood. This bear was wounded at the first fire, but dropped in the brush and made a sneak to get close up to its enemy. The little boy saw it coming quietly through the thicket, and called out, pointing to it. Old John at this point grows dramatic as he tells the story. I cannot reproduce his polyglot, but he went on to tell how he put his wife and child behind him, himself standing out with rifle ready, waiting for the bear to show himself above the cover. "H'allways, s'pose I get in bad place, some danger there," said John; "h'allways I mek some leetly *prie*, the good God, dat he have *pitie* on *moi*." So now he made his "leetly *prie*," and calmly waited, knowing that not more than one shot would be allowed him. This shot, it seems, was delivered at very close range; but was fatal, the bear falling so close he could almost push it with his foot. "'Up, here!' h'I call to heem," said John, "but he no mek some move, no." At the telling of this story Madame Monroe, Philistine as she is in regard to her old husband's everyday character, smiled with evident pride at the recollection of the steady courage which had saved her and her boy.

More Bear Stories.

At another time, on this very flat where John Monroe had killed this bear and also the one which stampeded the saw mill camp in the night, his brother, Francis Monroe, one day some four years ago, was riding horseback through a berry patch, when he saw a bear standing up and feeding. Slipping down from his horse, Francis took a shot at this bear with his rifle, which was an old .44-40, much worn. When the bear was struck it fell down, squealing and bawling; but another bear rose up to see what was going on, and this one Francis shot down. Yet another rose, much closer to him, and this also he shot, it falling below the top of the brush out of sight. Then a fourth bear, close to him, showed up, coming on toward him, and this he shot more than once, but could not stop. This bear closed with him, and so began one of the fiercest bear fights of which I have ever personally heard. It seems that Francis had the bridle or lariat of his horse fast to his wrist, so that his horse could not get away, though it tried its best to do so. Francis made all effort to keep the horse between him and the bear, but did not forget to use his knife at every chance, succeeding in cutting the bear deeply in the neck. The horse repeatedly kicked the bear, and no doubt but for the horse the man would have been killed. As it was, the bear got to him, and bit him badly in the chest, and nearly cut off his hand, biting through two of the bones of the hand entirely (as I myself personally saw when I met Francis Monroe a few days later than this). The bear at last was repulsed by the horse, and Francis was able to mount and get away. He was long in recovering from his hurts, but to-day is a rugged-looking, though gray-haired, man. To avenge his injuries, John Monroe, his brother, took the trail, but got no bear. Schultz and Jackson came through there the next day, but at the time found none of the bears that had been shot, though they saw the whole story amply shown upon the face of the ground. Weeks later, Mrs. Monroe found near the place where their lodge now stands the skeleton of a bear, large and apparently old one, with very imperfect teeth. Francis thinks this was the one which attacked him, and that had its teeth been better it would have been worse for him.

John Monroe has killed so many grizzlies that he does not pretend to keep track of them. He is really a hunter, and his stories are truthful. Thus, over on Badger Creek he killed a very big bear which was so close that as it fell it knocked the gun out of his hands. His favorite way of getting his bear is to wait till it gets so close that he can't miss it, then to shoot it in the right place. He told me one thing which may be of possible service to those intending to go for a grizzly, and who may be so unfortunate as to have the grizzly go after them. He said that when a bear is charging a man it runs with its paws curving out and in, pigeon-toed, in a rolling kind of gait, and with its head swinging up and down in its stride. John said that the thing to do then, besides the "leetly *prie*," and the care that one shall have no "shakes in hees knee—dat's bad," is to keep cool, and to hold the aim directly upon the tip of the bear's nose, not at his head, and not at his chest. Thus, if the bear's head happens to be up at the time the shot is fired, the ball will strike him at a good place in the chest, and if his head is down, it will hit him either in the head, the chest, or the neck or back, and that on the fatal center line. He explained that if one sights at the bear's head he may overshoot and not strike the animal anywhere, though it is impossible to miss, no matter what position the bear is in, if that careful aim on the nose is kept in view.

I took such delight in hearing the old hunter's bear stories that I kept him busy for a long time, and got out some good ones. Yet another one he told me, showing that he was not to be outdone by his brother when it came to fighting more than one grizzly at a time.

"This happened *au Nord*," said the old man, by which I knew meant during his connection with the Hudson Bay Company many years ago. He went on to tell how, when out hunting, he saw a very big bear digging at an ant hill, its head and foreshoulders being covered up. John was armed only with an old Hudson Bay fuque, as in those days the modern rifle was unknown. Yet with this he did not hesitate to attack his meat, and creeping up close, he fired at the bear, or at least tried to fire. The piece hung fire with a long "fizz-z-z," and then at last with a loud "chow-w-w" let go its load. By this time the bear had moved, so that the ball struck it in the hind leg, breaking the leg. At once the bear made for him on three legs, and John only escaped by quickly dodging around a small tree. Here the bear played hide and seek with him for a long time, trying its best to get at him. John found that by holding the tree out away from him at arm's length he could escape the reach of the bear, and at last he drew his heavy Hudson's Bay dagger and began to cut at the bear, striking and then jumping back behind his tree. In this way he finally wounded the bear seriously, and at length fairly disemboweled it, so that it went away and lay down. Hardly had it done this before a second bear came into view to see what was going on, and this bear John shot and killed. Two more bears appeared in the same thicket before he was out of it, and the old fuque, hang-fire and all, proved effective enough to land these also, so that he got the four, all in a small distance of each other. John said that the crippled bear that was chasing him about the tree was persistent, and kept on coming after him, stopping and resting, and then charging again up to the tree, but that in all the time the bear would not look him in the eye. The animal was evidently afraid of its foe, as indeed it might well be, for in those days the hunter was a young and active man who had no fear of any animal that walked. John thinks that he has come as near being killed by a cow moose as anything, he having been charged both by cow and by bull moose at different times. He says a dog makes a moose very mad, and that if a cow moose has a calf, the sight of a dog makes her very dangerous. In his more active frontier days the old man must have seen a lot of life worth living. He says that his father, Hugh Monroe, a man famous on the old frontier, always told his boys never to kill a man until the last moment of necessity, but always to run away rather than to kill a man. John Monroe was, nevertheless, in his time forced at different times to kill four men. He was once surprised in the night and shot by Indians, but escaped after killing one of the party. At that time he was shot in the thigh, and carries to-day the big scar of this wound, as he pointed out to us.

Lore of the Wilderness.

All in all, I put in a very good day at John's lodge, telling and hearing stories and learning something of the way the native peoples lived in the earlier times. I discovered how to cure meat in the smoke of the lodge, and how to make what John called "Hinjun tea," of the dried peppermint—a drink which he said was very good, "s'pose you sore in breast, you tire ver' much hafter long hunt." The tea was very black, but not unpleasant to take. The Indians use it to some extent to-day instead of coffee or tea. I learned also how to set a steeltrap in the snow, which I suppose is something not all men know how to do. John said that one should take plenty of hair (this he called "hay," so that for a long time I could not understand what he meant, till he pulled out a bag of hair and showed me), such as is commonly left around an Indian camp after the curing of elk or deer hides, and that he should cover his trap with this and not with snow or twigs. He said that first one should make a bed of the hair, and place the trap in the bed. Then he should put bunches of the hair into the bent spring of the trap, so that it would not get so cold and brittle in the times of very cold weather. Then, after setting the trap, the whole should be covered with a layer of the hair spread out and have snow brushed over it. In this way the cushion of hair will keep the snow from packing so hard but that the tread of an animal will break it down and spring the trap. In this Northern country one must always figure upon the effect of very deep snow and very great cold. Thus the marten traps are put high up in the side of a tree trunk in a hole cut for them, and covered so that the snow cannot make them useless. Sometimes a marten trap is set out at the end of a long sapling which is felled across a stump or put into a crotch, so that the bait can only be reached by crossing the trap on the way out to the end of the felled tree. This way keeps the snow from lying too deep on the trap to prevent it from throwing when trod upon.

We told John Monroe where we had left the rest of the meat of my last two sheep, and he said that after awhile he would go up there and get it. "My h'woman, he strong," said the old man again, with great satisfaction; from which I inferred that he would do the finding, and she would do the carrying. As we seemed to get along pretty well together, I at length asked the old man if he could fix me up with a steel trap, so that I could catch my big cat up on the mountain, where Billy Jackson had lost his snare not long ago. He very kindly did fish out a big double-spring trap, which later he told me was one of old Hugh Monroe's beaver traps, and which he therefore prized very much. Renewing his instructions how to set this trap for the cat, I assured him that on the following day, no matter what the weather, O-to-kò-mi and I would go up the mountain to my first sheep, and I doubted not I should catch old Pah-kùk-kus himself, and so put an end to all the trouble we had been having in this valley of storm and stress.

Pah-kuk-kus Escapes.

Sunday night was very cold, and Monday morning was a bad one, with no pleasure at all in prospect for the hunter who faced the storm-swept peaks that surrounded us. Schultz again went out with McChesney, and O-to-kò-mi and I went up our mountain after our cat. We found the earlier snowshoe trail almost obliterated, the snow having swept all things white and level since our last journey; yet I noticed that Shep, our dog, when allowed to run on ahead, unerringly followed the old trail under the snow, though it was not in the least apparent to the eye. At least, it was not apparent to my eye. O-to-kò-mi said, with a touch of some superiority, that a white man could not follow a trail at all, but that an Indian could always see the trail under the snow.

When we got to our sheep carcass it did indeed seem that Pah-kûk-kus had been there. The whole country was torn up with cat tracks. We found where Billy's first snare had been broken off, and then set about hunting up his second snare. At last, having circled around some 80yds. or more, we found the heap of brush which he had piled over his bait, and noted the two cross logs between which he had calculated to break the neck of his lion when it sprung the snare. Then we found his spring pole, a stout little sapling thicker than one's wrist. We saw where he had hacked it on the side to weaken it so that he could pull it over to set his snare. But of this spring pole only a part remained! Of the loop there was no trace! The brush heap was torn as though by a cataclysm of nature.

O-ta-kò-mi ran about the place and excitedly pointed out to me the whole story. The cat, lion, wolverine, whatever it was—he said no lynx could have done it—had come to the bait, and, as in the other case, from the faulty construction of the trap, put in its paw instead of its head through the loop to pull out the bait. It had been caught, and then with a mighty surge and a struggle had snapped off the snare pole, and so gone off down the mountain, hook, bob and sinker. Since then the snow had come and blotted out the trail, which was two or three days old. Yet, since that time, some cat, of course not old Pah-kûk-kus himself, whom we had snared, had come back to the carcass and had been eating there the last night. We could see the freshly gnawed bones, the ribs of the sheep being cut neatly, as though with an axe, and the whole heavy piece of the meat being nearly pulled up from under its deep cover of snow and ice.

This was interesting, and O-to-kò-mi and I concluded that our trip had been worth making, even though our last snare was gone. And then we made a big mistake. We ought to have set the steel trap right at the bait, and then we would have caught our animal sure; but we sought to be yet more careful, and, therefore, pulled up the entire remnant of the carcass, and dragging it off some hundred yards or so, hung it up in a tree above reach of a cat or lion. Then we built a pen so that the bait could only be approached from one way, and at the bottom of this path we set our steel trap, carefully wrapped in some hair which I had brought along with the trap from John Monroe's lodge. We figured that the cat would come back, and that missing his feed, he would follow along, stop at the tree to sniff, and so be ours forever, like Ginevra and the old oaken chest we read about in the Fourth Reader. In this we were not altogether in line with actual subsequent history, but we didn't know it at the time.

On our way down the mountain to camp, O-to-kò-mi and I fell in with the side trail of McChesney and Schultz, who had been over on the opposite side of the Two Medicine Creek, hunting along the face of the big rock wall that rose above the black timber across the lake from us. They got into camp about twenty minutes ahead of us, and had only the same sad story to tell of another day of hard work and no sight of game. It was really too bad, the luck that McChesney had, after his long trip all the way out from New York. He hunted very faithfully and hard, but the game just did not come his way. I never saw the luck run against a man so long and hard on any hunt as it did against him on this one. He and Schultz had had no easy time this day, and had made a long circle, crossing the creek on our bridge where we had crossed when we made our upper camp. They had seen no game, and had met such storms of wind and snow that it would have been next to impossible to get a shot even had they been close to game. McChesney now began to lose heart and expectation of getting a shot, though he in no wise complained at what he saw was luck pure and simple, since the game was evidently in the country in abundance and only the bad weather prevented his getting his head.

The Relief Expedition.

We had at just about this time been reduced to low rations, our grub being nearly out, and no word having come from the relief expedition promised by Billy Jackson. It transpired, however, that during our absence the expedition had arrived and gone. On the trail between the lake and our lodge we found a great hole in the snow, and saw that here a horse had been down in the snow, and had been dug out by means of our shovel. The rider of the horse had evidently not learned that the snow was some 6 or 8ft. deep in our valley, away from the wind-swept lake. At the lodge door we found a small sack of flour, some sugar and other stuff. Upon the sack was a curious epistle, containing the first news we had received from civilization for two or three weeks. This letter was inscribed on a bit of pasteboard and required some study before we made it out, but we discovered its verbatim contents to be as follows: "Cook. yeast flour an shugar Bakein pouder i woud stope but thay is no feed for my horse joseph Kipas team will com tomore Fitchsimens wone the fite Jackson cant come." From this it is to be understood that besides the itemizing of the stores left for us, we were to know that Joe Kip's team would be up for us the next day, that Billy Jackson was not coming back, and lastly, that, as to a certain little event which had occurred in Nevada since we left the world behind us, Mr. Fitzsimmons had "wone the fite." The signature, Cook, as we took it, was the word at the head of the letter, meaning that Mr. Cook, the nearest rancher below us, had brought in the stuff for us.

So we had notice served on us that the sheep hunt was at an end, for when Boak came in with the team we would have to hurry out, as no way for feeding the horses was possible in that snow-covered valley. At this, of course, came the usual depression hunters feel at being forced to break camp, but on the whole we were not loath to go. I had killed three sheep and wanted no more, and McChesney saw that he might stay there another week and perhaps not get a shot. Moreover, he said he had taken so much prolonged and violent exercise that he had gone stale, and so did not enjoy the work as he had at first. He was worn out by the hard work of the climbing, as well he might be; for no form of hunting American game could ask more of a man than he had been doing. For instance, I presume it would be very much easier to walk down a moose in the flat country twice over, than to take the repeated hard climbs in the icy mountains that McChesney had been making for two weeks. Of course, the ordinary fall hunt in the mountains, with pack train and good weather and all that, is an entirely different thing, even in the same country. The mountains one sees in summer or fall are not the ones he meets in winter, and too much of them in winter might well take off the edge of one's pleasure.

Again Pak-kuk-kus Escapes.

On the morning of March 23 we were undecided in our plans, as we did not know for certain that Boak would be able to get in on time with the team. All the others expressed a willingness to stay in camp, but for myself, I was satisfied that I had a lion, or at least a wolverine, or maybe a cat up in my steel trap on the mountain, some five or six miles from camp. So I set out alone, taking the dog Shep along to run any trail which might be necessary. It was a coldish day, so I made good time up the valley, and till I struck the icy face of the mountain. Here the wind swept away the trail, and I told Shep to go on ahead and pick it out, which he did very nicely. At last I got up above the timber, and here I realized what a difference one's altitude means in mountain work. Below me, a big black cloud was sweeping over the valley, and soon it shut out entirely the view of the opposite mountain, blotting out the long sharp ridge of dark timber which I always used as my landmark when seeking camp. Then the storm swept across my mountain also, and by the time I had turned the corner which cut off from my sight the Two Medicine Lake, there was a howling, whistling gale blowing, and I could not see more than a few feet ahead of me. Following the edge of the tree line, however, and more especially following Shep, who knew more about the trail than I did, I came at last to the steel trap under the tree. To my intense mortification it was not touched, nor did any trail show that it had had a visitor near by. The snow had packed the trap full and hard, and in touching the drift to loosen the snow I was unlucky enough to spring the trap, and it took me nearly half an hour to set it again. I was nearly frozen, and the old and worn out trigger would not hold without a twig bent under it. Half a dozen times the jaws clicked close to my fingers while I was putting this twig in place, and I was not sorry when I got the machine back in its bed. Then I went back to the old snare hole where Billy had had his traps. To my further disgust, I found that my cat had been back again that very night, and had managed to dig out a few bones from the bottom of the pit, which we had overlooked. Of course, this held the animal at the old feeding place, and it had not taken up our drag to look for the main piece of meat. If we had set the trap at the snare hole I should have had my cat that morning sure. I tried to take up a trail with the dog, as we had tried each day before, but it was so bare and open at that point that the snow held no trail, and at last I had to give it up. But I picked up all the stray bones I could find, and concluded I would get Pah-kûk-kus yet if we didn't have to break camp right away. At that time I did not know that the team was in our neighborhood.

The Desolate Hearth.

It was well on in the afternoon when I got down out of the mountains and reached our camp. Here I was surprised and startled to see that there was no camp at all left! The lodge was gone, and so was every particle of the outfit. The fire was out, and the ashes lay cheerless and cold on the spot about which we had passed so many happy hours. I do not recall ever feeling much more of a twinge at any sudden incident, it did look so desolate and dismal by the contrast. This had been home for me—as much as any place in the world—now for some days, and to see it thus torn down and desolate made me feel mighty lonesome. It showed, too, what it would mean to be caught in that country without the proper means of taking care of one's self. Sometimes one thinks he can get along pretty well alone, but suddenly I got a touch of lonesomeness. I wanted to see the other fellows. So I hit the trail down the lake and before evening was at John Monroe's lodge, where I found Boak, the team and all our outfit. Schultz and McChesney had taken down the lodge and packed everything on the sledge and toboggan, starting down to John's place with their loads. The team met them and relieved them, and now half the stuff was at the top of the sharp ridge above the lake, which made the great difficulty in getting out of that valley at that season of the year. It was possible to move only a part of the total load at a time, but Boak said he could get out with one more little load up the hill. It was now too late to start on the trail for home, so we concluded to stay at John Monroe's lodge, all seven of us, which we did with great comfort, albeit with very little turning room. That was an awfully windy night, and the lodge cover flapped and groaned all night. Mrs. Monroe said that it was surely Pah-kûk-kus, and John said it was plain that we were followed by that evil spirit, as he had never known it before to storm so long and hard in that valley. He thought that if we went away it might quiet down a little! He was still more convinced that we were objects of marked suspicion when I told him my story of the cat trap. It was surely Pah-kûk-kus up there! And he much bemoaned the loss of the trap, which he was sure he would never see again, and which he valued so much as an heirloom of his father. As it was now sure that I could not go up to the trap again, I showed John as well as I could where to go and how to get there; but he groaned and mourned, and said he did not think it would be possible for anyone to find the trail after the hard wind that had been blowing. Then I gave O-to-kò-mi a $5 bill, and told him it was his if he would go up when the snow was gone and get John his trap again. I have never heard whether he did or not, and do not know what became of my cat. Yet methinks that his skeleton now whitens up there on my mountain, not far from where I left the old trap of Hugh Monroe, for the clog I arranged for him would stop an elephant from going very far through the woods. Nothing can have saved that cat, unless he was lucky enough to spring the trap and not get fast. That he came there to get at the hanging meat there is almost a certainty. I want that cat yet mighty bad, and I would give a pretty penny to have his hide after all the bother he made me. Of course, if it really was Pah-kûk-kus, and not a lion, or a wolverine, or a mammoth lynx, I cannot expect to catch him; but if it was any animal and not a demon, I sure have him out there in the hills somewhere to-day!

Closing Hours.

While we were at John's camp the old man took a fancy to my toboggan, so I left it with him. I took a fancy to one of his pack saddles, so I took it with me. Boak and I at this stage completed my education in the diamond hitch, for Boak is an old-time *cargador*, and packed in "Californy" in the good old days. John Monroe showed me how to pack a dog, telling me that in his life "*au Nord*" they often used dogs, not only to draw sledges, but to carry packs. He said a good-sized dog could pack 50lbs., some of them even 100lbs. The way to lash the load was around the flank of the dog, not about the ribs, as it could not stand that. The old man in pantomine showed us how they used to pack a dog train, the dogs apparently crushed into the snow with their packs, but staggering up and getting under their loads. "Then you see him wag he tail, like so," said John, wiggling his upright thumb in a way which showed the whole comical picture so plainly that all laughed. He explained to us that if the dog could not wiggle his tail, he could not carry the pack, but so long as his tail was going, it was all right. John said that a new dog when packed was much like a horse, rolling and bucking, and trying to free himself of the pack, but he soon got used to it, and would go on the trail steadily all day, carrying his pack. John said he was going to rig himself up a dog train now with his new toboggan, and go after his rations the way they used to travel *au Nord*. And he cracked an imaginary whip, and gave the shout of the old days of the fur trail.

Thus, on March 24, we turned our backs on the valley of the Two Medicine, which had been a spot so full of interest to us, and brought to a close this section of our Rocky Mountain hunt. The day broke calm and fair, and I was able to get some very pleasant pictures of the lodge of John Monroe, showing the old man and his wife in front of their winter home, snowshoes and all. I got a good view from the ridge looking back over our lake, and this picture shows old Rising Wolf clearly in the far background, across the ridges of black timber. At last we all bid the old hunter and his "h'woman" good-bye, not without regret, for they had been kindly and full of interest. Taking off his hat, he devoutly hoped that "the good God mek some blessings on you," as he said good-bye. Madame gave to McChesney and myself each a fine tobacco pouch, embroidered with beadwork of her own manufacture, and when asked what she would like from the settlements, said she would like a black calico dress and some wood to make bows for a pair of snowshoes—as the wood of that country was too soft. Her latter request we found the more difficult to fill.

The "Black Wind."

There was suspicious mildness in the air that day which did not deceive the experienced members of the party, who knew that a Chinook was brewing, the "black wind" of the Indians. We could see all the mountains covered with low, black clouds, and soon as we were out on the open country above the timbered valley, the full force of a steady and powerful wind struck us overwhelmingly. It was not cold, but in violence it was just short of a hurricane. Fortunately, it blew in directly in our course, so we were helped and not hindered by it. We made the run, or those on foot did, to Cook's ranch, some eight miles, in about an hour and a half. All one had to do was to raise his feet and the wind would carry him forward, his stride covering twice its ordinary distance. We were now all hardened and tough with the steady exercise of the hunt, and felt the keen exhilaration of the air and exercise. We paused only briefly at Cook's ranch, and here transferred our outfit to a spring wagon which Boak had brought up that far. As we got down into the prairie country we found the whole earth streaming with water. We had come out of winter into spring.

At the agency we made but a short stop with Maj. Steell, and reached Blackfoot station with a very tired team after dark that night, going on out still further, to where the cheery lights of Joe Kipp's ranch house beckoned us.

We now had the first opportunity for a number of days to see ourselves as others saw us. When I looked in a glass I nearly doubted my eyes. I was dirtier than I had thought it possible for any human being to be and live. A silk handkerchief which I had sewed about my neck when I first went into camp was absolutely black with the grime of the lodge smoke. McChesney had a lovely beard, which he hated to sacrifice, but when we both shaved we found that our faces had shrunk about one-half. In other words, we were in training. The work of the climbing had put us in perfect condition, so that had we been obliged to go into the matter with the gentleman, we felt sure the despatches would not have said: "Fichsimens wone the fite."

This brought to a close our sheep hunt, but within a few days we went back into the mountains once more, this time after goats, and of this hunt I shall also tell, as it shows yet better the real meaning of a winter hunt in the Rockies.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Good Words About Some Good Things.

MEMPHIS, Tenn., Aug. 5.—By the way, do you know that I am your oldest consecutive reader; at least no one could be my elder, but might be a twin, since I have read every FOREST AND STREAM ever printed, *ab initio*, and always send it to another son of a gun.

GUIDO.

MONROE COUNTY, Pa., Aug 9.—*Editor Forest and Stream:* I received to-day the *Game Laws in Brief*. Many thanks. It was just what I wanted. Many ask about the new law, and now I have it to explain from. I have worked hard for that law, and was the first to have it introduced in the Legislature eight years ago.

It was through reading FOREST AND STREAM I reformed. I live in the midst of the worst market-hunters in the State. I have won them over gradually. I have often brought them in and read to them from FOREST AND STREAM. I think if they would read FOREST AND STREAM there would be more game and less pot-hunting. H. T. F.

PORTLAND, Me., Aug. 8.—The FOREST AND STREAM was never better than at the present time, and is certainly the best rod and gun journal published. W. N. T.

A CORRESPONDENT writing from Glenwood, N. Y., says: "I take your address from a copy of the FOREST AND STREAM of 1890—or what is left of it after having been thumbed by readers for seven years here in the country store."

WALTHAM, Mass., Aug. 9.—I have just read Eugene McCarthy's most interesting and delightful description of "When, Where and How to Catch the Leaping Ouananiche," and to say that I am very much enthused by the perusal is to draw it very mild. I now feel that next season will rarely see me on these waters. But my present object in writing is to procure two copies of this unique book. I therefore inclose $1, the balance pass to my credit for one copy of FOREST AND STREAM. L. G.

Natural History.

GROUSE OF THE PRAIRIE.

Wymore, Neb., Aug. 16.—*Editor Forest and Stream:* I notice in your Answers to Correspondents in Forest and Stream of the 14th the question raised by the friend of H. P., of Grand Rapids, as to the color of the meat of the prairie chicken, and your answer to his inquiry for light. You are right as far as you go, but you have not covered the ground, and it may be that the friend of H P. is not so far wrong after all. You say the contention of the friend of H. P. would apply to the ruffed grouse.

Now, a ruffed grouse is what in Illinois would be called a pheasant, and in New England a partridge, and its meat is light. But no one would mistake a pheasant or a partridge for a prairie chicken. But there is a grouse that is not a pheasant, or a partridge, or a prairie chicken, and its meat is light, and they are very frequently killed and eaten as prairie chicken, and in fact the average hunter would not notice the difference. A prairie chicken has very dark meat, and in the older ones it is much darker than the younger ones.

A prairie chicken has no feathers on its legs below the knees. But this grouse has light meat, and feathers to the end of its toes, but in these two points we have the only distinguishing features.

Their habits are exactly the same as the prairie chicken, and they are very plentiful in the western and northern parts of Nebraska, and were once very plentiful here. But now we seldom see them here, but still have the prairie chicken, while in the western and northern parts of this State we have the grouse, and seldom see a prairie chicken.

The ruffed grouse, viz., pheasant or partridge, inhabit the woods or brush, but these grouse live on the prairie. I think there are many more grouse in the State now than there are prairie chickens, and if the friend of H. P. had hunted in Nebraska I would know how he had very naturally been led to believe that the meat of the prairie chicken was light. He had been killing grouse; and I would also like to know if these grouse inhabit Michigan.

Prairie chicken and grouse are very plentiful in Nebraska this year, but they will be nearly all killed off before the open season commences on Sept. 1.

In another letter I will call attention to some of the peculiar features of our new game law.

Prairie chickens have been killed here right along since the middle of July, when the largest of the new crop were scarcely half-grown. A. D. McCandless.

[In our Answers to Correspondents' column it is impracticable to cover very much ground, and we are obliged there to make our replies as terse as is consistent with intelligibility.

The sharptail grouse is, of course, about as well known as the pinnated grouse, but it occupies a more northerly and more westerly range; and, although in many localities to a great extent a prairie bird, we must take serious exception to many of the statements made by our correspondent. He says "a prairie chicken has no feathers on the legs below the knees." He probably means below the heels, for almost all birds are feathered from the knee to the heel, though in most of them the feet are naked. Exceptions are the grouse, some hawks, owls, etc. However, the pinnated grouse is feathered on the tarsus or shank, though not so heavily as the sharptail, which in its northern form is almost as heavily feathered as a ptarmigan.

The flesh of the sharptail grouse when cooked is brown. It is not white like that of the ruffed grouse or the breast of the chicken; but what we said of the pinnated grouse is true also of the sharptail grouse—that the flesh of young birds is much paler than that of old ones.

The habits of pinnated and sharptail grouse we have not found by any means "exactly the same." The sharptail grouse is much more a bird of the cover than the pinnated, and when started on the prairie is very likely to plunge into the brush. It is often found among brush or timber on high mountains. It is also often seen in the early morning, especially on cold days, roosting high in the trees, something that we have not seen the pinnated grouse do. The sharptail grouse and the pinnated grouse have often been confused by people who knew both as "prairie chickens." As a matter of fact they are very distinct in many ways. The sharptail grouse is sometimes found in Michigan and Wisconsin, though probably they are not plenty in those States.

We regret to learn that so little regard is paid to the game law in Nebraska, and should be glad to hear further from our correspondent on this point.]

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

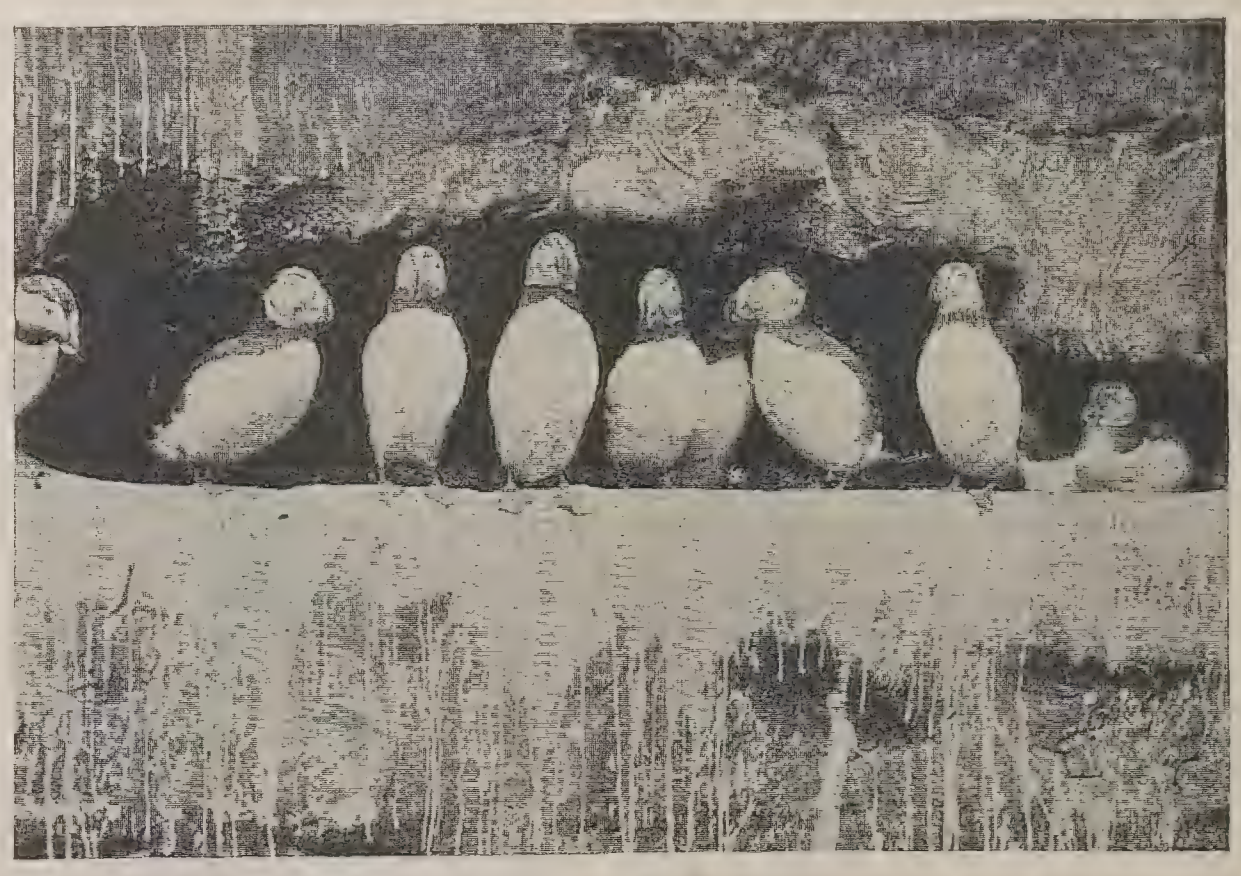
LIFE OF NORWAY.

One of the most interesting features of the Exposition now being held in Stockholm is the Biological Museum. This is a really charming panorama of all the birds and beasts of Scandinavia arranged with real trees, rocks, moss, etc., and with admirably painted scenery. It is the only one of the kind that has ever been made, and has been done under the supervision of Bruno Liljefos, the Swedish animal painter, and Gustaf Kolthoff, zoölogist of Upsala University. Both men are enthusiastic sportsmen as well as naturalists and artists, and the animals here have little resemblance to the "stuffed specimens" seen in many museums.

A winding staircase in the center of the building leads to a circular platform with cushioned seats, and here through walls of glass we can see the wood creatures at home, nesting, singing, feeding and hunting.

We begin with the luxuriant forests of the southern provinces of Sweden, and by moving from left to right we change our latitude and travel northward to the bird cliffs and gray stretches of the Arctic Sea. In the first section are the large stag, the fallow deer, the roebuck, the house stork, so much loved in Denmark and southern Sweden, the strange hoopoe bird, nightingale, black-breasted thrush, rock-dove, cuckoos and magpies. Many other species of small animals and birds are found here in the south as well as in the great central districts. A family of otters is playing on the outskirts of a wood, a large horned-grebe is brooding on her floating nest, while a lesser grebe swims near by with her little flock of young. Under the trees a hooded crow is breaking an egg he has just stolen from a neighboring nest, a large woodpecker is drumming on a tree trunk, and in the thickets and on the branches above the smaller birds are busy with domestic affairs. By climbing to a second platform above the first we are on a level with the high life of the woods. Little nuthatches are hunting for insects on the bark; here a bat peers out of his hole, there a couple of chickadees peer at one curiously as they hang head downward from a twig; a flock of waxwings are holding a dignified congress; on a lower branch a splendid capercailzie parades before his mate. Then as we move a little to the left the woods gradually assume a more northern character.

A BIT OF SEA BEACH.



This is the great central district which covers the greater part of Sweden, and here are almost all the game birds and animals; the giant moose or "*elg*," a family of brown bears, a pair of gray timber wolves, prowling among the trees; a pair of lynxes crouching on a rocky ledge; a litter of little foxes playing before their lair. A water orezel rests lightly on a stone above a mountain pool, a great gray owl and its fluffy owlets are taking their *siesta* in a row; a beaver is hard at work building a dam, and the southern birds have given place to those of the colder forests. The blackcock takes the place of the gorgeous pheasant; pine finches and redpolls those of the nightingale and hoopoe. Here is the large northern hare instead of the southern brown rabbit. The trees grow scantier and more stunted. There is a vista of blue distance, a cold northern horizon of pointed firs seen across peaty moors and dark tarns. This is the land of the reindeer and its enemy, the wolverine or glutton. The white Arctic fox slinks from rock to rock in search of the yellow and brown lemmings that feed among the moss and lichens.

We travel north at a surprising speed. A few steps bring us far within the Arctic Circle. The last stunted spruces die away and the barren ridges change to bold sea cliffs. Between them is a sheltered inlet with white breakers dashing outside, and here among the sea-marsh hillocks many birds are nesting—eider ducks, king ducks, velvet scoters, redbreasted geese, curlew, plover, and a number of smaller species. The crags are like a great tenement house, with seagulls, skuas and cormorants occupying the lower ledges, rows of guillemots and auks above, and in the upper stories a great colony of puffins duck in and out of their holes or gather on the narrow ridges. The painting of this part of the panorama is especially fine. The rocks and birds nearest the spectator are real, and it is impossible to detect the point where they give place to the artificial parts, where trailing nests float among the tops of the crags and snowy flights of seafowl swing downward to the water.

Then comes a wide stretch of open sea, with low, scudding clouds and tossing waves rolling shoreward. Eider ducks float on the water just beyond the surf line, and seals play around the rocks and lift their sleek black heads above the breakers. A score of little birds, sandpipers, rails and other species, follow the receding waves or search for food among the stranded seaweed. This ends the panorama and brings us around to the starting point.

This exhibition, so attractive as well as instructive, is what we should have in Central Park in connection with the Natural History Museum. Of course it would be more difficult to bring together a representative collection of our fauna because of the greater extent of our country, but the Northern and Eastern States could easily be included, or instead of traveling from south to north the latitude of New York could be followed to the Pacific Coast with its peculiar fauna and flora. We have no dearth of naturalists fitted to undertake the work, and Mr. Ernest E. Thompson, with his great ability as artist and naturalist, could do the part performed so admirably by the Swedish artist, Herr Liljefors.

E. T.

GROUP OF PUFFINS ON THE BIRD CLIFF.

NOTES FROM MEXICO.

Somehow or other my paper of March 6 was *traspapelado*, and I have just now got my hands on it. In regard to Mr. Thompson's query about the hunting of the coyote, I will state that it is commonly thought here in Mexico that they organize into packs. I was told by a friend not long ago that he saw from a slight elevation quite a number of them driving the plains for jack-rabbits, in a sort of half moon. He believed they were sending the hares past a stand, where others of their band were posted, but had no means of verifying this.

The same article mentioned above asks for evidence of the fertility of the hybrid cross of dog and wolf. I suppose it will be no news to state that the cross of the Mexican dog and coyote is undoubtedly fertile. On pretty nearly any country ranch animals of all grades may be seen.

Reading an exceedingly well written and interesting article on deer shooting in Canada (Parry Sound) I was forced to inquire again, How is it that other people's deer shot behind the shoulder "drop in their tracks"? Mine won't, even with a .45 70 or .45 90 rifle. My experience is that such a shot is always followed by a mad death race of anywhere from 25 to 200yds.

I got a point the other day from a Texas friend in regard to a matter on which I have been puzzling. By sad experience I had learned that quail, even the blue Mexican quail, failed to breed in a dry season. A year or two ago one of your Arizona correspondents recorded the same observation and included rabbits, etc. Now, it might be explained that the food supply had something to do with the matter, and this would apply well enough to the cottontails and other mammals. But the quail feeds on seeds of grasses and the berries and seeds of various forms of cactus, all of which are about as abundant in a dry season as in any other. This I have seen confirmed by the condition of the few quail to be found; they are always fat.

Now, my friend tells me that when he was serving his apprenticeship as a deer hunter not far from the line of the arid belt of western Texas, his teacher, an old woodsman, said to him once: "If it doesn't rain pretty soon we'll not have many birds; the eggs won't hatch." He then called his attention to the fact that brooding quail, and even tur-

country than he does himself, yet I am afraid that the method practiced, as he mentions, was not the only one in vogue among the warm-weather shooters in Minnesota and other Western States. It was not unusual for sportsmen or market shooters to handle their birds as Grumbler states when it was inconvenient or impossible to obtain ice. We nearly always treated our birds in this way on our shooting trips out in Iowa, fifteen years or more ago, though we had no occasion to do any shipping, of course. It was in August that most of the market shooting was done, and in August a young prairie chicken will spoil in a single day if the weather be very warm. The method which I saw most practiced in the northwestern counties of Iowa, then largely unsettled, was as follows: A party of market shooters would hire a team and light wagon and put into it several casks containing ice. They drove across country with this rig, their dogs ranging out, and they themselves riding. When birds were found and killed they were thrown into these casks of ice or ice water. Of course the market shooter was not shooting for fun, but for money, and he could not afford to lose his birds after he had killed them. Sometimes he could not get into the railroad every night. This method of shooting obtained over upper Iowa and lower Minnesota during the summer months. I do not mean to say that it was the only method practiced, or that it was the method practiced in the country where Grumbler made his observations. All I ask our friend to believe is that in my time I savvied prairie chickens a few myself.

Not Wisely, but too Soon.

A few cases have come to hand in which gentlemen have shot or eaten prairie chickens not wisely, but too soon, and who have, therefore, been obliged to settle with the law. At Brookings, S. D., on Aug. 18, two brewers of Dubuque, Ia., named Hub and Inhuff, were fined for shooting and shipping illegal prairie chickens. They were arrested at Elkton, and caught in the act of billing the chickens out at the railroad office. They were fined $65 and costs. May equal good fortune attend a plenty of other non-resident shooters who break the laws of the States where they go to shoot.

Out at St. Paul they have an active and energetic game dealer by the name of R. E Cobb, who handles a good deal of the legal or illegal game of Mr. Fullerton's State. A few days ago Deputy Warden William Tuttle, acting under the recommendation of a hotel keeper, went to Mr. Cobb and said that he needed some prairie chickens for a banquet. He got thirty-five illegal prairie chickens. Mr. Cobb will get $10 and costs for each bird.

At Litchfield, Minn., on Aug. 15, Warden Fullerton caught a "sooner" with seven illegal prairie chickens in his buggy. It is said that the country about Litchfield has been full of chicken shooters for two weeks, and the only wonder is that more have not been apprehended.

Warden Harry Loveday, of Chicago, has been hustling his best this summer. He has done a lot of correspondence, and has appointed over seventy deputy wardens. In his work he has been left quite alone, no State wardens having yet been appointed for Peoria and Quincy. It seems not to be generally known—even by Gov. Tanner himself—that there are, under the law, three State game wardens, and not one. It would seem to be time that Quincy and Peoria were heard from.

So far as I know, Warden Loveday has had but one illegal game case and one conviction. On yesterday William H. Jung, a restaurant keeper of 106 East Randolph street, this city, was fined $10 and costs for offering for sale venison, this item being listed in his bill of fare. The case was tried before Justice Prindiville, and the man Jung offered a unique defense. He declared the meat actually sold was not venison, but bear meat, and both he and his cook swore that this was the case. Jung furthermore produced as a witness the man who sold him the meat. The latter, an employee of the house of F. M. Smith, game dealer, also swore the meat was not venison, but bear meat. This man knew his business well. Anyone who works for the big game dealers like Smith is far more useful if he has a handy conscience and a correct memory, the accuracy of the latter member being gauged by his ability to remember having sold nothing but legal game. Justice Prindiville listened calmly to these doughty, or doubty swearers, smiled, and soaked Mr. Jung $10 and costs

Methods of Game Dealers.

There is no doubt that if illegal game is being handled on South Water street this summer it is done in a well-covered manner, and with no flaunting disregard of the law. At times the dealers in illegal game have been somewhat put to it to cover up their illicit property. One firm has been in the habit of keeping its contraband stuff in a loft to which access was had by means of a ladder. If any suspicious parties appeared the ladder was removed, so that suspicion was not apt to be directed to the real hiding place of the game. One other firm when pressed close by a former warden, was obliged to take a lot of game out on the roof of the store to escape detection. It is said that at the time when the Chicago Club had its property searched for illegal game a number of prairie chickens were secreted under a bed!

The "Hot Time" at Grand Rapids.

The Itasca Gun Club, of Grand Rapids, Minn., will hold its annual trap-shooting tournament Oct 29 and 30, and it has been at some pains in spreading the announcement that there will be a "hot time" at Grand Rapids on these dates. It is likely that this tournament is to be a sort of boom-promoter for the town. A large attendance of shooters is anticipated, and it is announced that there will be a grand moose hunt, to which all visiting sportsmen will be invited. The tournament will be held in the deer-shooting season, but the moose season does not open until Nov. 5. I fancy that a trap tournament with the side show of a "grand moose hunt" is something not often set down in the annals of sport, though I fear very much that the best of sportsmen will not care to add to the "hot time" at Grand Rapids at the particular time set forth in the prospectus. Moose hunting is something for the individual and not for the crowd. If the sportsmen of Grand Rapids have really some moose country near them, as it is said to have, they can do much better than to exploit it by means of a "hot time," whose main feature is a general moose hunt with a brass band and a hallelujah chorus.

Distinguished Guests.

Oftentimes there appear distinguished guests whose names are such as they themselves will not willingly let die. In the human heart there springs perpetually the belief of each individual that he is different from all the rest of the world, and a little bit better. The men who take a rifle along when they go mascallonge fishing think it is no harm for them to shoot a deer, although very wrong for any one else. The club man who licks his chops over a little previous chicken grouse deprecates any such practice in other persons, but cannot see how the law can be construed to apply to himself.

Just now two singular instances came to mind of this distinguished personage business. A Pennsylvania Congressman wants to go elk hunting in Wyoming this month, and has telegraphed Governor Richards of Wyoming for permission to kill elk. Such permission has been respectfully declined. A similar request was made of Governor Richards by the U. S Geological Survey party at work this summer in the Teton forest reserves. These men wanted permission to kill game for food, but their request was denied. Yet another instance occurs this month in Colorado, and this not without certain comic features. A party of Kentucky men engaged in hunting in Colorado discovered that they were breaking the law, and wrote to State Game Commissioner Swan, begging him to give them a special dispensation. As one unanswerable argument, they stated that if he would do this, they would send him a barrel of the best Kentucky whisky obtainable in the entire Blue Grass Country! After this it was indeed tough to be told that no elk or deer could be killed except in the course of scientific research. The Kentucky hunters will return to their State firmly convinced that Colorado at least has an absolutely incorruptible warden!

Wild Pigeons in Wisconsin.

Messrs. Metz & Schloerb, of Oshkosh, Wis., write me, under date of Aug. 14, a very interesting letter regarding the appearance of wild pigeons in upper Wisconsin. The information is brief but authentic, the letter reading:

"Seven flocks of wild pigeons were seen here this morning about 6 A. M., Aug. 14. The flocks ranged in size from about ten to fifty. They were flying low along the shores of Lake Winnebago, and are the first seen here in eighteen years.

"There is no mistake about this, and I think you will soon hear from other sources about the presence of wild pigeons amongst us again."

More About Pheasants.

Mr. J. F. Blome, of Tomah, Wis., writes me on Aug. 18 about his success with the pheasants which he is breeding in an amateur way. He says he has two hens and a cock, which he obtained this spring. One of the hens has laid eighty-nine eggs this summer, and the other seventy-two. He wants to know if anybody has beaten this record. Next spring Mr. Blome will breed these birds more extensively, and will market a few if his good luck continues. I should say that his birds are the English ring-necked pheasant, and he says they are very gamy fowl. E. Hough.

1206 Boyce Building, Chicago.

Maine Game Regions.

For the benefit of sportsmen who are seeking the most desirable localities in the Maine forests the coming fall for hunting big game, I desire to call their attention to the region of the Moose River. The C. P. Railway passes directly through the heart of one of the most desirable portions of the great Maine wilderness for moose, deer and caribou. Jackman station on this railway is the most central one to take to reach the best moose hunting that, I am satisfied, can be found in Maine.

From this point it is fifteen miles on the old Canada turnpike, a most excellent road for wagoning, to the boundary line between Maine and Canada.

From there it is fifteen miles in a dense wilderness to Portage and Penobscot lakes. A good saddle road has been cut through to these lakes, where are eight large and comfortable hunting camps, good guides, excellent cooks, and good, substantial camp fare. There is a carry of only one mile between the two lakes.

Deer are very abundant now almost anywhere in the Maine woods, but in the Moose River region they are so plenty that the settlers are complaining bitterly of their trespasses upon their fields and growing crops.

But while deer are to be found in many places, it is not every section of northern Maine that affords good moose hunting.

The Portage Lake country is an exceptionally good one for moose without question. Some caribou were killed there last year, and several of the guides there told me recently that they had seen more this year than last.

The open season for deer is the same as formerly, Oct. 1, but moose cannot be taken this year until Oct. 15.

Parties desiring information regarding this region for moose hunting had better correspond with C. A. Coleman, Jackman, Me. J. F. Sprague.

Monson, Me., Aug. 16.

Green Mountain Deer.

The city papers have been very arduous of late in whooping up the deer of Vermont, in many cases letting their enthusiasm get the better of their veracity. There are deer in this State, that is very true, but if the city sportsman comes up to Vermont expecting to see them on every hillside he will be sadly disappointed. The southern and eastern parts of the State support a few specimens, and these poor, lonesome representatives of the deer tribe did so much damage to the crops (?) that the last Legislature, after much brain exhaustion (?), concluded that an open season would be the thing, and so Vermont offers golden (?) opportunities this fall for the deer stalker. It is rumored that the farmers where the deer are said to abound have got a cross between the Jersey cow and the razorback hog on the market, so that no sportsman need return without venison. But I cannot vouch for the truth of the story. Stranger things than that have happened, however.

I read with much interest the account in your paper of the occurrence of the mocking bird in this State, and I think I know of a later occurrence. Some time since, while talking with the curator of the State museum, he informed me that he knew of an occurrence of the above-mentioned bird as nesting in the southern part of this State only a year or two. A friend from Massachusetts informs me that he has seen several of that species in his State during the last five years, and on one occasion found a nest with four eggs. It may be possible that this Southern songster is extending his range of distribution to take in the New England States.

Mount Tom's article, in a recent number of your paper, has the true ring to it. It is a lamentable fact that sportsmen often slaughter (that's the only word) game ruthlessly for the gratification of their desire to kill. A dozen partridges or ducks ought to satisfy the greediest sportsman, but many times you will hear him boast of his hundreds, and then regret that some were still flying in the woods and marshes. No true sportsman ever pursues this course, only human beings with pot-hunter instincts. We have had our share in Vermont, and at times the "pismire" age seemed close at hand, but now, thanks to game legislation, the state of things is improving. Kenewah.

Milton, Vt., Aug. 16.

Illinois Prairie Chicken Season.

A curious complication has arisen concerning the enforcement of the game law which forbids the killing of prairie chickens in certain months in each year, and Game Warden H. W. Loveday, who makes his headquarters in this city, says he hears of many people who openly disregard the law and of some officials who refuse to prosecute under it. In 1889 the Legislature amended the game laws, and the House changed the date of the open season so that the killing of these birds was only lawful between Sept. 15 and Nov. 1. The Senate amended the House act by changing 15 to 1 in a specified line, and the House concurred; but the bill as passed contained the dates fixed by the House, and thus the bill stands. Those who now defy the law assert it was changed by the clerk of the House and is invalid. Mr. Loveday and ex-Game Warden Bortree assert that the law is valid. It is the intention of Mr. Loveday to strictly enforce the law as it stands.—*Chicago Herald.*

Country vs. Town.

Vinton, Ia.—There are a few who would like to have it understood that the farmers commit all the crimes against the game laws, and that the passing of the game is due to the criminal disposition of them alone. There is now and then a city sportsman who, upon having trouble with a farmer, seems to denounce all farmers as a class. J. K. B.

Ansonia, Pa.—I have lived in the country all my life, and have handled a gun ever since I was large enough to hold one; and where I am known I am considered a fair wingshot. I think human nature is about the same whether a man is dressed in corduroy and $15 hunting boots or in overalls and $2 cowhides. I have hunted with a good many so-called sportsmen, and I never hunted with one yet who was satisfied to stop when he had a reasonable amount of game. He always wanted to make a score. A. Van G.

Off for the Bitter Root.

Nevada, Ia., Aug. 20.—A small party of Nevada's best citizens, Dr. C. E. Hoag, Dr. F. S. Smith, J. M. Wells and Hon. J. F. Reed, will leave about Aug. 30 for the big game country. Their destination is the Bitter Root Mountains. These gentlemen are true sportsmen, and all but one are experienced hunters. They are fitted out with Winchester repeating rifles, .30 40, smokeless; Kenwood sleeping bags and cameras. They have engaged one of the best guides in the West, M. P. Dunham, and will also be joined in Montana by a brother of Mr. Reed. Dr. Hoag has partially promised me that the trip shall be written up for Forest and Stream, and if it is we may expect some entertaining reading.

John C. Briggs.

Information Wanted About Duck Shooting.

Parkersburg, W. Va., July 31.—*Editor Forest and Stream:* Will you kindly make inquiry through your valuable paper for information regarding good points for duck shooting—for some information regarding the Sunken Lands below Cairo? Our party (members of the Mountain State Gun Club) are trying to make selection of location for our fall shooting trip, and some favor inland or swamp and others seashore shooting, so we are desirous of getting information on the subject, and know of no better way to reach sportsmen than through Forest and Stream. Anything you may do in the matter will be fully appreciated

C. L. S.

Mr. Adams in Town.

Mr. B. H. Adams, of the Moosehead Ranche, Wyoming, has been in town for some little time. He came on with the consignment of elk, buffalo and deer shipped by that ranche to Mr. W. C. Whitney for his preserve near Lenox. That these animals all reached their destination in good condition was due very largely to the unremitting watchfulness and care exercised by Mr. Adams.

key, would make an almost entire failure of bringing off young in a perfectly dry season. They lay as many eggs as at other times, but the eggs do not hatch. A certain degree of humidity seems necessary to the life and development of the embryo. And nobody knows what dry air really means till he has felt that of Mexico and the West. I should like to know if any of your readers have made observations which corroborate the above. AZTEC.

MEXICO.

A Fatal Collision in the Air.

TONASKET, Okanogan county, Wash.—In a recent issue, Point criticises the statement of Shadow in regard to the grouse going 40yds. after it was dead. Well, it is quite a way, but grouse fly very fast, as I once had an occasion of observing. One fall I took my gun and dog, and went out one evening to try and kill some grouse, not so much for sport as for the meat. I went into some stubble, and soon flushed quite a large flock that flew out toward the prairie, and intending to mark them down, I kept my eyes on them. Soon I saw another flock coming from the south. It so happened that they crossed a given point at the same time. Two of them collided. I plainly heard the collision, and saw one of the birds fall; it seemed to me that it came straight down. The other went a short distance. I went out to where they fell, and soon the dog found them. The one that fell straight down was badly bruised, its wing, ribs and leg were broken, and the liver and heart was all bruised. The one that had struck was badly bruised about the breast, and its vitals were all bloodshot; both were dead. I have often seen dead birds under the telegraph wire, but these were the only ones I ever saw hit each other with any force.

LEW WILMOT.

Naturally Trapped Water Birds.

CALAIS Me., Aug. 18.—*Editor Forest and Stream:* In answer to your question about birds being caught by mussels, I would say this has many times been noticed here. A case of a young loon was recorded by Prof. Ganong in the *Auk* not long ago, the bird being caught by the lower bill. Tongue and bill were cut off when released from the mussel, and the bird went away quite lively.

The shooters have reported to me several water birds trapped in that way, but birds are much more frequently caught by the toes. Mr. Sage had the picture of one—a sora—in the *Auk*, and I have sent them to Prof. Baird, at the Smithsonian years ago. Our flats a few miles down the river are largely covered with small salt water mussels, and before the shore birds were destroyed they were often caught there by the bill and toes. The knot (*Tringa canatus*) or robin snipe, at times were so plenty the beach would be red; then in a week or two, the young or gray birds would come along, as the boys say, by the million, mixed with plovers and curlews. Now all are gone. I have not seen a knot or curlew for years, and hardly a plover. Now like the wild pigeons all are gone.

GEO. A. BOARDMAN.

Game Bag and Gun.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co on receipt of price, 25 cents. All dealers sell it

"TWO IN ONE."

Editor Forest and Stream:

In reading over a late copy of your paper, I was touched in a tender spot by an article entitled "Two in One," by Reformer. It was the realism of the article that touched the responsive chord and not any sympathy I have for that style of sportsmanship.

What a bundle of inconsistency and iniquity Reformer must be! And yet I feel strangely drawn toward him and would almost be willing to loan him (out of sight and unseen) the new hammerless Parker I am going to get as soon as I get able. Nor is it any kindred spirit that does the drawing act, either, for my tactics have been just opposite to those of Reformer.

I have argued against and scolded at the game laws as administered, but, in the matter of shooting have always respected their provisions. Nor do I want to claim any credit for doing it, either, as it was more from cowardice than from any real respect.

Nor have I any kick coming because I did not get my share of game, for I have easily taken fifteen or twenty times my *pro rata* share. Nor have I any apology to offer for doing so, for I have played the game according to rule as laid down by law.

Reformer's article tells the whole story of the almost universal contempt for all game laws. The man with a hotel, who wants the game left to draw a crowd, and the man with a magazine or paper which he wants to circulate among sportsmen, and who hopes to curry favor by shouting loud and long at imaginary game law violators while he, inadvertently perhaps, writes himself down as a law-breaker on the next page; the man with a book for sale, on "How to Catch It"; the would-be warden; the guide, etc., have all been studied and read through and through by the public, with the result that all game legislation is coming to be treated as, and to a great extent, a farce. Talk about professional hunting and trap-shooting ruining sport! perhaps they have done something in that line; but the professional game protector has wrought a thousandfold in evil. But it is never too late to mend. Weed out the agencies that have led to such universal disrespect of the game laws. The would-bes have been leading and instructing the public, lo, these many years, and we are further in the wilderness than ever. It is time the unprofessional public took a hand in the educational business.

I have in mind an old gentleman (I suppose he is old from the fact that I understand he founded the FOREST AND STREAM) by the name of Hallock, who would make a good leader on such a tandem. His life study of the habits and haunts of game, and his smooth, easy, unirritating way of stating facts would make him a great force for harmonious and effective work. E. P. JACQUES.

GENESEO, Ill.

OHIO'S PHEASANTRY.

VAN WERT, O., Aug. 4.—A few years ago the Ohio Fish and Game Commission, which is composed at present of the following gentlemen: George Falloon, president; J. C. Burnett, Sabina; E. H. Shorb, Van Wert; Albert Brewer, Tiffin; J. W. Owens, Newark; L. H. Reutinger, secretary and chief warden, Athens, decided that it would be time and money well spent if they should devote their attention, and a portion of the small appropriation allowed the board by the legislature in breeding and rearing the splendid and prolific game bird, the English, ringneck and Mongolian pheasants, to which should be given the free range of our entire State.

A pheasantry was first established near Celina, Mercer county, but for various reasons the commission was compelled to remove the same to a more favorable location, and selection was made of lands one mile northwest of this city. Seventeen acres, consisting mostly of woodland, were leased by the commission for the purpose erecting a pheasantry. The same is now well established and is doing well under the immediate supervision of Commissioner Eugene H. Shorb, who has made a study of pheasant breeding and who was the first to successfully raise the birds in this State, ten years ago.

Public interest in this fine game bird is general throughout the State, and can only be comprehended by seeing the enormous number of letters received by the commission asking for information as to where the birds are procured and how they are raised.

Through the courtesy of commissioner Shorb, a representative of the State Journal had the pleasure of visiting the pheasantry the other day. Only a very limited number of visitors are allowed to enter the grounds, and the entrance gate is kept constantly locked, as the birds are very timid and easily frightened by strange faces. The pheasantry is enclosed by a hog barb wire fence, sixteen strands, 10ft. high, to keep out dogs and other disturbers.

The average number of eggs laid by a pheasant during the season is forty-five. From April to the middle of June 4,356 eggs were set. Out of this number 3,130 pheasants hatched, and to-day there are upward of 3,000 strong, healthy birds on the farm. From March up to the present date upward of 6,100 eggs have been laid by the pheasants on the farm. Last spring about 2,000 eggs were sent by Commissioner Shorb to citizens in various counties of the State for hatching purposes, and it is reported they have all done well.

At present there is a force of five persons, four men and a woman, on the farm.

The propagating of Mongolian, English and ringneck pheasants is no easy task, as the following particulars of how it is done will show: It requires hard, tedious and diligent work to raise the birds in such large numbers. The setting is done by hens procured from farmers. The hen is placed in a box 20in square, made from barn siding, to which a runway is attached 60in.×20in. and 12in. high. The runway, which is covered with wire netting, is detachable from the box at the end wherein the hen is set and where the hen and young birds are protected from storm and cold. Both the runway and the box are placed on the ground and the nest is constructed by taking a square piece of sod about the size of the box and in the center cut out a round space about the size of a hen's nest.

A little dry leaves or chaff is then placed in the bottom of the nest; the hen is disinfected well with insect powder before placing her upon the nest. She is then placed upon the nest with common eggs for two days before placing the pheasant eggs under her; this is done to test her staying qualities. The eggs are then placed under the hen at nighttime, after removing the hen's eggs. Food and water is placed in the runway so the hen can subsist during incubation. The eggs are examined every day, and for this purpose the lid, or roof, of the box is lifted while the hen is out of the runway, so that none become broken or soiled. In case the eggs beeome soiled from broken eggs or otherwise, they are cleansed with a rag wet in tepid water and wiping them. However, the eggs must not, under any circumstances, be placed in water.

It requires from twenty-two to twenty-four days for the eggs to hatch. After they have been under the hen twenty days they are sprinkled with lukewarm water twice a day. This is necessary in order to enable the young birds to leave the shell. The runway and box fit close to the ground to prevent the young birds from leaving, and unless this precaution were taken they would leave the hen as soon as they were out of the shell.

The hen and young birds are kept closely in the box for twenty-four hours after they are hatched, and not allowed to have either food or drink. At the end of twenty-four hours both the hen and young birds are let out into the runway; the hen is given all the corn she will eat and this keeps her from eating the food of her young. The food for the young birds for the first week is custard made of milk and eggs, and which is given fresh at least five times a day. Great care is taken not to feed too much at a time, so as to keep the coop clean. If this were not done the place would become foul and tend to breed disease and the birds would die from diarrhœa.

The food for the young birds for the second week consists of custard and milk curd. The custard is given three times a day and milk curd, which is mixed in equal parts of ground hemp and canary seed, is given twice a day. Some young lettuce and young onion tops chopped fine are added to both the custard and the milk curd. The young birds are also given plenty of green food by placing lettuce or young clover in the coops. Thus their food is frequently changed.

At the end of a week the young birds are fed hard-boiled eggs and boiled potatoes chopped fine and mixed together. Ants and ant eggs, grasshoppers and flies are also added to the bill of fare for the young birds when they can be procured. At the end of twenty-four days the young birds are fed chopped fresh beef and crissel's sprats or prairie meat. Great care is taken in preparing the food not to have it form a paste. At the age of one month a little canary feed and wheat are given. When the young birds are three months old they are fed chopped oats and barley mixed with cornmeal.

During the first week the birds get no water, as they get quite enough from the custard. The young birds drink from a vessel not more than ½in. deep; this is done so they cannot get wet. They are kept in the runway about ten days, so they will learn the call of the hen. After this they are allowed to run at large, but the hen is confined until the young birds are weaned, which is usually done when they are six weeks old. After this length of time they have learned to roost in the box,

The water is changed three times a day, and the vessels are kept clean all the time. The feeding, which is one of the most important duties on the pheasantry, is done by experts. At present about ten gallons of milk and thirty-three dozen hen's eggs are cooked daily into a custard and fed to the little pheasants. Feeding is done at regular intervals five times a day. When old and strong enough, they are fed grain and turned out on the farm to scratch for themselves.

The matured male bird weighs about 4lbs. and the hens 1lb. less. The general make-up is one of beauty. There are but few birds liberated so far this year. A dozen were turned loose in Wyandot county last week.

Last year hundreds of the birds were liberated in different parts of the State, where the natural conditions are favorable, and where the Commission had the assurance of organized protection on the part of the public. The Legislature has enacted a law forbidding the killing of pheasants until the year 1900, and the Commission will see that this law is strictly enforced in every county in the State.

It certainly appears that should the commissioners meet with the same degree of success in the next three years that they have this year, and with a strict enforcement of the game laws, our State will abound with the birds in 1900 It will prove a great benefit to our farmers, and will more than recompense them for what little grain they may take from their fields, by destroying bugs and insects that are now proving very destructive to crops.

At a meeting recently held in Columbus, the Ohio Fish and Game Commission decided to begin the distribution of pheasants the latter part of August. About 2,500 birds will be liberated throughout the State. It was stated at the meeting that the 200 pairs liberated last year had increased to 2,000. The commission offers a reward of $25 to any person who will furnish information that will convict anyone of molesting or killing pheasants in this State before Nov. 1, 1900.—*Ohio State Journal.*

CHICAGO AND THE WEST.

Early Birds.

CHICAGO, Ill., Aug. 21.—Three weeks ago I was advised by a gentleman in business on South Water street that prairie chickens could be obtained. I could not secure from him any further statement. He declined to give the names of parties having such illegal game in possession. The steward of a certain Chicago restaurant last week approached a gentleman of my acquaintance and offered to serve him young prairie chicken if he desired.

Sportsmen of Ottawa, Ill., have been troubled with early shooting, and are this month taking urgent steps to break it up.

At McPherson, Kan., the farmers of several townships have organized to prevent illegal and destructive shooting.

At Zanesville, Wis., illegal shooting of prairie chickens has been going on for weeks, so that it is feared few will be left at the opening date, Sept. 1.

At Polo, Ill., there has been a reaction against the old-time illegal shooting, and there is a strong movement for the enforcement of the law on prairie chickens. The local paper suggests a close season on prairie chickens in this State for five years.

At North Dixon, Ill., illegal shooting has been going on some time on prairie chickens. This is one of the worst corners in the State for this sort of law-breaking.

DeKalb, Ill., is one of those towns which have taken a position that the Illinois game law has been amended to read Sept. 1. Warden Loveday has visited DeKalb and given warning that all shooters who go out after prairie chickens before Sept. 15 will be prosecuted. It may be worth while to remind the DeKalb men that any prosecution thus brought will be certain to stick, for the men who claim Sept. 1 as the chicken date of Illinois have absolutely no evidence upon which to rest their case in court. The original bill from which the copy was made by the engrossing clerk was destroyed, and there is no means of showing what was or what was not the reading of the "line 6," in which the change of date was to have been made. These facts were developed by Mr. M. R. Bortree, who to-day pointed out the matter to me. The date of Sept. 15 is the one which will stand and which will stick in the courts, and those who shoot before Sept 16 may learn this in a more expensive manner than by the simple reading of the facts.

Mr. Valentine Hicks, of Ashton, Ill., has been appointed deputy game warden for Lee county. Mr. Hicks is an enthusiast on game protection, and his connection with the Rising Sun Game Park Association was some years ago mentioned in FOREST AND STREAM.

At Mitchell, S. D., the South Dakota Fish and Game Protective Association is doing good work. It offers a reward for each conviction of violation of the game laws. The farmers are taking interest and are determined that illegal shooting shall not be tolerated next year as it was this.

The season in South Dakota opened yesterday, and to-day there will be thousands of guns afield. Some dozens of hunters left Grand Forks, S. D., on Thursday, to get an early start Friday morning.

At Fulda, Minn., attempts are making by the local sportsmen for the enforcement of the chicken law. The local paper urges that the opening date be respected. This is a sample of a movement that seems to be going on all over the West this year. I have never noticed in the country press so general a position in favor of supporting the prairie chicken law, nor do I believe that there has ever been before so general and determined opposition to the methods of the men who go out to shoot the chickens ahead of the law.

Where to Go for Chickens.

This week I have a number of letters from gentlemen wishing to be told where they may find good chicken shooting. This is a question difficult to answer. It is reported in a general way, but in such manner as to indicate accuracy, that chickens will be more abundant in Minnesota and North Dakota this year than at any time for some years. I think on the whole I should recommend the upper part of North Dakota; for instance, Pembina and points further west, along the Soo railroad.

How Chickens were Marketed.

I observe that in a late issue of FOREST AND STREAM my unknown friend, Grumbler, charges me with ignorance of the methods of the market shooters who shot prairie chickens in Minnesota in the early days. He says that these shooters did not use ice-barrels, but drew their birds and stuffed them with hay. Of course, I should not like to be understood as saying that I know more about Grumbler's

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

SOME FISHING WHIMSEYS.

SIASCONSET, Nantucket Island, Mass.—It is here that fish do abound. At this season they are of the blue persuasion and all are birthright members. They hold protracted meetings in front of the village. They gambol on the "rips." I can't find it in my heart to disturb them in their innocent pleasure of carrying destruction into the seried ranks of the mossbunkers and other small fry. The mossbunkers don't enjoy the experience. They are not built that way.

The gifts of Providence are dispensed differently. Some men have the genius for catching fish; others the talent for eating them. Let others catch. The bluefish can't say it is I who ruthlessly break up their home circles. All I do is to eat them when caught by other men who have less tender sympathies. I neither fish nor cut bait. To this I attribute a fair reputation for truth and veracity in circles where I am not too well known. There is an occult relation between going a-fishing and lying about it afterward. Writers on ethics have not given the subject the consideration it deserves. I can't account for it except on the supposition that the writers are fishermen and do not wish to write in self-condemnation. Every liar is not a fisherman. The few fishermen who do tell the truth prove the general rule to be the other way. I used to believe that fishermen did experience pleasure in the sport. It was a generous illusion. It has been dispelled by close observation. I now know that the only inducement for men to go a-fishing is for the pleasuse of lying about it afterward. This statement applies to amateurs. Men who gain their subsistence as toilers on the waters do it as a business. It is pelf, not pleasure, they seek.

The average amateur fisherman says he loves the sport. He travels off ten miles to whip a trout stream. He sits on a bank and holds a rod and line with one hand and fights mosquitoes and black flies with the other until nightfall. He anchors himself on a rock or a bridge with a drop line; at intervals he mournfully hauls in and spits on his bait and throws it out again. He sits in a small boat in waters where striped bass or sheephead sport in sweet communion and eat their neighbors. In solemn silence he awaits the coming of an unsuspecting fish which he hopes will be tempted by the bait he has thrown to allure his hankering maw. He does all these things, even in a drenching rain or a pinching cold. He does it, too, with a foreknowledge that his friends will wonder when they next see him whether he is recovering from the chickenpox or has been applying a blanket blister plaster to his face for a toothache, involving the entire force of his teeth on the retired list. He may come home without a scale of his own raising That "don't makes no difference." He will speak in rapturous praises of the delights felt in the silent communion with nature. He will descant on the poetic emotions inspired by gazing upon the landscape or listening to the cadences of the rippling waters. He will tell of the healthful effects on mind and body that come from rest to the brain, and breathing in the air free from the noisome exhalations of urban surroundings. But the climax comes when he tells of the wild ecstasy he feels when the fish strikes the hook and the struggles that ensue when drawing him from his native element. How mortals do deceive themselves!

Quiet and sentiment don't pay for the loneliness, the annoyance and the fatigues inseparable from going a-fishing. Else why do fishermen never raid the waters without a pocket filled with highly concentrated fluid consolation? A man who enjoys the experience, *per se*, doesn't need to reinforce the pleasure by removing the cork from the business end of a bottle. It is when his spirits droop that he invokes other spirits from the vasty shoals of that pocket companion. They bring him solace and give him courage. They prepare him for feats of romantic narrative. If he catches no fish he buys them at the market, and exhibits the stock as the result of his skill. If he brings in a pitiful string of light weights, he smuggles it into the house. Then he goes outside. He tells a story, in which he triples the number and quadruples the weight of the catch. That is bad enough. But no fisherman's story is believed without confirmatory proofs. In nine cases out of ten he drags wife, daughter, son, cook and chambermaid into the abyss of mendacity to sustain his story. The chief of the Department of Ethics in the Census Bureau writes me that he was astounded himself at the disclosure by the statistics of the number of wives and mothers whose home life had been beautiful and characters without reproach, who began downward careers in a reluctant affirmation of their husbands' exploits as a fisherman. In each case, the initial step taken, her conscience became seared and her course was down, down, until the point of abject depravity was reached. "Then," the chief writes me, "without a blush she would pass hours and hours in building crazy quilts and writing spring poetry." As the chief is not a fisherman, I believe what he says. If by chance a fisherman hauls in a fish of fair proportion he will regale his companions for a half hour in describing the efforts the captive made to escape and the dexterous skill he had to use to land him. Then he will tell about another fish twice as big and four times as gamy that got away just as he got him close to the gunwale or the shore.

A story is told of a fisherman who, for fifteen years, sat on an abutment of London Bridge day after day, rain or shine, holding his rod and line. He was never seen to raise a fish. One day a man asked him if he had caught anything that day. He answered no, but that three years before he had had a splendid nibble. This was told to illustrate the patience supposed to be the characteristic virtue of the ideal fisherman. I don't believe it. No man would sit day in and day out so many years to experience the perpetual joy of catching no fish. He could drop a line into his cistern, go off and read the "Pandects of Justinian" or "Baxter's Call to the Unconverted," or some other equally exciting work, and find just as many fish waiting when he should return home and pull in the line. If, for argument, I admit there was such a man, I know what his answer would have been. He would have told the marvelous number he had caught the previous day or week, followed by a bill of particulars of the number and weight of the fish he had landed. If further proof of the absurdity of the story were needed, its author fails to chronicle that the man was not seen to take a drink during the whole fifteen years. That is conclusive.

I think I have shown that fishing and telling incredible stories about are intimately connected. I am convinced, too, that the paucity of the catch and the stories told about it are always in inverse ratio one to the other. The smaller the catch the bigger the story, until zero is reached. Then lying, *ipso facto*, touches the boiling point. I didn't cipher this out until I came to Siasconset. Here and elsewhere on the island a man can nearly always catch enough to satisfy moderate wishes and sometimes the wildest ambition. I have seen a fisherman pull into his dory, a few hundred feet from the beach, from thirty to sixty fine bluefish in a single afternoon. When cod "strike on" in the spring and fall he can go out in a dory and sometimes bring in from fifty to one hundred off a single tide. From Sesachacha Pond a boy or girl will often average a perch a minute until tired, to say nothing of an occasional eel that will seek the favor of being caught to vary the entertainment. A man has scarce ever a chance to lie in telling fish stories here. His enthusiasm for the sport is chilled. His spirits are depressed. Inverting the bottle will not dispel the gloom He leaves for other waters where there is some margin left for extravagant story telling. He never thinks of 'Sconset except in the privacy of self communion.

There is one apparent exception to the broad statement I have made. It is apparent only. Those who go sharking wrestle with a game they are not familiar with either in theory or in practice. They neither know the sharking grounds nor how to catch the fish when the ground is reached. They rely upon the practical man who furnishes boat and tackle and bait. He it is who baits the fisherman's hook; throws out the line; tells him when a shark has struck; when and how to haul in; does nearly all the work; persuasively hammers the shark on his nose to overcome his scruples against getting into the boat; pulls him on board, and finally lands him on the beach. Matters are lively for a time. The fisherman may perhaps do one-tenth of the work; but for the contributary aid he does render he feels that he is a hero. Then comes the temptation to lie. When the time comes he will tell his friends that he did it. That is to be expected. Perhaps he did, but it was on the principle of *qui facit per alium facit per se*. On the question of weight, however, he must take advice. There is no scale on the beach where the carcass is to be buried. The owner of the boat comes to his rescue. He has an eye to business. He knows the weakness of his patron and wants further employment. If he shall say that a consumptive shark that might lift the beam at 200lbs. weighs 800, the fisherman is more than satisfied. On that authority he will tell his friends that he caught and landed a shark that weighed nearly a half a ton. As the statement is not above the average of a fisherman's stories it will probably not be found recorded against him on the day of judgment. EDWARD F. UNDERHILL.

THE POETRY OF BAIT FISHING.

THE day is breaking. The darkness fades away like a heavy veil. Light comes again to earth, and discloses the beauty of her sister, Nature.

After hastily eating a small lunch, buckling on the basket, snatching the rod and cramming the baking-powder can (filled with bait) into my pocket, I hurriedly unlock the door and step out into the cold, crisp, bracing air.

A short walk brings me to the little railway station, and while loitering around the platform and being asked the usual number of times, "Are you going fishing?" I am joined by my companion John, and we are off.

Reclining on one of the old, rickety, velvet-covered seats, we settle down to enjoy the scenery. As the train goes winding along the river bank, we see the broad meadows, peaceful cattle, and the farmer going his daily rounds. Further on we run through small patches of woods; then longer stretches, and we at length stop at a beautiful, clear stream winding away back into the woods as far as the eye can see. We jump off, but are not going to fish here even if it does look tempting.

We trudge along the rough road through the woods into a large clearing, climb a short hill, and suddenly there breaks upon our vision a new and inviting scene. The woods which environ us ring with the many sounds of nature; the birds are chirping to their mates; insects are humming, and from afar come the faint chime of the cow bells as the cattle are driven into the pasture. Down in the valley we see the stream winding gently through the meadows, and now and then gleaming in the soft sunshine.

We go down, and leaving our rods outside, stop at a farm house, where we are speedily made welcome; and then from out our pockets come sundry curious packages, which make the children crowd eagerly around. First we make Granny happy with a package and a new pipe, then Granther with a similar acceptable gift; and lastly, after undoing many wrappers, we draw forth the candy and sweetmeats for the children.

Bless their hearts! they look so happy that we feel more than repaid for the trifling outlay. Then intrusting the remainder to their mother, who deals it out more carefully, distributing the largest pieces to the best behaved, we sit down for a little chat with Grandmother. Presently George comes in, gives us a hearty shake of the hand, and wishes us "good luck."

He tells us where he lost a good one the day before and hopes we'll catch him, although himself secretly yearning for the glory.

With the promise to return to dinner we depart and soon reach the stream down by the old bridge, and hastily rig up and then drop a line with its enticing bait under the bridge; then from the depths I feel what reminds me of a long pull, a strong pull and a pull altogether, and finally, splashing and struggling, I land upon the gravel a bright fellow which would weigh about ½lb.

Now we separate; John goes up into the woods and I wander down among the daisies, where I soon come to an old mill which is fast falling to decay and in some places is completely overgrown with moss. Stepping carefully, I pick a way cautiously among the slippery timbers, and peeping over a half-rotted beam, I put on a fresh worm and drop it under the old mossy water-wheel. A sharp pull brings a responsive strike and I have hooked one. He tries to run under the sunken timbers on the other side of the hole, but I hold him back, then he dashes up under the water-wheel. Suddenly I hear a surge, the snell snaps, and I have lost him. With the reaction I lose my balance and down I go, the rod slipping from my grasp and falling into the water. I rise as gracefully as circumstances will permit and as by a certain impulse, grasp my pole firmly at the middle joint and, leaping like a chamois from crag to crag, finally deposit myself in a heap upon a nice, soft, yielding bed of the stickiest mud it was ever my good fortune to touch, meanwhile having left the butt of the rod where it had caught between two sunken timbers and reeled off about 40ft. of line which was wound about my legs in the most artistic manner possible. Strange to relate, only about half my fish went toward restocking this beautiful hole. Finally, ascertaining that nothing was broken, I scraped off about half of the mud, extricated myself from the fish-line, recovered my rod and proceeded. The mud, however, became so troublesome that I had to stop and wash part of it off, the other part, after the sun had dried it, I peeled off in lovely layers about 1in. thick.

I went on, now and then catching one and losing one until the horn from the farmhouse announced that dinner was ready. Then, with a light heart and a well-filled basket, I reached the house. John had preceded me; he also had met with good fortune, although his fish were a trifle smaller. FREDERICK W. FASSETT.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

Some very good fishing has been enjoyed this month in and about Lake St. John, and as usual at this season the sport is steadily improving. Among those who have within the last few weeks enjoyed excellent outings after trout and ouananiche, may be mentioned Mr. J. H. Wilkenson, of New York, who some two weeks ago made a splendid catch of ouananiche averaging 4lbs. in the Grande Décharge. Not only were the fish large, but they were extremely numerous. Mr. H. G. Fellows, of Brooklyn, N. Y., has also fished the ouananiche pools of the Décharge with great success. Rev. Dr. Dumbell, rector of St. Peter's Church, Sherbrooke, had great sport up the Ouiatchouaniche about the beginning of the month, and Mr. J. G. Sutphen, of New York, has also had excellent fishing in the same stream. Mr. L. Letour secured a splendid string of ouananiche in the Décharge, and Mr. R. E. Robinson has been camping for about three weeks on an island below Lake St. John, where he was highly favored by the fickle deity who presides over the destinies of anglers. Messrs. D. A. Murray and R. W. Stevenson, of New York, made the Peribonca trip with very great success, securing magnificent takes of ouananiche and pike. Dr. J. C. Essig, Dr. Norman Essig and Mr. George Essig, of Philadelphia, essayed the trout fishing in the Riviere Croche, and met with the greatest success. Their good fortune will doubtless induce very many others to try this river, which, being about forty miles from the hotel at Roberval, has not, so far, been very much patronized. It falls into the St. Maurice. Dr. Lee, of Philadelphia, has left Roberval upon a long fishing and hunting trip, intending to cross the whole northern part of the continent to Moose Factory on James's Bay. The Messrs. McCormick, of Florida, have also left Lake St. John upon their second northern trip of the season. Ouananiche are now reported running up the Metabetchouan River, and with the approach of September there is likely to be a rush of anglers for the fall fishing in the island pools so graphically described by Dr. Van Dyke in "Little Rivers," and by Lieut.-Col. Andrew C. Haggard, D.S.O., in his charming introduction to "The Ouananiche and Its Canadian Environment."

The days of the summer insect pests in these northern woods being now about numbered for the season, the members of the various fish and game clubs owning preserves along the line of the Quebec & Lake St. John Railway are returning in large numbers to the scene of their last spring triumphs. Besides their fishing rods, many of them are also bringing rifles with them, for much of this country is already teeming with caribou. Mr. Graham H. Harris, of Chicago, who is now on the Tourille tract, has seen several of them this month. He is now fishing for the large trout of Lake George on this preserve, near the headwaters of both the Ste. Anne and the Metabetchouan rivers, the first of which flows into the St. Lawrence, and the second into Lake St. John. Mr. Harris has just been joined by his friends, Carter Harrison, Mayor of Chicago, and the latter's brother-in-law, Mr. Onsley.

Caribou have frequently also been seen of late upon the Triton tract, which is about to be fished by a large number of prominent Syracuse anglers, and also by Messrs. Rathbone, of Albany, and Cheney, of Glens Falls. Among other very successful anglers upon this tract were Sir Charles Rivers Wilson, President of the Grand Trunk Railway, and Lady Wilson, of England, and Mr. Hays, general manager of the G. T. R. System. Mr. Hays was fortunate enough to obtain a view of a magnificent caribou.

Two or three members of the Springfield Club have recently left here for their club limits at Lake Amabalish, and next week will witness the arrival there of a number of others. The Nonantum and Metabetchouan Club members are already largely represented at their Canadian headquarters. Nearly a dozen of the latter, principally from Bridgeport, Meriden and other Connecticut points, are at Kiskisink, where they are enjoying splendid sport, 3 and 4lb. trout being fairly plentiful.

Speaking of club houses, I must not forget to tell you that up at the main lodge of the Tourilli the other day I saw something that made my mouth water, and that I suspect but few club houses hereabouts can boast of, namely, a complete set of the bound volumes of FOREST AND STREAM from the earliest number. They were presented to the club by its founder and president, J. U. Gregory, Esq., one of the keenest of Canadian sportsmen.

E. T. D. CHAMBERS.

QUEBEC, Aug. 20.

AN Egyptian invocation to Isis reads: "Oh, Isis, mistress of sorceries, deliver me, set me free, from all bad, evil, *red* things." This doesn't mean the bright red cover of the *Game Laws in Brief*, for while the *Brief* is in bright and plain English too, even an Egyptian would be interested in the handsome pictures.

CHICAGO FLY CASTING TOURNAMENT.

Chicago, Ill., Aug. 19.—Mr. Mansfield's record-breaking cast of 111¼ft., added to his recent startling performance at San Francisco, points unequivocally to the fact that there has come to the front a man who is unmistakably superior not only to the men he met in Chicago, but to all the other men who have in previous times met and recorded their ability with the rod and fly. Mr. Mansfield not only broke the record, but he broke it with a margin which has an actual championship tang to it, a sort of head-and shoulders significance which leaves his winning without a regret or a reservation in the mind of anybody. No accidents or fouls or untimely puffs of air, no shortcoming of any kind, will be urged by any unsuccessful one as reason for his not casting 111¼ft. Had all the anglers of the country been together, or a larger portion of them, it is highly improbable that anyone would have crowded Mr. Mansfield for his place. He may feel repaid for his long trip across the continent to measure rods with the cracks of the middle West; and the gentlemen who met him may be equally glad to have had him come, see and conquer them so handsomely. His work was really the feature of the tournament.

The other work, while good, has been surpassed, and is likely to be again surpassed by the men who did it. Mr. Davidson has previously beaten his record for this tournament with the bait rod, and although his friends in the other classes have put down records of which they need not be ashamed, they may hope to do as much again. Mr. Peet came strongly to the front, and Mr. Babcock, with his win in the interesting event of the roll-casting contest; proved himself a finished handler of the fly rod. It is likely that these two feel very well satisfied with their fortune. Among those who were near them in the totals were several who possibly might be willing to go into the matter a little further before concluding that they had done all that lies in them to do. Mr. Davidson kept up his local reputation for evenness of performance.

Among outsiders present were Messrs. Fred Divine, of Utica, N. Y.; W. F. Eames, of St. Louis, and G. A. Stevens, of Moline, Ill. These did not compete, so that really the contest was San Francisco against Chicago, single representative of the city by the Western sea taking two firsts, for long distance fly and for dry fly-casting in accuracy and delicacy, to say nothing of second in roll-casting, which fell behind the first by only one-third of 1 per cent. The Chicago men met a good one in Mr. Mansfield certainly, and they are proud to know him.

The arrangements at the park lagoon were well made, and the spot was in every way worthy of the assembly of even a larger number of contestants. The officers did all possible for the comfort of those in attendance, and the parting of the friendly competitors was made with the generally expressed pleasure that all had gone well in the second open tournament of the Chicago Fly-Casting Club. A large and interested crowd of spectators lined the banks of the lagoon, and at times made trouble by their curiosity and eagerness. The preparations for the events, the buoys, courts, tents, decorations, etc., left nothing to be asked, and the judging was acceptable to all, even to those who did not win. The following table will show the winners and records for each event of the tournament in accurate and accessible form:

	Roll Casting Fly.	Long Distance Bait, feet.	Long Distance Fly, feet.	Distance and Accuracy, per cent.	Accuracy and Delicacy, per cent.	Bait Casting Accuracy, per cent.
W. H. Babcock	90⅛	54′ 8⅘″	81	73	81⅛	81⅖
I. H. Bellows	89⅓	70′ 2″	87	76⅓	78⅔	94⅗
C. H. Chadwick	..	76′ 1⅕″	..	..	..	95⅘
L. F. Crosby	..	78′ 3⅕″	..	59⅔	..	91
F. B. Davidson	..	98′ 4⅕″	69	..	84⅝	..
B. W. Goodsell	87⅔	61′ 4⅖″	83	79⅔	83¾	73⅘
F. Gardner	..	.....	..	..	..	94
E. D. Letterman	..	93′ 4″	..	..	..	93⅖
C. A. Lippincott	89⅔	84′ 9⅘″	66	79⅔	82⅛	90
C. G. Ludlow	62⅔	64′ 6″	78	62⅓	71⅙	94⅖
G. A. Murrell	82⅓	79′ 5⅘″	77	5⅔	78⅝	95⅗
H. A. Newkirk	79	71′ 1⅖″	..	91⅓	63⅙	85⅗
F. N. Peet	76	75′	92	87	84⅝	95⅘

J. J. Parker	..	.....	..	..	..	83⅗

HOLDERS OF MEDALS.

Long Distance Bait, F. B. Davidson.
Roll Casting Fly, W. N. Babcock.
Long Distance Fly, W. A. Mansfield.
Distance and Accuracy, H. A. Newkirk.
Accuracy and Delicacy, W. A. Mansfield.
Bait Casting Accuracy, F. N. Peet.
Special prize for highest general average in all was won by F. N Peet with 58^{13}_{360} per cent.

The weather during the first day of the tournament was marked with steady wind, which became puffier later during the day. On Friday night heavy rain fell, but Saturday was pleasant. The long-distance fly-casting event, which turned out in such surprising manner, was the last event of the tournament, and was begun late in the evening, it being 6:45 when Mr. Mansfield went to the platform. The conditions were then good for casting, and with the last man of the last contest the record went down. Mr. Mansfield received hearty applause as his success became known, and acknowledged it with becoming modesty. In his work, the San Francisco crack is beautifully easy, keeping a perfect control of the vital back and understanding his tools as though they were part of his own nervous system. In long-distance work he uses the dropped loop below the guides, and starts the slack forward with admirable time. His work is with full arm, and his delivery carries nothing of physical exertion with it, though it goes without saying that there must be educated muscle back of the rod which pitches a line to the distance of a gun shot. Mr. Mansfield's rod is a tournament tool, 11ft. long, and weighing 10½oz. With this rod he gave us the prettiest spectacle of casting the fly with which the anglers of this vicinity have ever been favored, and with which no other country, by the way, has ever been authentically favored. He may take his record back to Frisco with him, but let him remember that he had to come to Chicago to make it, and let him not hope to beat the Chicago record when he unrolls his line next October at the tournament of his home club. E. Hough.

CHICAGO AND THE WEST.

The Season's Big Fish.

Chicago, Ill., Aug. 21.—Mr. C. J. Schweilzer, of Kansas City, caught on Aug. 11, in the Wisconsin River, near Kilbourn, Wis., a black bass weighing 10lbs. This is thought to be the largest bass ever taken in Wisconsin.

The Traverse City *Herald* reports a rainbow trout weighing 5lbs. 13oz. (weight fifteen hours after taken from the water), taken in the Boardman River by Washington Round, of the G. R. & I. Ry. With him were Messrs. W. J. Hobbs, Sam Iles and O. P. Carver. A small brown trout, weighing 1¾lbs., was caught by the same party. The Boardman was last year a good trout stream, and it certainly holds the record for the lower peninsula of Michigan this year.

By the draining of a reservoir at Denver, Col., large numbers of fish, more especially carp, were left stranded and were taken. One carp is said to have weighed 26lbs. Yet a still larger carp is reported from Hagerstown, Md., one described as weighing 35lbs., measuring 3ft. 1in. in length, and 22in. in girth.

Some Catches.

Dr. Gonzales, of Crawfordsville, Ind., caught in Cedar Lake, Ind., seventeen bass, all over 1lb., among them five which weighed over 5lbs. each.

At Tomahawk Lake, Wisconsin, and in adjacent waters, some good sport has been had this month with muscallonge and bass, as I learn from a friend just returned. At White Sand Lake, Mr. Hugh McDonald, of Covington, Ky., got one 'lunge weighing 24lbs. At Tomahawk, a Mr. Slack, of Ft. Worth, Tex., in one day took twenty-two bass, running from 2½ to 4½lbs. At Trout Lake, two ladies were out fishing one day last week and both got strikes at the same time, one fish proving to be a pike and the other a 'lunge. The pike was landed, but the 'lunge broke away after getting under the boat. On Tomahawk Lake, week before last, Chas. Fliegel took one 'lunge weighing 8lbs., W. S. Kibby one weighing 12lbs., R. C. McPherson one weighing 13lbs., Chas. Johnson one of 5lbs. and one of 12lbs. In Gilmore Lake, J. Erickson got one weighing 14lbs. In Tomahawk Lake, Mrs. B. W. Sherman, a cottager spending the summer there, got two weighing 18lbs. each and one weighing 22lbs. C. La Salle got one of 22lbs. in Tomahawk Lake, and Tom Curran, of Rhinelander, got four 'lunge which together scaled 41lbs. A. C. Paterson, of Chicago, took one of 12lbs. and one of 7lbs. J. Chadwick, also of Chicago, landed one of 26lbs. In High Lake, E. L. Caldwell and Mr. Dyer got several 'lunge running from 9 to 16lbs. In Jute Lake, W. E. Kelly and M. J. Smiley, of Chicago, in one day caught 100 bass, sixty-eight of which weighed over 2lbs. each, and one of which weighed 5½lbs. Peter the Guide, fishing in Star Lake, killed a good 'lunge weighing 23lbs. In Clear Lake, Mrs. Henry Payne, of Humboldt, was fortunate enough to kill a fine 'lunge—34lbs. in weight and 4ft. 7in. long. In the same waters, Rev. F. B. Jolly and others, of a La Grange, Ill., party, took sixteen 'lunge of various weights. A. C. Allen got twenty-two bass one day, each of more than 2lbs. weight. Mrs. A. E. Williams, wife of a lumber dealer who is in business at Star Lake, probably holds the muscallonge record for the season, for she has done little but fish all summer, her husband providing her a guide and boat as she likes. Since May 1 Mrs. Williams has caught, in Star, Partridge and Ballard lakes, seventy-five muscallonge. She has had eight over 20lbs. each, and her biggest fish weighed 23lbs. Her guide, a man named Rouleau, has in the same time caught ninety-seven muscullonge in all. The heaviest fish taken in these waters seems to have been 36lbs., two of that size being recorded, one taken by Chas. T. Kuhn, of Chicago, in Squaw Lake, on Aug. 14, and one taken in Tomahawk Lake by Mrs. B. W. Sherman. Other weights of fish taken by Mrs. Sherman during the summer run 20lbs., 14lbs., 16lbs., 10lbs., 12lbs., 15lbs, 34lbs., 22lbs., with very many more running from 5lbs. up; certainly a very good showing for the two ladies, Mrs. Williams and Mrs. Sherman, and one which I do no think has been surpassed by any rod of the vicinity. Ambrose Risden, of Chicago, got one 'lunge weighing 12lbs. Chas. Jenks, of the Northwestern Road, Evanston, got one of 7lbs.; and John Branch, his companion and fellow townsman, got one of 11lbs., these two gentlemen also taking one day twenty-two bass averaging 1½lbs., some going as heavy as 3½lbs. In Rock Lake and Clear Lake, the Street Brothers, of Chicago, caught 100 bass, of weights from 1½lbs. to 2lbs. In Squaw Lake, Wm. Walker, of Indianapolis, got one 'lunge weighing 12lbs. All the above records are exclusively printed in Forest and Stream.

Where Is It?

Mr. J. Schaffer, of Chicago, tells a friend that he can take him, within two hours' run of Chicago, to a lake in Indiana where he can catch bass, pike and muscallonge. He asserts he is not mistaken about the muscallonge part of it, but declines to give the secret of his locality. It is not an impossible thing that any water tributary to the Mississippi River may have muscallonge in it. I have known this fish taken in central Iowa, in the Skunk River, and have recorded an instance of large 'lunge being taken by Mr. Dupuy in Taggart Creek, Ky. I do not know of any Indiana lake, however, in which I should expect to find a muscallonge.

Lake Trout from the Whaleback.

The big whaleback excursion steamer Christopher Columbus plies between Milwaukee and Chicago, for the most part depending for its traffic upon young persons who want to go up to Milwaukee to get married, the laws of Wisconsin being very encouraging to this industry. It would not occur to any one that the whaleback would be a good boat for trolling purposes, or that the waters thus traversed would be very good for the man who wanted to get a fine fat lake trout. Yet this month, so a friend of mine tells me, a man by name of Penney, of Chicago, took a notion to do some trolling while on his way up to Milwaukee, and he caught a 5lbs. lake trout in Lake Michigan. He had out about 100ft. of line, and says that the speed of the boat made the fish feel as though it weighed at least 20lbs. I have never heard of a lake trout being taken for years in this part of the lake by any means, let alone trolling from a whaleback. The item is exclusively printed in Forest and Stream.

Iowa Streams for Fishing.

Mr. W. F. Paul, of Charles City, Ia., writes some interesting notes regarding the fishing in some of the streams of eastern Iowa. All these Iowa rivers emptying into the Mississippi were once splendid fishing streams, but sheer neglect, combined with illegal and destructive fishing, ruined them almost utterly. The day of modern methods is just beginning to dawn in Iowa. In his letter Mr. Paul says:

"Fishing has been great sport in the Cedar and Shell Rock rivers this season, fine specimens and good numbers have been caught, mostly bass and wall-eyed pike. In most instances live bait is used, such as minnows and soft-shell crawfish, and also small frogs, though crawfish seem the most favored at present.

"A few of our local fishermen are having fine success at the Shell Rock River. Three of them went there and caught over 100lbs. of fish in one day, and two others caught in the same length of time 72lbs., and they were beauties, averaging about 3½lbs. each for the bass and about 7 to 7½lbs. for pike.

"In the Cedar we are catching more fine specimens of wall-eyed pike and pickerel, as commonly called here. Several 10lb. pike have been taken from this stream this season and many good strings of bass. Considering all these fine catches we pride ourselves as having fine fishing streams in our vicinity.

"The Charles City Game and Fish Club, of Charles City, Ia., offer a reward of $10 for the arrest of each person who can can be shown on reasonable proof to have killed any protected game before the legal season, or taken any fish from its streams by any other means than hook and line, as allowed by the Iowa fish laws."

Closed Streams in the Yellowstone Park.

The National Park has long been known and exploited as one of the most wonderful fishing grounds in the world, but it seems that even its swarming streams can be and have been over-fished. On Aug. 12 Col. Young, the new superintendent at the Park, issued a circular prohibiting fishing in the Gardiner River from its mouth up to the junction of the east and middle forks; also in Glenn Creek, Indian Creek, Willow Creek, Obsidian Creek and Beaver Lake. All these streams are close to the main roads between the entrance of the Park and the upper geyser basin, and tourists have fished them so much, on account of their accessibility, that it appears the supply of trout is well on the way to exhaustion. I opine that the protection will be the sort that protects, as it has been in the past in all the accessible portions of the Park. E. Hough.

1206 Boyce Building, Chicago.

ON MINNESOTA WATERS.

Sioux City, Ia.—*Editor Forest and Stream:* Our object in this letter is to give the plain, unvarnished truth, and to guide and direct amateur sportsmen to fields of unlimited sport.

On June 6, eight disciples of Izaak Walton left behind them the many worries and cares of city life, and bent their course for the fishing waters of the smiling lakes of northern Minnesota. For some time we had all been reading up on the beauties of Minnesota lakes as set forth in railroad and booming town literature, in which the writers expatiated on the health-giving qualities of the boundless pine forests, or the bracing air on the crystal waters of the silvery lakes. The resinous pine trees, the sweet perfume of the blossoming plants and shrubs, and the cool and refreshing draughts of the gentle zephyrs over rolling waves of the lakes, it was therein set forth, would inject the elixir of life into our fagging souls and stir up the weakest to better activity. The woods, we were told, abounded in elk and deer, the lakes were fairly black with wild ducks and geese, and the waters teemed with fish of all kinds—you could see them on top of the water, not by the thousands, but in myriads, so that in a very short time you would fairly tire of fishing. These fairy tales of the forest and lake concerning the fowl and fish so worked on the minds of some of our inexperienced sportsmen that our first night at Park Rapids will ever be a memorable one to us all.

Allen, a big, auburn, whole-souled fellow, one of our party, struck the bed as soon as we reached the hotel. Our landlord, being a little crowded for space, had put six of us into one room. Allen was soon in the land of nod, and the rest were on the eve of retiring when the sleeper made a sudden movement and startled us all by crying out in his sleep: "Got a bite—hold him, Bill, hold him—don't give him slack line—pull him in—there! see, he has swallowed hook and all."

We first tried Park Rapids, in Hubbard county. The fishing in this vicinity was good, where we could get out to the lakes, but it was difficult to get there. For the way Park Rapids advertised, the accommodations are very poor. The lakes are all some distance from town, and there is but one place in town where boats can be gotten, and that is at a hotel, and the landlord will not let you have those unless you stop at his house and pay his price. The liverymen want a fortune to take you to the lakes, and more if you are fortunate enough to find a boat to be taken out. We folded our tents and stole away from the hungry sharks among the dead pine trees and tamarac brush, and left them to feed upon a new school of "shiners."

We next pitched tent at Detroit City, about fifty miles southwest of Park Rapids, on the Northern Pacific Railroad. Here the genial landlord of the Fair Haven House met us with two teams and took us to his place, six miles south of Detroit, on the eastern shore of Lake Sallie. We were all happy once more, as we got settled into a house all by ourselves. It was but a few moments and we were in full possession of the coveted resting place. We were at home, indeed, and a father could not have made things pleasanter for his children than did E. McNeil, the accommodating and obliging proprietor. We were all happy. The weather was fine, the scenery grand, the fishing excellent. Here beautiful bodies of crystal pure water are held in nature's calm embrace by the emerald foliage of the oak, elm, lime, balm of Gilead, poplar and birch. The hillsides and valleys were smiling in their new dresses of sweetest spring flowers, and the birds were twittering their vows of love to each other, or carrying sticks and straws to distant treetops, where instinct combined with art taught them to build their nests and raise their young.

Day after day we rose early in the morning and left in the best of rowboats for distant parts of the lakes, only to return for supper in the evening loaded down with the finest pickerel, pike, black and rock bass.

The Lady of the Lakes, a small steamer, makes two trips daily on lakes Detroit, Muskrat, Sallie, Melissa, and down to Buck's Mill, near the Little Pelican. This is a chain of lakes connected by small rivers from a quarter to a half mile in length. All these streams and lakes are fairly alive with fish of all the kinds found here. You can see them basking in the sun on the gravel bottoms of the streams.

Occasionally we would all take the steamer for Buck's Mill and stay all day, when we were rewarded with the best sport during our outing.

Ducks and geese are said to be very plentiful in the spring and fall. A finer place for hunting them cannot be found than along these streams. Deer and bears are occasionally seen, but not in abundance.

Often when the weather was fair and the lakes were calm we would fish till after 9 o'clock in the evening. But taking fish was by no means all the sport we had.

In the evening when our day's work was done, we would return to our cottage on the verdant hillside, not to go to bed, but to sit and smoke and tell tales of our day's adventures

For some of us this was our first trip to the Northern lakes, but we all agreed that it shall not be our last. To those who have never been there, we would say if you wish one of the finest outings of your lives go to Detroit, Minn., and on the lakes of the Pelican Valley. We would advise you to take a tent with you, to use when away from the hotel, and you wish to stay out for a few days at a time.

CIMEX.

ONTARIO FISHING WATERS.

BELLEVILLE, Ont., Aug. 16 —Since my last the bass fishing has continued exceptionally good, many good catches, nearly all fish of upward of 2lbs. and up to 4½lbs.

Thomas McDonald, of Point Ann, of whose bass pond I made mention in a previous note, has liberated in the Bay of Quinte all the fry in it, many of which measured 2½in. in length. He says that next year he will put 500 bass into his pond, and that he calculates they will produce 3,000,000,000,000 of fry, all of which he will put into the bay. With such a source of supply the Bay of Quinte can be made one of the finest bass fishing grounds in the world. The Government ought to take the matter in hand, as no private individual can be expected to work long for the public good, as Mr. McDonald has done and purposes doing next year.

Maskinonge are rather shy in their usual resorts near Belleville, but at Marina Lake, near Modoc village, twenty seven miles distant, *Esox nobilios* has been affording rare sport. The local newspaper gives the following details:

"Fishing at Moira Lake has been unusually good for the past week, large catches of fine bass, pickerel, etc., being made. In addition, the following catches of maskinonge have rewarded hours of patient 'trolling': Lester Morrice led off with a 22½ pounder on Thursday last. W. H. O'Flynn lost one, as well as his hooks, but next evening caught a fine large one weighing nearly 20lbs. Mrs. B. O'Hara was lucky enough to hook a nice 12 pounder, and the same evening, while Mr. O Hara was crowing over the other campers, they ran across that old fishing veteran, M. Maybee, with two of about the same size in his canoe. Mr. Maybee caught another still larger one. Monday evening, J. C. Dale successfully landed his first 'lunge, a fine one, weighing over 20lbs. The same evening A. H. Watson 'played' a large fish for ten or fifteen minutes, but finally lost it. On Tuesday, Mr. Crawford, visiting at Mr. Dale's cottage, caught a 12-pounder, and Master Roy Dale, the same evening, caught a large one, but it got away from him before he could land it in his boat. Wednesday morning, Master John Dale took an early spin, and in less than ten minutes had captured a beauty, weighing about 17lbs. He got it in his boat but it flopped out, and after a few minutes' tugging he landed it to the boat again, and sat on it until assistance reached him. Other fishermen have hooked their fish all right, but owing to breaking lines have lost fish, bait, hooks and all. The interest in the sport is increasing every day, and even the lady campers are not exempt from the excitement."

COLD RIVER TROUT.

COLD RIVER rises near the base of Killington Mountain, in Vermont, flows through the town of Mendon and empties into Otter Creek two or three miles south of Rutland. The stream is appropriately named, and its temperature is like that of spring water, even in the hottest of weather. Leaving Rutland by way of the Mendon road, which extends through the Notch, in the mountain range east of Rutland, you arrive at the river after a journey of about five miles. From this point to where the C. V. R. R crosses the stream, two and half miles south of Rutland, the fly-fisher finds an ideal strip of water. This stretch of fishing is about four miles long and runs through a dense forest most of the way, having a fall of about 100ft., which makes the water quite rapid.

Having arrived at the stream, put on your waders (for you must wade most of the way), and with your favorite fly-rod, flies tied on No. 8 or 10 Sproat hooks and a 6 or 9ft. leader, step into the stream and enjoy life.

Do you see that rock projecting from the water in midstream, with the current rushing against and around it, forming an eddy at the lower side? Cast your flies beyond it, draw them gently across the current toward the eddy. Aha! See that rise! See how he breaks the water six or eight inches away from your fly, exposes his entire length to your admiring gaze, descends in a graceful curve and takes the fly as he goes down. Now, with a quick but gentle motion of the wrist press the hook into his lip, and as he realizes that he is duped, he gives you such an exhibition of trout athletics as only trout living in cold, rapid waters are qualified to give Long stretches of rapids, alternating with deep pools shaded by huge rocks, occur in unbroken succession, and in each propitious place lurks a fierce insect-destroying trout. Extremely wary as they are, owing to the transparency of the water and the many lessons they have learned from numerous fishermen, the finest exercise of the art is required to bring to basket the denizens of this beautiful stream; and although many careless and indifferent anglers assert that the trout are nearly all caught out, I know to the contrary. They are "at home," but only to the careful and well-equipped caller.

The trout of this stream are justly celebrated for their game and table qualities; slender, rather than thick, yet beautifully proportioned; color light and tints delicate, yet distinct, with a silvery sheen of extreme brightness over all. The Rutland Association for the Protection of Fish and Game is doing good work in stocking and protecting these waters, and in consequence the fishing is expected to improve each season.

W.

New Hampshire Trout.

CLAREMONT, N. H.—It has been my observation, that trout as a general thing are very regular in their spawning. Some streams may be earlier and some later than others, and I think that in our streams here more spawn is deposited between Oct. 16 and Nov. 1 than at any other time. Yet I have in mind two streams in this vicinity, Bible Hill Brook and Grannis Brook, that I feel assured that the spawn is deposited before Oct. 16. Now if they continue to spawn six months that would bring it into the last of March or first of April, and whoever found trout in spawn at that season in this vicinity except in very rare cases? You will find a trout at any season of year occasionally with spawn. Yet this has not changed my mind in regard to late August fishing; for when I kill trout that will average eighteen out of twenty that are well started with spawn, I somehow fell as if I had killed a mighty lot of trout for next season's fishing, and what I kill are but a very small item to what are killed by the hundreds of fishermen who fish for them, and it seems to me that any man ought to be satisfied with what trout he can kill between May 1 and Aug. 15.

I know that the Fish Commission are doing a grand work, yet many things are overlooked that would be a great help to perpetuate and increase our trout fishing. One of the greatest curses is the polluting of our streams with sawdust and chemicals from mills. There are many other minor causes which, if they could be stopped, would give us an abundance of trout without so much restocking.

COLUMBIA.

A Boston Sportsman's Exhibition.

WE have received an announcement of the first exhibition under the auspices of the New England Sportsman's Association, in the Mechanics' Fair Building, Boston, March 14 to 26 inclusive. This is to be, essentially, a sportsman's exhibition, with numerous delightful gleanings from forest and stream, and with actual, practical demonstrations of life in the woods, controlled and managed by true sportsmen, and will by no means be the conventional "trade show."

Here the visitor will find all the latest and most improved paraphernalia pertaining to life in the woods, with the newest inventions. But, perhaps, the most fascinating of all will be the demonstrations of life in the woods, from the picturesque Indian camp and the log cabin of the trapper to the temporary lean-to of the amateur sportsman, all equipped with practical utensils and paraphernalia, and each presided over by guides—Indians, Canadians, and hunters and trappers from all parts of the country. Inquiries, applications for space, etc., may be addressed to the New England Sportsman's Association, Boston, Mass.

Black Bass in New England.

BOSTON, Aug. 21.—Bass fishing is still attracting a good deal of attention in both Maine and New Hampshire waters. Winthrop Ponds, in Maine, are daily fished for bass, when the weather permits, and some good catches are the result. Winnipisaukee Lake and the adjacent ponds are fished constantly, and big catches of bass are being reported. The other day a very remarkable string was taken by a party stopping at Bay View Cottage, Centre Harbor. The string was a surprise to both natives and sportsmen, and was taken chiefly with helgramite for bait. The largest bass weighed 7½lbs., while in the string were eleven fish weighing over 40lbs. Long Pond, in the vicinity of Centre Harbor, was one of the points most successfully fished.

Mr. Frank P. Dodge, with Mrs. Dodge, is off for Lake Bario, Nova Scotia, for the fall fishing. Mr. Dodge's two boys have been at his camp there for several weeks, in charge of a trusty guide. They write home glowing accounts of the trout they have caught. Trout are abundant, from 1lb. to 3lbs. weight, and sometimes larger. They take the fly readily nearly all summer, though bait is the surest at all seasons.

SPECIAL.

New Jersey Coast Fishing.

ASBURY PARK N. J., Aug. 21.—Perhaps never before was the outlook for fall fishing better either in the surf or bays and rivers. Already the run of bait fish is on such as mullet, sand eel and spearing. The catches of weakfish in Barnegat has been something phenomenal the past two weeks, while northward in the Shrewsbury and adjacent points the fishing has been all that could be desired.

The movements of the kingfish have been very erratic the entire season, they have apparently not been governed by tidal conditions, as is their custom, neither have they taken the hook freely at night. The severe storms have no doubt been the cause of their movements from point to point, but why they should refuse the bait at night is one of the many inexplicable things for which fish life is justly renowned. Striped bass are now in the background and will undoubtedly be but little heard from the next few weeks, which is always their custom at this period.

LEONARD HULIT.

Lake Bomaseen.

LAKE BOMASEEN, not far from Rutland, Vt., and near Casselton, is a beautiful lake about nine miles long by three wide at the widest part, with some islands, and the water is very clear. We caught, with two small-sized spoon hooks, in about two hours' fishing, 105 rock bass that would weigh from ¾ to 1lb. apiece. Smaller ones can be taken with worm and hook and line, but we caught no large ones until we took to trolling with small spoon hooks. There is quite a variety of fish in the lake—yellow perch and pickerel, rock bass and large-mouth, or black bass.

I have seen one pickerel taken there through the ice that weighed 11½lbs.

Take the Delaware & Hudson road to Hydeville, which is at the outlet of the lake; there is good hotel accommodation there, and you can get teams to drive you to the other end of the lake, where the best fishing is.

OLD WAY BACK.

Spawning of Fish in Pacific Water.

THAT the spawning seasons of families of fish similar to those of the Atlantic should be different on the Pacific is easily accounted for by the warmer temperature of the water. It would seem that the laws of heat and cold have the same effect on fish that they do on vegetation, ordering the seasons accordingly; and the spawning of fish, like the budding of trees, may be advanced or retarded by mild or inclement weather. Stated visitations of pelagic or anadromous fish may be postponed or even prevented by cold weather, but the Pacific is less subject to these vicissitudes than the Atlantic.—*Chas. Hallock, in Our New Alaska.*

Bluefish in Long Island Waters.

ISLIP, N. Y., Aug. 24.—Bluefishing is excellent in the Great South Bay, and large catches are reported.

E. R. W.

Camp-Fire Flickerings.

"That reminds me."

A Shot in the Dark.

ONE of our neighbors, Uncle Nate as we all called him, was greatly bothered by a whippoorwill that came nearly every night and sat on a rock in his back yard and sang his love song, or whatever it is, until Uncle Nate was nearly wild. One night he lay awake and, as he said, stood it just as long as he could, when he got up, and taking down the old gun that was loaded with a fox charge he went to the back door, and drawing a bead on the rock, which he could dimly see in the faint starlight, blazed away. Then, in the pleasing consciousness of a good deed well done, again sought his couch.

In the morning his first care was to reload the old gun, as there was no telling when it would be needed. After this task was finished, he started for the back yard to gloat over the mangled remains of his tormentor; but what was his horror and disgust to find that, instead of holding on the rock, he had completely riddled his wife's best washtub, which was turned bottom up about 4ft. from the rock.

The disappointment was bad enough, but when Aunt Hannah came out and saw the ruin, Uncle Nate afterward declared, it was worse than the whippoorwill, and he made a break for the barn, his usual haven of refuge in such cases. Uncle Nate was one of the softest-hearted, best-tempered fellows in the world, and, as was always the case when he and Aunt Hannah had a falling out, he was soon begging her pardon. Then he went to whittling out spiles, and it was afternoon before he had the shot holes all plugged.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

FIELD TRIALS AND FIELD TRIAL JUDGES.—III.

THE man who knows all about a field trial and its competition, because, though he has never seen either, he has shot over pointers and setters in actual field work, is the most helpless and inefficient man imaginable when he is present in person at a field trial, if he have any responsible connection with it, whether it be as judge, steward or handler. Nor is his friend and admirer, who has perhaps bred some very good setters and pointers, as measured by the local standard of canine values, and who is inflated with some field trial wisdom at second-hand, to be rated any higher if he be great only from his own inner consciousness.

No inexperienced man is competent to be of real ability and use as a field trial judge; a sportsman must have had both experience in the field and at field trials to the end that he have a thorough knowledge of practical field work, and of the principles of a competition, and also of the manner of conducting it.

By far the greater part of the adverse criticism on field trials and field-trial judges is offered by men who have seen little of field trials, or nothing at all. Their writings are mostly founded on hearsay.

I once knew a man who read Darwin's "Origin of Species" for the first time, it also being the first work on the subject he had ever read, and though he could not spell words correctly nor intentionally write a grammatical sentence at that time, his education being such as was gained by a few boyhood summers at a common school, he made most voluminous marginal notes on every page of the "Origin of Species, correcting, amending and amplifying Darwin, and this from the knowledge he gained from page to page by reading the book, and from the supplementary inner egotism which impelled him to believe that all things should be as he saw them and as he thought was fittest. It is hardly necessary to add that the valuable marginal contributions never appeared elsewhere than in the pages of that one book.

If the field trial critic, whose theories are advanced as facts would first learn whether or not his theories were true or false, there would not be so many slushy columns of rubbish contributed to the sporting press of America. I in nowise dispute the right of a man to his opinions, or to the publication of his opinions, so long as he presents them as such, but I do dispute his right to assert that his emotional opinions and crude conjectures are facts, and this the more when he asserts his facts from hearsay, personal prejudices, all colored with the mental idiosyncrasies which may unfit his informers from rendering any impartial or sound judgment.

As there is always a small percentage of grumblers at field trials, and men so selfish that to lose is to kick, there are also grumblers and kickers who stay at home, men who like to talk and write even if the matter is one with which they have no concern. The kind of man whose knowledge is second-handed, bearing the imprint of the vagaries of the men who communicated it, with such new ones of his own added as are at command, rushes into print either over a *nom de plume* to conceal a timorous heart or over his own name, one which is not of those who work and pay for the conducting of field trials. Such men are irresponsible, who have nothing to lose and nothing to offer, except what they

can distil from such garbage as they seek and take. This in no wise relates to wholesome discussion. I think that I may safely say that no "kicker" of late years ever did anything of great material importance for the support of trials, and I think nothing of any importance at all which did not have a direct bearing on his own personal interests. If there is any kicker who is hereby unjustly treated, the public no doubt would be glad to know of it. Having thus mildly presented the merits of the kicker, his claims to public recognition now may be dropped till such times as they have again a particular significance.

The qualifications of a good field trial judge cover a great deal more than the home theorist could possibly know. As the data of his opinions are most times from the work of dogs which he has observed in field shooting, judging a trial appears to him to be the quintessence of simplicity. What is easier than to walk along leisurely and observe and note what a dog does? That is easy—but let us investigate what he really has to assume in the way of work and responsibility when judging a corpetition.

As said before, the field trial judge must first have a good knowledge of field work, and by this we do not mean that every man who has shot many years over setters and pointers has such knowledge. Some men will have a better understanding of the dog's work in one season than some other men will have in a lifetime, and again, some other men will never learn. The reason is that the matter of brains governs this branch of intelligent effort as it does all others in the world in which man is a factor. Without proceeding further into this feature, we may assume that the field trial judge should have a generous degree of common sense, which is uncommon sense when we consider it and the many men who do not possess it.

The average man who is unused to mental labor finds great difficulty in concentrating his thoughts on one subject for a prolonged period of time. It frequently happens that without the mental training and discipline, he is unable to do so. This may be noted also in many ways in everyday life when men unaccustomed to mental labor attempt to solve mathematical problems, or make abstracts of titles, or listen to a sermon, or read columns of statistics, and some men read whole pages in an absent-minded way without knowing a word of what they have read. Some men will hear the first few words of a friend's discourse, and although their faces may express the greatest of interest, they do not hear a word. They are mentally indolent or incapable of concentration.

The field trial judge must keep his eyes on the dogs' doings incessantly, for unless he sees every detail of a piece of work done, he doesn't know anything about it. For instance, he takes his eyes off the dogs for a moment while they are ranging; he looks again; one dog appears to be pointing nicely and the other one, a few yards behind, is backing, apparently. The circumstances would seem to justify giving a point to the one and a back to the other. The new judge would so rule to a certainty. Now the evidence is in this case all circumstantial. The dog which was apparently backing might have pointed first, and his competitor might have crossed in ahead a moment afterward and made an independent point closer to the birds, so that the dog which pointed first would thus appear to be backing. This happens every now and then at field trials, and it happened at Grand Junction in 1887, and decided first place erroneously in an important stake. Sometimes one dog points and his competitor instantly steals it; sometimes both dogs point independently at the same instant, and the judge must see it all, else he doesn't know.

As for the errors, if the judge's eye is off the dog when a flush or other error is made, he may never know it happened.

He constantly must be mentally comparing the diligence, range, bird sense, beating out the ground, one with the other, and the same with the precision, quickness and good judgment in roading and pointing; also whether either dog is self-hunting in whole or in part, or whether he is working honestly to the gun. Also, it is necessary to note whether the work is done independently, the dog's own perception and execution producing the results, or whether it is from crafty coaching given by his handler, or from jealous rivalry of his competitor.

It is easily perceived, when the matter is explained, that the most incessant watchfulness is indispensable The judge's mind must be concentrated always on the work. With this he must note the general course so that the dogs may be able to work on consecutively without such interruptions as are made by sudden changes of course to and fro, throwing the dogs and handlers in among the spectators, or balking them so that they lose all idea of continued work; or becoming separated they are working on independent, separate courses. When this happens there is more or less loud whistling and calling to the dogs to shape their efforts to a new, common course, and when one handler has then his dog going right, the other handler may still be frantically striving to get his dog in hand and impress on him the new direction in which he is to work. A field trial is a much more ponderous affair to handle than is one or two dogs in field work, quite as much so as is a regiment more difficult to handle than a file of men.

When the green judge has dogs and handlers working at cross purposes, he is wasting a great deal of time, and when the heat is ended the work has been so irregular and indecisive that he does not know much more about the dog's merits than he did before. He soon perceives that handling one or two dogs to shoot over, and handling two handlers who are handling the dogs in a competition, at the same time observing the need of economizing time and ground so as to give the dogs the greatest possible opportunities which time and grounds afford, are quite distinct affairs, and one experience depreciates his own conceit very much.

National Beagle Club of America.

At the field trial committee meeting of the National Beagle Club of America, held at the rooms of the American Kennel Club, the following members were present: Jas W. Appleton (chairman), Hermann F. Schellhass, John Bateman, Geo. B. Post, Jr., G. Mifflin Wharton, A. Wright Post, Jas. L. Kernochan, A. D. Lewis, N. A. Baldwin and George W. Rogers.

The report on the new Produce Stake proved very encouraging; the entries are seventeen bitches and thirty-eight puppies. It was voted that the eighth annual field trials be held at Hempstead, L. I. Mr. Bradford S. Turpin, of Roxbury, Mass., and W. S. Clark, of Linden, Mass., will officiate as judges.

The following resolutions were passed: *Whereas*, Death has removed from our rolls the name of Mr. George Laick, for six years treasurer of the National Beagle Club of America, one of the oldest members of the organization, and a breeder of national reputation.

Resolved, That we testify to our deep regret at the loss of one who was held in the highest esteem, not only by the members of the club, but by all sportsmen and lovers of the dog; and who, as executive member of the club from its beginning, and as a member of the former American Beagle Club, labored earnestly and vigorously to promote its welfare and the objects of the Association; and be it further

Resolved, That these resolutions be incorporated as a part of our minutes, and a copy sent to the bereaved family with an expression of our sympathy.

THE OAKLAND SHOW JUDGING.

Hempstead, L. I., Aug. 20.—*Editor Forest and Stream:* I mailed to Mr. Payne a reply to the irresponsible accusations which he made against me on the ground that my judging of the Oakland, Cal., show was dishonest, and dishonest only because Mr. Payne said that it was so. He seemed to have different opinions from me on the judging, and the explanation of this difference he seeks to find in my dishonesty. He, however, seems to have some trade reasons also for this difference of opinion, as will be touched on more fully hereinafter. My reply he refuses to publish, and for his refusal he publishes the following reasons: "As a copy of this peculiar literary effort has been mailed to his paper, it would publish it in full were it not that our space is too valuable to waste on such long-drawn-out vaporings," etc. And then by way of showing how valuable is his space, he uses three columns—a full page—in a labored, irrelevant reply, totally foreign to the issue; and all this reply is made to my article, which he refuses to publish. He also garbles my letter somewhat to give it a turn to fit his own purposes, and to illustrate probably his idea of the "liberty of the press."

Notwithstanding his affectation of the value of space in his paper, the *Teapot*, he has devoted several columns to the subject in different issues since charges were lodged against him with the A. K. C., and in his paper of July 31 he had a long article on "press censorship." No such sophistry as the "liberty of the press" will serve to cover up Mr. Payne's malice and malignings. The press has done a grand work in which he has had neither part nor lot. Mr. Payne refrains, however, from informing the public that libels and other unlawfulness are abhorred by public sentiment and the laws of society, even though the unlawfulness appears in his paper; that some sheets published in the past were so libelous and contrary to public morals and public good that they were by law suppressed; that while there is a most commendable sentiment in favor of the "liberty of the press" and the freedom of speech, there is also a strong sentiment against its abuse. And yet, it seems somewhat inconsistent for Mr. Payne to prate of the freedom of speech, as it applies to himself, and then deny me the use of his columns to answer accusations which he made in them. He permits his readers to hear his side of the case only. It is palpable that he fears to have the case fully presented, and yet he is the man who boasts, in season and out of season, of the fearlessness of and of its high standards, its accomplished editor, its unselfish efforts in the cause of the dog, and—free advertising. As a matter of principle such refusal of a hearing is grievously unfair and wantonly wrong. As a matter of fact it is not of the slightest importance, for the weakling, his paper, with its handful of readers, bears about the same proportion to the sporting world that a drop of water does to the water in all the oceans. Fortunately there are journals which will give a fair hearing to the man whose character is subjected to wanton and malicious attack.

Every word and phrase of Mr. Payne's latest attack shows, not a struggle for a principle, but a bitter personal enmity and an unscrupulous use of any means to gratify it. All the broad ground of public zeal has gone; the personal anger and the personal enmity stand forth, visible to him who reads. He is malignant and unscrupulous.

However, it was but common fairness and common decency that the case (after it had been taken up officially, as shown by the charges of the St. Bernard Club, of California, against him, and in due form presented before the A. K. C.), should not be prejudged or prejudiced by him, but this he deliberately attempted to do in his issue of July 31, in an article headed "Turned Down Again," in which he first endeavors to belittle and cast odium on the members of the St. Bernard Club, of California, and then discloses his real purpose, as follows:

> "Now, in their desperation, as a last dying convulsion, they have preferred charges against H. T. Payne for some strictures appearing in ——— about some individual, which was not just to their liking, and now the 'marble heart' has met them again, for the A. K. C. has very sensibly refused to proceed in the matter and has advised the secretary of the so called club to present his charges to the Pacific Advisory Board. This simply means that if the Advisory Board wants to listen to them it may, but that the A. K. C doesn't propose to."

There never was a more brazen, insolent and unscrupulous attempt to influence the action of a judicial body of men by misrepresentation than this, and there is not in it even the attempt to observe law or fact. As is well known, any matter concerning canine affairs on the Pacific Coast must first come before the Pacific Advisory Board, and its action is then subject to the approval or disapproval of the central body, the American Kennel Club. The charge was at the outset sent to the A. K. C. It was sent back to the Pacific Advisory Board, because there was no other course to pursue under A. K. C. procedure, and "advising" the secretary of the return of the charge was the term used in all such cases. It in no wise implied that the Pacific Advisory Board could do as it pleased in the matter. It must take cognizance of all such cases which come before it in proper form. It has no such arbitrary powers as Mr. Payne seeks to clothe it with. It will be observed, also, that what Mr. Payne frantically called charges a few weeks ago are now merely "strictures."

And now a few words by way of rejoinder to Mr. Payne's answer to my article, which Mr. Payne refused to publish, and which he thereby also deprived his little band of martyrs, his readers, of the privilege of reading.

In his full page of alleged reply I note that Mr. Payne's name appears twenty-seven times and that the name of his paper appears twelve times; and as Mr. Payne and the paper are one and the same, as will shortly be shown herein, he refers directly to himself no less than thirty-nine times, and I presume that that was what he referred to when he said that "our space is too valuable to waste," etc. He needs it all for himself. An editorial with Mr. Payne's name in it thirty-nine times could not be otherwise than gratifying to himself and instructive to his readers. It is modest, tactful, erudite, pertinent and convincing. He mentions himself; his dogs, himself; his dogs, hisself; dog trainer, hisself; exhibitor, hisself; his criticisms; experience; connection with dog shows; his judgment, in repetition *ad nauseam*. But this is as one might expect it to be, for Mr. H. T. Payne is the owner and editor of the *Teapot*, and therefore he has a right to require his readers to read his name thirty-nine times on one page if he thinks that it would be a benefit to them to do so. He is the whole editorial and business staff. One man is quite sufficient to edit the paper and to attend to its business affairs, with ample time also to breed dogs, sell them, purchase them on commission, and cultivate brawls so as to have something for his readers to read about. Two compositors are force enough to set up the type of his paper, in which are the thoughts of the editor on such matters as he deems to be worthy of his attention. Therefore, when his paper belauds Mr. Payne's worth and goodness—his virtue, modesty, disinterestedness, expert knowledge, truthfulness, abhorrence of roguery, high standards of action, etc.—it merely sets forth what Mr. Payne wrote of himself and what the two compositors set up in type, and what the bantling bore forth in its pages to a craving world. When his paper fearlessly proclaims that Mr. Payne is a great and good man, Mr. Payne should know that it is so, for he wrote it himself. When Mr. Payne quotes the *Teapot* as authority to establish a point, he surely should know the value of his own writings; when he produces its sayings as a matter of evidence to prove the truth of what he says himself, no doubt is left as to his correctness; and when he praises the *Teapot* with generous beslavering, there can be no doubt but that he feels that it fully deserves it. But, though it is pleasing to read his name thirty-nine times on one page, I am constrained to believe that he has forgotten the subject-matter in contemplation of his own greatness.

It would be idle to attempt to follow Mr. Payne's three columns of irrelevant matter. The issue as he raised it at first is entirely abandoned by him. Of the three columns, about a half column is devoted to a eulogy of other judges whose doings are in no way related to the case, yet they are exalted that I may appear little; about a full column recounts Mr. Payne's canine and journalistic experience, enumerates the offices he has held in different bench show clubs, touches on the merits of his dogs (though he had the tact to refrain from quoting prices), and there is a general effort to give himself a genuine importance outside of mere pretence. The rest is mostly a personal attack upon myself on new lines. It does not seek to cloak the personal enmity and vindictive purpose of the *Teapot*, or of Mr. Payne. If the *Teapot* were really a big teapot it would be a most dangerous cauldron, but being a little teapot with very little in it, it can do no harm. I challenged the proof of his accusations and dared him to do his worst—all of which he avoids answering with studious care; this is the matter he should answer; he should do so, but he cannot. He has overshot his mark and stumbled into a pitfall that he blindly overlooked. Still a man who is engaged in the multifarious business of dog-breeder, dog-broker, secretary, exhibitor, editor of the *Teapot*, and brawler-in-chief to the Pacific Coast, cannot be expected to be precise in all things, nor to be fair to a nicety in any.

My exposure of his incompetency and imposition on the kennel world in his assumption of expert knowledge and his arrogant attitude toward everyone and everything, in his self-constituted position of expert critic, evidently went home to a weak spot, for he particularizes his educational experience as follows:

> "The *Teapot* (Mr. Payne) has a pretty clear knowledge of Mr. Payne's connection with dogs and dog shows, and knows that his first experience with dog shows began at Philadelphia in 1876, and that during the years of 1876, '77 and '78 he attended the St. Louis and Baltimore shows of '76 (*sic*), the first Westminster show at Gilmore's Garden, '77, and the St. Louis shows in '77 and '78," etc.

Who can remember Mr. Payne on that straggling circuit? He was simply a spectator, as were all the other spectators who attended those shows, and who would scarcely claim that they acquired expert knowledge and high critical ability from attending them. But we have Mr. Payne's word, backed up by the indorsement of the *Teapot*, that he really did see those shows. If the mere attendance at shows makes one an expert, then we have thousands of experts here in the East who have seen many more shows that Mr. Payne ever saw. Let the thousands of experts now feel that they are duly qualified; for has not Mr. Payne said so? He claims that he had journalistic experience on the daily press before he recently plunged into the kennel world of journalism. Then all the other editors, reporters and writers of the daily press are likewise qualified to write on dogs. There are expert critics and kennel writers by the thousands, for if Mr. Payne can qualify as a kennel editor by experience on the daily press, why cannot all other writers do the same? "Mr. Payne was breeding, breaking and handling thoroughbred dogs from imported stock more than a quarter of a century before Mr. Mortimer was ever heard of in the judges' ring, and this under the tutorage of one of the most thoroughly posted dog men in America at that time." Again nothing but assertion. Name the imported stock and the posted dogman of that remote period. The fact is that he is a cheap pretender, and only by the accident of his surroundings has he been possible. In the East he never would have passed the mushroom stage. As an expert in canine matters he is an impostor. At no time can there be found any of his writings in the *Teapot* which show intrinsic knowledge of canine subjects. Let the reader of the *Teapot* look back and consider how much was knowledge and how much was brawling over personal matters, and he will find that the knowledge was little and the brawling much.

The life of the *Teapot* is its little sizzle. It is its policy. It brings it into notoriety. As a matter of unwritten history, though well-known history for all that, Mr. Payne promotes the dissension on the coast. While many of the fanciers of the Pacific Coast are unfortunately more or less identified with factions, I found that they were nearly all generous, broad-minded gentlemen, and I firmly believe that if there were a kennel journalist among them who had the good of the fancy at heart, instead of an ulterior purpose to foster dissension and make every wrangle a factor in furthering his own personal interests, there would soon be no bitterness. Instead, there would be peace and common effort for the public good. A peacemaker could do it, but that is a rôle which Mr. Payne is unable or unwilling to assume.

After refusing to publish my letter, and then garbling it to suit himself, he asserts that my testimony is impeached. Testimony to what? He has not even presented my case. I ask him again to make his specification. After he has done that it will be in order to talk of testimony—not before. He asserts that at the Oakland show I "turned down" Mr. Harker's fine bitch, and on looking in his advertising columns of that time, I find that Mr. Harker was an advertiser in the *Teapot*. He recently rebuked me for not placing Pittsburgh Tommy higher than reserve, and on looking in the advertising columns of the *Teapot* I find that Pittsburgh Tommy is duly advertised therein. The Irish setter Chief, Jr., was placed third, and this was another award which did not meet Mr. Payne's approval, and the *Teapot's* comment was as follows: "In Irish setters by far the best dog in the class was given third, and absolutely the worst one put to the front," and again on consulting the *Teapot's* advertising columns I find that Chief, Jr.'s, stud card occupied a prominent position therein.

I mentioned in my last letter that one element of his moderate success was the absence of any serious journalistic competition on the coast. He immediately seizes this as a good thing to publish as a thrust at his contemporary, perverting it to suit his own inference. The *Breeder and Sportsman*, against which he aimed it, devotes most of its space to horse interests; and when I said that the *Teapot* had no serious journalistic competition, I meant a competition that was specially devoted to canine interests. There was no intention to reflect on any one personally.

The effort to prove that there was something wrong by associating a lot of circumstances together—that such and such a man took such and such a dog into the ring, and that then such and such a dog lost or won—is too despicable to treat seriously. Someone must lead the dogs into the ring; and as to who does so is beyond the judge's control, and is none of his business anyway. Mr. Payne's "criticisms" seem to be based largely on what other's have told him, as

in Mr. Harker's case and others; and the fury of his criticisms seems to depend on whether the losing party is or is not one of the *Teapot's* advertisers.

To sum up, Mr. Payne was a competitor at the late Oakland show, and therefore he was not competent to make an impartial criticism on the awards, even if he had the technical knowledge necessary to do so. As a disappointed exhibitor, he was qualified to be scurrilous, as many others have been before under the same circumstances. His charges of dishonesty are mere assertions. It is impossible to draw a definite specification from him. A libel suit would bring no redress. It would be impossible for him to give a true technical report of any show, but his reports such as they are, are founded on the sayings of the disappointed exhibitor and the profitable advertiser—there were exhibitors other than these at the show, but Mr. Payne is silent concerning them. His charges, as he was pleased to consider them, were largely a matter of hearsay; as he affects a smattering of law, he should know that hearsay is no evidence. On his own declaration we know that he has had a vast experience; on what we know without his declaration he has been a common brawler in the canine world on the Pacific Coast. He is a notoriety seeker on his own admission, unscrupulous in the use of means to attain it.

The charges against me, which he was so hotly anxious to prosecute when there was no opposition in sight, are now mildly termed by him "strictures," and it is very likely that by the time he is done with it all he will be pleased to call them mistakes.

As Mr. Payne's purpose is to advertise his paper, I have referred to it as the *Teapot;* not in any spirit of levity, but to avoid being made a catspaw of to subserve his purpose. To such advertising as I have contributed he is welcome.

JAMES MORTIMER.

SCHOOLING THE DOG.—XI.

THE first attempts of the dog at roading and pointing are necessarily very crude and unsuccessful. Although he has all the instinctive desire to pursue and capture his prey, he has not learned the practical methods necessary to success. Experience is the only means by which to learn the best methods. Nearly all dogs of dash and courage pursue the same method at first; that is to say, they trust to their speed alone, whether they are in pursuit of fur or feather. Observing, after a few failures, that his speed alone, with a large dependence on his eyesight, is entirely inefficient as a means to capture game birds, he begins to modify and readjust his efforts after a manner which promises better success. Instead of noisily dashing up on his birds at full speed, he sneaks up on them, but still entirely too noisily and too fast. He thus gives them warning before he can draw close enough to have any chance of capture, and he makes the further mistake of making his attempt before he has the birds accurately located. Thus, when he makes his dash on the birds, he may not make it with sufficient precision to succeed, or even to have a chance to capture. Some men shoot at a bird on the wing after much the same principle. They know where the bird is, they point the gun in the general direction, fire and—miss. Every detail is all right excepting the final effort. The dog learns that he must still further modify his manner of approaching the birds, so he, after a time, draws on them with the greatest stealthiness, trusts almost entirely to his nose, and carefully placing each foot so that it will give forth no sound; if need be, he crouches as he steals along, so that his body may be concealed from the view of the birds, though in this respect dogs vary greatly. He grows more careful in making his final effort. He must be within a short distance of the birds before he makes his spring to capture, otherwise all his careful effort is a failure.

There is certain limited area within which he can spring with greater rapidity than the birds can rise, but if he makes any mistake in judging this area, they can soon attain greater swiftness of flight than the dog can of pursuit, even if they flew close to the ground; and the slowest birds can rise in a moment to a height beyond the dog's highest bound. Any effort which is thus not timed to a nicety ends in failure.

Repeated disappointments from flushing the birds in drawing on them, or in faulty attempts at springing to capture, are a recurring check to his impatience and impetuous purpose. He learns to combine strategy with force. The tense muscles, glowing eyes and quivering jaws testify to his suppressed excitement and bloody intention as he draws on the birds, but they are under the guidance of a mind which is becoming better disciplined from experience.

All these things the dog must learn for himself and from experience. It is useless for the trainer to attempt to force a dog to point in the interest of the gun before he has learned to point more or less in his own interest.

This in a general way, for the instinct to point varies greatly, though generally speaking, it has its development as described in the foregoing. Some dogs have very little pointing instinct, and they profit but little by experience in improving their methods. This is not always from deficient intelligence or from any absence of good intent. Sometimes it appears to be from functional dullness of the scenting powers. A dog with a poor nose is as badly handicapped in his attempts to point birds as is a man of poor eyesight who attempts to shoot them.

Some dogs have the pointing instinct in such an excessive degree that they are entirely worthless. They will point on every scent, or on every bright-colored or strangely-shaped object. I remember one dog, a pointer, which when cast off on the prairie would point so continuously that she never would be more than a few yards from the shooter, and she pointed so stanchly that I believe she would have pointed during a whole day if she was permitted to do so. Every bright flower, pile of hay, or other conspicuous object, served to gratify her desire to point, and many times she pointed when there was no accounting for it. She would point either by sight or scent, and as she did little else but point, she was entirely worthless as a field dog. This is an instance of an excessive development which is rare indeed, but all degrees of the instinct will be met with by the trainer who schools many dogs. Nor is there any uniformity as to the age at which the instinct is naturally developed. It may appear in the puppy when he is but little more than weaned, or it may not appear till the dog is quite matured. It is therefore a mistake to condemn a promising dog otherwise, if known to be of good stock. A precocious puppy, as to his pointing instinct, may not prove of any value as a field dog, for there is far more than the act of pointing, in what are the full qualities of a good field dog. Nor is the excessive development of the instinct the sign of a good dog, nor is it necessary that a dog should point excessively in actual field work. The point should be intelligently applied in the interest of the gun as should be all his other acts. Pointing with great stanchness because the scent is gratifying or because the dog is stupid is really a fault instead of being a merit.

BERNARD WATERS.

Premium lists of the seventh annual bench show of the Binghamton Industrial Exposition can be obtained of the secretary, Mr. Judson S. Newing, Binghamton, N. Y.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

MANITOBA FIELD TRIALS CLUB.

WINNIPEG, Man., Aug. 20.—*Editor Forest and Stream:* Owing to absence from the city, I have been unable to forward, until this date, the attached list showing entries made in the Manitoba Field Trials Club All-Age and Amateur Stakes, which closed on the 15th inst.

The All-Age Stake, total 26, made up of 18 setters and 8 pointers, and the Amateur Stake of 9 setters and 3 pointers; total 12.

AMATEUR STAKE—SETTERS.

MISS BRANDON—F. G. Simpson's b., w. and t. bitch (Gladiator II.—Cam Sing).

LARRY—F. W. Scott's o. and w. dog (Larry Noble—Angelo).

SWAB—A. C. Reed's b. and t. bitch (Manitoba Toss—Pettie Sing).

DUKE'S RUTH—Winnipeg Kennels' b. and w. dog (Duke of Manitoba—Cam Sing).

ORTOLAN—Chimo Kennels' b., w. and t. bitch (Orlando—Atalanta).

LARRY NOBLE—Chimo Kennels' o. and w. dog (Ezra Noble—Cornelia G.).

PRINCE RUPERT—Chimo Kennels' b. and w. dog (Larry Noble—Atalanta).

MINNIE SING—H. R. Garwood's b. and t. bitch (Ponto—Minnie).

ELLA WHELER—A. C. Reed's b. and w. bitch (Ponto—Swab).

AMATEUR STAKE—POINTERS.

HAL—W. Whyte's b. and w. dog (Yacht—Pansy).

TANNIS—E. J. Bennet's b. and w. bitch (Rector—Mianie).

SHOT—H. W. Whitla's w. and b. dog (Sam—Rose).

ALL-AGE STAKE—SETTERS.

SAM T.—Del Monte Kennels' b. b. dog (Luke Roy—Betty B.).

IROQUOIS CHIEF—J. E. De Ruyter's b., w. and t. dog (Antonia—Can Can).

CINCINNATUS PRIDE—Ed. A. Burdett's b., w. and t. dog (Cincinnatus—Albert's Nellie).

COUNT ROBERT—Ed. Gray's b., w. and t. dog (Count Erie—Ann).

DUKE T.—W. R. Tait's l. and w. dog (Monk of Furness—Bessie W.).

ANN OF ABBOTTSFORD—Ed. A. Burdett's b. and w. bitch (Gladstone Boy—Bohemian Girl).

TONY'S GALE—C. H. Phelps' b., w. and t. dog (Antonio—Nellie G.).

HURSTBOURNE ZIP—D. E. Rose (agt.) b., w. and t. dog (Tony Boy—Dimple).

CHRISTINA—D. E. Rose (agt.) b., w. and t. bitch (Blue Ridge Mark—Lou R.).

JASIE FREEMAN—J. B. Stoddard (agt.) b., w. and t. bitch (Antonio—Nellie Hope).

JILL—Ed. H. Osthaus's b., w. and t. bitch (Fauster—Nance).

MISS BRANDON—F. G. Simpson's b., w. and t. bitch (Gladiator II.—Cam Sing).

DODO III.—Jubilee Kennels' b., w. and t. bitch (Orlando—Atalanta).

SWAB—A. C. Reed's b. and t. bitch (Manitoba Toss—Pettie Sing).

MAID OF THE MORN—E. McKenny's b. and w. bitch (Val Lit—Cam Sing).

BARRISTER—E. McKenny's b. and w. dog (Val Lit—Cam Sing).

ORTOLAN—Chimo Kennels' b., w. and t. bitch (Orlando—Atalanta).

PRINCE RUPERT—Chimo Kennels' b. and w. dog (Larry Noble—Atalanta).

POINTERS.

LADY OF HESSEN—J. A. McIlhenny's w., l. and t. bitch (Hessen Boy—Lady of Rush).

TICK'S KID—Del Monte Kennels' b. and w. dog (Tick Boy—Lulu K.).

ELGIN'S DASH—F. W. Dunham's l. and w. dog (Kent's Elgin—Mack's Juno).

ALABAMA GIRL—D. E. Rose's (agt.) l. and w. bitch (Von Ann—Lady Mull).

TOPSAWYER—D. E. Rose's (agt.) l. and w. dog (Stride-away—Jelt).

ABDALLAH ROMP—J. B. Stoddard's l. and w. bitch (Rex—Singo Kent).

KING'S LEE—Ed. H. Osthaus's l. and w. dog (Kent's Joe—Lad's Lady).

LORD BUSTER—B. Gordon's l. and w. dog (Lord Mount—Unknown).

G. B. BORRADAILE, Hon. Sec'y.

POINTS AND FLUSHES.

The National Beagle Club of America provides competition in eight classes, the same as those of last year, but some important changes have been made in the conditions governing them. Premium list and all required information concerning the competition can be obtained of the secretary, Mr. Geo. W. Rogers, 208 West Eighty-eighth street, New York.

The manuscript for Vol. II., Maj. J. M. Taylor's book, "Bench Show and Field Trial Records and Standards of Dogs in America," is now ready for the printer. It will bring all records of fields trials and bench shows of both sporting and now sporting dogs, up to Jan. 1 '97, with other valuable data. It will contain the standards of all breeds and the names of the officers and membership of all specialty clubs to date. As the book is a very expensive one to get out, the additional expense of electrotyping will not be incurred as in Vol. I., and the issue will be in accord with the orders received up to date of Sept. 15. In size and quality it will be about the same as Vol. I., 500 pages or more. The price will be the same also, $5, to accompany the order. No C. O. D. shipments made. Address J. M. Taylor, 47 Ave. C, Bayonne, New Jersey.

The two pointers in the spirited field scene which we publish this week are Nabob and India, bred by the Charlottesville Field Trial Kennel, owned by that sterling sportsman Mr. Edward Dexter, of Buzzard's Bay, Mass. Both pointers have been conspicuous in field trial competition and their names are therefore familiar to the readers of FOREST AND STREAM. The bitch India, we regret, died last winter. She was highly prized. The excellence of the picture, stamps it at once as being from a brush of the talented artist, Prof. Edm. H. Osthaus

NEW PUBLICATIONS.

"Totem Tales."

ABOUT two years ago there blew into the FOREST AND STREAM office in Chicago a muscular, well-built man of blue eye, sandy beard, broad chin and a general air of careless Western ease which rather pleased me. He said his name was W. S. Phillips, which was only a pseudonym for El Comancho, known in the FOREST AND STREAM columns as a contributor of good Western stuff. El Comancho was a natural name for this man, who in look and air and personal preference was and is more Indian than white man. He came to Chicago firm in the belief that his ways were the right ways, and that he could whip the whole city. How many of us have come from the West firm in the same belief! Mr. Phillips had a patent process for photo-etching, a scheme of his own perfecting and a very good one. He explained to me that he was an artist, and one needed small assurance to that effect after seeing his work. We two became friends, and we had many talks, here in the city, these filled always with his longings for the woods and streams, for he no more belonged here in this society of wolves than a fresh pat of butter belongs in a Clark street restaurant. He couldn't lick this city, and I knew it, though I could not tell him, because I liked him. He was so Western and so breezy and so indicative of the things I loved.

Mr. Phillips stayed in this city for more than a year, doing work at his profession as an all-around artist, and putting out some beautiful specimens of the capabilities of his process of engraving, which were executed with a fine needle upon a prepared gelatine plate I have never seen any reduced photo engraving which compared with the delicacy attained by his process, whose results were more like etchings on copper than like any reproduced drawings. He disposed of his patents to some advantage, but I am not sure that he whipped the city. A good many of us do not. All the time he reviled the civilized way of living, and all the time he was longing for the woods, a blanket, a rifle and a knife.

It came to Mr. Phillips's mind while here in Chicago to write a book about Indians, since he knew so much of Indians through his experience among them. He was fairly brought up among the Indians in the early days of Nebraska, and he gravitated to them when he went out to the Pacific Coast to live some years ago. All through many long hot days and many long and weary nights, as I personally know, this man worked at his Indian book, trying all the time to whip the hard-hearted city which so many of us fail to whip. He had a heart of iron and the constitution which comes from the free air of the West. I knew of his fight with the summer climate of the hard-hearted town, and I was glad it was over, and when I knew his book was on the press. Presently he drifted away again, blowing back into the West from which he came. I was glad, for though I missed him, I knew he did not belong here.

Now on my desk lies this book which El Comancho did here in the hot and hard-hearted city. It is called "Totem Tales." It tells of the pine trees, and the streams, and the breath of wild nature. It is the soul of the talking pine which speaks. It is of the wild children of the woods that it converses. It is a purely and distinctively Western book. No man who was not reared in the broad and primitive environments of the West could have conceived or executed this work. It was a work of love, a work meaning a part of the author's life and feeling. Useless to look in it for polish or finish, but profitable if one seeks fibre and strength. There is no time in the rush of real Western blood for the veneer of so-called modern literature. There are no prettinesses in this book, but there is enough of solid fact and sol'd fancy, if we may use so disparaging a term in this connection. Yet this term is not unjust. The fancies of the book are substantial ones, concrete ones, such only as may be conceived in the child minds of the Indian savages with whose lives it deals. It tells of their matter-of-fact explanations of natural phenomena, their puerile hero tales, their absurd yet interesting theology, their grotesque and unformed modes of thought and life. The author writes of this with a firm and confident touch, being sure that he knows his theme of long acquaintance. The product of his work is a book somewhat unique in tone, and one which should find clientage among those who value original investigation and original thought in unusual fields.

Mr. Phillips calls his book a collection of "Indian tales, Indian told." In this expression I think he is open to criticism. He deals with the West Coast Indians, whose dialect is presumably the Chinook tongue, whose vocabulary is limited to a few hundred words at the outside. The characters of the Totem Tales move with a wider tread, discourse with a more stately diction, speak with a wider imagination than a literal rendering of the expression "Indian told" will allow us to entertain. This imagination, however, is one of the charms of the book, which has all the right in the world to claim to be a reflex of the life with which it deals. Certainly the writer of the book takes us along into the heart of the woods, and into the hearts of the wild people who inhabit them.

The author says that the field of his action is "far away in the unmapped West," a description inviting and appealing of itself. It is near the Lake of the Mountains, which is very deep and very blue. The genius of the book is the Talking Pine, who is "the one who is very old and very tall, and whose arms are withered in places, the wise one of all the nation of the pine trees." This tree is the friend of T'solo the wanderer, which is the name claimed by the author in his story. To T'solo this talking tree tells the folk stories of the Ka-ke-hee, the chief of the demons, of the Kit si-nao, the Stone Mother, of the Great Waters, of the Crow children, of the Rain song, of the birth of the sun, of the reading of the Totem pole, of Quaw-te-aht the changer, of Spe-ow and the spider, of Wah wah-hoo the frog, of the magic of the Evil eye, of the Tah-mah-na-wis of S'doaks, etc. We follow the primitive man along the forest aisles, and see man changed to a spirit, a spirit changed to a man; a cloud, a shock of thunder, a waterfall, an animal, each given human attributes, or divested of the same in turn, with all the ease of the untutored mind, whose workings sometimes give us hints of our own highest poetry, or our own highest and most valued lines of thought. We are forced to believe the Greeks were Indian, or that the Indians are Greek.

An instance of a cruder form of the Indian thought may be given in connection with the ideas of a frog, a will-o'-the-wisp and a marsh. These terms represent a certain exact total to us, with whom a yellow bullfrog on the marsh's brim is a yellow bullfrog and nothing more. With the Indian mind, as interpreted by the talking pine, these things have other attributes. Wah wah hoo, it appears, was changed by his father's magic into a frog, and he sings at night to mourn for his dead wife Hah-hah is dead, and her shadow looks for Wah wah-hoo, but cannot find him because he is a frog. Han-hah does not know this, and they say she travels over the swamps at night with a strange white light in her hands. The white men call her the will-o'-the-wisp, and sometimes try to talk with her, but she runs away. "So now you know who the frog is, and why the will o'-the-wisp drifts across the bogs at night, because I have told you the tale as it was told to me by the Talking Pine a long time ago." Thus we have a rude poetry from a most unpromising topic. As other topics offer more liberty and scope, it may be seen what is their handling, and of the pleasure of learning this it were not well to deprive the reader in advance. There is much information in this book, blended always with a wholesome and healthy touch of the pure outdoor air. We read of wild things and wild people, and so wish that we, too, were wild again. We find no polish, no literary finish exhibited or claimed in this book, but we have an imprisoned wild spirit given us shrined in the uncut amber which has held it for long generations of time. We have a notion of this actual spirit of the men and the things embodied in the tales to the totem times and totem peoples.

Mr. Phillips is first a Western man, then a hunter, then an artist and then a writer. He has illustrated his own book with nearly 200 original drawings, all made with the needle upon his prepared plates, and some of them are striking and unique. These pictures are as much or more a part of the book than the context, which does less than they to give us the insight into the heart of these wild things. The pictures are varied and complete in their design, and partake fully of the nature of the main theme of the book. The book and its central notion are of necessity crude, primitive, unfinished, and thus are the pictures which typify it. Some of the drawings are unnecessarily rough and careless, and the artist-author uses too often his device of the full moon as a background; but others of the pictures are quaint and delicate, showing the range of treatment possible to the free-handed craftsman in this twofold work. We should not call the pictures art in all cases, more than we should call the stories of the Talking Pine artistic in all cases; but should we be able to do this we should have added but one more work to the long list of emasculated product these days daily turned out from *fin de siecle* presses backed by editors who dare not accept human interest and independent thought, as above rose-leaf scent and rosewood polish. Look for none such in the Totem Tales by El Comancho, but look rather for a book like himself, wide-chinned, fearless, breezy, partaking of the glorious West; so shall the reader be pleased at having gained a friend of his after days, upon whose angularities he may hang more than a passing hour. The mountains of the West are not yet sandpapered, and in the bark of the pines still run the rough traceries implanted by the artist's hand that makes the Lake of the Mountains and the trees that hem it about. This book is recently put out by the Star Publishing Company of Chicago. It has curious interest to me, since I saw it grow and knew how much of the longings of its maker was going into it while he was here trying to whip the heartless city. Now he has gone back to the mountains and pines of the State of Washington, among the tribes of which he writes; yet he does not take with him all that he knew of these places and things, but leaves a little of the "breath of the forest, the ripple of the stream," to make us wish we too were there.

THOUGHTS I THINK.

Davy Crockett's chief fame rests on his skill and prowess with the rifle and some words of wisdom which he uttered in such few idle moments as he could spare from shooting squirrels in the center of their eyeballs. He was a wheelman, or it is supposed he had wheels, for what else could he have in mind when he said, "Be sure you are right, then go ahead"? If the bicycle riders would but observe Davy's adjuration to them, there would be but few smashed wheels, bent frames or punctured tires, to say nothing of bruised knees, strained tendons, broken bones and loss of life. Don't go ahead without thinking and looking.

The numbness of the arms and the exceeding discomfort caused by vibration of the handle bars when riding over a surface which is at all rough, are by nearly all riders attributed to the rigidity of the handle bars. Numerous devices have been used to overcome the vibration. By far the greater cause of the unpleasant effects of it lies in the rider. He or she grips the handle bars too hard and holds the arms too stiffly. With a tight grip and a stiff arm, every vibration of the handle bars is conveyed to the arms and body instantly and in full force. Such manner of holding would produce numbness in time even if the man and wheel were motionless. The stiff grip and heavy pressure on the handle bars are in no wise an advantage to the rider, though they are in a way injurious, since there is more or less constriction of the chest of the rider who so rides; there is the discomfort from numbness and vibration, and there is the awkward and ungraceful pose which comes from a strained position. The ordinary grip of the hand, with the arms entirely free from use as a support of the body, is sufficient to enable the rider to guide the wheel safely and promptly. It will respond far more quickly to a light, skillful hand employing gentle force, than it will to rigid arms and straining force. Sit erect; give the lungs a chance to play; use the hands and arms to steer the wheel and not as a prop to support a lazy body; don't wriggle in your seat when pedaling, and thus will riders sever any apparent relationship between themselves and the *Simiadæ*.

There is an unconquerable affinity between the department store bicycle and the repair shop. The repair shop is its home.

A fortune awaits him who can invent an unhealing puncture to deflate a bore.

The tandem, by and large, is the prince of wheels, or rather, the prince-princess of wheels. The man who owns one is thrice blessed; first, because he has a machine which will carry him doubly happily through pure air and sunshine; second, because he possesses the affection of some sweet girl, else he had never purchased it; and third, because losing one sweetheart he can easily win another because of his ownership of the tandem. He has his sweetheart's affections firmly anchored. She doesn't care to leave him out of sight a day at a time, and as for going out of town for a week or a month—no! The tandem is a pleasure and a menace. It is a pleasure to the sweetheart when she is present and a menace to her when she is absent, for is it not a machine which is built for two?

Some men who cannot "raise the wind" in times of peace can raise a storm in times of accident. Did you ever see two Jimmy Faddens collide?

If the bicycle only proves as successful for army use as the recent trials of it by troops would indicate, and as the authorities anticipate, it would be an easy matter to secure millions of volunteer bicycle soldiers to meet the enemy—because when the shooting began they could pedal home so much quicker than they could run. There are others who wouldn't flee.

A fleeing army on bicycles would be an impressive road race. And yet they would only need to throw some broken glass and tacks on the roadway behind to safely cover their retreat. There are more ways to use butter than to choke cats with it.

"A fool and his money are soon parted," and they part many times and oft, if the number of bargain counter bicycles sold is any criterion of the fool and his money. But the man who buys and is sold once, is wisely prudent on his next venture. "Once bitten, twice shy."

The man who objects to good roads in the abstract is not above using them in the concrete.

When crossing a street and you see a wheelman coming toward you, stop, take three steps backward and forward three times in succession and you'll do the trick.

In Calcasien Parish, which comprises a large part of western Louisiana, and which is famous for its rice industry, a number of citizens have banded together to test the constitutionality of certain laws pertaining to working the roads. In the rainy season in that country the roads are impassable to vehicles. All the traffic depends on the small, forlorn-looking Creole ponies. The residents of that Parish should see that good roads are kept out at any cost. It is their prerogative as free citizens to have bad roads or no roads, even if they live in poverty and darkness to do so.

"Deer sirz—I live on mi farm near Hamilton, Kan., am 57 years old and just a little sporta. My neffew in Indianna bot hisself a new bisicle and sent me his old one by frate, and ive learned to ride sume. Its a pile of fun, but my bisicle jolts considerable. A feller came along yesterday with a bisicle that had hollow injun robber tires stuffed with wind. He let me try hissen and mi, it run like a koshin! He told me you sell injun robber just the same as hissen. How much will it be to fix mine up like hissen? Mine is all iron wheels. Do you punch the hollow hole threw the injun robber, or will I have to do it myself? How do you stick the ends together after you got it done? If your injun robber is already holler, will it come any cheaper empty? I can get all the wind I want out here in Kansas free.

"Eberneezer Y. Jenson.

"P. S.—How much do you charge for the doodad you stuff the wind into the robber with and where do you start?" —*Exchange.*

The Idler.

Wheelmen and Tolls.

A recent decision of the Supreme Court of Michigan is of universal interest to wheelmen. In the case of Murfin vs. the Detroit and Erie Plank Road Co., the action being against the Plank Road Co. for preventing the plaintiff from riding over its road without paying the toll regularly charged a vehicle, the judgment of the lower court in favor of the plaintiff was affirmed. The court ruled that there was nothing in the laws of the State which warranted charging toll to pedestrians, wheelbarrows, carts, hand sleds, baby carriages, and other vehicles propelled by human beings, though good roads were essential to their use as it was to the use of the bicycle. The court was not so certain as to whether a motor cycle would be exempt, as is the bicycle propelled by human agency, though its opinion was that the right to charge toll was limited to vehicles drawn only by animals. The precedents were all against charging tolls to pedestrians, and vehicles propelled by human beings.

Lake St. Louis, 1897.

Second Day—Second Race.

Monday, Aug. 16.

TRIANGULAR COURSE.

The second day, Monday, was an ideal one for small yacht racing, a reefing breeze, steady in force and direction, and a moderate sea, the conditions being less trying than in the first trial race at Oyster Bay. After working around through the early morning from S.E., the wind settled at S.W. before the yachts were at the line. Momo made sail and knocked about for a few minutes, and then tied up astern of Vailima while her crew set to work to shift mainsails, the best one being unbent and replaced by a poorer one, as it was evident that the chances were for more rather than less wind. Glencairn had started with one of Avoca's mainsails.

When the news of Glencairn's defeat reached Toronto on Saturday afternoon, Com. Jarvis was about to start for Boston, where he had a business engagement for Monday morning. The way to Boston from Toronto lies through Buffalo, but by dint of many time tables and much bothering of ticket agents, Com. Jarvis managed to change his route, and by 7 A. M. on Sunday he was at Dorval, ready to do all that was possible to help Glencairn. He spent the day at Dorval, going out in Glencairn in the afternoon with Messrs. Duggan and Poe. The wind was light, but well suited for the purpose, and the best mainsail at hand, one of Avoca's, was set and carefully inspected. Battens were shifted and such other changes made as were possible, and as the result of this work the sail was much improved.

Both Momo and Glencairn swung their whole mainsails before the start, but the former had on her second jib. The signals were given at 11:20, 11:30 and 11:35, the committee steamer lying south of the buoy, the triangle of 1⅛ miles to a side being sailed with all marks to starboard. The courses shown on the chart, of 2 miles to a side, were not used, the smaller triangles, sailed three times, being preferred by both parties. This triangle was very carefully laid out and tested by running over several times with the log; the timing of the yachts on some of the legs, which is absolutely accurate so far as the times go, shows a very high rate of speed for such small craft; but it is believed that the distances are correct. The first leg of the course was almost to windward; just before the last whistle Momo was to the south of the committee steamer and Glencairn to the north of the markboat at the other end of the line. Each crossed over until these positions were reversed. Glencairn came about under the stern of the steamer and crossed the line under good headway within 4s. of the whistle. Momo lay for a moment beyond the markboat and then came for the north or leeward end of the line, crossing 20s. late. Both crossed on port tack, but within the first two minutes Glencairn went on starboard tack for a short hitch well out to weather of Momo.

There was no possible question that from the start Glencairn was doing decidedly the better work, pointing well and holding to windward. They made several short tacks, Glencairn being already too far ahead to trouble Momo. The rest of the windward leg showed only a steady gain for Glencairn, she finally stood by it on port tack and eased sheet for the second mark, the times being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	11 53 42	0 28 42	0 01 53	0 01 53
Momo	11 55 35	0 20 35		

Momo set a balloon jib and hurried after her flying rival; she seemed to be running much faster, but the times at the second mark off Pointe Claire showed but a small gain for her:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	12 02 20	0 08 38		0 01 44
Momo	12 04 04	0 08 29	0 00 09	

They jibed at the mark and started for the line, Momo at once starting to reef. She lowered away and tied in two reefs, Glencairn at once following with a single reef and setting a small jib. The finish was timed:

FIRST ROUND.

		Elapsed.		Gain.		
	Time.	Leg.	Round.	Leg.	Round.	Lead.
Glencairn	12 12 14	0 09 54	0 37 14		0 01 27	0 01 27
Momo	12 13 41	0 09 37	0 38 41	0 00 17		

Glencairn's gain to windward had been fairly made and as fairly cut down by Momo on the two reaches, so far as the slight gains of 9 and 17 seconds are concerned.

The second round was practically a repetition of the first. The two yachts were never near together, and each simply sailed a straight race without thought of the other. The times at the weather mark were:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	12 33 20	0 21 06	0 02 23	0 03 50
Momo	12 37 10	0 23 29		

Again they ran across to the Pointe Claire mark, both setting balloon jibs, the times being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	12 41 31	0 08 11		0 03 49
Momo	12 45 20	0 08 10	0 00 01	

This time of 8m. 10s. for 1⅛ nautical miles shows very nearly a 10-knot speed.

It was now blowing pretty hard and with considerable sea. Glencairn was carrying sail well and making good weather of it; but with such a lead the first thing to do was to sail a perfectly safe race. At 12:43 she lowered away and turned in her second reef. Momo followed by tying in a third reef. They reached across and finished the second round:

		Elapsed.		Gain.		
	Time.	Leg.	Round.	Leg.	Round.	Lead.
Glencairn	12 50 52	0 09 21	0 38 38		0 01 47	0 03 14
Momo	12 54 05	0 08 46	0 40 25	0 00 35		

Glencairn set a smaller jib when she reefed, but Momo, after taking in her balloon jib and reefing, set no jib, and sailed the last round under three-reefed mainsail only. The weather mark was timed on the third round:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	1 14 10	0 23 18	0 02 47	0 06 01
Momo	1 20 11	0 26 05		

With close-reefed mainsail and no jib, Momo was still able to preserve a reasonable balance by running her board aft in the slot, but she was doing very poor work beside Glencairn. Glencairn carried only her small jib on the next leg, but Momo set her balloon jib; however, she gained nothing, the times being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	1 22 11	0 08 01		0 06 01
Momo	1 28 12	0 08 01		

When Glencairn came to the Pointe Claire mark she tacked round instead of jibing, having plenty of time to spare and caring to take no unnecessary risks. She continued for the finish under her small jib. Momo not only jibed at the mark, but set her balloon jib in the vain hope of picking up what she had lost. She flew over the last leg, the times showing a speed of 11 knots. The final times were:

		Elapsed.		Gain.		
	Time.	Leg.	Round. Race.	Leg.	Round.	Race.
Glencairn	1 31 35	0 09 24	0 40 43 1 56 35	. . . .	0 01 10	0 04 24
Momo	1 35 59	0 07 47	0 41 53 2 00 59	0 01 37		

Aboard the Duchess of York was Mr. Duggan's six-year-old son Herrick; when Glencairn crossed the line he nodded his head gravely and remarked, "I think Daddy will keep the cup."

The race was in all respects a fair one, and its result must be taken as conclusive under such conditions, a reefing breeze and sea. The performance of Glencairn, in pointing, carrying sail and going through the seas, was uniformly superior to that of Momo. It was said that on Sunday the whole population of the shore from Lachine to St. Anne's was praying for wind; in which case the answer came promptly and freely, for there was wind enough left at night to sail a whole series of international races. It blew through the night, and was still blowing in the morning.

After the race Mr. Crane decided not to sail in Momo on Tuesday, but to give up his place to Mr. D. Le Roy Dresser, one of the heavy-weights who sailed Skate about New York. Mr. Dresser is about 6ft. 5in. in height, and weighs some 70lbs. more than Mr. Crane. Both boats were hauled out as usual after the race.

Third Day, Third Race.

Tuesday, Aug. 17.

WINDWARD AND LEEWARD COURSE.

The blow of Monday not only knocked up a sea during the night, but had increased in force until it reached a rate of about twenty-five miles per hour. The sun shone brightly at 5 A. M., but by 9 o'clock it was dark and cloudy and a light rain was falling, which continued until late in the afternoon. It was only a light drizzle and not enough to kill the wind.

The two yachts were off Pointe Claire, at the first mark of the triangle, at 10:50, both lying astern of Dama while mainsails were reefed. Momo tied in three reefs, all that she had points for; Glencairn tied in four, showing considerably less canvas, but after a short spin she shook out one. The steam yacht Wild Rose ran out to set the weather mark, two miles W. by S. of the start.

When the preliminary whistle blew, at 11:24, the wind was blowing very fresh, a steady drizzle of rain was falling and a very nasty sea running. The preparatory sounded at 11:34 and the start at 11:39. Both boats carried small jibs as they came for the line, Dama lying to the south'ard of the mark. With a minute to go both stood along the line to the north, on port tack, Momo to windward, they wasted a little time beyond the north end of the line and Glencairn started for it with about 40s. still to run. She was too soon, but kept her way and tacked. Momo started for the line a little later, and reached it just on time and to windward of Glencairn. Unfortunately she had sheets off and no way on; before she gathered way Glencairn shot out from under her lee and had a clear lead. Both crossed on starboard tack, but within 2m. Glencairn came about and stood toward the Pointe Claire shore, Momo holding on along the edge of the Middle Ground. Momo went on port tack at 12:43, and Glencairn at 12:45, the two meeting about 4m. later. Momo passed under Glencairn's stern, but so close as to show that she had gained rather than lost thus far. Glencairn of course tacked at once and the two made a long tack, for over 10m., until they were close in under the shore up above Pointe Claire. In getting there Glencairn weathered out so much that she passed well to windward of the Pointe Claire buoy of the triangle, though Momo passed to leeward of it.

The next tack, on starboard, Momo going about nearly 1m. after Glencairn, was also a long one—about 10m.—for Glencairn; then she came about for the weather mark, as she had to leave it on starboard hand. The times were:

	Time.	Elapsed.	Gain.
Glencairn	12 11 25	0 32 25	0 02 33
Momo	12 13 58	0 34 58	

Glencairn set her balloon jib as a spinaker and ran down with boom to starboard, jibing at the mark. Mr. Duggan was taking no familiarities with buoys or markboats, and made rather a wide turn, but Momo kept off still further, being to leeward of the buoy when she jibed. The times were:

FIRST ROUND.

		Elapsed.		Gain.		
	Time.	Leg.	Round.	Leg.	Round.	Lead.
Glencairn	12 25 20	0 13 55	0 16 20		0 01 51	0 01 51
Momo	12 27 11	0 13 13	0 48 11	0 00 42		

As usual, Momo showed a gain down wind, but by no means enough to affect the loss to windward. The sun was now visible, and the sky cleared a little. Momo seemed to gain for a time on the windward mark, but the timing showed her far astern at the end of the first leg:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	12 57 58	0 32 38	0 02 01	0 03 52
Momo	1 01 50	0 34 39		

The run to the line showed even a slight loss for Momo, the round being timed:

		Elapsed.		Gain.		
	Time.	Leg	Round.	Leg.	Round.	Lead.
Glencairn	1 11 49	0 13 51	0 46 29	0 00 03	0 02 04	0 03 55
Momo	1 15 44	0 13 54	0 48 33			

The last round was sailed with the boats wide apart, but Momo picked up materially on both legs. The weather mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	1 47 03	0 35 14		0 02 59
Momo	1 50 02	0 34 18	0 00 56	

The last run was quickly sailed, with another gain for Momo, the final times being:

		Elapsed.			Gain.		
	Finish.	Leg.	Round.	Race.	Leg.	Round.	Race.
Glencairn	2 00 10	0 13 07	0 48 21	2 21 10			0 02 30
Momo	2 02 40	0 12 38	0 46 56	2 23 40	0 00 29	0 01 25	

On two of the leeward legs Momo showed the greater speed off the wind, and she made a gain of almost a minute in the last windward leg. In this part of the race, however, while Momo was undoubtedly pushed to her utmost to make up her lost time. Glencairn had the race safe in hand, with a long lead, and she had only to sail cautiously and easily to avoid a possible mishap. The wind and sea were still as high at the finish as at the start. After the fleet started for Dorval and Lachine the sky cleared and the sun came out for a time. In honor of the visitors, the Forest and Stream Club, Montreal's big country club, had planned a "*Fête de Nuit*" for Tuesday night, a special train being run out to Dorval, where the club has a beautiful house and grounds, on the point above the yacht club. In consequence of the wet weather, the festivities, which were planned to take place outdoors, were postponed to Wednesday night. An impromptu dance at the yacht club was arranged, however, as a partial compensation for those who came out unaware of the postponement.

Fourth Day—Fourth Race.

Wednesday, Aug. 18.

TRIANGULAR COURSE.

Wednesday morning was clear and sunny, but with a fresh westerly breeze, a dozen miles an hour or so, the wind and sea had fallen late in the night, and when the wind freshened the sea was but moderate. The Dama and the Duchess of York were out at the line at 10:30, but few other craft were about The two yachts made fast astern of Dama and Momo tied in three reefs, while Glencairn tried but two. After trying the weather for a short time Momo shook out one reef. Mr. Dresser had returned home, and Mr. Crane was again on Momo. The preliminary whistle was given at 11:10 and the preparatory at 11:20, with the wind about S.W. The first leg of the triangle, with marks to starboard, was almost to windward. When the start was given at 11:25, Momo, after sailing around the Dama, came under her stern a little too soon, bore away along the line and luffed over with the whistle. Glencairn, after a little maneuvering below the line, was to leeward of Momo at the start, but at once luffed out across Momo's wake. For the first time in four days of hard racing the two were in close company, and for a few minutes there was a very pretty fight. Momo tried to pull away, but Glencairn clung to her weather quarter and then worked out on her beam, pointing well and holding better to windward. As they went along in this way, Glencairn gradually widened out to windward until she was some 30yds. distant. A little later and she was clear ahead and gaining with every foot sailed, until she had a lead of 2½ minutes at the end of 1⅓ miles. The first mark was timed:

	Time	Elapsed.	Gain.	Lead.
Glencairn	11 45 57	0 20 57	0 02 32	0 02 32
Momo	11 48 28	0 23 29		

After passing the mark on port tack booms were eased to starboard and balloon jibs set, Momo shaking out her second reef. The wind was rather lighter than at the start, and there was a moderate sea. They were timed at the second mark:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	11 56 08	0 10 11	0 00 47	0 03 19
Momo	11 59 37	0 10 58		

On this reach Glencairn had increased her gain, Momo losing a little time with her reef. They jibed at the mark, and Glencairn then shook out her second reef. There was still plenty of wind, but the leech of the mainsail was showing signs of tearing, and the reef was cast out in order to ease the strain at the cringle. She carried her small jib set under balloon jib on each round, but Momo had to take in her balloon jib in order to set her small jib, thus losing time. The round was finished.

		Elapsed.		Gain.		
	Time.	Leg.	Round.	Leg.	Round.	Lead.
Glencairn	12 05 14	0 09 06	0 40 14		0 03 09	0 03 09
Momo	12 08 23	0 08 56	0 43 25	0 00 10		

Glencairn was well away with her small jib sheeted home, while Momo was still coming along under mainsail only, while Mr. Crane was shifting headsails. They started off on port tack, and in a short time Momo started to shake out her last reef. Glencairn also shook her last reef out in hopes of saving the mainsail, but the leech had started and a tear ran across the sail for over 3ft., leaving the two parts flapping. With her whole mainsail drawing, Momo began to pick up the leader, and as the wind was now falling the race became very exciting, the odds being strongly in Momo's favor, with her whole mainsail and four reaches to go with but one more windward leg. The first mark showed a decided gain for Momo:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	12 29 00	0 23 46		0 01 12
Momo	12 20 12	0 21 49	0 01 57	

Once around the mark, Glencairn set her balloon jib in the regular way. Mr. Shearwood went aft and hauled down the third reef pendant, which had been rove that morning, in order to take the strain from the torn pare below. Momo tried a risky, and as it proved, fatal experiment, dropping her spinaker boom to port and breaking out her spinaker on it, then staying the spar as far forward as possible. The boom soon slipped up the mast and made a general tangle forward, the sail being towed under the bows before it was finally taken in and reset properly. At least a minute was lost by this maneuver, and instead of passing or catching Glencairn Momo lost some very valuable seconds. The second mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	12 39 18	0 10 18		0 01 12
Momo	12 40 30	0 10 18		

On the last reach to the line, Momo's strongest leg in all the races, she gained little or nothing at first, but over the last part of this leg she came up very fast. Glencairn lowered her balloon jib and had her working jib drawing without loss of time, but again Momo had to jog along under mainsail alone while the work of lowering balloon jib, passing it on and getting out the working jib, hooking on and hoisting the latter, went on with a slowness that was exasperating to those of her friends on the different boats. It was not that this difficult work was done so badly, but on Glencairn the jib tack was made fast on the deck and the rigging was much better, two jibs being set at the same time. On Momo the jib was made fast to a bowsprit, some 2ft. outboard, and it was necessary to take in one sail before beginning to take in the other. With all of this drawback Momo had made up enough to put her on the line even with Glencairn, and to windward, as they started for the final four miles. The times were:

		Elapsed.		Gain		
	Time.	Leg.	Round.	Leg.	Round.	Lead.
Glencairn	12 49 17	0 09 57	0 44 03			0 00 04
Momo	12 49 21	0 08 51	0 40 59	0 01 08	0 03 03	

With all the odds in her favor, Momo again failed to hold Glencairn. The torn edges of the latter's mainsail were fluttering badly. Even in the fairly light wind it was the old story, and Glencairn was soon clear of Momo, and fast weathering out on her. When Glencairn made her last long tack for the mark, she weathered it easily; Momo was by this time some distance astern on the same tack. Watches were held anxiously on the pair; but instead of weathering the mark, Momo fetched by to leeward after Glencairn had rounded, and had to make another tack.

The treatment of the Canadians, from first to last, throughout the races, has been most courteous and considerate, whether Glencairn was winning or losing; but when it was seen that Momo failed to weather the mark, an involuntary exclamation that sounded almost like a yell of derision broke out on the club steamer; the suspense was over, and Glencairn had, in spite of her accident, won the cup. The times at the windwark mark were:

	Time	Elapsed.	Gain.	Lead.
Glencairn	1 10 42	0 21 25	0 03 47	0 03 51
Momo	1 14 33	0 25 12		

The second mark of the last round showed the usual off-the-wind gain for Momo, but it was too late for her to profit by it. The time was:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	1 20 05	0 09 23		0 03 02
Momo	1 23 07	0 08 34	0 00 49	

The last leg was tame enough, Glencairn was warmly greeted at the finish and Momo came in for a generous share of salutes and cheers. The final times were:

		Elapsed.			Gain.	
	Finish.	Leg.	Round.	Race.	Leg.	Round.	Race.
Glencairn	1 29 00	0 08 55	0 39 43	2 04 00		0 02 22	0 02 26
Momo	1 31 26	0 08 19	0 42 05	2 06 26	0 00 36		

While Glencairn was better handled than Momo throughout the race, the great feature of the day was the magnificent work of Mr. Duggan in the last two rounds. For more than two-thirds of the race there was a certainty of the mainsail tearing, with every possibility of the boat being fatally disabled. With this possibility hanging over him, Mr. Duggan still managed to keep the boat going, and when the disaster finally came he never lost heart, or at least his handling did not show it. The chances in the last round, the two boats starting even, were overwhelmingly in favor of Momo; apart from the actual damage to Glencairn's sail, and its demoralizing effect, there was no telling at what moment the whole sail might be ruined. In spite of all this, Glencairn was taken out to windward carefully but boldly, beating Momo as badly as when her sail was intact in the previous races. The tear, by actual measurement, was 3ft. 5in. long, extending from the second reef cringle down and across to the front reef board, thus leaving two large pieces that flapped until they fairly shook the boat.

The weather in the last three races was not exceptional or unduly heavy, nor in any way more than these boats or even the 15-footers should be capable of standing, but it was unusual in summer, and very different from what Mr. Crane had anticipated. He had expected quite light weather, and had planned accordingly, with a low freeboard, a lofty and narrow rig, and a very light centerboard. Whatever virtue these features may possess in light weather, they were certainly at a discount in a reefing breeze and sea beside Glencairn's deeper and larger hull, higher side, lower rig and weighted centerboard. That Momo was beaten in such weather is nothing surprising; but, further than this, we have serious doubts whether she could have beaten Glencairn under whole sail in a light but steady breeze. She had an advantage in light weather in a better mainsail than Glencairn, but as far as the differences in design go, there is no good reason to believe that those features which made Glencairn so much superior in heavy weather would have told against her in light weather.

As was the case last year, everything passed off without protests or disputes, the only break in the good feeling which prevailed on every hand being over the substitution of Mr. Dresser for Mr. Crane on Tuesday. It was perfectly well understood by the Canadians that Mr. Crane was not unable to sail, and that Mr. Dresser, who was not a member of the Momo and Al Anka party, but solely present as a spectator, was in no way superior to Mr. Crane as captain of the boat and in setting sails. The one thing which made him eligible was his extra weight of 70lbs. in a strong wind, and against this was his size and weight for sail setting, and his unfamiliarity with the lead of gear. While there is thus far nothing in the letter of rules to prohibit such a change of crew during the races, the feeling was very strong on the part of the Canadians that such a change of live ballast solely to suit the weather was a violation of that spirit of the rules which they have observed rigorously in both contests, and if passed unnoticed it could not fail to establish a very bad precedent.

As the rules now are, men of medium size and weight are practically barred from the 20ft. class; it is purely a question of live ballast, and the heaviest men who are not actual lubbers in a boat are chosen for the crews. Bad as this is, the case will be still worse if the right be recognized to shift crews according to the weather. In this case the man who would win must have at hand two heavy men and two light men, to be shipped according to the weather at the start.

Quite a number of members of the Seawanhaka C. Y. C. were present during the races: Vice-Com. S. V. R. Cruger and Mrs. Cruger, Mr. and Mrs. W. C. Kerr, Mr. and Mrs. H. K. Sturdee, Mr. and Mrs. J. Adams, Mr. and Mrs. Dresser, Messrs. C. A. Sherman, Sherman Hoyt, A. W. Rutherford, C. W. Wetmore, and others. Mr. H. C. McLeod, of Halifax, formerly of Lake Minnetonka, was also present. Every possible courtesy was extended by the Royal St. Lawrence Y. C. and by the people of Dorval to the visitors.

On Wednesday night the Forest and Stream Club gave an outdoor festival—a *fête de nuit*—in honor of the guests, which was very largely attended. On Thursday night Com. James Ross gave a dinner at the St. James Hotel, in Montreal, to Mr. Duggan and the visitors.

Momo has been shipped to a small lake in the Adirondacks, where Mr. Durkee, one of her owners, will use her.

Western Yachts.

AT MINNETONKA.

CHICAGO, Ill., Aug. 20.—Times have been lively as usual in yachting circles this season on Minnetonka waters, and the Minnesota yachtsmen have treated each other to a number of surprises. The crack sloop of last year, Tartar of the double stern, appears this season rigged as a cat, and was so sailed in the competitions for the Interlake regatta, Minnetonka against White Bear. Kossak, a Clapham model, originally designed for a sloop, was found to perform better as a cat, and has been so sailed, though under that rig she is not without sundry vagaries of her own. Supremacy seems to lie between Tartar and Katrina. In sloops, Wizard is chosen over Breeze to sail in the Interlake regatta. There has been some talk of fitting Breeze as a cat, but nothing appears to give color to the rumor.

In the first test races Tartar and Akela exchanged courtesies the first two days. The actual time for the first day was as follows, over a course of 6½ knots: Akela 1:13:45, Tartar 1:11:56, Aurelia 1:11:30. Tartar and Aurelia get 19 seconds from Akela, and Tartar beat Akela 2m. 8s., Aurelia beat Tartar 26s., and Aurelia beat Akela 2m 34s. It was a surprising result.

On the second day the time was:

	Start.	Finish.	Time.	T. A. C	Corrected Time.
Tartar	3 55 20	5 10 12	1 14 52	0 07	1 14 45
Akela	3 56 50	5 09 30	1 13 25	0 00	1 13 25
Aurelia	3 57 11	5 11 20	1 14 09	0 07	1 14 02

On Aug. 19 Tartar won everything in the three races sailed, the time being as follows:

FIRST RACE.

	Start.	Finish.	Elapsed.	Corrected.
Tartar	3 20 14	4 00 31	0 40 17	0 40 10
Katrina	3 20 18	4 02 32	0 42 14	0 41 41
Kossak		4 00 00		

SECOND RACE.

Tartar	4 08 17	4 48 36	0 40 19	0 40 12
Katrina	4 08 10	4 51 57	0 43 17	0 43 14
Kossak	4 08 58	4 50 37	0 41 39	0 41 39

THIRD RACE.

Tartar	4 58 14	5 28 04	0 39 50	0 39 43
Katrina	4 58 15	5 40 09	0 41 54	0 41 21
Kossak	4 58 30	.. .. ..	.. .. ..	.. .. ..

On Aug. 14 the entire Minnetonka mixed fleet turned out, some fourteen boats being entered. A heavy squall came up and put an end to the sport, the judges' boat being obliged to put in for shelter, and only two of the fourteen boats finishing—Pyxie, 2:15:55, and Katrina, untimed. Several of the boats were knocked down, and the crews of more than one were rescued only after perilous experiences. Pyxie was magnificently handled. On White Bear Lake, the same day, the cup and pennant races were also interfered with by the heavy wind. Witch was capsized, and there was much damage done to rigging in other boats. The winners were: Akela in the 23-footers, Aurelia in the cats, and Siren in the sloops of 21ft. Summary as below:

SECOND CLASS SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Siren, Smith	3 15 00	4 59 38	1 44 38	1 29 51
Falcon, Van Vleck	3 15 00	Did not finish.		

SPECIAL CLASS.

Majove, Sanders	3 20 00	Did not finish.		
Croppie, Lyon	3 20 00	Did not finish.		
Crappie, Lyon	3 20 00	5 00 56	1 40 56	1 23 15

CATBOATS.

Pastime, Smith	3 25 00	Did not finish.		
Alfrida, Ordway	3 25 00	Did not finish.		
Aurelia, Welch	3 25 00	4 43 11	1 18 11	1 08 34
My Girl, Ramaley	3 25 00	5 04 22	1 39 22	1 28 43

FIRST CLASS SLOOPS.

Akele, Griggs	3 30 00	4 44 32	1 14 42	1 06 30
Tartar, Mead	3 30 00	4 51 15	1 21 15	1 12 50

GREEN LAKE, WIS.

An interesting interlake trial of boats was sailed at Green Lake, Wis, Aug. 7, yachts being entered from Lakes Winnebago, Delavan, Oconomowoc and Green Lake. The course was 12 miles, and the regatta was won by Elk, of Oshkosh, which will take the cup to Winnebago, where it will be sailed for again next August.

In the race for the Commodore's cup, Green Lake, Aug. 14, Tzin, sloop, won after a closely contested race with Hypatia and B. & F., the actual time 2.19.04. Tzin needs but one more win to own this cup permanently. She lost to B. & F. in the race of Aug. 9.

DELAVAN LAKE, WISCONSIN.

Week after week passed at Delavan Lake this summer with a succession of calm Saturdays. On Aug. 14 it was possible to get a start, and four boats entered, all of Delavan Lake ownership, Euliana, Mary Gladys, Circe and Estelle. Interest centered between El Capitan, sailed by Com. Jones (the same boat which sailed fifth in Green Lake regatta), and Mary Gladys, sailed by the boy Ingersoll, a skipper youthful but full of nerve. Two races were sailed during the same day, Mary Gladys winning the first and El Capitan the second. Time in the morning race: Mary Gladys 1:21:50, Euliana 1:21:40, Circe 1:24:10. In the afternoon race: El Capitan 1:21:00, Mary Gladys 1:28:50, Circe 1:28:55.

FOX LAKE, ILLINOIS.

At Fox Lake, Ill., Aug. 14, the fifth regatta of the Fox Lake Y. C. was sailed, fourteen entries, four classes, with the following results over a course of 7.2 miles:

CLASS A

	Start.	Finish.	Elapsed.
Babe Jane	3 06 50	4 30 18	1 23 28
Alida	3 06 22	4 25 38	1 19 16
Vencedor, Jr.	3 05 20	4 25 25	1 20 05
Dolly C.	3 05 10	4 24 40	1 29 40
Vencent	3 05 45	4 32 25	1 26 40

CLASS B

Bellevue	3 16 20	4 45 30	1 29 10
Far Away	4 25 30	4 44 20	1 18 50
Starling	3 15 10	4 46 17	1 31 07
Harriette	3 15 20	4 48 25	1 33 05

CLASS C.

Sleepy Tom	3 20 50	4 46 02	1 25 12
Francis M.	3 20 42	4 51 00	1 30 18

CLASS D

Lorna Doone	3 25 20	4 57 49	1 32 20
Nellie G.	3 26 05	5 03 00	1 35 25
Never Know Me Now	3 25 42	4 52 40	1 26 57

Three additional races will be sailed on three successive Saturdays—commencing next Saturday—for three pennants, open to all sloops whose owners are members of the F. L. Y. C.

In Class B the tie between Bellevue and Far Away will be sailed off at 11 A. M. next Saturday from the East Side Hotel. This closes the regatta season as far as Class D is concerned. Never Know Me Now claims the cup until next year.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Beverly Y. C.

BOSTON, Aug. 17.—The 253d regatta of the Beverly Y. C., the fourth Corinthian, was sailed off club house Aug. 14.

Course for cruising and second classes, 11¼ miles; fourth class 8½, fifth class 5½.

Judges: F. Elliot Cabot and David Rice. Wind, a single reef sou'wester.

Robin Hood won in cruising class; Edith second by only 22s.

Thordis won in second class, as usual.

Elsa and Howard in fourth class cats sailed a close race, Elsa scoring one for the pennant, and Howard winning first prize by 1m. 5s. on allowance.

In fourth sloops, Mr. Eustis at last got Capelin to the line in good racing shape, and won handsomely.

Imp beat Hebe as usual in the small class.

CRUISING CLASS.

	Length.	Elapsed.	Corrected.
Robin Hood, A. H. Hardy	21.04	2 09 40	2 10 10
Edith, C. M. Baker	21.00	2 10 32	2 10 32
Mariposa, R. W Downer	21.00	2 13 32	2 13 32
Kantaka, A Winsor	21.00	2 15 38	2 15 38
Royal Blue, C. S. Dennison	21.00	2 17 02	2 17 02
Micaboo, J. R and C. L Harding	21.00	Broke down.	

SECOND CLASS.

Thordis, T. B. Wales	26.00	2 09 06	1 56 55
Anonyma, Vice-Com Dabney	24.09	2 16 18	2 02 36
May King, D. L. Whittemore	25.09	2 10 25	1 57 56
Kalama, David Rice		Withdrew.	

FOURTH CLASS—CATS.

Elsa, C. S. Sargent	19.00	2 01 19	1 41 31
Howard, H O. Miller	18.00	2 01 38	1 43 26
Cinch, H. Parker	18.01	2 05 55	1 47 51
Hope, J. H. Ellis	18.00	Broke down.	
Playmate, H. Sargent		Broke down.	

FOURTH CLASS—SLOOPS.

Capelin, W. E. C. Eustis	19.03	1 47 17	1 30 47
Opossum, R W. Emmons	19.00	1 49 55	1 33 07
Heiress, G. G. Amory	19.00	1 52 57	1 35 09
Blue Fish, J. Crane and A. S. Hardy	19.00	2 02 07	1 45 19
Grilse, W. E C. Eustis	19.00	Withdrew.	

FIFTH CLASS—CATS.

Imp, G. B Dabney	14.05	1 23 13	1 00 36
Hebe, J. Parkinson	15.00	1 25 47	1 10 51

TIMES OF THIRD CLASS BOATS, AUG. 3.

I recently discovered that I had made two stupid mistakes in figuring time of third class boats, Aug. 3. Arab won the race; she went over course in 1.25.41 actual, and 1.13.29 corrected time.

Ben My Chree made actual time 1 31.43; corrected 1.17.20. Arab won first, Perhaps second, Ben My Chree third.

W. LLOYD JEFFRIES.

American Y. C. Special Regatta.

MILTON POINT - LONG ISLAND SOUND.

Wednesday, Aug. 17

THE American Y. C. sailed a special regatta on Aug. 17 in a light and variable S.E. wind accompanied by a heavy rain squall. The times were:

SLOOPS—43FT. CLASS.

	Length.	Elapsed.	Corrected.
Eurybia, Chas. Pryer	40.02	2 45 17	2 45 17
Coya, F. J. Grace	36.00	Did not finish.	

SLOOPS—26FT. CLASS.

Acushla, H. W. Hanan	30.04	2 19 40	2 19 40
Vorant II, S. G. Tyson	34.00	2 26 58	2 26 58
Surprise, J. D. Baird	34.68	Did not finish.	

OPEN SLOOPS—25FT. CLASS.

Houri, E B. Hart, Jr	21.99	2 31 16	2 31 16
Keneu, M. Clark	19.46	2 27 00	3 21 52

CABIN CATS—30FT. CLASS.

Onaway, S. C. Pirie	26.25	2 44 04	2 40 14
Kit, F. J. Dunne	20.18	2 25 21	2 25 21

CABIN CATS—25FT CLASS.

Presto, M. E Hatfield	23.48	3 27 35	3 27 35
Harrietta, Robert Jacobs	21.90	Did not finish.	

OPEN CATS—25FT. CLASS.

P. K. Pigeon, Deady & Harrington	20.92	3 32 03	3 30 52
Punch, H. B. Clark	20.50	Disabled.	
Zelica, H. A. Sherman	20.99	3 38 02	3 55 36
Adele, W. Goetschius		Did not finish.	
Anglesea, L. N. Spence	21.53	Did not finish.	

OPEN CATS—20FT. CLASS.

Gosbird, R. H. Nevins	18.20	4 03 58	4 00 13
Irvin H, Ed Cromwell	17.00	Did not finish.	
Minnetonka, A. B. Allee	19.85	3 41 17	3 41 17
Ione, C. Bird	19.68	3 45 03	3 46 53

OPEN SLOOPS—15FT. CLASS.

Glance, A. W. W. Marshall	15.00	4 00 40	4 00 40
Mist, Dr. Wolf	15.00	3 53 12	3 53 12
Yola, C. H. Mallory	15.00	3 30 21	3 30 21

YAWLS—20FT CLASS.

Zahrer, W. H. Downing	19.66	Did not finish.	
Alice, George Fry	19.66	3 43 12	3 43 12

OPEN CATS—15FT. CLASS

Skip, Oliver Adams	14.00	Did not finish.	
Cora, T. J S. Flint	12.50	Did not finish.	

The winners were: Eurybia, Acushla, Keneu, Kit, Presto, Minnetonka, Yola and Alice. In the 25ft. open cat class P. K Pidgeon is protested by Zelica. Decision reserved.

The regatta committee included Stuyvesant Wainwright, H. de B. Parsons and Thomas Dimond.

Interlake Regatta.

DARTFORD, Wis., Aug. 10.—I take pleasure in inclosing herewith reports of our Interlake Challenge Cup races, and Commodore's Cup race.

Five clubs were entered for the Interlake, which was won easily by the Elk, Oshkosh Y. C., in two straight races. The cup will be sailed for next year at Oshkosh, on Lake Winnebago.

INTERLAKE CHALLENGE CUP—FIRST RACE.

Start 3:15:	Finish.	Elapsed.	Corrected.
Elk, Oshkosh Y. C.	5 25 53	2 10 53	2 10 13
Hypatia, Green Lake Y C.	5 20 15	2 15 15	2 13 40
Corana, Nodaway Y. C.	5 35 28	2 20 28	2 17 55
Watson, Oconomowoc Y. C.	5 37 14	2 22 14	2 22 14
El Capitan, Lake Delavan Y. C.	5 47 17	2 32 17	2 26 14

First of a series of two out of three races for the Green Lake Yacht Club challenge cup.

Judges: Com. Ferd W. Peck, Com. L. Frank Gates, Capt. J. J. Rardau, John R. Davis, Com. Geo. C. Eldredge.

SECOND RACE.

Start, 9:45:	Finish.	Elapsed.	Corrected.
Elk, Oshkosh Y. C.	12 16 30	2 31 30	2 30 50
Hypatia, Green Lake Y. C.	12 25 42	2 40 42	2 39 59
Corona, Nodaway Y. C	12 22 17	2 37 17	2 34 44
Watson, Oconomowoc Y. C.	12 28 07	2 43 07	2 43 07
El Capitan, Lake Delavan Y. C.	12 32 02	2 47 02	2 40 59

Winning of this second successive race entitled Elk to the Interlake challenge cup offered by the Green Lake Y. C.

Judges: J. J. Rardau, Com. F. W. Peck, Com. L. F. Gates, J. R. Davis, Com. G. C. Eldredge.

COMMODORE'S CUP.

Start, 3:55:	Finish.	Elapsed.	Corrected.
Hypatia, Gwynn Garnett	6 03 32	2 08 32	2 08 32
B. & F., H. R. McCullough	6 05 28	2 10 28	2 07 27
Tzin, W. E. Haseltine	6 11 50	2 16 50	2 12 29
Pleasant Point, J. W. Ross			

All boats except B. & F. carried reefed mainsails, but shook out before finish.

Green Lake Y. C.—Oakwood Cup Race.

DARTFORD, WIS.—GREEN LAKE, WIS.

Saturday, Aug. 14.

COURSES: Triangular; two laps. Distance: 10½ miles. Weather: Cloudy and warm. Wind: Stiff, freshening into a gale.

Start, 10:40:	Length.	Turn.	Finish.	Elapsed	Corrected.
Hypatia	23.00	11 46 25	1 01 03	2 20 03	2 20 03
Tzin	30.00	11 48 20	12 59 45	2 19 45	2 16 24
Pleasant Point					
Timbula		11 46 17			
B. & F.		11 49 45			
Tam O'Shanter					

Winners: First prize, Tzin; second prize, Hypatia.

On rounding second buoy on last lap boats were struck by a terrific squall, capsizing Pleasant Point and forcing Timbula and B. & F. to drop their sails. Tzin and Hypatia had great difficulty in reaching finish without going over. Tam O'Shanter dropped out on second round.

All started out well bunched with Hypatia to weather, giving her a lead which she retained until passed by Tzin on last leg of course.

First leg, beat to windward; second leg, free run; third leg, close-haul run.

B. & F. did some excellent work, but was unable to round second buoy owing to force of the wind.

Judges: H. M. Curtis, G. W. Murison, C. H. Canby.

Gilbert's Bar Y. C.

WAVELAND, Fla., Aug. 14.—The Gilbert's Bar Y. C. held their usual monthly regatta Saturday, July 31, in a light wind. In the first class only one boat sailed over the course; times as follows:

FIRST CLASS.

Joker	0 53 45

SECOND CLASS.

	Actual.	Corrected.
Swallow	0 52 00	0 52 00
Ilderin	0 55 23	0 54 21
Beatrice	0 55 55	0 51 09

Pewaukee.

PEWAUKEE, Wis., Aug. 14.—To-day's regatta was sailed in a heavy southwest wind. The starting signal was given at 4:00:25 P. M. and the yachtsmen were instructed to sail twice around the 4-mile triangular course. The start was made almost in the teeth of the gale, and the yachts in both classes were sent on their way by the same starting gun. The Martha, owned by A. H. Steinman, of Milwaukee, ran aground off Lakeside and bent her rudder, and although she entered the race she was unable to hold up to the wind and had to drop out. The yachts all went into the race with reefed canvas. The Kite lost several minutes at the start in hanging her jib and was the last to get away.

The A boats started with the Sirrocco, Lottie and Tempest in the lead; the Sirrocco had her peak halyards blown out and had to retire soon after she got away.

The B boats were led all the way around by the Aida, which made most of her gains by a series of tacks, along the south shore of the lake in the long beat to windward on each time around. The Lorraine was the last in her class to start, but she overhauled all the rest of the fleet before they reached the first stake, and from this point she steadily drew away from the rest of her class and finished 6m. ahead of the Tempest.

The first time around, the yachts finished as follows:

CLASS A.

	Corrected.
Lorraine, Schiller & Bauch	0 54 30
Lottie, L. D. Markwell	0 57 00
Tempest, C. F Hase	0 57 30
Idle Hour, R E. Giljohaun	1 01 30
Christine, Louis Aner	1 01 00

CLASS B.

Aida, A. C. Zinn	0 57 30
Sophia, W H. Meyers	1 02 15
Kite, Poppert & Peckler.	1 04 15

On the second time around, Lottie, Idle Hour, Sophia and Christine were unable to continue, and dropped out. The rest of the fleet continued around the course with little change in their positions, and finished as follows:

CLASS A.

	Corrected.
Loraine	1 46 18
Tempest	1 52 20

CLASS B.

Aida	1 53 30
Kite	2 01 35

Winners: Class A, Lorraine; Class B, Aida.

Judges and time-keepers, Geo. M. Conway, A. G. Miller, John C Spencer.

ERNEST E. WHITE.

BELLEVILLE, Aug. 16.—The new 20-footer built by Mr. A. Tisdale, of this city, had her trial trip on Saturday afternoon. She proved herself a fast boat in light weather and good on all points of sailing. She carries about 65yds. of canvas and stands up well under it. Mr. Wm. Carter made her sails and they fit nicely. Mr. Tisdale has never before attempted to build so large a boat, and his success in this one may lead to his building others.

R. S. B.

Canoeing.

AMERICAN CANOE ASSOCIATION.

Eighteenth Annual Meet.

GRINDSTONE ISLAND, ST. LAWRENCE RIVER.

Aug. 6-20, 1897.

THE big A. C. A. burgee never floated as high before as it does this season, for Com. MacKendrick has planted a big flagpole on the top of the hill, from which the red and white flag is visible for miles around. The strong and steady westerly winds of the whole two weeks have worked havoc with the flag, but it has been a pleasant sight to old A. C. A. men. The island and the bay change little from year to year, but the camp itself is located a little differently. As of old, many prefer the shade of the north side, though the main camp on the level at the foot of the hill facing Eel Bay, Squaw Point, too, is in its original location. The old wharf is still standing, but it has been deserted, and a new one has been built further along the shore, near where the Brockville camp was in 1884-5-6, and the mess shed last year and at present. In connection with this change, headquarters has been moved from its old location on Capitol Hill, and is now at the head of the new wharf. Here the officers' tents are arranged in a semicircle, the Commodore in the center, with the A. C. A. burgee flanked by the Canadian and American ensigns on tall poles in front. The camp store, mess tent and kitchen are close to headquarters. This arrangement is an improvement, in that the wharf and the public buildings—if tents may be called such—are no longer in the center of the men's camp, but between it and the ladies' camp, and thus accessible at all times from the latter.

The regular arrangements are practically the same as last year. The transportation has been excellent, with steamers to Clayton and Gananoque. The mess is again in the hands of Mr. McElveny, and has given general satisfaction; and Mr. H. C. Morse, who has been the camp site committee, has proved an able successor to Mr. Robertson. The work of the latter for several previous years is so well known to all who have attended the meets, that it is only necessary to say that Mr. Morse has filled his place.

The attendance at camp has been comparatively small, the register showing only 165 names of members; to what this is attributable it is difficult to say. Quite a number of the older men, like Edwards, have been in camp, and at one time during the meet there were five ex-commodores present—Edwards, Huntington, Dorland, Wilkin and Winne. For the first time in many years, if we remember, since 1884, the Vesper B. C., headed by Paul Butler, has been absent, and the racing has suffered accordingly. Of racing men there were, as the entry list shows, very few, in fact in the sailing Mr. Archbald had no dangerous competitor in a thoroughly modern canoe. In the paddling there was no new-comer such as Mr. Noack last year, and only four men started for the trophy. In the way of boats, the paddling brought out nothing new, the trophy being won in an old canoe; in the sailing division there was Mab of last year and three new canoes. One of these, Toreador, designed and built by L. E. Fry, of Clayton, for F. C. Moore, was similar in general appearance to Agawam and the curious Dimples, built on the Connecticut River some eight years ago, with a very full deck and much dead rise, a V section. She was rather heavy in construction and did nothing in the races. Another, We're Here, was designed by her owner, H. H. Smythe, and built by John McGowan, at Bay Ridge. A third, designed and built by J. H. Rushton, was owned by C. W. Lansing. None of these were in any way, model, construction, rig or fittings, worthy of a place beside Mab, and they did nothing in the racing. What races were not won by Mr. Archbald in Mab, went mostly to Mr. Douglas in Cricket, a six-year-old Ruggles canoe, or to Mr. Stewart in Az Iz, another Ruggles canoe some three or four years old. The new canoes were fitted with particularly large and clumsy attachments for the deck tillers and very high long sliding seats.

This year there were, strange to say, four war canoes at the meet, and two very good races were paddled in them. The old "Huff" of Rochester, with her "hand-painted" sails, was on hand, and also a very handsome new war canoe of Spanish cedar, designed and built by the Spalding-St. Lawrence Boat Co. for the Wawbewawa C. A.

The racing was decidedly inferior to that of last year, there were many events, but few starters and no really good competition; some of the minor races occasioned a good deal of amusement, but the sailing trophy race had six starters, three finishing; the paddling trophy brought out but four men, and the Dolphin trophy was merely thrown in as a part of the trophy race. There were a number of complaints on the part of the racing men against the management of the races, and on one occasion a general strike occurred. As Mr. Archbald was desirous of leaving for home on Aug. 19, the trophy race was posted, with little warning on the afternoon of Aug. 18, at which time a strong and puffy west wind was blowing, hitting hard across the top of the hill and down on Eel Bay. Mr. Archbald was ready at the appointed time, but the other racing men could not be found. After a search the committee discovered them all sitting in a group on top of the hill, laughing at the chase. They declared that the wind was too high and the conditions unfit for racing, and refused to start. Mr. Archbald got under way and sailed a short distance when his mainmast broke at the deck, in full sight of the strikers on the hilltop. Some one went down to the signal officer's tent and stole some code flags, and soon the warning "Dangerous winds expected, canoes should keep near shore," was flying from the big pole. The race was not sailed until the following day. The first war canoe race brought out a scratch crew of the old fellows, Edwards, Huntington and others. The final war canoe race was an international one, arranged by Capt. Louis L. Drake, of the Wawbewawa C. A. He picked a crew from the States, while Vice-Com. R. E. Burns picked a crew of Canadians. The Americans got away first and led by half a length at the half-mile flag, when the Canadians took the lead. Within 100ft. of the finish a hot spurt put the Americans over with a lead of hardly 10ft. The old plan of a course with a turn was revived for most of the paddling races, with some disqualifications in consequence. The results of the races were very poorly recorded on odd scraps of paper; no proper blanks or record books were provided, and the records are less complete than usual.

The races began on Aug. 14, Saturday, and continued up to Thursday night. During the whole meet the winds were very strong, mostly from the west. There was no rain to speak of, but the weather was unusually cool. Nearly all of the races were sailed in strong breezes, and there were some days when none cared to set afloat under sail. Mr. H. D. McVean, of the regatta committee, who proved so officient last year, was absent in Florida, so the management of the races devolved on Messrs. Sparrow and Schuyler, with Mr. Dunnell as clerk of the course.

Very good order was preserved in camp, and it was quite possible to sleep for a reasonable number of hours at night. There was none of the over-dressing that has been complained of at times at the meets; on the contrary, this year the fashion ran to sleeveless Jerseys and undershirts, with sunburned arms. While this was all right in the canoes and about camp, it was carried too far at meals and in the presence of ladies. It is not specially appetizing even for a man who is not squeamish to sit at table opposite to a pair of shoulders ornamented with raw red sores as the result of sunburn and chafing.

The principal business of the camp is the election of the commodore and secretary-treasurer, and this was done at the meeting of the executive committee on the evening of Aug. 18, Com. MacKendrick presiding, with Purser L. C. Woodworth, of the Central Division, acting as secretary. Sec'y-Treas. Blake was unable to be present during the meet through pressure of business. For some reason not apparent an attempt was made to induce the Atlantic Division to waive its turn to the officers and meet in favor of the Central Division, but this proposal met with no favor. Vice-Com. Murray was the first choice of the Atlantic Division, but he positively refused to accept the nomination. Mr. F. L. Dunnell was finally elected commodore for 1898, with Mr. C. V. Schuyler as secretary-treasurer. A recommendation was read from the Atlantic Division in favor of a camp next year about Eel Bay. A proposal was then considered from the monthly magazine *Recreation*, published in New York, to print the A. C. A. Year Book, furnishing one copy to each member and 300 copies to the Association, free of cost, and to send a free copy of the magazine to each member.

After the meeting adjourned, the result of the election was announced to the members at a so-called "general meeting" about the camp fire. As usual, this "meeting," which exists merely as a matter of custom and not of law, afforded an occasion for much pent-up eloquence, *apropos* of nothing in particular.

A letter was read from the Chamber of Commerce of Port Tampa, Fla., suggesting a winter camp of the Association. A letter was read from the paper *Shooting and Fishing*, requesting that it be named as an official organ of the Association. On motion of E. B. Edwards, seconded by W. U. Lawson, it was recommended to make a contract with *Recreation* on the above terms, with the option of renewal. A motion was made by R J. Wilkin, seconded by P. F. Hogan, that *Recreation* be named as the only official organ of the Association; it was not carried. A motion by R. J. Wilkin to renumber the members, after a long discussion was laid on the table. A recommendation was adopted to the effect that the Executive Committee provide special personal prizes each year to the winners of the two Association trophies. The usual formal votes of thanks to everybody were passed in the usual manner.

The division meet of the Eastern Division was held at Lawrence, Mass., on May 30, the following officers being elected: Vice-Com., L. S. Drake; Rear-Com., R. H. Hammond; Purser, F. J. Burrage; Ex-Com., Parry C. Wiggins, Butler Ames, A. W. Dodd. The meetings of the other divisions were held in camp. The Northern Division elected Vice-Com., D'Arcy Scott; Rear-Com., G. R. Howell; Purser, ———; Ex-Com. J. McD. Mowat. Com. J. N. MacKendrick was elected as successor to E. B. Edwards, the retiring member of the Board of Governors.

The Central Division elected Vice-Com., J. R. Stewart; Rear-Com., A. H. McNabb; Purser, L. C. Woodworth (re-elected); Ex-Com., H. C. Morse, F. G. Mather and T. H. Stryker.

The Atlantic Division elected Vice-Com., Thomas Hale, Jr.; Rear-Com., F. M. Pinkney; Purser, W. M. Carpenter; Ex-Com., F. C. Moore and Geo. P. Douglas.

The Northern Division at its annual meeting appointed a special committee for the consideration of the question of the amendment of the measurement rules, especially as they concern paddling canoes. The committee included Vice-Com. D'Arcy Scott, Rear-Com. D. H. McDougall, Vice-Com. R. E. Burns, E B. Edwards and W. T. Lawless.

The committee agreed on the following suggestions:

Paddling Regulations.—A canoe to compete in any paddling race of the A. C. A. must be sharp at both ends, with no counterstern or transom; and, except as hereinafter mentioned, must come within the prescribed limits, as follows: Maximum length, 16ft., not less than 30in. beam, not less than 12in. deep, and not less than 45lbs. weight. Slight discrepancies in weight may be made up temporarily to the extent of 3lbs. only.

Measurements.—The length shall be taken between perpendiculars at the fore side of stem and the aft side of stern. The beam shall be taken at the widest part, not including the heading. The depth shall be taken from the level of the gunwales amidships to the bottom of the canoe inside.

Canoes for Four Men.—Maximum length, 20ft.; minimum beam, 30in.; minimum depth, 12in.; minimum weight, 70lbs.

War Canoes.—Maximum length, 35ft.; maximum crew, fifteen men.

One important addition to the Association this year was the Buffalo C. C., a club heretofore unknown at the meets, but represented by ten members and displaying much enthusiasm.

A. C. A. Regatta Programme, 1897.

SAILING.

Event No. 1. Paddling and sailing combined, ½ mile alternately; total, 3 miles; time limit, 1½ hours. Start to be made under paddle.

P. S.—The same seat shall be used as in Event No. 3.

Event No. 2. Paddling, ½ mile, with turn.

Event No. 3. Sailing, 4½ miles; time limit, 2 hours.

Note.—Events Nos. 1, 2 and 3 are record races, under Rule 5 of Racing Regulations.

Event No. 4. Unlimited sailing, under Rule 1 of Sailing Regulations, 6 miles; time limit, 2½ hours. Starters in the trophy sailing race to be selected from this race under Rule 5 of Racing Regulations.

Event No. 5. Trophy sailing, 9 miles; time limit, 3½ hours. See Rule 5 of Racing Regulations.

Event No. 6. Dolphin sailing trophy, 7½ miles; time limit, 3 hours. The canoe winning first place in Event No. 5 will not be allowed to compete in this event.

Event No. 7. Club sailing, 4½ miles; time limit, 2 hours. First three members of any club to count; a club to be represented must enter at least three men. All men contesting must have become members of the club they represent prior to the first day of the 1897 meet

Event No. 8. Divisions sailing, the same as No. 7, except read divisions in place of club. The sliding seat or statinary deck seat shall not exceed in length the width of the canoe.

Event No. 9. Novice sailing, 3 miles; time limit, 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1896.

Event No. 10. Limited sailing, 3 miles; time limit, 1½ hours. Sail area limited to 100sq. ft., and any seat which projects beyond the gunwales prohibited.

Event No. 11. Unclassified sailing, 4½ miles; time limit, 2 hours. Open only to canoes without self-baling cockpits. No race unless three or more starters. Canoes must be outside the A. C. A. limit to compete in this event.

DIVISION RACES.

Event No. 12. Atlantic Division Cup.
Event No. 13. Central Division Cup.
Event No. 14. Eastern Division Cup.
Event No. 15. Northern Division Cup.

Note.—These events will only be h ld if not sailed at Division meets. These races will be sailed under the rules provided by each Division, which will be posted on the bulletin board, and will be called in the order published during the first week of camp.

Event No. 16. Open canoes, paddle ½ mile to windward with single blades, and return under sail

Event No. 17. Open canoes, sailing, 1½ miles.

PADDLING.

Event No. 18. Trophy paddling, 1 mile straightaway.

Event No. 19. Novice paddling, ½ mile with turn; open canoes, single blade. Open only to members who have never paddled a race outside their own club races.

Event No. 20. Paddling, ½ mile with turn; open canoes, single blades.

Event No. 21. Tandem club paddling, ½ mile with turn; open canoes, single blades.

Event No. 22. Deck canoes, single paddling, ½ mile with turn; double blades.

Event No. 23. Decked canoes, tandem paddling, ½ mile with turn; double blades.

Event No. 24. Four paddling, ½ mile with turn; single blades, open canoes.

Event No. 25. Upset paddling.

Event No. 26. Tail-end race, open canoes, single blades. Paddler to kneel in bow and paddle bow first with the wind.

Event No. 27. Ladies' single paddling, ¼ mile straightaway; open canoes.

Event No. 28. Ladies' tandem paddling, ¼ mile straightaway, open canoes, single blades.

Event No. 29. Mixed tandem paddling, ¼ mile straightaway, open canoes, single blades.

Event No. 30. Hurry-scurry, run, swim and paddle.

Event No. 31. Swimming, 100yds.

Event No. 32. Tournament.

All paddling races, except the trophy paddling, shall be limited to canoes not less than 30in. beam, and not less than 55lbs.

NOTES.

The committee reserve the right to call any of the less important races any time during the meet, when they may see fit.

All events in which less than two entries present themselves at the line will be canceled.

In events where less than three start, only one prize will be awarded.

The regatta committee have provided prizes for each and every race on the programme.

In case the committee are pressed for time, two or more races will be started at the same time whenever possible.

The committee reserve the right to add to the programme at the meet on twenty-four hours' notice, said notice to be posted on the bulletin board.

A. C. A. Races, 1897—List of Entries.

Proposed Change of Rules.

KINGSTON, Ont., Aug. 20.—*Editor Forest and Stream:* The inclosed report was handed to the regatta committee in camp at Grindstone Island, and will doubtless be considered by them and acted upon before the meeting of the executive committee in the fall. Kindly publish it, so that the members who were not in camp may be advised of the changes which the Northern Division has seen cause to ask for.

R. EASTON BURNS, Vice-Com. N. D. A. C. A.

At a meeting of the special committee appointed at the annual meeting of the Northern Division, the following suggestions as to amendments to the racing regulations, so far as they affect paddling canoes, were offered for the consideration of the regatta and executive committees.

PADDLING REGULATIONS.

A canoe to compete in any paddling race of the A. C. A. must be sharp at both ends, with no counterstern or transome end except as hereinafter mentioned, must come within the prescribed limits, as follows: Maximum length 16ft; not less than 30in. beam; not less than 12in. deep, and not less than 45lbs. weight. Slight discrepancies in weight may be made up temporarily to the extent of 3lbs. only.

MEASUREMENTS.

The length shall be taken between perpendiculars at the fore side of stem and the aft side of stern. The beam shall be taken at the widest part, not including the heading. The depth shall be taken from the level of the gunwales amidships to the bottom of the canoe inside.

CANOES FOR FOUR MEN.

Maximum length shall be 20ft.; minimum beam shall be 30in.; minimum depth shall be 12in.; minimum weight shall be 70lbs.

WAR CANOES.

Maximum length, 35ft.; maximum crew, fifteen men.

Note.—These regulations shall apply to the trophy as well as all other paddling races with the exception of the record paddling event, which shall be governed by the regulations governing the classification of sailing canoes.

Signed, E. B. EDWARDS,
W. T. LAWLESS,
D'ARCY SCOTT.
D. H. MCDOUGALL,
R. EASTON BURNS.

Rifle Range and Gallery.

Coatesville Defeats Lancaster.

LANCASTER, Pa., Aug. 19.—The last of a series of three matches between the Lancaster and Coatesville Rifle clubs was held at the Tell Hain rifle range, in this city, on Thursday. Both teams shot well and the Coatesville marksmen won by 39 points, the score being 1,800 to 1,761. The best individual score of the match was made by Kendig, of the Coatesville Club, who scored 195 points out of a possible 200. Obreiter, of Lancaster, and Gilbert, of Coatesville, were tied for second place, with 193 points each. In Obreiter's score were seven successive 10s.

The victory of Thursday made the Coatesville Club the winner of the series, they having won the first match by 47 points, while Lancaster took the second by 11 points.

In the individual totals of the three matches Obreiter stands first with 552 points out of a possible 600. Kendig comes second with 55 : Gordon third, 518; Ilyus fourth, 534; Carpenter fifth, 531; Weber sixth, 526; Darlington seventh, 525, and Gilbert eighth, 511.

The best record of tens was made by Dr. E. B. Ilyus, of Lancaster, who shot ten in succession in the first match.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 28.—EAU CLAIRE, Wis.—Elliott-Budd match for the Du Pont trophy.

Aug. 31-Sept. 2.—SUTTON, Neb.—Tournament of the Sutton Gun Club. $150 added money, as well as merchandise prizes. E. E. Hairgrove, Sec'y.

Sept. 1.—HAVERHILL, Mass.—Third shoot of the Massachusetts State Shooting Association, under the auspices of the Haverhill Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 6—MARION, N. J—Annual Labor Day tournament of the Endeavor Gun Club. A. R. Strader, Sec'y.

Sept. 7-10.—DETROIT, Mich.—Jack Parker's annual tournament.

Sept. 8-9.—TERRE HAUTE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Terre Haute Gun Club.

Sept. 11-12.——————, La —Tournament of the Many and Robeline Gun Clubs.

Sept 14-16 —Kansas City, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs

Sept. 14-16 —Des Moines, Ia.—Tournament of the Capital Gun Club. S. C. Quimby, Sec'y.

Sept. 15-16.—Portsmouth, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 15-16.—Parkersburg, W. Va.—Tournament of the Mountain State Gun Club. State and open events. Chas. E Morrison, Sec'y.

Sept. 21-23 —Mitchell, S. D.—Tournament of the W. J. Healey Hardware Co.

Sept. 22-24.—Watson's Park, Chicago, Ill.—Tournament at live birds and targets. Programmes ready about Sept. 1. Write to John Watson, Station R, Chicago.

Sept. 28-29.—Indianapolis, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 28-Oct. 1.—Passaic, N. J.—Annual tournament of the New Jersey State Sportsmen's Association at Clifton racetrack. First two days, targets; last two days, live birds. Main event on last day is at 25 live birds, $25 birds extra, handicap; $500 guaranteed to three high guns. W. H Huck, Sec'y. Rutherford, N. J.

Oct. 4-5.—Warwick, N. Y.—First annual tournament of the Warwick Gun Club. Open to all. Targets. $50 average money to four high guns in all programme events. John M Servin, Sec'y.

Oct. 6-8.—Newburgh, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—Greensburg, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Oct. 22-23.—Huntington, Ind.—Tournament of the Trap Shooters' League of Indiana, under the auspices of the Erie Gun Club.

Oct. 29-30 —Grand Rapids, Mich.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the tournament of the Ontario Rod and Gun Club League at Waterloo, Ont., Aug. 26-27, was received too late for us to make any mention of it that would reach shooters in Canada before the close of the shoot. The programme is quite an interesting one, and we read it through carefully. We noted that A. S. A rules were to govern all points, with the exception that the rise for all guns would be 18yds. The list of championship and guaranteed purse events is a long one. The part of the programme that interested us most was the "explanatory" article, which contained the following: "Before placing the following programme in your hands for perusal, we have devoted a good deal of time and considerable expense to consult as many as possible of our local sportsmen, and especially members of the League, in regard to the division of prizes in the different events to be competed for. You will no doubt remember that Galt introduced the Rose system last year as an equitable arrangement for the division of prizes, but for some reason it did not materialize in popularity among the sporting fraternity as was expected. Before arranging the following programme we have consulted the majority of the local sports, and the result is, they all favor class and straight shooting. Our special aim is to give perfect satisfaction at the coming tournament, and we trust our efforts in that direction will be appreciated by all true lovers of the sport." It may be that we are a little thick-headed, but we must confess that we cannot quite understand the meaning of the phrase, "they all favor class and straight shooting." The Rose system is a system of dividing purses when it is "class shooting." In class shooting there are several ways of dividing purses: Rose system; the old and inequitable system; the Equitable system; Jack Rabbit system; Pumphrey system, and a lot of others. What "straight shooting" is we can't say, unless it means "high guns." That it can hardly do, however, for almost all purses each day are divided under the old system, the solitary exceptions being No. 2 on the first day, and Nos. 1 and 2 on the second day. No. 2 on the first day is described as "Jack Rabbit system, straight shooting, 50, 30, 20" No. 1 on the second day is described as "straight shooting; divided 50, 30, 20." No. 2 as "Jack Rabbit system; divided 50, 30, 20." No high guns there, unless in No. 1 on the second day.

A 4-handed match at live birds, 100 live birds per man, $200 a side was said to have been arranged to take place at Hollywood, N J., on Monday last, Aug 16, the contestants named being Edgar Murphy, Phil Daly, Jr., Dr. Gagnon and Fred Hoey. The following clipping, from the New York *Journal* of Aug. 17, is well worth running, in view of the fact that none of the four mentioned was on hand to take part in this match: "Phil Daly, Jr., had barely grassed his last bird in the grand national handicap at Hollywood when the four contestants arranged to shoot another match under the same conditions, with the exception that each marksman was to wager $200 Edgar Gibbs Murphy, the tallest trap shooter of them all, Fred Hoey, Dr. Gagnon, the portly Chicagoan, and Phil Daly, the winner, entered into the agreement and selected yesterday afternoon as the time for the contest The grand national handicap furnished some of the most exciting trap-shooting ever seen at Hollywood, and there was much interest in the match set for yesterday. By noon time the man who furnishes the birds was on hand with 400 vigorous flyers, and the traps were put in shape for hard work. The usual army of small boys, who run after dead birds and supply the traps with fresh ones, was present, and Dandy, the retriever, was also in readiness for business. Referee Von Lengerke lent his judicial presence, and a number of those who speculate on trap-shooting events made their appearance. All that was necessary to make the trap-shooting contest a success was the presence of the shooters. But they failed to come, and frequent bicycle messengers were unable to get any trace of them. After waiting till well on to 4 o'clock, the pigeon furnisher gathered up his birds and departed, the small boys dispersed, and the spectators wandered away. And all are struggling to unravel the deep, dark mystery of the sudden disappearance of Edgar Gibbs Murphy, tall, broad-shouldered, light complexioned. Phil Daly, Jr, medium height, fair complexion, close-fitting shooting cap. Dr. George C. Gagnon, of Chicago, short, stout, dark complexion, light Fedora hat. Frederick Hoey, tall, light complexion, court-plaster on right cheek. Reasonable reward for information as to their whereabouts."

When the programme for the coming State shoot of New Jersey, Sept 28-Oct 1, is issued, it will be found to be lacking a certain portion that is always of interest to resident shooters, viz., a full list of merchandise prizes. It has been found impossible to make up a full list of these prizes without unduly delaying the publication of the programme. Lists of the prizes will, however, be printed in the sportsmen's papers as far as possible, and leaflets containing these lists may be had, on or about Sept. 15, from Secretary W. H. Huck, Rutherford, N. J The tournament will be managed by Elmer Shaner, who will be assisted by an able corps of assistants. The accommodations at Clifton race track, where the shoot will be held, are really very good indeed; and the spot itself, which is close to Passaic, N. J, is easy of access, being less than an hour from New York city. In addition to the merchandise prizes, there will be two trophies for residents of the State to compete for. At targets there will be an individual championship trophy, and a trophy for the 3-men team championship. At live birds there will be the same championships to be contested for, the trophies being those handed over to the new association—the New Jersey State Sportsmen's Association—by the old association, which was known as the New Jersey State Association for the Protection of Fish and Game. The individual championship medal for live birds is held by W. Fred Quimby; the team trophy by the Jersey City Heights Gun Club, an organization that used to hold its shoots at Marion, N. J. New Jersey is full of shooters, particularly of live bird shooters, so that we can safely say that this tournament will be well attended. The added money in the open target events ought to attract lots of shooters from the adjacent States, New York, Pennsylvania, and from New England.

The big live-bird event on the last day of the Jersey State shoot will have plenty of entries. The conditions are similar to those of the Grand American Handicap, save that only $500 is guaranteed to the three high guns. The Interstate Association, we believe, began by guaranteeing only $500, so we can confidently look for $1,000 guaranteed at the Jersey State shoot in '98. All surplus over and above $500 will be added, but such surplus will go to certain high guns other than the "three high guns," the proportions being regulated as is the case with the surplus in the Grand American Handicap. There is another change, however; in case of more than fifty entries—that is, over a total purse of $1,250—will go to swell the purse for the "three high guns." For instance, suppose there should be sixty entries, $250 would be added to the $500 guaranteed, making first money $375; second $:25, and third $150. The next nine high guns would divide in fitting proportions the sum of $750. The stake should be worth shooting for, as an entry list of at least fifty ought to be a certainty.

The scene for holding the Grand American Handicap of 1898 has not yet been decided upon. The dates, however, will probably be the same as last year, that is, the last week in March.

The trap columns of the *American Field* last week afforded a good example of the policy pursued by some publications, weekly and daily: "If you haven't any news, make some." Under the head of "Shooting Around New York," or some such title, occurs the following: "Edward Banks, who has been spending his vacation with Neaf Apgar at Frenchtown, N. J., returned home in time to take part in the Brooklyn Gun Club's weekly shoot at Union Course on last Saturday afternoon During the afternoon he shot several target races with Dr. Littlefield and won them all." The item is true in every particular save one or two, viz.: We have not had a vacation so far, but hope to take one in a few days. Also, Neaf Apgar is located at the Pine Point Club Hotel, Orange Lake, near Newburgh, N. Y., not at Frenchtown, N. J. Likewise, Dr. Littlefield did not lose every match he shot with the said party. The whole secret of the matter is that the item was clipped bodily from the Brooklyn, N. Y., Sunday *Eagle* of Aug. 15, a paper that does much to boom trap-shooting in this section, but which is unfortunately hardly particular enough about the matter it prints. For instance, in one of its issues last week, it reproduced in full one of the recent club shoots of the Garden City Gun Club, of Chicago, locating it in Garden City, L. I., a suburb of Greater New York.

W. H. Sanders, of New York city, was one of the contestants for the gold watch, donated by the Brooklyn Gun Club for competition on Tuesday last, Aug. 17. Mr. Sanders is a good live-bird shot, but the bluerocks and the magautrap were an enigma to him until late in the day, when he caught on in good shape, and went home satisfied that the next time he tried he would come pretty near breaking them all. It is really curious to see how hard it seems for a good live-bird shot to get on to targets properly. Of course practice is the main thing needed, but in many instances a gun that is too straight for the work is chiefly to blame.

Some of the party that took part in the team races at Orange Lake, N. Y., on Aug. 19, stopped the night at the Pine Point Club Hotel. Among the number was Capt. A. W. Money, who had a peculiar and painful experience the following morning. Just as he was getting up, some small bug began to investigate the drum of his right ear. Its curiosity caused the captain great pain, and Neaf Apgar had to come to the rescue with some sweet oil to drive the critter out It refused to be ousted, so perished where it was, being removed later in the day by a specialist, but at the expense of far more pain than it had originally caused.

An instance of the effects of a few experts among a few semi experts and novices can be noted in the scores made at the tournament of the Hazelwood Gun Club, of Anderson, Ind., which appear in another column. The scores were mailed us in detail, and from them we learned that after the fifth event on the programme, several of the weaker shots dropped out and shot "for birds only" in the succeeding sweeps. Previous to dropping out, however, they had contributed their share toward the expenses of the more expert shooters.

Harry Dain, of Peekskill, N. Y., made a mark in the team races shot at Orange Lake, N. Y., on Aug. 19. In the first he broke 24 out of 25; in the second he ran 25 straight. J Wood, of the Newburgh Gun Club broke 24 both times. On the previous day, Aug. 18, Schorty, who had made a mistake and got his dates mixed, showed up at the lake prepared to break targets and eat clams (the clambake was set for Aug. 19). Not to be beaten out of his fun, Schorty went for the targets and ran 50 straight in practice, breaking 22 out of the next 25.

The prospects for a good attendance at the annual Labor Day (Sept. 6) shoot of the Endeavor Gun Club, at Marion, N. J., are quite flattering. Two sets of traps will be in position, one being taken up with the expert rule handicap contest for a cup donated by the Austin Powder Co., of Cleveland, O. This cup is to be shot for under expert rules, one man up, 100 targets per man, with the John L. 147 Winston handicap to govern. The winner of the cup is subject to challenge every month, so that we ought to have plenty of fun around here this winter.

The party leaving New York city for the Montpelier, Vt., Interstate tournament by this evening's boat to Albany, N. Y., is made up as follows: Capt. A. W. Money, Ed Taylor, H. P. Collins, U. M. C. Thomas, M. A. Beers, J. J Hallowell, Ferd Van Dyke, J. H. Cameron and the trap editor of Forest and Stream. The party goes by way of Lake George and Lake Champlain to Burlington, Vt., thence by rail to Montpelier. Guy R. Clark, of Sandy Hill, N. Y., will join the party just before it arrives at Lake George.

We have heard but little of late from Portsmouth, N. H., but we understand that the club is making great preparations to give its guests on Sept. 15-16 a pleasant shoot and a good time generally. The programme will be about a reproduction of that which was so successfully carried out at Lewiston, Me., Aug. 4-5, under the auspices of the Androscoggin Gun Club. The programme on those dates was made up of 15-target events, all at known angles, $1.50 entrance.

G. W. Sergeant, of Joplin, Mo., the man who has made a name for himself by devising a system of arranging traps in such a way that a broken target causes little delay, has been doing some good shooting lately. On Aug 11, at Springfield, Mo., he won high average with 92 per cent., Dave Elliott being second with 88 per cent.

A list of the winners at the tournament of the Massachusetts State Trap-Shooting Association, held at Saugus, Mass., Aug. 19, on the grounds of the Lynn Fish and Game Association, shows that Dickey broke 120 targets out of 125 shot at!

In the report of the shoot at Inwood, W. Va, which appears elsewhere, the special event on Thursday, Aug. 19, was for a silver cup representing the championship of the "four counties." Mr. Spickler won this cup, as will be seen by the scores.

The Cleveland, O., Gun Club is stirring up interest in trap-shooting circles in Ohio by holding a five-men team championship contest on Thursday of this week. A silver medal will be given to each member of the winning team.

Programmes and all other information of the shoot to be held Oct. 29-30, by the Itasca Gun Club, of Grand Rapids, Mich., can be obtained in a few days by addressing Dr. W. P. Brown, secretary of the club.

On Wednesday last, Aug. 18, Chris Wright, of Paterson, N. J., won a heat for the silver tea service donated for open competition by the Boiling Springs Gun Club, of Rutherford, N. J. The wins now stand: Van Dyke two, Hyde and Wright one each. The next shoot will be held Sept. 1.

The Labor Day shoot of the Parker Gun Club, of Meriden Conn., will draw out shooters from the New England States. The club has issued a nice programme, and guarantees plenty of shooting and a pleasant time for those who attend the tournament.

Aug. 23. Edward Banks.

New Jersey State Sportsmen's Association.

Rutherford N J., Aug. 11.—*Editor Forest and Stream:* This Association has been formed for the purpose of preserving game and fish in the State of New Jersey as well as to encourage emulation among sportsmen at the trap.

Either clubs, as such, can join the Association, or an individual can become a member if elected by the executive committee on payment of a fee of $1

The annual tournament will be held this year at the Clifton Race Track, Passaic, N. J., on Sept. 28 and three following days

To be eligible to compete for State events at this tournament a shooter must be a member of the Association, either as a member of a club which belongs to the Association or as an individual member.

It is believed that there is a very wide field for work in this State in getting the laws for the preservation of fish and game more energetically enforced, and the Association intends to use every effort to have this done.

New Jersey sportsmen are asked to help by becoming members of the Association and inducing any of their friends to do the same.

W. H. Huck, Sec'y.

Ohio Border League.

Warren, O., Aug. 15.—Inclosed find full account and scores of our tournament, held on Thursday, Aug. 12. In addition, I would say that the shooting was as hard as it could possibly be. The traps were screwed up to the last notch, and the wind blew very hard directly across the traps from left to right. When such men as D A. Upson (who shot under the name of Williams) and F. H. Snow, both from Cleveland, O., can only score 88 and 86 per cent., respectively, the conditions are certainly hard.

Under the management of the Warren Gun Club, Thursday, was given one of the best Pennsylvania and Ohio Border League tournaments of the 1897 season. Local members were untiring in their efforts to make the meeting a success, and it was one in every particular. Though the attendance was hardly up to the customary number for Warren, yet it compared well with what the other League cities have drawn during the season.

In the League event, in which 5-men teams from Greenville, New Castle, Youngstown and Warren shot, New Castle was victorious by one point. However, Warren had already won at three of the five tournaments, giving them the first prize of a $100 Parker gun The home team also captured the high average trophy, a Winchester repeating shotgun. The second prize, a Remington hammerless gun, went to New Castle, and the third prize, a set of bluerock traps, to Greenville. The Meadville team, which has performed indifferently at the previous shoots, did not put in an appearance at Warren. In the team shoot the scores were:

New Castle: Alexander 18, Morgan 18, Hill 15, Pillow 23, Hart 19; total, 93.

Warren: Chryst 15, Schoonover 17, Jones 22, Nonneman 20, Ewalt 18; total, 92.

Youngstown: Andrews 14, Nutt 16, Rand 17, Osborn 17, Chapman 20; total, 84.

Greenville: Spier 8, Henry 18 Buck 19, C. A. M. 16, J. Alexander 19; total, 80.

Records for the entire series of five tournaments, out of a total of 625 targets shot at per team, are as follows: Warren 499, New Castle 472, Greenville 458, Youngstown 438, Meadville 320.

Following is the tabulated score for the entire tournament of Friday:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

George	9	12	9	14	10	14	15	Dennis	..	..	..	..	20	..	12	..
Elliott	6	10	12	17	12	15	13	J E B	..	..	..	..	..	7	8	..

Event No. 4 in the above was a handicap, in addition to the sweepstakes, for a Winchester shotgun. This was won by Jones, of Warren, who had an allowance of 2 targets, which he broke, and thereby made a straight score of 25. Events Nos. 6 and 7 were handicaps for the $100 Smith gun, which was won by Worthen, of Akron He had a handicap allowance of 11 targets, and was tied by Nonneman, handicap of 6, and J. Alexander, handicap of 7. In the shoot-off at 20 targets, Worthen was a winner by breaking the entire number.

It had been intended to have the annual meeting of the Border League here in the evening after the shoot, to elect officers and close up business for the year. However, as Meadville was unrepresented, and for some other reasons no session was held. The League, as at present constituted, will not be in existence next year, chiefly on account of the attitude of the Meadville shooters. It is probable that Warren, New Castle and Greenville will be the nucleus of a new League. The presence of Youngstown is desired, but the club there say it is difficult to muster a shooting team of late. Just what new clubs will be taken in to form the League of 1898 is not known. Cuyahoga Falls, Akron and Cleveland are under consideration.

The Warren team stand as winners for two years, and can easily furnish five men to shoot at the front in the fastest company.

R. W. Ewalt, Sec'y.

Around Pittsburg.

THE BUTLER SHOOT.

Pittsburg, Pa., Aug. 18.—The Pittsburg shooters were well represented to day at the tournament held by the Butler Gun Club, thirteen in all being present as a delegation from the Smoky City Greenville and other teams were also represented by able shooters. There were twelve events on the programme, all the purses being divided 40, 30, 20 and 10. Bessemer and W. S. King did some good shooting.

HAZELWOOD GUN CLUB.

Aug. 19.—Alex. King and John G. Messner did some excellent shooting to-day at the grounds of the Hazelwood Gun Club. King won the gold medal, emblematic of the western Pennsylvania sparrow championship, while Messner carried off the Hazelwood Club's sparrow championship gold medal with 25 straight. Bill McCrickart, the presiding genius at this club, had plenty of good and strong-flying sparrows on hand, and a full afternoon's sport was indulged in. Scores were as below, No. 2, being the western Pennsylvania championship contest, and No. 3 for the Hazelwood Club's medal

Smoke.

In a Colorado Wind.

Pueblo, Col., Aug. 12.—Below you will find scores of the last weekly shoot of the Pueble Gun Club. The weather was very warm and we had a stiff wind blowing, but nevertheless a few of the boys turned out to entertain a visitor, our genial friend, J. Hildreth, Jr., of the Winchester Repeating Arms Co. Below are the practice scores shot to-day, 25 targets per man, thrown from the magautrap:

First practice event:

C L Funk ..... 1111111111111111111110101—23
J M Killin ..... 1111111101111111001101011—20
J Hildreth, Jr ..... 1101111111101101111101101—20
A E Hein ..... 1111110110011111110011111—20
O J Ogg ..... 0111011111110111111101101—20

Second practice event:

C L Funk ..... 1111111111111111111111111—25
J M Killin ..... 1110111111111101111111111—23
J Hildreth, Jr ..... 1111010110111011111111111—21
A E Hein ..... 0011001111111110111110111—19
O J Ogg ..... 1111111011111111001101111—21

Third event, medal shoot:

C L Funk ..... 1111111111111110111110111—23
J M Killin ..... 1111111101011000101110111—18
J Hildreth, Jr ..... 1111101111011111100111111—21
A E Hein ..... 1110110011100101111111111—19
O J Ogg ..... 1111101100011111111111010—19

C. L. Funk won the medal. He also shot at 25 more, breaking 24 of them, making his total 95 breaks out of 100 shot at. Secretary.

Missoula Rod and Gun Club.

Missoula, Mont., Aug. 12.—Inclosed please find a few scores made at a practice shoot during the week. There will be few scores from now on for six weeks or so, as the shooting season opens the 15th inst., and birds are said to be plenty in the surrounding country, so our members will all be out hunting from now on, I presume.

ON LONG ISLAND.

BROOKLYN GUN CLUB.

Aug. 17.—The attendance this afternoon at the grounds of the Brooklyn Gun Club was small, but the quality was all right. The shooting, as a rule, was far better than is generally seen on these grounds, but everything was in favor of high scores, there being no wind and an excellent light.

Louis Piercy, the fifteen-year-old member of the Endeavor Gun Club of Jersey City, and his father, Geo. H Piercy, both shot very well in the prize shoot; and so, indeed, did George McAlpin, who made his first appearance at the target traps for many a long day. From the way the three above-named shooters were centering their targets it looked as if a decision as to the ownership of the valuable gold watch put up for competiton by the club's captain, John Wright, would not be arrived at by nightfall. At the end of the second shoot-off of the tie, McAlpin took George Piercy on one side and whispered something in his ear; Piercy nodded, and then McAlpin announced that he and G Piercy withdrew in favor of the lad—an announcement that was greeted with unstinted applause. Young Piercy really deserved his prize, as he had shot very well, breaking in the prize shoot a total of 55 out of 60, an average of 91.6 per cent. His father, G. H. Piercy, broke a total of 52 out of 57, or an average of 91 2 per cent. George McAlpin had a record of 91.5 per cent The figures below speak for themselves.

L Piercy (6)	1101111111111111111111111101111111111 —31
G S McAlpin (3)	1111111101111111111101111111111111 —31
G H Piercy (5)	1110111111010111011111111111111111110 —30
Capt Money (3)	1111111111111101111111111111111111 — 32
Dr Little (6)	0111011010111111111111111111111101111 —31
Asmus (7)	0111111100111011101110111111111011110 —29
Smith (3)*	1111011101111111110111011111111 — 26
Schilling (2)*	0111011111111101111111101111 —25
E Banks (2)*	1111100110101011110111111011011 —22
Dr Small (6)	1001111111110111111101111111110010101 —28
W M Sanders (7)	0011101010011110000011111011111100000 —20

* Did not shoot their allowances.

The ties were shot off at 10 targets, with proportionate allowances, no one, of course, being allowed to score more than a highest possible, viz.: 10 points:

	First Tie.	Second Tie.
L Piercy (2)	1111111111 0—11	1110111011111 10
McAlpin (1)	1111111101 —10	11111111111 —11
G Piercy (1)	11111111111 —11	11111111111 —11
Money (1)	11011101101 — 8	.....
Small (2)	1110101011111— 9	.....

As stated above, McAlpin and G. Piercy withdrew in favor of the younger Piercy, the fifteen-year-old Jersey boy winning the handsome watch. Young Piercy used W-A, McAlpin used Schultze, and George Piercy shot E C., we believe.

Several sweeps were also shot, but we have no records of the scores. We remember, however, that George McAlpin shot away up all the time, seldom losing a target. EDWARD BANKS.

NEW UTRECHT GUN CLUB.

Aug. 21.—The semi-monthly target shoot of the New Utrecht Gun Club at Dyker Meadow this afternoon was poorly attended. W. H. Thompson won in Class A; Dr. O'Brien in Class B. Scores were:

Club shoot, 25 targets, unknown angles:

W H Thompson (A)	0111111100111101101111011 19
Dr Littlefield (A)	1101100000001101110101111—14
Dr O'Brien (B)	1000001010110110010111110—12
F Dillin*	0010100001001110011011101—11

* Guest.

In a match at 25 targets, Thompson defeated Littlefield by 24 to 18.
G. E. POOL, Sec'y.

The Inwood Tournament.

A FEATURE of the Inwood fair, which was held at Inwood, a small station on the Cumberland Valley R R., about six miles from Martinsburg, W. Va., was a trap-shooting tournament. This shoot was under the management of the Martinsburg Shooting Association, and was run by Harry Little, Chas. Weaver and H L. Smith, of that Association, who did all in their power to make the tournament an enjoyable event.

The main attraction the first day was a special event of 25 targets for a can of W-A Smokeless powder, which was won by H. L Smith, whose score was 23

J. P. Haddox and Harry Little were high averages of 78^6_7 and 74^2_7, respectively, the first day.

Wednesday, Aug. 18.

I fear the annual shoot in connection with the Morgan's Grove Fair at Shepherdstown, W. Va., will not be given. It appears that no one cares to take hold of it. E. C. DRAWBAUGH.

Team Race at Yonkers, N. Y.

YONKERS, N. Y., Aug. 14.—The South Ferry Gun Club held its monthly outing at Silver Spring Park The attendance was large, owing to the previously arranged team race between the South Ferry and the Silver Spring gun clubs. As the scores given below will show, the South Ferry team easily carried off the honors, the good shooting of the veteran Tom Mack—the idol of the South Ferry club—being one of the features of the match. Chick Bremmer was high man on the Silver Spring team. The return match will be shot on Labor Day, Sept. 6. Scores of to day's race were as follows, Joe Noonan acting referee:

South Ferry Gun Club.

T Mack	1111100111111111111111111—23

IN NEW JERSEY.

BOILING SPRINGS GUN CLUB.

Aug. 18.—The fourth contest for the silver tea service donated by the club, was held to-day on the Boiling Springs Club's grounds at Rutherford In the shoot for the service, 50 targets, handicap allowances, Wright, Hyde and Hexamer each scored 50. They shot off the tie at 25 targets with proportionate allowances. Wright broke 25 out 27, Hyde and Hexamer 25 out of 28. They then shot off at 15 targets, all scratch; Wright and Hyde tied on 13 each, Hexamer losing 4 It took two more series of 15 targets each to decide the race, Wright and Hyde each breaking 14 out of 15 in the third shoot off; but in the fourth shoot off Wright again broke 14, but Hyde got only 12. Thus the win went to Wright, who broke altogether 116 out of 128, an average of 90.6 Scores follow:

AT ELKWOOD PARK

Aug. 20.—Dr. Gagnon won the Blieman cup at Elkwood to-day with a score of 23 out of 25 from the 25yds mark There were six other entries, viz: R A Welch and L. Finletter, both members of the Riverton Gun Club; Edgar Murphy and Fred Hoey, of Hollywood; Bland Ballard, of the Kentucky Gun Club, Louisville, Ky., and Phil Daly, Jr, of Long Branch. The tie for second and third moneys was shot off at 5 birds Welch, Ballard and Daly dividing on 5 straight. Hoey withdrew in the 23d round, having lost 6 birds.

The conditions were 25 live birds, $25, handicaps ranging from 25 to 30yds., 50yds. boundary; cup and 40 per cent. to the winner, 30 per cent to second and 20 per cent. to third.

A GOOD AFTERNOON AT HACKENSACK.

Aug. 21.—The Bergen County Gun Club announced quite a field day for the above date. The main features on the programme were the E. C. cup shoot and the 10-men team race between the home club and the Endeavor Gun Club of Jersey City. Notwithstanding these attractions, the attendance was comparatively small—particularly of the members of the Endeavor Gun Club. This is somewhat unusual, for the club members generally support the teams representing it by showing up in goodly numbers. Six men was all it could muster, although Uncle Billy Hughes might be called a seventh, as he was on the grounds, but had no gun Al Heritage was present and held up his end well, but, as he put it afterward: "When it comes to feathers, I'm right there These things I never could hit properly Wait until the last two days of the Jersey State shoot at Clifton racetrack." The result of the team race was a win for the visitors by 6 targets.

The monthly shoot for the E C. cup, 50 targets, unknown angles, handicap allowance of extra targets to shoot at, brought out a field of seventeen shooters. The cup was won by Ed Taylor, the representative of Laflin & Rand; he broke 23 out of each 25, and needless to state, he used W-A powder. Noel Money, secretary of the E. C. Schultze combination, also shot up strongly with two 23s, but Taylor's handicap gave him a big advantage.

The afternoon was almost perfect for shooting targets, there being a bright sun and a good light. The targets were thrown far harder than is usual at these grounds, while the trapper boys quartered them sharply up and down the screen. The varying heights of the targets also added to the difficulty of locating them properly; some targets towered strongly, while others scooted over the reeds, never rising against the sky. Below are the scores in the principal events:

Ed Taylor (6)	1111011111111111101111111111111111111111111101111011—46
	10111w — 4—50

Al Heritage	0111111111100100101110101110011011111001011101010 —32
J A Banta	1111111110101101111100100100110100010010111010010 —31
Cruger	1100101110110001110100 0010001110000101100110011110 —24
Toplitz	1111000110010010011000100011010100000011101000101 —23
Aspinwall	0000010000101010010001010010000010000101110010001 —15

The above scores do not give all the handicaps, but where they are omitted the shooters had no chance to equal Taylor's score of 50. The handicap allowances were shot off in the team race between the Bergen County Gun Club and the Endeavor Gun Club, of Jersey City, so as to save time.

Neither club could put a full ten-men team in the field, vacations playing havoc with the attendance. As it was, six men from each club took part, the result being a win for the Endeavors by 6 targets, Louis Piercy making 24 and Carl von Lengerke 23 for the winners. Capt. Money with 22 was high for the home team. The scores as a rule ran low.

Endeavor Gun Club.

Louis Piercy	1101111111111111111111111—24

H D Warner	0011001111101111011110100—16—115

Several sweeps and practice events were also shot during the afternoon. Among the number was an event at 25 targets, expert rules. In this event Noel Money won first money with 22 breaks. In practice previously at this style of shooting, he broke 23 out of 25, making a total of 45 out of 50. And the targets were thrown hard, too.

EDWARD BANKS.

Hingham Gun Club.

HINGHAM, Mass , Aug. 14.—Below are the scores made to-day by members of the Hingham Gun Club in a 50-target handicap race, unknown angles. The handicaps were misses as breaks. Allison was easily high with 46 out of 50, which with his handicap allowance of 3, brought up his total to 49. Henderson from scratch was second with 43 out of 50. Scores were:

Allison (3)	11111111111111111101110111
	11111111111111111011110111—46+ 3 -49

Targets and Clams at Orange Lake, N. Y.

THERE is joy in Newburgh, N. Y., and its adjacent hamlet of Peekskill-on-the-Hudson. Another scalp has been added to the long string of such trophies possessed by the above-mentioned almost invincible combination. Seven New Yorkers (or thereabouts), accompanied by Captain J. A. H. Dressel, of the U. M. C. Company, who acted in the joint capacity of rooter and mascot, journeyed to Pine Point, Orange Lake, near Newburgh, N. Y , on Thursday, Aug. 19, and did its best to take into camp the enemy's talent. The New Yorkers thought it would be easy, but it wasn't Something was amiss, and the visitors lost the race by the narrow margin of two targets. The captain of the visiting team was wholly to blame for the fiasco; his men did nobly, but he failed to connect with 7 targets out of 25. That was what happened. The clams were not to blame either, for the bake was not opened until after the race had been shot.

Since Neaf Apgar has been installed as proprietor of the Pine Point Club Hotel, a good deal of target shooting has been done at this picturesque spot. A magautrap has been leased and the targets are thrown out over and into the lake. There are no "pick-ups." The background, chiefly water (because the shooting stand is about on a level with the top of the trap house), is perfect, and some capital scores have been made at Pine Point The stand, too, owing to the formation of the point on which the shooting is done, is small, only three men being able to shoot at the same time, and even then they have to stand very close together. This makes it very like shooting at targets thrown from a magautrap with the shooters grouped around No 3 score. In short, the shooting is very easy; but yet one has to watch very closely, or one of the curving right-quarterers will be shot over, or a short and sharp left-quarterer permitted to drop intact into the water of Orange Lake.

The excuse for the team race was a clam bake and general sweepstake programme of events. George Taggart engineered the preliminary work of the bake, finding out who would come and who wouldn't. The actual manual labor connected with the cooking of the clams, lobsters, chicken, fish, potatoes, green corn, etc., was attended to by an expert, whose name has totally escaped what is usually a fair sort of a memory. He lives somewhere around Newburgh anyway, and knows his business. When the first team race had been decided, and when the natives had rubbed it in again by winning a six-men team race by 10 targets, the bake was opened, and somewhere in the neighborhood of 100 guests sat down to break straights. Scores in these events were uniformly high. The Rose system was given a trial and was found to work capitally; experts, semi experts and novices, all were satisfied with the result of the divisions, something rather unusual, and there was no handicap. In one event at 20 clams, unknown angles, use of one fork only, "first money alone" went to Dave Brown, the popular president of the West Newburgh Gun and Rifle Association; his was the only straight in this event, and thus afforded a good example of the workings of the Rose system; had the division been under the old system of 40, 30, 20 and 10, Mr Brown, who is an expert, but not a paid man, would have gotten what we claim to be an inequitable proportion of the purse.

The day was just one of the made-to-order sort, and came as a great relief after the frequent showers which have characterized the summer season of 1897 up to date. The programme of amusements for the day was varied, too. Sweepstakes at targets were open to those who wanted to shoot, an average of between fifteen to twenty entries being maintained throughout the afternoon, for shooting did not commence until about 2 P. M. Quoit pitching contests were also well sustained, report saying that George Taggart was ahead at this game. After the bake, Mr. Stebbins, of Newburgh, gave an exhibition of his skill in riding horses without either saddle or bridle; his efforts in this line were warmly received by the entire crowd. Later in the evening he gave some recitations also that called forth applause. Altogether, it was a most thoroughly enjoyable day, and the initial clambake and target tournament at Pine Point was voted an unqualified success.

Below will be found the scores of the teams that met on this date:

Newburgh—Peekskill.

H P Dain	1111111111111111111111011—24
J Wood	1111111111101111111111111—24

E Banks	0011011111111010001111111—18—158

After the above defeat by 2 targets, the New York contingent made an effort to regain its lost laurels, shooting a six-men team race, Dickson having left and Huck's right cheek being too badly pounded to permit of his putting his gun to it again this afternoon. The result of the second attempt was even more disastrous than the first effort, the home team winning easily by 10 targets, as per score given below:

EDWARD BANKS.

At Little Rock.

LITTLE ROCK, Ark., Aug. 17.—Quite an interesting match was shot on the local club grounds to-day; it was the direct result of the State shoot, and some good-natured jollying on the part of the contestants. It took but very little talk before Dickinson and Thibault agreed to shoot 100 targets for the price of the birds. It will be remembered that Thibault made the best average at the State tournament, while Dickinson is generally conceded to be the best shot on the local ground. In fact, he had never been defeated at home in an individual match. It has been some time since any one has had the nerve to try conclusions with him.

The race was close and interesting from start to finish. Dickinson showed great form in the preliminary sweeps, scoring 29 out of 30. He started off very well, and at the end of the first 25 was 2 birds to the good, the score standing Dickinson 22, Thibault 20. In the second string Thibault evened up matters, scoring 23 to Dickinson's 21. The latter again took the lead by breaking 21 to Thibault's 20 in the third string of 25.

When Thibault lost his 3d target in his last string of 25 it was generally believed that Dickinson would win, as he is a strong finisher. But to-day he proved to be the opposite, as he lost 4 targets out of his last 7. In the meantime Thibault lost only one more, and finished his last string with 23, which landed him a winner by 2 breaks, the final score being 86 to 84

Woodson and Conner also shot 100 targets, their aggregate total to count against that of Dickinson and Thibault. Woodson scored 85 and Conner 79

Dr. S. P. Collins and Mr. C. W. Rix, of Hot Springs, were also present and took part in the sweeps. In all six men shooters were on hand, and a very pleasant afternoon was spent. Trap shooting locally has taken the lead of all other sports, not excepting the national game, even baseball.

The conditions were known traps, unknown angles, Sergeant system

Thibault	1110111111111010011101111111101111111101111111111111—43
	1011011101111001111111111111011111111111111111011111—43—86

PAUL R. LITZKE.

Maine State Championship.

WATERVILLE, Me., Aug. 19.—A total of forty-two entries were obtained to-day in the contest for the individual championship of the State of Maine at targets. Guy Randall, of Portland, was the winner, with 48 out of 50; Rich Hunnewell and Reid were tied for second and third with 46 each, Preble coming in fourth with 45. Scores were:

Randall 48, Hunnewell 46, Reid 46, Preble 45, Wyman 44, Greene 44, Wilkes 44, Doten 44, Ray 44, Williams 44, Corson 44, Dennis 43, Thayer 43, Libby 42, Batts 42, Thompson 42, Storey 42, Adams 41, Cobb 40, Maybury 40, Herbert 39, Rowe 38, Jones 38, Lord 38, Blake 38, Davidson 37, Webber 37, Shaw 37, C. Getchell 37, House 36, Hovey 35, Harrington 35, Barton 35, Greenwood 34, W. Getchell 31, Parsons 34, Combs 34, Merrill 32, W. Corson 32, Connor 31, Soule 26. MAINE.

Western Traps.

CHICAGO, Aug. 21.—On Sunday last a fierce and dangerous fire broke out in the woods back of Calumet Heights Club house, so that for some time the buildings and property were in danger. The members present worked hard for hours in checking the flames. The fire broke up most of the usual club proceedings. On the week previous the following scores were made by the few who met at the traps, a number of the members being absent hunting snipe and plover. Westcott won in Class A, Norcom in Class B, and Chamberlain in Class C:

Class A.

Westcott.....11111111011101011111111010—20

BOILED WIRES.

Lake City Gun Club, of Warsaw, Ind., opens its annual tournament Aug. 19. Among those in the first money are Fred Gilbert, H. F. Young, Chan Powers, M. Head and Rolla Heikes.

The East Side Gun Club, of Toledo, O., held its regular club shoot Aug. 16; the following scores being made at 25 birds: W. Jennings 21, John Specht 17, F. Birdsall 13, B. McClain 16, J. Arnds 10, Nute Gardner 16, Geo. Eiben 9, G. Herring 20.

Open sweep, 25 birds: W. Jennings 19, Geo. Folk 21, B. McClain 16, Nute Gardner 15, Geo. Eiben 14, H. Hess 21, G. Herring 18, J. Specht 16, F. King 15.

Sioux Falls Gun Club, of South Dakota, met Aug. 18 in its club contest, only three members competing. At 30 targets scores were: Morrison 11, Burgess 20, Hutchinson 25.

Vermilion Gun Club, of Tower, Minn., held its club shoot Aug. 17. Taylor and Swanson, previously tied for the medal, had another struggle, Taylor winning it with 14 out of 25. M. Cundy now owns the A Class badge, having won it five times, with 193 birds out of 225 total.

Virginia Gun Club, of Minnesota, at last week's club shoot made the following scores: M. E. Fanning 12, Durkee 15, Laing 18, Mars 10, Pratt 16, Brown 17, McNeil 15, G. H. Fanning 16, Oakman 15, Rinneart 16, Dr. Bates 16, Cuppernull 11.

Sweepstakes shoot of 20 singles, known angles, $5 entrance fee, first money only: M. E. Fanning 19, Laing 19, Barber 17. Fanning and Laing divided.

At the last regular monthly shoot of the Mt. Sterling Gun Club of Illinois, the following scores were made:

Fred Carks 23, William Breidenbend 21, Joe Estes, unknown angles and unknown trap, 21; William Wright, unknown angle, 17; H. Vandeventer 17, J. P. Nye 16, H. Davis 15, J. Breidenbend, unknown angle, 14; L. Avery 12 out of a possible 25. Fred Parks broke the club record by scoring 25 birds out of a possible 100.

At the weekly shoot of the Omaha Gun Club, Aug. 15, good scores ruled, Frank Parmelee going straight, as below:

Parmelee.....11111111111111111111—20

The second annual tournament of Fayette Gun Club, of Missouri, was held Aug. 17, the winners being as follows:

First event, 10 targets: Head 10, Eaton 9, Kelly, Woodson, Reeves, Tolson and Palmer 8.

Second event, 5 targets: Woodson, Reeves and Eaton 14; Kelly and Linn 13, Mason 12.

Third event, 20 targets: Head 20; Linn 19; Kelly and Mason 18.

Fourth event, 15 targets: Reeves and Palmer 14; Head 13; Tolson and Mason 12.

Fifth event, 20 targets: Kelly and Mason 19; Eaton 18, Woydson and Reeves 17.

Sixth event, 15 targets: Tolson 15; Eaton and Reeves 14; Mason, Linn, Palmer and Kelly 13.

Seventh event, 15 targets: Reeves 15; Kelly and Eaton 14; Mason 13.

Eighth event, 10 live birds: Palmer and Linn, 9; Head 8, Vivion 7.

Ninth event, 15 targets: Palmer, Eaton and Reeves, 14; Kelly and Woodson, 13; Tolson and Hobbs, 12.

Tenth event, 20 targets: Kelly 19, Palmer and Eaton, 18; Linn and Mason, 17.

Eleventh event, 15 targets: Linn 14, Kelly, Mason and Darby, 12.

Twelfth event, 25 targets: Palmer 24, J. D. Tolson 23, Woodson 22, Mason and Head, 21.

Thirteenth event, 15 targets: Mason and Palmer, 13; Woodson and Eaton, 11; Head and Kelly, 10.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Jack Parker's Annual.

ADVANCE sheets of the programme for Jack Parker's annual tournament, at Detroit, Mich., Sept. 7–10, have come to hand.

The schedule of events for Tuesday, Sept. 7, is as follows: Three 15 target events, $1.50; three 20-target events, $2; one 25-target event, $3; and the 2-men team championship event at 50 targets per man, $6 entrance for each team.

On Wednesday, Sept. 8, there is a similar list of events, but the 50-target event is for the Gillman & Barnes medal, valued at $150, for "Individual Expert International Championship," 21yds. rise, use of both barrels. The entrance fee is $1.50—the price of the targets.

The third and fourth days have similar programmes in all respects, save the 50-target races. On the third day, Sept. 9, the 50-target event is named the "King's Smokeless Handicap," allowance of extra targets to weaker shots. The first prize is a diamond watch charm. On the fourth day the 50-target event is also a handicap affair, but the handicaps are by distance only, 14 to 21yds. The prizes are valuable merchandise prizes, worth winning.

Under the head of "Rules and Conditions" are the following notes that will be of interest:

"Take Jefferson avenue through cars passing by Hotel Wayne direct to shooting grounds. Rose system of dividing purses will be used, four moneys in 15 birds and five in the others. The Gilman & Barnes medal has been won six times by six different persons and must be won three times in succession. The handicapping by distance and extra birds will be done by a committee on grounds. The shoot is open to all. Those desiring to enter for merchandise only, can do so by paying for their targets as stated; all ties on merchandise can be settled among the shooters themselves or shot off in succeeding event. Those entering in the sweepstakes are not eligible for merchandise, unless they fall below money place, provided the scores made by the merchandise shooters allow them to come in; thus a man making 11 in a 15-bird race is generally out of money, but would be in for a merchandise prize, provided 14, 13 and 12 was not made by merchandise shooters, which scores would shut out 11. Half a cent apiece will be deducted from all targets thrown and paid to ten high guns at the end of each day, and as I always throw about 30,000 targets, it will mean at least $150 for average. Only sweepstake shooters will be eligible for above average. A handsome diamond button for best average in all sweepstake events for four days. A handsome diamond button will be given to person making best average in all merchandise events for four days. Traps ready Monday, Sept. 6, 2 o'clock P. M. Ship shells care of Hodgson, Howard & Marks, 93 Woodward avenue, Detroit, Mich. Plenty Peters loaded shells, smokeless, semi-smokeless and black on grounds. Dinner served near grounds in first-class style. King's Smokeless trophy becomes property of winner. Messrs. F. Lindsley, Mr. King and Mr. Harry King, all of the King Powder Co., will be on the grounds and explain to everyone the merits of the King Powder Co.'s products. Mr. Thos. Keller, of Peters Cartridge Co., will also be present. The merchandise shooters will help swell the average money for the sweepstake shooters."

All communications in regard to this tournament should be addressed to John Parker, 465 Junction avenue, Detroit, Mich.

Pawtuxet Gun Club.

PAWTUXET, R. I., Aug. 7.—The second weekly shoot of the Pawtuxet Gun Club in the Hunters' Handicap prize series was decided to-day. There are eight of these contests, which will practically close the season for us. The present season has been very successful. Class A shoots at 25 targets, unknown angles, from an expert trap screwed up to throw 60yds. Class B shoots at known angles, but the targets are thrown only about 50yds. To-day's scores were:

Class A.

F I Greene.....1101101111111101111110010111 —19
S D Greene, Jr.....1111110111111001001001011 —17

SHELDON.

Bedford Rod and Gun Club.

BEDFORD, Ind., Aug. 17.—A target shoot was held to-day by members of the Bedford Rod and Gun Club. Among the events on the programme for the afternoon was a match at 50 targets, unknown angles, between Stipp and Sherwood. The match was won by Stipp, who started off with a run of 34 straight, finishing with 48 out of 50. Sherwood lost five targets.

Another match was the result of a challenge by Palmer for a medal held by Doyle. The conditions were 25 targets, unknown angles, handicap allowances of misses as breaks. Palmer was allowed 10 misses as breaks, while Doyle had an allowance of 12. Palmer won somewhat easily with a total, including his handicap allowance, of 24 to 21.

Some practice shoots were also indulged in, the scores being as follows:

No. 1, 25 targets, unknown angles: Doyle 17, Durham 14, Kelly 11, McDonald 7 out of 20.

No. 2, same conditions: Palmer 14, Durham 12, Kelly 11 out of 15.

Scores in the matches mentioned above were as follows:

Stipp vs. Sherwood;

Stipp.....1111111111111111111111111111111111101111111101111111—48
Sherwood.....1111111111110101101101111111111111111101111111111111—45

Challenge match for medal held by Doyle:

Palmer (10).....0101001111000101100111101—14+10—24

SEC'Y.

Cummings Felt Gladder than Gladfelter.

LANCASTER, Pa., Aug. 19.—W. Parke Cummings, of this city, and Geo. Gladfelter, of Columbia, Pa., shot a match to-day at Hambright's Three-Mile House. The conditions were 50 live birds, $50 a side. Cummings won by 40 to 36. The officials were: W. H. Fendrick and A. C. Krueger, judges; W. T. Hambright, puller; Brownie, the property of Charles Wagner, retrieved the birds. Scores were:

W P Cummings.....0202011012011121122100011—17

E. C. SMITH.

Tournament at Anderson, Ind.

ANDERSON, Ind., Aug. 11.—The Hazelwood Gun Club of this city concluded its annual tournament to-day, Jack Parker, of Detroit, acting as manager. Owing to a mistake in giving out dates, the attendance was not as large as was anticipated; still, we succeeded in shooting through the programme for the first day. The programme for the second day was called off, so as to give the boys a chance to shoot a few small races.

Below are the scores for Aug. 10, from which it will be seen that Charlie Young won first average, with Partington second and Forbes third:

Events:	1	2	3	4	5	6	7	8	9	10

Answers to Correspondents.

No notice taken of anonymous communications

J. L. K.—You will find some snipe on Fire Island Beach, Long Island. The good snipe grounds on the mainland are protected.

H. M., Cheyenne, Wyo.—If you will send us your address we will supply the *Brief* supplement, which contains the new Nebraska law forbidding bar shooting of ducks.

B., Omaha, Neb.—Koehler's Juliet (22,206), by Phil Bernard, out of Koehler's Juno, by Folko II. (11,847), out of Koko, by Bonhomme, out of Chartreuse. Phil Bernard by Celtic Rector (8,948), out of Celtic Linda, by Bernard, out of Thirza.

J. G. H., New York.—I heard someone say the other day that deer's meat has the best taste when it has just begun to decay. Please let me know if this is so. I can hardly believe it, but he insisted that he was right, and called the meat some French name which I have forgotten. Ans.—Tastes differ. Venison is nearer mutton than any other domestic meat, and practically the same rules apply to it with respect to its condition for use as food.

D. S., Prince's Bay, N. Y.—I have a hound fifteen months old. When six months old she had distemper quite bad, but apparently got over it all right in a short time, and seemed to be as well as ever. Four weeks ago I took her out for a run and she had a fit, and has had two or three since. Small sores seem to be breaking out on her body. What is best to give her? Ans. Treat for worms. Give forty drops of Fl. ext. of Cannalis indica three times a day. Keep dog quiet, allowing no exercise.

C. A. S., Sandusky, O.—What is the proper treatment for my dog, half setter and pointer? He is one year old. I have had him in the field several times, and he got what I call a fit. His eyes stared, he trembled, wheeled round in a circle and fell; he foamed at the mouth and kicked his legs. He was weak and tired. At present he keeps hacking most of the time and throws up a mucus substance. His nostrils seem to run, for he keeps licking them. His eyes are red; he refuses food most of the time. I feed twice a day, light, and he is getting thin. I gave him two doses of araca nut powder, but saw no worms. Ans.—Give following pills three times a day:

R. Ext. cannalis indica.....gr. i.
Morph. sulph.....gr. 1/12
Strych. sulph.....gr. 1/60
Acid arsenous.....gr. 1/40

Each pill to contain the above. Keep dog as quiet as possible. Feed well; give a little raw meat daily.

PUBLISHERS' DEPARTMENT.

For Summer Rest.

VACATION DAYS IN THE MOUNTAINS.

ALMOST from time immemorial the mountain section of Virginia has been famous for its health-giving and strength-restoring treasures. The numerous medicinal springs that plenteously dot the territory were resorted to by the Indians long before the white man came, and in the legends of the aborigines they are regarded as holy places. Among the most noted springs of this character are those located in the great Warm Springs Valley, and chief of these are the Virginia Hot Springs, the Warm Sulphur Springs and the Healing Springs, at an elevation of 2,500ft and environed by mountains rising 1,500ft. higher, which make the air delightful in the shade and the nights cool even in the warmest weather. These resorts are as popular as they are valuable in restoring health and strength, and are patronized for their social advantages as well as for their salubrious surroundings. They, as well as Greenbrier White Sulphur, Old Sweet, Sweet Chalybeate, Red Sulphur, Salt Sulphur, Rockbridge Alum, Cold Sulphur, Natural Bridge, The Alleghany, Nimrod Hall, and over three hundred homes for summer boarders, are reached by the Chesapeake & Ohio Railway, which operates a perfect train service between New York, Philadelphia, Baltimore, Washington, Old Point Comfort, Cincinnati, Louisville, St. Louis and Chicago. For further particulars and descriptive matter address H. W. Fuller, General Passenger Agent, Washington, D. C.—*Adv.*

Tour to Gettysburg, Luray and Washington.

THE Pennsylvania R. R. Co. has arranged for a most delightful seven-day tour to the Gettysburg Battlefield, Caverns of Luray, and Washington, to leave New York Sept. 9. It will be in charge of one of the company's tourist agents, and will cover an intensely interesting section of the upper South. An experienced chaperon, whose especial charge will be unescorted ladies, will accompany the trip throughout. Round-trip rate, including all necessary expenses during the entire time absent, $27 from New York, $26 from Trenton, and $24 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents, Tourist Agent, 1196 Broadway, New York, or address Geo. W. Boyd, Ass't Gen'l Pass. Agent, Broad Street Station, Philadelphia.—*Adv.*

Good Chicken Shooting

will be found at numerous points along the Northern Pacific Railway this fall, notwithstanding the heavy summer rains. Present advices are to the effect that in the vicinity of Fergus Falls, Perham, Detroit, Sauk Centre and Little Falls, in Minnesota; and Wahpeton, Pembina and Valley City, North Dakota, chickens will be a good crop. At Aitkin, Little Falls, Perham and Detroit, partridges will be plentiful. Ducks will be found in large numbers all along the line. Season opens Sept. 1. Chas. S. Fee, Gen. Pass. Agent, St. Paul, Minn.—*Adv.*

Florida, Aiken and Augusta,

and all of the charming winter resorts of the South are reached by the Southern Railway. The popular route between New York and the South. Double daily through sleeping car service the year round; only line operating dining car in the South; effective early in January. The Great New York and Florida Limited will be resumed; a train "*de luxe*" from New York to St. Augustine and the Royal Palms. For information, call on New York office, No. 271 Broadway.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 4, 1897.

VOL. XLVIX.—No. 10. No. 346 BROADWAY, NEW YORK.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any address which may be furnished us for that purpose.

There are writers of great distinction who have made it an argument for Providence that the whole earth is covered with green, rather than with any other color, as being such a right mixture of light and shade that it comforts and strengthens the eye, instead of weakening or grieving it. Addison.

THE JACKSON'S HOLE ELK SCANDAL.

WE publish to-day some further statements sent us by County Attorney J. W. Sammon, of Uintah county, Wyo., respecting the elk captured last winter and now held in captivity in Jackson's Hole. Apart from the corrections that the elk are not in the corrals of the Moose Head ranch, but in those of the adjoining ranch owned by Mr. Joshua A. Adams, and a discrepancy as to the number of animals, the circumstances of the case now presented are practically as they were related in our issue of July 3. In this new representation we find no reason for modifying the opinion then expressed, that the elk were illegally captured and are unlawfully held, and that the attitude of the officials in relation to the matter constitutes a public scandal.

The three papers submitted by County Attorney Sammon consist of a letter and a sworn statement by Deputy Game Warden Manning and a statement by Mr. Adams, giving his version of the affair. Deputy Warden Manning writes that he thinks the law should be so modified as to permit the taking of live elk in the snows. Whatever the warden may think the law should be is entirely irrelevant; his business as an officer is not to suggest improvements in the statute, but to enforce the law as it stands, and to enforce it against all persons impartially. If deputy game wardens in Uinta county, Wyo., go through the formality of taking the oath of office they undertake thereby to execute the laws of the State; they are not empowered to grant indulgences to intending violators on the ground that they think that the law ought to be something else, or that the violations will be for the good of the game and the country.

The bald facts as here made plain are these: The law of Wyoming forbids the trapping of elk. Adams contemplated a violation of the law by shutting up a band of elk in his corral; he applied to the deputy game warden for an official sanction of the contemplated violation, and the warden told him to go ahead. Adams then did take the elk, has held them ever since unlawfully and still holds them to-day, and Warden Manning reports this to the County Attorney and cheerfully adds that "the game laws are being well observed in this region." In view of Warden Manning's letter and affidavit, we take this first opportunity of correcting an expression in our issue of July 3, when we said: "The most scandalous feature of the case is the apparent connivance of the county officers, who by their refusing to act in the matter are violating their oaths of office." The word "apparent" should have been omitted.

The opinion rendered by Game Warden Manning to Mr. Adams being wholly gratuitous, merits little consideration. He advised Adams that for him to take and retain in captivity a band of wild elk would not be a violation of the law forbidding the trapping of wild game. Either this must mean that Adams is a privileged character, above the law and not subject to it, but permitted to do what other citizens are forbidden to do; or else, Adams being just an every-day ordinary man and amenable to the law as the rest of us are, it means that it would not have been a violation of the law for the other ranchmen to have corraled other elk, nor for any number of ranchmen in the State to have corraled any number of elk, nor for all the ranchmen to have corraled all the elk, and so to have made an end of them; and if the law did not permit this, it should have permitted it; and since it did not do so, no attention should be paid to it. If we are to accept the validity of Warden Manning's dispensation as to elk, we may get other dispensations, if we go at it in the right way, from other game wardens with respect to antelope and all other animals; to take them in any way one can get them, and jerk the meat and tan the hide, and so to save the game from the mountain lion and grizzlies and coyotes. The Manning-Adams philosophy teaches that all these creatures must perish some time, and that it were better "in a spirit of sorrow and pity" to do for them now, and so forestall a harsher fate, as moved by maternal instinct the she-elephant sat down on the motherless partridge to protect it from the cold, or as the Spaniards in South America saved the heathen babies—by first baptizing them and then dashing their brains out. This would be carrying out the Manning-Adams code of game protection to its legitimate operation. It is highly improbable, however, that the people of Wyoming will consent to have their statutes so honored in the breach by contumacious offenders backed up by bumptious game wardens.

What Mr. Adams intended or intends to do with his captured elk has nothing to do with the case; it does not affect the unlawfulness of his act. He tells us that he was moved by "sorrow and pity," but admiration of his charity is somewhat lessened when the generous toll he took for himself is considered. Moreover, it is demonstrable by the testimony of old inhabitants that the Wyoming elk survived through many winters before Mr. Joshua A. Adams migrated to Jackson's Hole and set up hayricks.

The statute forbidding the taking of elk alive was enacted to correct a growing abuse, the wholesale capture of game for export from the State, and it was adopted in direct response to a demand for it from this very same Jackson's Hole country, whose dwellers were vehement in their complaints of the live elk shippers, as our columns of that date will show.

As a plain proposition, if it is the right of one citizen under the law to corral a band of wild elk, it is the equal right of all. Conversely, if it is not the equal right of all, it is not the right of one. This is the very simple point involved in the Jackson's Hole elk case, and we commend to State Game Warden Gustave Schnitger the expediency of his promptly acting upon some legal advice derived from a higher authority than that of Deputy Game Warden Manning, upon whose opinion County Attorney Sammon appears to have rested the case.

THE SOONER.

IN the expressive speech of the prairie chicken country, the sooner is the gunner who gets out into the field before the law is off and pots his own share of the birds, and as many as he can steal of the shares of the other fellows who are mindful of the law. For several weeks, now in the period prior to the lawful season, we have heard much of the performances of the sooners in various sections. As usual, in many localities they have cleaned up the bird supply, and in some instances have been cleaned up themselves, thanks to the activity of the authorities and the executive agents.

The tribe is not by any means confined to the prairie country; the sooner is found over the entire continent; his range is as limitless as was the original habitat of the wolf before him; he is as ubiquitous as that personage who, as a raging lion, walketh about seeking whom he may devour. He preys on all game in its immaturity—the quail cheeper, the chicken partridge and the wild duck flapper. He represents various grades of social, professional and official life; witness the doctors and sheriffs and other sooners, whose arrests are noted in our Western correspondence. An Eastern type is described in the chapter published on another page, relating the arrest of a Narragansett Pier society leader for sneaking out into the cover and potting young partridges in close time. The social circles of the Pier are said to have been agitated by the arrest and taking in of this particular sooner, and we are told, by one authority that "the character of the offense with which Mr. Randolph is charged is unique among those claiming to be men of the world, who, according to the code of that class, would look upon one of their number who knowingly broke a law for the preservation of game, as fully equal in enormity to the refusal to pay a debt of honor or cheating at cards."

It would be a sincere satisfaction to believe that this was truly spoken, but the fact is that the summer residents of Narragansett Pier, Newport, and other fashionable resorts, have always encouraged, as they do to-day, the killing of immature game out of season by market-hunters for consumption at dinner parties; and it is fair to assume that a class which habitually devours illicit game cannot lay claim to any particular squeamishness about capturing the game themselves by similar sneak methods when they imagine that they can evade the officers of the law. The Rhode Island Association was organized for the express purpose of putting some limit, if not an entire stop, to this unlawful killing of game for summer residents. If the "men of the world" who resort to Rhode Island during the season would discountenance the serving of illicit game on their own tables and the tables of their hostesses, the work of protection in one State at least would practically be settled.

As the sooner is always with us everywhere, his suppression is one of the ever present and ever pressing problems of game protection. The only solution ever found, or ever likely to be found, is to get ahead of him by sooner protective societies, sooner wardens, sooner detectives, and sooner fines.

THEN AND NOW.

THE signs are right. In the neglected pastures the feathery stems of the tall weeds are beginning to be tipped with the gold that gives them their name, and the rowen crops of the hay land are thickly dotted with withered brown clover heads and with the white panicles of the wild carrot. The pale yellow of the shorn rye stubbles is overtopped and hidden by the abundance of the tall ragweed, green as yet, on which later the quail and the brown sparrows may feed. By the roadside asters are blooming, and the tangled blackberry vines that creep over the old stone walls and up the weathered and rotting fence posts bear a rich fruitage of red and black. Daily the apples in the orchard are growing larger. As yet they have taken on no color, but the peaches have begun to borrow the hues of the setting sun and give promise that ere long they may be gathered. The chestnut burrs have formed and are beginning to fill. Down along the river the wild rice seeds are hardening.

The time of singing of birds is past and gone. Only the alarm notes of the robin, woodthrush or catbird are heard. All have finished their season's work, have reared their broods, and now are gathering strength for the long journey on which before long they must start. Birds are still to be seen, but they are busy, restless, uneasy. Swallows are gathering on the telegraph wires; loose flocks of kingbirds are standing on the tree-tops and making swift dashes after the passing insects; mottled bobolinks fly over the marshes, and rarely a belated family of crows wings its silent way across the fields. But bird time is over, and from now until another spring, those which we see will be only our native hosts assembling for the journey or loiterers moving along southward, or hardy winter residents, which ply their busy tasks in field and woods all through the season of bitter cold.

The signs are right, let us try the rail.

Twenty-five years ago many of us went rail shooting with our muzzleloaders. Breechloaders were not too common then. On the thwart before the gunner were often boxes containing his powder, his shot, his wads and his caps. In the first two were the measures, and a stiff hickory loading rod, almost as stout as the bore of his gun, rested beside them.

As he was rowed from the landing to the grounds his pusher discoursed on the shooting of the past. "Twenty years ago," he would say. "Ah, them was the times! James Smith got 211 birds to a tide and Johnny Jones got 194," and so he would go over the big scores that had been made in the good old days, and lament over the present scarcity of birds and the lesser skill of the shooters of his time. Then when they reached the grounds and the gunner had arranged his ammunition, and they shoved into the rustling grass and the first bird rose, there would be heard the call "Mark!" the flat crack of the lightly loaded gun, the splash of the block thrown to mark where the bird fell, the squeak of the wads in the barrel, and finally the tick of the locks, which signified that the gun was loaded. Then the boat would move forward again through the swishing grass.

In those days eighty birds was a good bag, and 100 about the top score. What is it to day? A recent report from a rail ground, where in those days 500 or 600 birds were not infrequently boated by all the boats out during a tide, gives on the opening day in the year of our Lord 1897 just nine rail. Over most of the ground not a bird was raised. On a certain piece, which in old times often gave two boats shooting for a whole tide, there were found two rail.

As it is with rail, so it is with most other birds. It is not strange that the men of this day have to a large extent given up field shooting and have taken to shooting at saucers thrown into the air by means of a spring. It is not strange, but, in truth, it is exceeding pitiful.

The Sportsman Tourist.

GREEN MOUNTAIN NOTES.

THE past month has been extremely unfavorable for camping, and many of the popular resorts on Lake Champlain have suffered in consequence. The cold, and for the most part rainy weather, has rendered this delightful pastime more of a hardship than a pleasure. A large number of new camps have sprung into existence this year, and that and the tremendous summer traffic of the local railroads and the Champlain steamer lines seem to indicate that Lake Champlain is becoming a dangerous rival to her lordly neighbors, the Adirondacks, in the matter of popularity. As a resort for the diciple of Walton, the lake is without a rival in the Eastern States.

If you are an admirer of that black, pugnacious gladiator, the black bass, you will find him here in his pristine glory, ever ready to test the strength of your split-bamboo with a half-hour's struggle for the mastery; and under the shadow of the cliffs, in his slimy haunts amid the trailing water weeds, the wary pickerel lies in wait for the time when he can dart like some silvery sub-marine arrow at your latest purchase of trolling spoon; and, perchance, if you do not despise the humble but satisfactory sunfish, bullhead, perch and shiner, you will find them in wait for your hook from the Richelieu to the Narrows, and these, with their brothers, the lake trout, shad, pike and many others of less esteem, ought to give you abundant pleasure and entertainment. Camping locations are in great plentitude and the farmhouse is always present, and there you can as you will replenish your larder with the finest products of the herd and garden. You have no malarial mists to dodge, troublesome insects are few, and there is the purest of life-giving, health-promoting ozone to breathe, fresh-laden with spicy odors from the Adirondacks.

The lake is very easy to reach from the large cities either by rail or boat. One season's stay will win you, as it has won many a traveler who by chance has visited this country and has abandoned his globe trotting for the pleasures of this charming inland sea. Points of interest are not wanting, both historical and natural; of the former, the stirring scenes of the Revolution are brought back with an interest you have never before known when you gaze upon the crumbling ramparts of Ticonderoga and Fort Frederic, the formidable outposts of the infant nation in that glorious page of her early history. These, with the many other historical ruins and scenes, are a never ending source of entertainment to the visitor. The natural wonders of Champlain are manifold. The chiefest are the Au Sable Chasm, a miniature Yosemite, Grog Harbor, where a Champlain steamer found a watery grave, Providence Island, and myriads of others on every hand. If you are tiring of lake fishing, the multitude of brooks that empty into the lake on either shore are, with few exceptions, homes of the brook trout, which, though pigmy in size compared with the finny folk of the lake, are none the less hard fighters, and whatever time you spend following the brooks through meadow, pasture and wood, if your wrist is alert and your line in season, will be, I warrant, voted by you well-spent when you sit down to a meal of your victims. The rivers that pour their water into the lake are not a whit inferior as fishing grounds to the larger streams. The Lamoille is a famous stream for pike as well as for bass; and in the spring, while its currents are still cool from the melting snow, "hooking up" suckers, mullet and sturgeon is accounted good sport by local fishermen, and so it is. A sucker caught in the ordinary way has no more fight in him than a block of wood; but in the swift current of the Lamoille, with a cod hook in his tail, the evolutions that he will perform would put a 5lb. trout to shame. It is no easy matter to land a sturgeon either, as they weigh from 20 to 150lbs., and a watchful eye and a quick hand are needed or the fisherman is apt to share the "drink" with his prize. The scenery of the Lamoille is simply grand, one moment you are sailing through the verdant virgin forest, the next through some lofty cañons, perfect miniatures of the famed Colorado of the West, all presenting a varied and beautiful picture to the passing fisherman.

If you are as fond of the roar of the nitro as you are of the chatter of your reel, stop until autumn, and the river's broad acres of marsh at its shallow mouth will hold a charm for you with its thousands of ducks—black, redhead, mallard, teal and many others. Or the noble wild goose, whose V-shaped flight in the cold November sky fills the sportsman with anticipation for a closer range.

The Winooski River is a famous pike ground, while the Otter Creek is noted far and near for its bass. The marsh in the town of Ferrisburgh, near the mouth, is a favorite resort for duck hunters, and in the spring pickerel shooting there is excellent sport. KENEWAH.

MILTON, Vt., Aug. 27.

THE LAMOILLE.

A NEW HAMPSHIRE OUTING.

BOSTON, Aug. 28.—*Editor Forest and Stream:* It was with no very great feeling of regret that we turned our backs on Lake Winnepiseogee this summer and decided to revisit old scenes and renew old associations in the ever-attractive White Mountain region. I must confess, however, that as I read in the papers of the magnificent catches of black bass made in the lake during the present month, I had longings for the pleasant cottage at Spring Haven, and a desire to retrieve my poor luck of last season. But that was not to be, and instead I was tramping over old paths I trod years ago, following the brooks that always yielded a handsome lot of trout, small in size, as those of mountain brooks always are, but delicious in flavor and the best of eating after a hard tramp through the woods and brush.

Wednesday, July 28, found us (Mrs. S. went along) at the pretty little station on Jefferson Hill, N. H., and a few minutes later we were at the residence of the Hon. N. R. Perkins. We had been there many times before—for twenty years we never missed a season, and of course well knew what was in store for us in the way of hospitality and good cheer. Mr. Perkins is one of the leading citizens of the county—a lumberman, having large interests in the Brown Lumber Co., whose extensive plant is at Whitefield—a farmer, a railroad man, and in former years a politician, who has held all the offices his constituents could give him. And he is never better pleased than when he has a house full of friends, as he generally does during the summer months. From his broad piazza the view is simply magnificent; the whole White Mountain range presents itself, nothing intervenes except the broad Israel River Valley, then the foothills, then the Presidential range, from Madison to Washington. What wonder, then, that I was glad to get there, glad to receive the hearty welcome from all the family, and to hear Nate (everybody calls him Nate here) "I'm glad you're come; it seems a long time since you were here." It was only three years, but as I saw the familiar points all about it didn't seem even that time. How the old scenes came back to my mind, and how pleasant it was to live them over again.

Twenty or more years ago I generally managed to get there about the time haying was over, when Manasah Perkins, the son, was a lad of fifteen, and who, even then, ran the farm so to speak. Then the other work could be left to the hired help, and Manasah and I were free to go wherever we chose. And many were the trips, long and short, we used to take. One of these is particularly impressed upon my memory. With a pair of horses, and a wagon filled with the necessary duffle, we started out one fine morning bound on a fishing trip somewhere. We had no particular point in view, but were provisioned for a week if necessary. We brought up that night at the end of the road in West Stewartstown, half a mile from the Diamond ponds. The next morning we took possession of one of the lean-to camps on the shore of Little Diamond, and for three days had nothing but solid comfort. The weather was of the dog day sort, and the fishing on the ponds was nothing remarkable. It was here I first met Judge Shurtleff, now the efficient chairman of the Fish Commission. He with a party were camping on the big pond. Our boats coming together one day, we introduced ourselves, and he told us if we would content ourselves with smaller trout than the ponds yielded, we could get them by fishing down the stream; they would be fair-sized brook trout, he said, and plenty of them. We took his advice next day, and we did get them sure enough. The Swift Diamond River tumbles out of the pond in a series of really beautiful falls for the distance of a quarter of a mile, then the fall of the stream is gradual, and it was no uncommon thing to get a dozen or twenty fish out of a big hole. I never saw such brook fishing before and don't expect to again. By lunch time we had all we wanted.

The next morning we started on our sixty-mile drive home, it was a cool day, and the ride, although a long one, was delightful. To Colebrook it was down hill all the way, and then to Lancaster the route lay along the Connecticut Valley. The pair took us along in great shape, and at 6:30 P. M. we were on Jefferson Hill. The fish were in fine condition, and a portion of them were distributed among friends at the hotel.

This is only one of the many trips Manasah and I made through the country in search of trout and always with good results. A favorite drive was that to Success Township, on the east side of the Androscoggin River, adjoining the towns of Berlin and Milan. There were three streams up there that were full of trout in those days, and in the big holes of Chickanolopy we used to take plenty of ½ and ¾lb. weight.

Another notable trip comes to mind. It was, perhaps, fifteen years ago, when Mr. Perkins, who was one of the county commissioners at that time, told me that there was to be a road hearing at Connecticut Lake on a certain day, and that if I would like to go along he would hitch up a pair and drive up. Of course I didn't need any urging for a trip of that sort, and my fishing togs were soon got together. We joined his associate officials on the way, and at noon of the second day arrived at the lake. Here we found an excellent hotel, and we passed the afternoon in sailing about that beautiful sheet of water and trying to catch some of the big fish that abound there. The road hearing had no attraction for me, and I was glad to accept the invitation of a son of the Rev. Dr. Tyng, of New York, to go up to Paul's Stream and get a mess of trout. We put in the whole day and had excellent sport. When we returned to the hotel the hearing was over and many of the parties interested had departed. In the morning it seemed to me that nearly all the members of the Coos county bar were there representing the various interests involved, and several of them had remained over in order to make a trip to Second Lake.

And just here occurred an incident that has never been forgotten, and I never see or hear of any of the parties interested that it does not come back with all its force and ludicrousness. The party was made up of Messrs. Edgar Aldrich (now U. S. District Judge), William S. Shurtleff, now Fish Commissioner; Irving W. Drew, a leading lawyer of New Hampshire, and Prof. Mark Binley, of Yale University, who was a guest of Judge Aldrich. The road to Second Lake at that time was of the roughest sort—it was easier walking than riding at any season of the year, but at that time it was particularly bad. But the party had made up their minds to go and bad roads were not going to stop them, although Shurtleff had his misgivings. They had chartered a two-seated buckboard; Irving Drew had also chartered a man to walk ahead of the team with a pair of lanterns, and when they had got seated (it was 8 o'clock in the evening) Shurtleff turned to the landlord and said: "Smith, if you see a man looking for the biggest fool in Coos county, send him in to Second Lake after me."

With that they drove off into the blackness and darkness of night. I afterward learned that they arrived at the lake all right after being five hours going six miles—got old man Chester up, had an early breakfast, caught a few fish and went back to First Lake in a little better time by daylight. Our party returned by way of Dixville Notch, Errol Dam, down the Androscoggin River, across the hills of Milan to Granton, then down the Connecticut Valley to Lancaster. It was a most delightful journey, and in later years my friend and I take renewed pleasure in recalling its varied incidents.

But I started to say something of my present outing—getting into a reminiscent mood was natural, surrounded as I was by the scenes of years past, and seeing again those with whom I had passed so many pleasant days. Of course I brought along my fishing traps—all except a pair of waders, and I found these hanging where I had left them three years ago. We were in Jefferson between three and four weeks, and we literally loafed the time away. I tried several of the brooks in the vicinity, and always got a few trout that would clear the law. We sat on the piazza hours at a time, now and then reading, again simply watching the cloud and sunshine changes on the great mountain range in plain view. The Squire and I drove out to Lancaster one day to take in the trotting races, and saw one heat during a thunder shower that made a miniature lake of the track. Here we met Judge Shurtleff, who had just returned from his new camp at Mettaluk Pond, on the Magalloway; he said the fishing had been good. He invited us to make a trip to Maidstone Lake, where a number of Lancaster gentlemen have a fine club house, but we were obliged to forego that pleasure for want of time. I had one fishing trip that is really worth mentioning, and that was up in Dummer, the place I wrote a short account of in the FOREST AND STREAM of Sept. 7, 1894.

At 5 o'clock on Monday, Aug. 9, I drove into the yard in front of what is now called Chandler's Hotel, a thirty-eight-mile drive from Jefferson, more than half the distance along the lovely Androscoggin River, with its substantial farmhouses and its broad fields of grass never out of sight. John Chandler is a character; I suppose, indeed I have no doubt that he used to work; he has a big farm, cuts a lot of hay, keeps a barn full of stock, but in all my goings and comings there I never saw John at work, that is, farm work; he goes fishing occasionally, and sometimes he has to carry a pack of stuff to eat and a blanket to sleep under, sometimes he has to pull a boat, and that may be work; he works his jaw sometimes, to a stranger he might seem talkative, but to a friend—one who knows him intimately—never. I am tempted to give his business card:

"What, second class? Certain. The only second-class hotel in the United States, Chandler House, Dummer, N. H. Famous at home and abroad for its hard beds, poor table and inefficient service. Terms the only thing first class. Under the mismanagement of John H. Chandler, well-known as the stingiest man in New Hampshire."

Just reverse this and you have the whole thing. A pleasantly situated house but a few rods from the Androscoggin River, visible for miles sweeping in graceful curves through the broad meadows, on either side handsomely furnished rooms, with the best of beds, and a table loaded with good things cooked by Mrs. Chandler, all for $1 a day, and you have one of the famous places in the North country. Mrs. Chandler, her sister, Mrs. Adley, and the latter's daughter, Miss Ellen, greeted me cordially, and in

answer to my inquiries as to the whereabouts of John, informed that he had gone fishing. And, sure enough, I could see him up the river half a mile, having a try at the pickerel. About dark he returned with half a dozen fish, and he, too, acted as though he was glad I had come. I had long ago found out when John was pleased to see one. He asked me what I was up there for, and I told him I wanted to go fishing. He didn't think much of the chances for a successful catch at Millsfield Pond, as there were two camping parties in there, and another of three were going in the next morning. I suggested Session's Pond, and he said we could try it, although the trout there are very peculiar; some days a good catch rewards the angler; at others you scarcely get a rise. He further said fine catches of two and three-pound trout had been made there earlier in the season. That decided me, and he was willing to make the trial. A ride of three miles toward Errol dam and a walk of a mile and a half brought us to the pond. John handled the paddle and I did the fishing. It was an off day, and although we tried every part of the pond, I caught less than a dozen trout, none of any great size. John brought his camp coffee-pot along, and at noon we did justice to the excellent lunch prepared by Mrs. Chandler. John said if I would remain another day we would put in the afternoon on Bog Brook. When he said that I knew he was a friend indeed, for it isn't everybody that he takes up that stream. When he wants a mess of trout he goes up there and gets them, that is, as a general rule. I asked him what was the matter with going up there in the morning as well as in the afternoon. He readily agreed to that.

Shortly after 8 o'clock we were carried up the same road we had traveled the day before a mile and a half. There we took the boat, crossed the Androscoggin and entered the brook, a very slow-flowing stream, running for several miles through an almost dead level country; it is navigable for about a mile and a half, then the overhanging bushes stop all boating. We had not gone far before we saw the beauties jumping, and I began to feel sure of rare sport. But I soon found they were not in earnest in taking the fly; once in a while one would take it, and in the course of a couple of hours I picked out a goodly number of ½lb. and ½lb. fish. We returned to the house for dinner. In the afternoon, from 4 to 7, we went over the same ground, and duplicated the forenoon catch. John handled the boat in excellent shape, mentioning to me once in a while what a superior guide he was, to which I readily agreed. Altogether it was a most enjoyable day. The next day I bid the family a reluctant good-bye, and in the afternoon reached Jefferson. To anybody who wants absolute rest, and can appreciate the good things of this life, I cannot too strongly reccommend the place kept by one of the best-hearted fellows who ever catered to the wants of the weary and hungry traveler.

To finish up my trout fishing for the year, on Friday, the 20th inst., I drove half a dozen miles up to the logging camp of the Brown Lumber Company, on the south branch of the Israel's River, and in a few hours' fishing caught thirty. Years ago this used to be a great stream for trout, but it is now so easy of access that it gets fished out early in the season. The next day we pulled out for home, after a most delightful visit among old and valued friends.

WM. B. SMART.

TWO VIEWS OF THE KLONDIKE.

CHICAGO, Aug. 20.—The Klondike fields will hold many of the finest, the boldest and most self-reliant souls which the whole earth can produce. The place for the young man is not here in the city, but there in the gold country. He may go in a tenderfoot, but he will come back a man. He may not bring back gold, but he has not lost his time. And he may, in the turn of a shovel, solve the problems of himself and of his family for his generation and others yet to come. The game is a grand one, the boldest and best in which any man can engage. True, he may lose his life, but this was his to lose once at one place or another, and if he is too particular about the place, he does not belong with the men who are headed to the far Northwest to-day.

The hardships of the trail and of the life in the mining country of the Klondike district have no doubt been grossly exaggerated. Those who are going in now are doing only what nearly 3,000 men have done before them, and what 50,000 will have done before this time next year. For a tenderfoot such a trip is an appalling one. For a man of the FOREST AND STREAM family the kind that has camped out and roughed it and acquired a notion of the necessities of outdoor life, the terrors are only such as will dissipate before a determined front. It will be hard at first, but if the man be the right sort he will so quickly harden into the work, so readily adjust himself to all the changed conditions as to be a continual surprise even to himself. We speak of the dangers of the wilderness, but really the most dangerous place on earth is in a large city. The percentage of men who die on the trail or in the Klondike country this winter will not be nearly so large as it will be in the same number of men in Chicago or New York. It is a hard matter to kill a man when he turns himself loose and begins to rustle like an animal. These men will go through all right, and every minute of their trip will be a joy forever to them. Is it any wonder that the exultation of all this throbs to-day under the breast of nearly every man you meet? Indeed, it seems to me that all the good men must be those who are on their way over the far trail, and that the poor ones are we who are staying at home. Sympathy should not be for those who have gone, but for those who have stayed. The real difficulties of the trip are not those of the wilderness, but those of the home. The real hardships will not be those suffered in the mining country, but those mental pangs endured when the absent one thinks of those he has left back in the States. Emphatically it is only the first step which counts on the way to the Klondike. All the rest is easy if one be bold enough to tear away from home.

We are to have still another bit of the Great West, after all. The old, self-reliant days of the frontier are to come back, after all. A vast new hunting ground is to be opened up. A new State is to be added to the Union. New millionaires, new families are to appear again as they have done before the advent of the commonplace times of the modern West. The exciting drama is to be enacted again upon the Northern continent, as it seemed was never again to happen. What wonder that "Klondike" is in the heart or on the lips of every man! Lucky the ones who have started or shall start! And may good luck follow them, each and every one!

Word received here from conservative men who have been accustomed to rough outdoor life seems to indicate that the newspaper reports of the difficulties of the mountain passes of Dyea and Skaguay have been exaggerated, and that if a man has energy and funds enough, he can get his outfit across the range and upon the Yukon Chain in ample time to reach the mines this season. One man returned from there says he would undertake to find any number of men who would cross the dreaded Chilkoot Pass every week all winter long if they had to. They have driven cattle to the Klondike. They are driving sheep in there now. They have gone all over that entire region for a century or so in the course of the fur trade, and the Hudson Bay Co. could take miners in easily enough by way of the Mackenzie River route if it wanted to do so. There is more money and more brains going in on the Klondike stampede than ever went in any other. There is no reason to dread anything except that those who go now will be too late to get good claims in the country which has been the immediate cause of this stampede. It will be useless to go to the Klondike tributaries, and one will have to find his own claim in a country new to him but old to many another man who has been in there two or three years. The Stewart and the Pelly rivers would seem to be the best ones to strike for now, and not the already occupied creeks along the Klondike River. That country has not yet been discovered where claims are waiting for everybody to come and wash out $1,000 to the pan.

Mr. W. S. Phillips, mentioned some months ago as an artist and writer (known in FOREST AND STREAM as El Comancho), this week arrived in Chicago from Seattle, where he has been in the middle of the Klondike exodus. He saw the great shipment of gold that came down on the steamer Portland, and saw the strange sight of a ton and a half of gold piled up in one heap, with men guarding it with Winchesters and the crowd surging about it half demented. Yet, though Mr Phillips had opportunity to go grub staked to the gold fields, he declined, and came just the other way, back to Chicago! It is a funny world. Here again he met me, naturally very anxious to go just where he had come from! Mr. Phillips says that over 1,500 men are working on the White's Pass trail, and that it will soon be in good condition. The last word from the Chilkoot Pass is that all the supplies and men are moving steadily over to the waterways beyond, and that it is very unlikely that anyone will need be left behind who wants to go ahead. Of course the daily papers reek with the customary scare heads, and it is not altogether unlikely that the owners of steamers which ply by the long route around by the mouth of the Yukon are at least quite willing to have large stories go abroad concerning the extreme hardships of the land route.

E. HOUGH.

SAN FRANCISCO, Aug. 18.—*Editor Forest and Stream:* Already thousands of misguided adventurers are stranded at the ports where they have been dumped ashore bag and baggage on an inhospitable bleak coast, without shelter of any kind, to find further progress impossible; no facilities other than paying Indians 20 cents a pound for packing provisions, and having to scale the almost inaccessible Chilkoot Pass, and thereafter to wade through swamps and swim rivers. Of the thousands collected at Dyea, not one in a hundred will get over, and those remaining will have the choice of wintering over until late next spring in a climate where the thermometer freezes up when it gets down to the end of the tube. And all this with no other shelter than tents, if they are so lucky as to have even those, and firewood scarce at $25 per cord. Or the other alternative of returning, if that is possible. Added to the expense of getting over the Pass, provided they succeed in that, the Canadian Custom House officers stand ready to pounce down upon them for duties on outfit and provisions.

The few who left earlier may reach St. Michael's in time to get the last boat of the Alaska Commercial Company up the Yukon, and may succeed in reaching Dawson City before the river freezes. The distance by river from its mouth is 1,900 miles. The boats are small sternwheelers, without accommodations for sleeping other than the soft planks of the deck; and sandbars and low water at this season renders progress slow. And last, but not least, are mosquitoes in clouds and myriads, unequaled in the whole world. All this is only a part of the delight of a trip to the Klondike.

This picture is no exaggeration, for at my elbow sits a fellow who has wintered in that locality and is authority, and tells me of his experience. He says that when mixing up dough (with hot water) for bread, if he left it standing long enough to chuck a stick of wood on the fire, when he returned to the dough he found it frozen stiff. Let those who are lamenting their inability to go to the Klondike read, learn, inwardly and outwardly digest.

Like letters "from our correspondent in Europe," written in the back office, you will read any amount of correspondence written from here, and dated Dawson City and along the route, padded out from notes gathered from returning miners unable to reach the diggings.

Speaking of the Alaska mosquitoes, one would suppose that the frosty nights, even in midwinter, would be discouraging to them, but that feature appears to give them an appetite. Although they do not possess the characteristics of the Jersey species as to size, being, on the contrary, so small as to pass through the meshes of an ordinary bar, they have a bill that would be the envy of a plumber in length. Nothing short of cheesecloth is an obstacle. In the very severe weather of the winter they are not so apparent. They avail themselves of the close season to go around visiting with their whetstones under their arms, and sharpen up as they gossip over the new arrivals that will afford sport when the season opens.

Natural History.

SOAP AND SOME OTHER THINGS.

Editor Forest and Stream:

Much has been written in proof and illustration of the delicacy and accuracy of the sense of smell, especially as developed in animals, but I very much doubt if we have found out even yet everything which is to be known on that subject.

To illustrate—my father was a sheep farmer and woolgrower, and of course kept his stock in numbers by a fresh crop of lambs each spring. The breeding ewes, during the period of lambhood, were usually subdivided into flocks of not over fifty. Frequently on warm, sunshiny spring days, while the mother ewes were feeding, the lambs, thirty, forty, or fifty in number, would gather together by themselves, and run foot-races up and down a clean stretch of smooth, hard, dry turf, apparently in pure frolic—and they didn't bother themselves about a timekeeper or an umpire either. They ran each race strictly on its merits, without trickery of any kind.

After twenty minutes or so of such vigorous exercise, beginning

> To feel, as well they might,
> The keen demands of appetite,

they would, as though by common consent, "call the game," and scatter for refreshment from the maternal fount. Each call or "bleat" by a lamb would at once be answered by its mother, but in no case would a lamb be allowed to touch the udder until the mother had satisfied herself by smell that that particular lamb was hers. In other words, out of fifty lambs, all having the same sire, and having sister-mothers, and all so nearly the same age, size and appearance that, with a few exceptions, the owner of the flock could not tell them apart, and all living and lodging together, with the same food, treatment and surroundings, all which factors would apparently tend to give them exactly the same odor—still every mother ewe would instantly identify her own lamb with absolute accuracy by a single sniff, and distinguish it from forty-nine others. And she never made a mistake. If it had the correct "scent," all right, but if it had any one of the forty-nine other odors it might go hungry and even starve, so far as she was concerned. She would not take the trouble to smell it again.

Now I can readily understand that the odor of a sheep is different from that of a horse, and also that the odor of a sucking lamb may be distinguishably different from that of a full-grown sheep; but the idea that fifty young lambs, so nearly related by blood as I have stated, and subject to no influence which, so far as we know, could possibly make a difference in odor—and in fact, lambs which to the human eye are as near alike as two 16-to-1 silver dollars recently from the mint—the idea that fifty such lambs should have fifty separate—and distinguishably separate—odors, is something quite incomprehensible to me. Nevertheless it is a fact; and if it be true of fifty lambs, I know of no reason why it should not be true of 500 or 5,000. And if so, where is the limit of the sensorial capacity in the animal kingdom—or is there any limit?

While this is not what I sat down to write about, another fact occurs to me now which may be of interest.

Occasionally a new-born lamb would die from accident or exposure, and occasionally a pair of twin lambs would appear in the flock. To foist directly on a lambless ewe a lamb that wasn't hers, was simply impossible. In such cases we usually stripped off the skin of the dead lamb while it was still fresh and retained its natural odor, and tied it on to one of the twins, and then got the lambless ewe to adopt it as her own. Usually we had to shut up the twin thus jacketed with the lambless ewe for a few days. Sometimes the ewe would detect the fraud at once, and then for a day or two would have to be held while the lamb partook of its nourishment; but, with rare exceptions, the ewe would soon become "wonted" to the fictitious offspring, and the new ralationship would be fully established. After a week or two the skin of the dead lamb could be removed without breaking the relationship. How the odor-problem was worked out, so that the new "scent" took the place of the old, and became acceptable as such in the mind or nose of the foster-mother, I do not know. I give but the facts.

And speaking of smells—though this is not what I sat down to write about either—I get no little amusement to myself by observing the actions of strange dogs. I am not a special lover of dogs, though I have no antipathy toward them as a class. But I make it a rule to be friendly with all the dogs—four-legged ones, I mean—which I meet at the houses of these on whom I have occasion to call, either on business or pleasure. Most dogs, on my first approach, will take on the usual manner or attitude of hostility or suspicion until they catch the odor of my person, and then they will more commonly wag their tails and trot off with a manner which says clearly, "He's all right," and thereafter we are friends. But sometimes, instead of giving any indications of friendship, they will thereafter treat me with the most utter indifference. Apparently the odor is with the dog the test or standard of friendship; but in the cases last referred to, it is a friendship of strict neutrality. After the first visit, the dog, after getting my "scent," pays no more attention to me than he would to a friendly cat. He will not come at my call, nor even look at me. If he passes my chair, and I offer to pat him, by way of establishing friendly relations, he will sometimes stop for a minute, provided he has nothing else to do, but will trot on as soon as something else attracts his attention. Ordinarily he is as indifferent to my presence as if I were an article of furniture. In one family where I visited frequently, I tried time and again to get on good terms with a high-bred pug, which was a general favorite with everybody except me; but after my first visit he ignored me absolutely. I might as well have tried to win the friendship of a graven image. He never showed the least feeling toward me either way. He simply ignored my existence.

And while this is not what I sat down to write about, another dog incident may not be out of place.

I have two daughters who resemble each other quite closely in build and general appearance. One of them recently made a protracted visit with the family of a former schoolmate, and became quite a favorite with the family dog. A few weeks after her return home, the other daughter made a visit to the same family. As soon as she entered the door, the dog bounded toward her with every appearance of doggish joy, but instantly catching her "scent," and so finding out his mistake, he dropped his tail between his legs, and, with downcast head and ears dropping like two

wet rags, and in fact with every appearance of mortification which it was possible for a dog to show, he slouched himself out of sight under the lounge, and for half an hour or so could not be persuaded to come out, even by the most enticing call of his favorite mistress. There seems to be a limit to the endurable disappointment of even a dog, and his nose tells him when that limit is reached.

It is a singular fact—though this is not what I sat down to write about—that there are some animal odors which—at least until they get used to them—are always offensive to some other animals. I suspect that herein lies the foundation of the usual and well-known antipathy which exists between dogs and cats. And the odor of the bear seems to be especially offensive to horses. A friend of my boyhood days having been fortunate in acquiring an abundance of worldly wealth, indulged himself in one of those extravagancies known as a "country seat." Among his other luxuries he made a purchase of a pet bear, and during daytime chained it to a stake in his back yard, about 60 or 80yds. distant from the public country road which passed in front of the house. His own horses soon became accustomed to the bear and paid it no attention, but aside from them, there wasn't a horse in three counties which could be driven past that house without showing every sign of extreme terror, and sometimes becoming almost frantic. Also, once up in the White Mountains I was riding across from the Profile House to Littleton, behind a livery team with a livery-stable driver, when suddenly both horses threw up their heads and snorted, and but for a free use of the whip would have backed around and gone the other way. The driver explained that a bear had probably crossed the road shortly before, and left the odor of his trail behind him, which the horses had caught, and hence their fright. But there was no bear in sight, nor any visible sign of one, nor could we see anything else which a livery horse ought to get frightened at.

I did not sit down to write about female seminaries either, but I am reminded of an incident which may be worth telling.

An old bachelor friend, to whom the deities who preside over the distribution of wealth had been quite liberal, was persuaded by his married sister to make a generous contribution to the endowment of the seminary of which she was a loyal graduate. His munificence led the seminary authorities to make a special effort to secure his attendance at the next following commencement. He went. He was the guest of honor. He attended all the receptions and parties and teas, and was assigned a front seat on the platform on commencement day. He was introduced to and was smiled on by some six or eight hundred fair damsels in the full blush and beauty of charming girlhood, and for a week breathed an air that was redolent with moire antique, white tulle, laces, curls, smiles, blushes and perfumery. Returning to his city home, he was asked what he had enjoyed most. He replied that the thing which he remembered with chiefest pleasure, was "the delightful odor of young girls which pervaded the entire atmosphere."

If our literature contains any better description of the predominant feature of a female seminary commencement, I do not remember to have seen it.

But, lest I should forget it, let me say right here that I sat down chiefly to recall a statement about female seminary life, made in FOREST AND STREAM, Aug. 7, 1897, page 104, reading as follows, the italics being my own: "One deaf-blind girl assorted the clothing of her fellow pupils *after it had returned from the wash, entirely by smelling it.*"

Now, after having personally witnessed the facts which I have stated above as to sheep and lambs and dogs, I am prepared to believe a good deal about seminary girls; but the statement above quoted rather stumps even my credulity. The line must be drawn somewhere. I have never been in the laundry business, but I would suppose that every taint of personal odor belonging to the garments would be effectually killed or overcome by the vile and pungent stenches of the laundry soaps commonly used in washing. If it had been stated that the deaf-blind girl referred to was able, by the sense of smell, to distinguish and name the particular kind or quality of soap used in washing each garment, I could readily believe that. Or, assuming that the same kind of soap was used on the entire "wash," if it had been stated that by smelling the garments she could tell the particular kind of fat used in making the soap, I do not think that my credulity would have hesitated for an instant. It has been taxed much worse than that by the fish yarns that have been worked off on me in years agone, by angling friends whose tongues are now as cold and dead as are the camp-fires around which we sat while the yarns were being spun. Or yet again, the deaf-blind girl referred to might be trusted, after smelling the wash, to say whether the laundry maid, who had handled the clothes, was Irish or pure Teutonic, "or even an I-tal-i-an." She might also be able to identify, by smelling, the particular brand of starch used, whether Oswego starch or some other kind of starch. Possibly she could name the variety of potatoes from which the starch was made, and describe the kind of soil in which they grew—just as experts in tobacco are able, after tasting a leaf, to say where it grew, and whether it was raised in unpolluted virgin soil or in a soil artificially manured and fertilized. I think that I could believe all that, especially if I saw it in FOREST AND STREAM, but to "go back of the returns," and say that after boiling and soaping and scouring and wringing and rinsing and drying and starching and ironing, enough of the odor of the original wearer remains so as to be discernible by any human nostril—that is a little too much, even for me—and I can stand a good deal.

Mr. Editor, did you ever hear of the sea captain who had sailed over all the oceans and up and down all the seas on the face of the earth, until he was thoroughly familiar with every cubic yard of atmosphere under the whole heavens? and did you ever hear how he could go on deck in the morning, smell the salt air, and tell the latitude and longitude without hesitation and with the most perfect accuracy? I heard this story in my boyhood, and ever since that, whenever I was in a skeptical state of mind, I have had some doubts about its being altogether true; but I think that I could believe it quite as well as I could swallow the statement above quoted about the blind girl and the washing. And while the statement may be true, just as it is written down, it will take a good deal more to convince me of it than a photograph of the girl, or a piece of one of her broken corset-steels.

SHAGANOSS.

To a shooting and fishing disciple just off a sick bed and able to shift a bit about the house FOREST AND STREAM is both a stimulant and a tonic, although the dose should be administered oftener than once a week—daily, for instance. Life is surely better, nobler, more manly and womanly, when FOREST AND STREAM is permitted to play a part in it.

M. CHILL.

ACCLIMATIZATION IN NEW ZEALAND.

THE twelfth annual report of the Wellington (New Zealand) Acclimatization Society for the year ending March 31, 1897, is an interesting document. On the financial side the results are very gratifying, the Society having a balance of nearly $1,100 to its credit—considerably more than it had last year. A portion of this increase is due to receipts for additional licenses for shooting stags and another portion to receipts for fishing licenses.

The European red deer continue to increase and thrive in the Wairarapa district, notwithstanding the fact that some illegal shooting has taken place during the past year. Active measures are being taken to suppress this, and a conviction has already been secured, which cannot fail to have a good effect. The greater portion of the deer are at present ranging in settled districts, and in some cases have become quite tame. As it was desirable that new herds should be started in wild and unsettled districts, twelve calves were captured, of which one-half were turned out by the Government in Tongariro National Park, and on the west coast of the South Island, and the remainder on the Corporation Reserve at Wainui-o-mata. Arrangements have been made with the Wellington City Counsel to utilize this preserve for game preservation purposes, and some pheasants have been liberated there.

Efforts to rear pheasants and ducks in confinement have not been specially successful. A consignment of English partridges has been arranged for during the coming season.

In New Zealand, as in this country, a steady decrease is taking place in the numbers of the native birds in many settled districts. This is due for the most part to the wholesale slaughter of rare birds by paid hunters for purposes of sale to foreign museums. Strong efforts are being made to put an end to this destruction.

Great trouble is had on the island by farmers, poultry breeders, and the society's aviary and fish ponds, from the depredations caused by the introduced ferrets and weasels. These vermin—introduced to destroy the rabbits and now protected for the benefit of the sheep growers—are rapidly increasing and are likely to become a real pest.

The work being done at the Masterton fish ponds in rearing and distributing various kinds of *Salmonidæ* continues to be successful, and the record made here is extremely creditable. More than 2,000,000 ova were taken last year, and of these 1,500,000 were disposed of either as idyde ova or fry and about 800,000 were gratuitously liberated as young fish in the waters of the district.

The result of the good work done by the Wellington Society is shown in the excellent fishing that is to be had in this district. The American brook trout have thriven splendidly, and while much work remains to be done an admirable beginning has been made.

CITIZEN BIRD.*

THIS is one of the most charming as well as the most useful books on birds ever printed. It is the joint product of Mrs. Mabel Osgood Wright and Dr. Elliott Coues, both of whom are sufficiently famous in bird literature to make their authorship a guarantee that something worth reading has been produced, and it is as full of information as if it had a much more ponderous and formidable title. It is the volume's great charm that it conveys information without appearing to do so; that in the form of a delightful story it gives us the essential facts about most of our eastern—and some western—common birds, telling what they do, how they live, how they benefit or injure man, and why they should be cared for and protected.

The volume is especially remarkable for the engravings which it contains, which literally illuminate its pages. These are beyond question the best bird pictures that have ever appeared in any book of moderate price—one might perhaps say even more than this. They are from sketches of Mr. Louis Agassiz Fuertes, the new bird artist who very recently began to astonish ornithologists by sketches which, while technically accurate, were as different as possible from the conventional bird sketches which have hitherto been regarded as satisfactory. Mr. Fuertes's birds have something about them which is remarkable in its approach to life. We get from them an idea of arrested motion which is startling. The sketches are not all equally good as representations of the different species, but they all have this quality of lifelikeness—which is after all the essential thing in the drawing of a living creature. It is probable that this life likeness is due to the exquisite faithfulness to nature with which the attitudes of the birds are caught. Many of the best bird pictures that we are accustomed to see in popular books look as if they had been drawn from stuffed specimens—not always too well stuffed. Mr. Fuertes's sketches, however, make one feel sure that the sketches were made from life. There are 108 of these drawings representing different species, besides some diagrams of bills and feet of birds, in all 111 illustrations.

The plan of the book is delightful in its simplicity. A naturalist living on a country farm is visited by a small nephew and niece. To them and to another small boy he tells the story of the birds that they see from spring to later summer, taking up the species in their natural order, giving some brief account of their habits, and finally describing them in simple yet unmistakable language. Almost every bird is further described by its picture.

The volume opens with a chapter giving an imagined conversation among the Bird People of the farm about the House People who have just come there, the birds expressing their anxiety on the subject of cats, guns and small boys. Thenceforth, until the closing chapter of the book is reached, the Bird People collectively do not appear. In the two or three following chapters the naturalist tells the children some general facts about birds, the plan on which they are built, the class to which they belong, and many of the characters of the class, all given forth simply, naturally and interestingly. Feathers and flight are described, and migration and protective coloring touched on. A chart of the classes of vertebrates is given; the plan of a bird's body with the names of the different parts, and sketches of bills and feet of different birds are shown in line drawing.

The Doctor lends an adventitious interest to his birds by an artificial classification, by which he divides them into guilds, including those which make their living in the same way. These guilds he names Ground Gleaners, Tree Trappers, Sky Sweepers, Wise Watchers, Seed Sowers, Weed Warriors and Sea Sweepers; titles whose attractiveness will be acknowledged. In the course of his talk he takes the ground that each bird is a citizen of this country, and a good citizen, too; that he is industrious, a useful member of bird society, patriotic, and that to the human community he pays taxes by rendering services which entitle him to protection. Hence the title of the volume.

In their search for the birds of forest, meadow, swamp and seashore, the children visit these different localities, and besides what they are told about the birds, acquire many other useful bits of knowledge concerning nature and her ways.

Besides their outdoor excursions with the field glasses, by which they learn much concerning the living birds, the children are admitted now and then to their uncle's work room, and have an opportunity to see and even to handle—rare privilege—the skins of some of the birds about which they are being taught, but which they may not be able to see or nearly to approach in life. They thus gain a practical acquaintance with all the common birds of the locality.

The whole scheme is worked out in an entirely plain and practical way, and shows how very easily an ornithologist might teach all his small friends the more salient points about the familiar birds, and thus become a very home missionary for bird protection.

If the plan of the book is simple and pleasing, its execution is not less so. There is nothing about it that is technical, and the long words in it are few. The talk of the children is natural, and that of the older people is just such as intelligent adults would use to children. Very early in the book one of the little people, already interested in the birds, asks her uncle if he cannot write a little book for the children, "just a common little book, all in plain words?" And behold the book has been written, and is here before us.

* MacMillan Company. Price $1.50.

Pinnated Grouse Habits.

CHICAGO, Aug. 27.—*Editor Forest and Stream:* This week I note editorial comment on the sharp tailed grouse, and I note it is said that the pinnated grouse has not been observed to take to the timber during the cold weather. In central Iowa in my time we did not have the sharp-tailed grouse, but had many prairie chickens. It was very common during cold weather in the winter, and more especially in case of snow, to see the prairie chickens roosting on trees in the timber along the river bottoms, or in the groves of timber on the uplands. Sometimes many dozens would be on a single tree, and my father and I have often killed a number of chickens from the same tree, shooting them with the rifle and killing the lower chickens first. If not disturbed, these large flocks of chickens would of a cold day sometimes sit in the trees until nearly noon. At times they would alight on fence rails. At the first approach of cold in the fall it was quite a common sight to see numbers of them in the mornings perched on top of wheat stacks or straw piles.

E. HOUGH.

"The Osprey."

RECENT numbers of the *Osprey* are remarkable for the interesting illustrations found in them. Those of the hummingbird and of the great horned owl in the May number are especially good. The June number contains several notes of interest upon the bird from which the publication takes its name, together with a number of photographs bearing on the species.

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

THE MAN BEHIND THE GUN.

Editor Forest and Stream:

One of your correspondents, in an article under the above title, says that a good shot should hit the width of the body of a running deer at any distance at which the rifle is accurate, and gives two instances of remarkable shots made by himself.

The question of caliber of rifle for big game is almost entirely one of convenience, that I think as well played out as the old question between muzzleloader and breechloader, which rests upon much the same ground. But what can be done with the rifle on moving game is a question tolerably fresh. For years we have heard much of "wing-shooting with the rifle," "champion wing-shot with the rifle," and similar things, nearly all of which seemed to consist of hitting so many glass balls at a few paces, always at the same distance and in the same position. In "The Still-Hunter" I devoted some space to this, but we have had little or no discussion of it the columns of this paper. In the hope that I may stir up a debate of the old-time sort and call out information from many of the crack shots who are able to give it, I will tell what I know about it.

I have had far more practice with the rifle than most of the crack game shots of the world. I killed with the shotgun nineteen quail handrunning in the thickest of catbriar swamps before I was twenty, and would have been backed against the world with the pistol about the same time by the students of Princeton College. I have since that had far more practice with the rifle on moving game than I have had all told with the pistol and gun combined, though I have never shot a match at a trap. I have had as big a local reputation as any one was ever given by ignorant or unwise friends, and you can find plenty in southern California today who will tell you that I can kill as many quail flying with a rifle as any one can with the gun. I have shot with it on the wing almost every bird that flies, from the great condor down to the little wren tit, one of which I once shot crossing and dipping at 38yds., the body being of about the same size as that of the hummingbird. I have shot hundreds of flying quail with the rifle; running jack rabbits and cottontails by the hundred, have made many doubles on them, and I once made a double on a single quail, cutting a bunch

of feathers at the first shot from a Winchester .22 and killing it with the second. And this was done left-handed, a way I sometimes shoot on account of neuralgia in the right eye, but not the natural way for me. I have also hunted and shot with many crack shots in various places and compared notes with many more.

My experience, and that of all others whom I have had a chance to pin down to cross-examination, has taught me that the hitting of running, flying, jumping, sailing, or even swimming game at the distances at which shots at it generally occur is more a matter of good luck than of good management. I don't believe the man lives who can hit forty running deer or antelope out of a hundred, taking all fairly good chances as they come and under the varying conditions of the field. And I don't believe anyone can kill half that many of any kind of birds, unless they be young pinnated grouse—which I have never tried—or something of that sort. It does not take very long to put ten out of fifteen shots from a repeater into a 3in. circle at 15yds. as fast as one can work the lever without lowering from the shoulder. And the other five will not be far out of the way. This becomes, with practice, almost pure snap-shooting, the sights being barely seen, and often not at all that one is conscious of. Sometimes you will get a whole magazineful into the ring, but you cannot rely on it. By shooting in this way I have no doubt a fair score could be made on pigeons from a trap at 15yds.

I never tried it on pigeons, but have tried enough of that kind of shooting to say with certainty that it is of no use for game-shooting, as game is generally found, but will injure rather than improve your chances of making a clean shot at anything moving beyond 15 or 20yds. It is also almost certain ruin to that fineness of sight—that careful discrimination between a fine view of the front sight and a coarse one—together with that perfect coolness, steadiness and delicate touch of the trigger finger so absolutely essential to center-shots on game at rest over the average distance, or when in bad lights, bad positions, or when only a small spot of it is seen and the shot must be very fine. Never practice that kind of shooting if you want to do first-rate work on game unless you accompany it with a great deal of very careful off-hand work at fine targets with open sights. Even then you had better do little of it.

I have met my share of the big talkers with the rifle, and have never yet failed to make the best of them back down on the following proposition:

I will give you a dollar every time you hit the crown of your hat up to 150yds or the whole hat up to 200yds. if you will give me a dollar every time you miss it. Shooting to be with open sights, but no adjustment before shooting as there would be no time for it with running game. I to have the privilege of changing distance and position of hat at every shot if I wish, and the match to be shot on ground where it can be through brush or timber or over it, across ravines and in different lights; that is rough and tumble country work such as you have in shooting game. When they consider the changes that may be made they always back out. Yet the hat is larger than the spot that should be hit by the man who talks of "placing the ball in the right place."

This can be done up to 160yds. with the old-fashioned sugar loaf bullet or cone loaded from the muzzle with the weight of the powder at least half the weight of the ball. It can also be done with a rifle of .16 shotgun caliber and round ball loaded from the muzzle up to 140yds. if 200grs. of powder be used. But with small round balls or long bullets and light charges of powder, that is such loads as ordinary hunting rifles are reasonably accurate under, it can not be safely attempted by the best judges of distance and light. Nothing but a trajectory that requires no change of sighting combined with a degree of accuracy which can not be had from rifles heavily loaded with the ball in the shell, will suffice.

Here is another proposition. Suppose you can group any number of bullets off hand in the 4in. ring at 100yds. Now, take the finest of globe and peep sights if you wish and make me a decent group that shall be 5ft. to the right or left of the bullseye. Or make one at 50yds., 2½ft. on either side. And remember that you must do this in the field with no shifting of sights and with a blank to aim at that is practically the same as a pure white wall. How much of a group will you guarantee to make at those distances off the center? Or try it even at 25yds. and see if you can make a group 15in. or 1ft. on one side that would hit the size of a quail half the time, or the body of a sparrow once in five times. Be careful of course not to shoot at your first bullet hole but have the place blank as it would be in shooting at game.

Now what proportion do we have of straight-away shots in the field? A long experience on all kinds of moving marks with close observation on this point convinces me that they are very rare. There is not one shot in twenty in the long run that you can make by holding the sights on the game. You must not only guess at the distance necessary to hold off of it, but also guess whether you are holding that distance—a double guess where either one is bad enough. Add the guessing on the trajectory of the rifle, which is almost certain to carry the ball a little too high or too low unless you have the distance measured and the sights adjusted to it as in target shooting, and we have an ever-changing problem that must be solved in very short time.

In addition to the above trouble all running game is rising and falling enough to make great uncertainty about reaching vital parts. The mule deer bounds high enough at almost every jump, especially in the brush where he is usually found, to leave a ball below or above him. Many of his jumps are certain to do this at the distance at which he is likely to be shot at. The Virginia deer, though apparently not as high a jumper as the mule deer, is still a good one, and as a rule his up and down motion cannot be ignored where it is possible to consider it. Even the antelope, that glides along with a grace so spirituelle that you cannot consider his rise and fall, has still enough of it to make you miss his vitals often, and the whole body occasionally, even when you have held the sights upon exactly the right point to catch the center if it were moving on a straight line. If you doubt this, fire a few hundred shots at jack rabbits skimming the plain or hillside in the dry countries, where the dust will show you where every ball strikes. When he is under such full speed that he pulls himself out like a telescope and seems to skim the ground like a fish duck flying close to the water, you will be amazed at the balls that strike just over or under, long after you have mastered as well as you ever will master it, the secret of holding far enough ahead.

Next comes the shifting play of light upon the sights. Take your rifle out in the sun, hold it at arm's length, run your eye along the sights, and turn slowly around in a circle. Or put four targets in the sun at the four points of the compass and make four snap shots at them as rapidly as you would shoot at game that was fast getting away. You will find it quite different from shooting at a target where you pick the light, or soon get used to it, or have time to find the center of light on the sights. The change in the center of light is largely obviated by taking the notch entirely out of the back sight, rusting it with iodine or blood, and blacking with ink or powder. Also by moving it much further up the barrel than it is usually placed. Don't worry about the center, for if you knock the back sight entirely off you can hit a telegraph pole at 100yds. as well as ever, and just as quickly. And don't worry about the range of sights being too short, for 15in. between them is enough, and even a foot does fine work. What is lost in range by the shorter distance between them is more than made up by the greater clearness of the back sight, and for running shooting by the greater quickness with which the eye takes the proper amount of front sight over it. Ivory for the front sight is indispensable to avoid the shifting of the center of brightness upon it. Lyman's sights are specially designed to avoid this trouble, and do it wonderfully well. The only difference is that the back sight being so near, the eye is not as quick for a very quick shot as the straight bar set far up the barrel, while the latter is also quicker in the gray of morning or late in the evening. The principle is the same in each, and is correct, for about nine people out of ten—that the eye will find the center all right if you will just be kind enough to let it alone. For all-around work a rifle should have both these sights. If one is not a fine shot or is much out of practice, he should use Lyman's sights exclusively and let notches in the back sight entirely alone, especially if his eyes are so old that he has to wear glasses to read. Still neither of these entirely obviate the effect of changing light.

All these difficulties are bad enough in the open country. They are increased in the woods by trees that stop the ball, by twigs that will set it wobbling or turn it at once, and by the change from light to heavy shade which is almost constant. The difficulty of judging distance is also much increased, and when you have tried it long enough you are sure to quit it and hold the same sight on about everything in motion.

I know how the fine shooting is done. It is so natural to forget how you unloaded the whole magazine of the repeater at some deer plunging along a brushy hillside. How awfully that one day would reduce your average for the whole hunt if you should be weak enough to include it in your figures! It seems now, by memory's eye, that you saw the whole body of the game at each shot. But you saw nothing of the sort. Here it was a shoulder, there a rump, now shining above the brush for a second, then lost, but small enough to take the best of shooting to hit it had it been at rest. What your memory now sees is a composite of several motions and appearances that look so easy to hit. If the gentleman who thinks it easy to hit when in motion the thickness of the body of a deer at any distance at which the rifle is accurate, will pick up his empty shells and count them against the game after firing 500 or 1,000 shots he may think otherwise. For my part, the principal pleasure I have found in the rifle is the fact that you may play with it so much on almost any kind of small game in motion, yet keep your conscience comfortably clear of the charge of murder.

T. S. Van Dyke.

Los Angeles, Cal.

A DAY WITH THE PARTRIDGE AT WHITE LAKE.

It was with a feeling of sadness that I boarded the Monday morning train on the Erie for White Lake, New York, having received intelligence of my cousin's serious illness there, but I found him much improved, and in reply to his first question as to where Dixie and my gun were (Dixie being my English setter), it was with much regret I had to announce that I had left them behind, as I did not expect to do any shooting on this trip.

"Well, never mind, old boy," said he, "I can fix you out. There is my Francotte rusting for want of use, and my coat and shells in my trunk, so to-morrow morning you can have a good day's sport. The law is up to-day, and Tacey will go with you. Do you know Tacey? No! well, let me introduce you to the proprietor of Sportsmen's Home. In the first place, he loves his dogs and guns; that should be enough to recommend him to any one. But he has other qualities, good-natured to a fault, willing, obliging and not a game hog. He knows when he has enough, and believes in leaving a bird or two for seed, and is a capital dog handler."

I had an interview with Tacey and he said he would go with me in the afternoon, if I could amuse myself until then. I could not restrain myself that long, but I started to look through a swale just below the house, thinking I might run across a bird or two before dinner. I had hardly gone a rod when Tacey's old dog Dash was upon me; he smelt trouble and was going to have some of it. Now, Dash has his own ideas of right and wrong, only laying claim to one master and refusing to mind any one but him. I attribute it to the fact that one eye is blue and the other brown. But he is a good one, as I learned later in the day. I took him along and ran the chances, but after we got in the cover all that I saw of him was an inquiring look once in a while to see if I had gone home yet; then he would go off and amuse himself. Not a bird did I find. I returned to the house and told Tacey I did not believe there were any birds in Sullivan county. "Well," said he, "if I don't show you birds this afternoon I will leave the county to-morrow."

It was along about 3:30 when we were on our way across the fields. There might be woodcock in that cover yonder, the ground was quite soft. "Hey! Dash! this way; careful now." But it drew blank, so we crossed to a swale just below. "You take along that side and keep your eyes peeled, and I will go through and see if I can put some out. Mark them well, and watch the trees, for this time of year partridge are apt to do most anything," and in he started.

Tacey evidently thought I was a novice at the business, and wanted him to put them out over my head, so that I could shoot them without getting my feet wet; but I think I was not long proving the contrary to him.

Whoa, Dash! Bang! Mark! and I had just time to see a fine partridge cross over ahead into a piece of cover beyond. "One down. Careful, Dash! Dead bird! Look out there, Walt!" About eight birds flushed wild ahead.

"Stay where you are until I come out." In a few minutes out he came with a fine bird, the first of the season. "Where did that one go you saw come out?"

"Across there!"

"Well, we will look him up, and turn those others back before they get in that swamp beyond!"

"Now, look here, Tacey," said I, "this is all very nice; but I want some of this fun myself, and am going right in there with you to follow the dog!"

"That is the kind of a man I like. Pitch right in, and we will see what we can do."

After a brief search for the one I had seen cross, but without result, we started around to turn the others. It was very thick cover; the laurels were hard to get through, to say nothing of the high grass and water; but my blood was up, and in we sailed. Hark! the bell had stopped, and Dash was on point just to Tacey's left. "Look sharp now, Walt; here they are." Bur-r-r, bang! Whoa, Dash! Dead bird. Two for Tacey, and I had empty pockets. This won't do. Tacey never moved, neither did Dash, when there was a bur-r-r to my left; around I swung, bang! and down I slid off the log I had been standing on. "Guess I missed!"

"Well, you got feathers all right," answered Tacey; "wait until I get my bird and we will see."

I looked while he got his bird, but could not locate the bird until Dash came along, stopped in the high grass, and there it was sure enough, my first of the season, and a fine one, which I proudly deposited in my pocket.

"Now, look sharp; there are more here."

Hardly had he spoken when a fast one crossed me, which I tried for, but neatly missed, and I heard Tacey say, "There are others. Whoa! Look sharp!" Up got another to Tacey's right and placed a big chestnut tree between him and Tacey. I waited for him to swing around, then brought him down. "Good shot, Walt, old boy; the chestnut saved his life a few seconds only. Now we are even; one dollar on the next bird"

"Done," said I; and we swung around to the right.

"Careful, Dash! Steady point! Rabbit," remarked Tacey. But Dash thought otherwise, as he stood with his nose close to the root of a big tree. "Come on, Dash." But there was no move. "Send him on, Tacey." "Go on, Dash." Bur r-r through the top hole he came and circled to my left. I thought he was gone, but stepped back a pace, let go and down he came. "One dollar or one day," sang I to Tacey.

"Right, my boy; you earned it on that shot fair enough, and you lead me one bird. Now we will take a look at another piece, where we are sure to find woodcock. I guess you have handled a scatter gun before from the way you walked into those birds; five out of six not so bad, eh?"

We crossed to the opposite, picking blackberries as we went, and deciding that one woodcock apiece would about fill the bill.

"Now we are here," said Tacey, "keep a careful watch on the dog, for among these pine trees they are apt to fool you."

Along we walked. I was thinking more of my three birds than of those to come, when Tacey shouted, "Look out!" and as I turned I saw a woodcock taking his leave around the top of a pine tree. I made a quick shift and fired, but was too late.

"What's the matter, Walt?"

"Not ready," said I.

There was a report from another gun above us, and another from Tacey's. "If I had only been quicker," said he.

"Well, you take along this lower edge and I will send that fellow that I missed back to you. He did not go far." So off I started, kicking through the fern and huckleberry bushes, when a bird rose right from under my nose. I shot twice and missed. A shot from Tacey corraled him.

"One more, and then for supper. Here, Dash, take a look in there. Whoa!"

And Tacey had him. Our score was full. It was half-past 6, and this wound up one of the most pleasant of afternoon sports. We returned home much pleased with our seven birds. I had been convinced; had turned a disagreeable start into a pleasant finish, and went home next day with a bag full of birds. We were late for supper, to be sure, but that good little wife of his had it nice and warm for us; and after indulging in plenty of good things, we wound up with the pipe of peace. I cannot speak too highly of the treatment given me at the Sportsmen's Home, and should any of my brother sportsmen want a few days' good sport within five hours of New York, they cannot do better than try this place.

A. H. M.

MORE MARYLAND PHEASANTS POISONED.

After spending thousands of dollars in securing the conviction of James Butler, who was sentenced to the penitentiary for three years on the charge of poisoning 3,000 pheasants in August and September of last year, the Bowley's Quarter Ducking Club members are disheartened to find that some one is poisoning the birds again this year. The crime of last year undid the work of four years' patient toil in a pioneer effort in this country to breed the English pheasant. This second attempt to destroy the birds may result in the club's abandoning further efforts to raise these birds.

About a month ago Mr. Joseph Davison, keeper of the recently installed breeding pens of Mr. Henry A. Brehm, located in Back River Neck, on Middle River, opposite Bowley's Quarter, noticed that many of the birds were dying mysteriously. He took several carcasses of the pheasants to Prof. Wilson, of Baltimore, and had the contents of their crops analyzed. The professor found a quantity of new wheat so heavily coated with arsenic that his experienced eye told him without a microscopic examination what poison had been used.

In spite of Mr. Davison's vigilant night watching, the birds continued to die and the poisoners, in some mysterious way, managed to continue their foul work until this entire flock was destroyed. Davison took Mr. McVicar, keeper of Bowley's Quarter game preserves, into his confidence, and the latter took precautions to guard his big flock, numbering upward of 1,500 pheasants, in the Fox Den pen, on Briar Point, just across the river from Davison's Quarters. Mr. McVicar's vigilance, however, was of no avail, and a week later his birds, too, began to die, and the same dreaded arsenical wheat was found to be the cause.

All of the club members were away from their home, in Philadelphia, at the seashore or abroad, except Dr. George W. Massamore, the assistant State game warden, who lives in this city. Mr. Davison and Dr. Massamore resolved to remove the birds remaining in the Fox Den pen and take them to Seneca farm, where they could be guarded better. Before this could be done, however, the pheasants died so fast that the attempt was abandoned, and now not a single bird of the 1,500 that were in Fox Den pen survive.

The president of the club, Mr. Nathaniel E. Janney, and Mr. Horace Magee, a member who has taken special interest

in the propagation of the pheasants, were summoned to Baltimore and a consultation was held. A determined effort will be made to save the birds in the Seneca farm pens, and prowlers around these pens at night or at any time will have a warm welcome prepared for them.

The members of the club are at a loss to find a motive for the crime. It is believed the poisoning is done by some one who has a personal spite against the club or some member of it. When Butler was arrested last year this absence of motive was also noted.

The value of the pheasant-breeding industry to the farmers in the vicinity of the Bowley's Quarter Club is acknowledged by all of the latter. The operations of the club are said to have given a large number of men employment all the year round in improving the premises of the club. Hundreds of birds have escaped to the neighboring farms, and prior to the poisoning the pheasants were believed to be as numerous as partridges in the vicinity, and many pheasants have been furnished free by the club for others to use in breeding.

Mr. Brehm's flock was started by a few birds obtained early this year from Mr. McVicar's stock There were 400 fine birds in the pen when the poisoner began his work.

A number of turkeys and chickens belonging to Mr. Davison were also poisoned, and Messrs. McVicar and Davison fear that members of their families may get the dreaded arsenic through the fowls and suffer death. They fear that the poisoner may directly try to make persons instead of fowls his victims. The loss will exceed $8,000.—*Baltimore Sun.*

THOSE JACKSON HOLE ELK.

Evanston, Wyo., Aug. 18.—*Editor Forest and Stream:* Some time early in July, last, you published an article relative to a certain lot of elk then—and now—in the possession of J. A. Adams, a resident of Jackson Hole, in this county, which article was largely commented upon by the press of our State and adjoining States. As County Attorney, I took the matter up with a view of prosecuting any person violating our game laws. To this end I asked the game warden of the said Hole to furnish me the facts; I also requested Mr. J. A Adams to do likewise. Adams forwarded such facts to the press for publication, while Mr. Manning sent in an affidavit, both of which I herewith inclose, and, as you have taken this question up, I trust you will publish such statements, that the facts may be known by the readers of your valuable journal.

You will greatly oblige me and all friends of the game by giving space to the inclosures. J. W. Sammon.

Statement of Game Warden Manning.

Jackson, Wyo., July 16.—*J. W Sammon, Esq, County Attorney, Evanston, Wyo.*—Dear Sir: Herewith the affidavit, as suggested in your recent letter. I trust it covers all the points desired. It is to be hoped that, should this game question ever come before the court, it may develop enough to get our legislative body to see it in its proper light.

I have been a close student of this question, and am satisfied the proper way is only to grant permits for the capture of elk in the manner in which Mr. Adams has captured those he now holds. Heretofore those captured under permits have been taken when it was necessary to run them down either with horses or on snowshoes, and one way was as bad as is the other, as more would be killed than were caught. In this way—the way Adams caught his—it was a positive benefit to the elk, to the country, and to the individual, as it was like making something out of nothing, as undoubtedly nine out of ten would have died if they had not been taken. A property right should accrue to the individual in game taken in this way, and such taking could not be abused, as it would always be a matter of notoriety when such conditions existed. I think taking game under any other circumstances should be absolutely prohibited.

The elk did much damage here during the past winter, as starvation made them fearless, and many people had to both night and day herd their haystacks and drive them away to certain death, when had they felt certain of acquiring ownership, perhaps hundreds might have been taken up by our citizens. Understand, that all haypen frames here are from 6 to 8ft. high and strong, but against the combined attack of a herd of elk, such fences, even, are as nothing.

Wm. F. Manning.

Affidavit of Game Warden Manning.

STATE OF WYOMING, } ss:
COUNTY OF COOK, }

William F. Manning, being duly sworn, deposes and says that during the winter of 1895-7 he was Deputy Game Warden for the Jackson Hole region; that he is well acquainted with Mr. J. A. Adams, and with the circumstances under which the said J. A Adams captured or took possession of the elk now in his possession. That the facts are: that the said Adams mentioned the fact to affiant about Feb. 1, 1897, that he should like to take up some elk for domestication and asked affiant's opinion upon the point of a violation of the game laws of Wyoming; that, considering the fact that elk were then dying in great numbers, it was affiant's opinion that it would not only be no violation of the game laws, but a positive benefit to the elk and the country if they should be taken up and cared for, and that he then expressed such opinion to said Adams; that thereafter, probably between Feb. 1 and 15 following, said Adams did take up a number of said elk, many of which were too far reduced by starvation to be saved, but by careful feeding on the part of Adams, the greater portion of those taken were saved. Affiant further says that there is no ranch in this region known or having a reputation as the "Moose Head Ranch," though affiant has understood that it was the intention of B. R. Adams, deceased, to so name his ranch, but such name had never been used here, and the ranch of said B. R. Adams, deceased, adjoins the ranch of J. A. Adams.

That all of the elk taken by the said J. A. Adams, that lived, are still held and kept by him. Further, affiant says that the game laws are being well observed in this region, and but one violation has come to affiant's knowledge for the present season; that the instruction of county attorney and State game warden to punish violators is being strictly followed Wm F. Manning.

Subscribed and sworn to before me this 15th day of July, A. D.
Moses W. Pettigrew,
United States Commissioner.

Published Statement of Mr. Adams.

In view of the fact that the *Sun-Leader* in an article of date July 8, 1897, relating to elk, says many things which unjust and untrue, not only in its own version, but in publishing the copy of the Forest and Stream article, which is in every respect false. I shall express my own opinion as a layman of the rights involved in the controversy now going on between the State authorities upon one side and County Attorney Sammon and others on the other, and of which I am the main issue involved. If, therefore, as I intend to make myself understood, I am guilty of a crime against the State laws, I should be prosecuted; otherwise I should be entitled to consideration in the premises Being a resident of the State, who upholds the intent and spirit of the law, and who refuses to recognize, either by attempted persuasion or threats of prosecution the opinion of any person except that given by a judge of one of the honorable courts of Wyoming, I reply to the article mentioned as follows:

That during the winter season of 1896-97 the yearling elk died in large numbers in this valley and in the immediate vicinity of my home. All of the yearling elk died except those expressly provided for. Hundreds of elk of all classes forced into my hay corrals for sufficient substance to keep them from starvation, and in a spirit of sorrow and pity that those animals should die, when by an act of kindness their lives could be saved, I took advice from my neighbors and a deputy game warden, and with a full belief and with an understanding from my neighbors that I was doing what was right and just and what they would do were they situated as I was, I allowed many hundreds of the animals to come into my corrals and inclosures. When spring came I retained twenty-seven head of yearling elk for the express and only purpose of domestication after the winter was over. After the spring was on, I was confronted with a demand to turn the elk out or suffer the consequences of my alleged unlawful capture of the elk in question. Investigation disclosed the fact that the deputy game warden, Mr. White, had represented to the State officials that I had unlawfully inclosed 177 head of elk. I refused to turn the elk out upon the mere demand of the game warden. Then followed the opinions of Attorney-General Fowler, the replies of County Attorney Sammon. Then followed a second demand of deputy game warden for the release of the elk. I told him to take them, as I would not resist any lawful process of a court for the elks' release. So far the deputy has not turned out the elk. These are in main the facts up to the present time, and it too plainly shows that the article in the *Sun-Leader*, having as it does the ear-marks of the powers that be, is maliciously false, uncalled for; and to the mind of any one versed in the ins and outs of this question, was for the purpose of "jumping on" the county attorney of Uinta county. Whether or not this is good politics, I am not willing to admit.

So far as I am concerned, I have at no time shipped or intended to ship any of the elk now in my possession. I have never applied for a permit for such purpose nor do I intend to. I have no interest in the Moosehead ranch, and the game in question is not retained in gross violation and contempt of law, as is broadly asserted in the article mentioned. There is not now nor has there been any collusion between the Hon. County Attorney of Uinta county and myself with reference to these elk, and this bold subterfuge indicates the depths to which the correspondent would go to gratify the ambition of his Wyoming employers.

I do claim for myself that the elk in question were saved from the sure and certain fate of starvation; that at no time did I violate any law in retaining them, and that, outside of the Attorney General's opinion (and he is not the court), there is no opinion in Wyoming courts establishing a precedent as to whether I am the worst game poacher or destroyer in the State. I stand ready now as I have in the past to obey the law. When it may be decided by the courts I have no rights, then it seems to me will be the time for the irresponsible Forest and Stream correspondent and his contemporaries to make their kick. I have read many articles upon the capture of these elk, and this is the only one authorized by me, and in all deference to those who have gone before I can only request a careful perusal of the same.

And it may be stated here that when it may be necessary to live and enjoy property rights without first recognizing and obeying demands arising out of the smokes of other battles, then I am willing to sacrifice what interests I may have in combating these inferences of a speculative nature engrafted into the controversy of the elk.

Joshua A. Adams.

SHOOTING CANADA GEESE.

One bright October afternoon, as I was siting outside my little tent in North Dakota, gazing over the great plains, my eye was suddenly attracted by a black line moving along the western horizon.

It took but a minute to distinguish what I was looking at to be a flock of Canada geese, and after following them along for a short time, I discovered they were heading toward a little sheet of water which lay not a great way from where I sat

Although I did not count on killing any of this flock, I thought I would try my luck at it anyhow; so picking up my gun and a few BBs I started with my dog down a ravine which led to a slough 100yds. or so away. As this was the only water within several miles around, I thought it was very likely that the birds would swing up to it, and if I was within gun range at the time I might happen to drop one or two, as their big white breasts offer a splendid target.

Making my way rapidly through the dry grass, I managed to reach the water before the birds were very near, and placed myself amid the thick rushes, which formed a good blind; then cautiously gazing in the direction of the birds, I saw that they were then coming toward me. Whether they saw me at that minute I do not know, but they swung off to the side, and when I saw their big breasts turn up and their wings tip to the side, I thought, greatly to my sorrow, that they were surely gone; but quickly thinking of the call in my pocket, which had attracted these birds before, I lost no time in bringing it to my lips, and soon had their familiar call—*Honk! kwonk! Honk! kwonk!*—ringing through the air to perfection.

I continued blowing the call for several minutes until I finally heard the echo of it from the birds, which the whole flock seemed to be answering. Then quickly locking my gun I peeped over the reeds, and saw once more to my great delight that they again were heading toward me, and I watched them grow larger and larger, nearer and nearer, until I finally had the pleasure of seeing the whole flock hovering above my head.

"It's a magnificent shot," I thought to myself, as I singled one of the birds out and traced it along over my gun rib, and when at last the report rang out I saw a few feathers drop out, but the loads did not seem to hit square enough to bring it down. As the flight of these birds is not so swift as some we have to deal with, I managed to get another shell in my barrel before they got out of range, and as the tail-ender of the flock sailed very saucily away, I drew a line on it. When the shell exploded I heard the shot beat on the bird's side, and in two or three seconds it lost its position in the "V" with its mates, soon hitting the ground with a loud bounce, which brought the expression of "Gee whizz!" which any shooter seeing one of these big birds fall will utter, or its equivalent, for it seemed as if it shook the earth. After locating my bird I looked at the remainder, and saw to my delight that the bird I had picked the feathers out of was lowering from the rest, and watching it with anxious eyes I finally had the satisfaction of seeing it safely in the grass, upon a little hill a few rods away. My dog and I were soon busy hunting up the bird I had first seen fall, and in a short time were in opposite directions tracing for the stain of blood on the clear yellow reeds. We spent a long time eagerly searching, until finally I heard a whine from my dog, and looking toward him, I saw he was working lively in the grass, with his tail waving as fast as it could go. I knew what this meant, and following him up a few paces he at last led me to my bird, which I found to be an extra large one, and gazing upon it I came to the conclusion that my long search was amply rewarded. It is not such a light thing as one might imagine to have one of these monarchs of the Canada prairies on your back, and after I had shouldered the big bird I thought I would go back to my tent, and leaving it there, resume search for the other one, which I had marked down upon the hill; but thinking that the second one might only be winged, I decided to hunt it up then, and if I could find it I would return to the camp better satisfied with the two. My dog, knowing what I was after, was off before I knew it to find the second one, and all the whistling I could produce had no effect on him; so I started back for the place where I had seen it fall.

I made a thorough search upon the summit of the hill where I had marked it down, and after tracing the same ground over a number of times without seeing a spot of blood or a sign, I got disgusted and took a seat upon the grass to await my dog's return. As I suddenly looked to my right I spied three mallards coming directly for me, and quickly slipping a pair of No. 4 shells into my gun, I buried myself in the grass to wait for them to swing over. They were flying down wind, and soon came whizzing by in single file and offering me an excellent shot.

Throwing my gun a few feet ahead of them, I followed them along a second, and opened up with both barrels in quick succession; at the moment the gun cracked two doubled up as if they had a sudden cramp, and fell in a lump upon the ground. I kept my eye upon the lone bird left, which, after flying some distance off, gradually swung around and started back in search of its mates, which so suddenly had disappeared. Keeping well under cover, and letting out a few squacks similar to its call, I managed to draw the bird within good gunshot; and when the report of my gun rang out, the shot seemed to strike it in the right place, for it suddenly changed from its quick flight and came down through the air heels over head, until it finally struck the ground.

At the report of the gun my dog appeared, and after spending a few minutes working in the grass, he delivered up the three birds I had so successfully brought to bag. My dog and I spent a long time after this in searching for the second goose where I had seen it fall, and when I was making up my mind to give up the chase, I noticed that the dog was following up a trail toward the rushes of the slough, where we had found the first bird. At first sight I thought he was only going over the tracks of the bird which I had over my shoulder; but after watching him a minute or so, I saw he was really in earnest on the trail, so I hurried over to him and backed him up in the tracks he pursued.

As we grew nearer the water, I heard a rustling of the weeds ahead, which I at once started for, and after I had taken a few lively steps through the soft mud near the water's edge, I at last laid hands upon the bird I had so long been hunting for.

When I had my string tied together, I found I had quite a load, and as the sun was now sinking behind the western hills, I threw gun over shoulder and started for my tent, which I reached before dark, tired and hungry, but well satisfied with the contents of my string. P. C. Heard.

UPS AND DOWNS OF HUNTING.

A letter recently received from A. J. Spearen, who has camps at and near Spider Lake, Me., may be of some interest to sportsmen planning a trip to Maine the coming season.

Spearen writes that his camps are well fitted, and that sportsmen will find plenty of room, and that he is in the best moose region of Maine. Caribou are quite plenty, and a great many deer. Trout fishing is first class. I inclose a photograph he sent, which shows the result of five successive casts, the total catch, eleven in number, averaging over 1lb. each. Much larger trout are easily caught, but the photo represents what he says. He proposes taking parties in by way of Moosehead Lake, giving them a fine trip through a chain of lakes, and to go out via Oxbow. A number of good heads of both moose and caribou were killed last season on his grounds.

Personally, I have known Spearen for a number of years, and he is a first-class guide. His camps are quite a distance back in the wilderness, and it takes some time to reach them.

On my hunting trips after such game as moose, caribou, bears and deer I have been quite successful. On eight trips I shot eighteen head of game—three moose, five caribou, four bears and four deer. One trip of the eight after caribou was a failure, owing to a very noisy crusty snow during the whole time, which spoiled all chances of still-hunting. Nearly all my game, except some of the caribou, was killed on grounds hard to reach, and I have always preferred such places to hunt in, as giving better chances than more accessible grounds. Many of my trips were made late in the season, as I always preferred still-hunting on the early snow, also for the reason that any large game killed then can be saved. Of course, to get to out-of-the-way hunting grounds after the lakes and streams freeze, entails long and hard tramps.

There are a great many disappointments in hunting large game by any method, and still-hunting has its full share A party may arrive at camp just as the first snow of the season is falling and everything indicates a successful trip. A slight thaw or a few moments of rain will be followed by a noisy crust, entirely spoiling what otherwise would be first-rate

tracking snow. Snow sometimes falls in the Maine woods very early in the season. My first still-hunting of deer was early in October, when a snowfall of some 2in. made good still hunting for a couple of days. I killed a deer on each day, getting both very easily; followed one fifteen minutes and one ten.

Of course there will be many failures, even when making long trips to camps far back in the woods. During the past year I read in FOREST AND STREAM the account of such a trip The writer complained of the time spent in reaching the grounds where he had been, and from seeing some large game being shipped at some of the stations he passed on his way home, he concluded that the hunting was as good, if not better, on grounds much nearer the railroad. Any one coming out during the hunting season on the Bangor & Aroostook Railroad will very likely see some moose and caribou and a number of deer being put on the train at various stations, and is very likely to be told that it was killed "just back here a little way." This "just back here" is rather indefinite. It may mean two or three days' journey. Also, could the number who go to these easily reached grounds and who return empty-handed, be compared with those who were successful, it would show but a very small percentage of lucky hunters. Of course, a good many deer can be found in these easily-reached grounds, but I am speaking of moose and caribou

In Nova Scotia, moose are frequently killed quite close to the settlements and highways. In the lower part of the province where I have hunted, the moose country is in the back portions of Yarmouth, Shelburne, Halifax, Queens, Annapolis and Digby counties. Large sections of these counties consist of bogs, barrens, lakes, streams and scrub timber, and the moose are practically surrounded on three sides by salt water, and on the fourth by settlements, highways and railroads. Parties go in hunting from all sides, and the moose are driven back and forth, and are often found in rather unexpected places. The first moose I ever saw was on grounds where our Indians said we were not likely to see even signs; and I had no idea, nor was I prepared when a moose walked out on to a small bog one morning, and stood looking at me not 40yds. away. We were just getting ready to move on, as we were over a day's journey from where we expected to find our game, and my rifle was in its case in camp.

Again, when in Queen's county, we had just passed Indian Gardens at the outlet of Lake Rossignol, when we met a party of native hunters who had been in a week. They had not killed anything, and were on their way out to get a supply of provisions, intending to come back immediately. They camped for the night at Indian Gardens, and heard a cow moose call not far away during the night; in the morning they crept toward the place, and killed the cow, a calf and a bull. They were so near the highway and some houses, that they got an ox-team and hauled the three moose out whole; the same party were back in less than a week and killed two more moose almost on the same ground. In Maine, however, it is rather different; the game has a much larger range and when moose are started they are more likely to travel a long distance back in the wilderness rather than toward the outskirts. Had I never killed a moose or caribou and wanted to I certainly should try Spearen's camps. I am confident I could get both there the coming season. I should, however, go prepared to stay some time if necessary, also to work to get shots. As it is, I do not want to shoot another moose or caribou enough to spend the time required to go where I would expect to find them. I get pretty good shooting on small game where I live—partridges and woodcock—and during the winter months a good many foxes in our New England way of hunting them; should snow fall before the season closes I can in a few hours get to a pretty good deer country.

In advising any one to try Spearen's camps, I do so simply for the reason that I think it is as good if not better than any other region in Maine. For particulars relating to making such a trip Spearen will furnish full details, his address is A. J. Spearen, Massardis, Me., Box 13.

C. M. STARK.

DUNBARTON, N. H., Aug. 21.

A POTTER POTTED.

SOCIETY at Narragansett Pier was considerably disturbed when the fact became known yesterday that one of the most prominent and popular of the summer residents had been arrested and taken to court for prosecution on warrants, charging him with pursuing game with intent to kill, in violation of the State game laws. The details of the affair make a very interesting story. It is alleged that Mr P. S. P. Randolph, with a local hunter named Potter, whom he employs as head farmer on his Pier estate, has been enjoying the pursuit of game for a week or more, covering their movements by a clever and yet simple ruse.

The two men, dressed as for a drive, left the Pier in a covered trap, with a footman, Mr. Randolph driving. When they reached the hunting ground they drove into the woods, where Randolph and Potter divested themselves of society garb and donned hunting rigs. Under a seat in the trap they had a dog and guns concealed. These were brought forth, and while Randolph and Potter scoured the woods for game the footman awaited their return.

The State Game Protective Association has been trying for a long while to put a stop to hunting and trapping in the closed season in that section. This spring the local hunters there undertook to form an independent association. But on promises that the State Association would endeavor to do something there, the gunners at Wakefield and in the vicinity joined the State Association. Others were told that they must stop hunting in the closed season. They protested that the New Yorkers at the Pier would be permitted to shoot. They were assured it would not be permitted, and that if they did they would be prosecuted.

More than a week ago State Game Warden Thomas W. Penney was notified that the law was being violated. He sent W. L. Plaisted, of Olneyville, to the Pier to shadow the parties complained of, Plaisted placed himself where he could shadow Randolph and his man, and when they started out, ostensibly for a drive, in the early part of last week, Plaisted followed them on a bicycle. He saw them turn into the woods. He shadowed them and saw the two men leave the carriage, change their clothing, take dog and guns and go into the woods, leaving the trap with the footman. He followed them through the woods, heard them shoot and saw them return to the carriage.

Plaisted was alone and decided to take no action then, but to await until he could have witnesses to corroborate his testimony. On Thursday Game Warden Rodman, of Wakefield, was informed of what had been seen, and officer Plaisted started out with a local shooter and a farm hand as witnesses to shadow Randolph and his man again. They followed as Plaisted had done before. They saw the change from driving dress to the hunting garb, and then they folllowed into the woods a little way and remained where they could see the men when they returned to the carriage.

When Randolph and Potter returned, they were conversing. The men in hiding heard one of them say to the other. "That bird came right at me or I would not have missed him."

Potter had a game bag, and it looked as though it was not empty. The men in hiding arose and started for Randolph and Potter. Both ran. Randolph was seen to hand something to Potter. Plaisted pursued Randolph and overtook him. Randolph took the matter coolly and asked if the matter could not be settled quietly.

Plaisted said he guessed it could. Randolph asked him to return to the carriage and they did. Arriving there, it is alleged, Randolph drew from under a seat in the trap a bottle of choice whiskey and another bottle containing Apollinaris. The other did not appreciate the courtesy of the proffered treat from his prisoner. When Randolph again asked if the matter could not be settled without difficulty Plaisted said he thought it could, but not with him.

Plaisted told Randolph that he did not care to make it unnecessarily disagreeable; that he knew Mr. Randolph well enough to accept his word, and offered to accept his pledge to appear before Judge Lewis in the District Court at 1 o'clock the next day to be arraigned.

This agreement was made. While discussing it, Potter returned and was placed under arrest, and the same arrangewas made for him to appear in court with his employer.

Randolph and Potter returned to the carriage and drove out of the woods. Officer Plaisted was satisfied that Potter had secreted the birds in the woods, and that he would make an effort to recover them, so that they could not be used as evidence in the cases. He shadowed the team after it was driven from the woods, and, as he expected, he saw it turned into the woods again at a point some distance away. He ran to that point, headed the team off and ordered Randolph and Potter to stay out of the woods, telling them he had men searching for the birds that had been secreted, and that he proposed to find them.

The rest of the afternoon was spent in the search for the birds. But darkness came on and they were not found. Bright and early Friday morning Plaisted was out in the woods again with two men hunting for the birds. They heard a noise on the other side of a wall they were passing. On investigating, they found Potter crawling along on all fours. He, too, was out bright and early after the birds. He was ordered to arise, and the party of searchers kept track of him until they found what they were after, three chicken partridges, which were concealed in the brush.

Randolph and Potter appeared in the District Court at Wakefield as they agreed and were arraigned. Both were charged with having pursued game with intent to kill in violation of the game law. They pleaded not guilty. Then Potter was charged with having had three birds in his possession. He pleaded not guilty. The cases were continued to Monday, Aug. 30. The prosecution was conducted by Game Warden Penney, of the Association, and Attorney F. W. Tillinghast.

Mr. Randolph told the officials that if he believed the game laws would be enforced he would be pleased to join the Association, and would contribute to its funds as liberally as anyone now in the organization. The Association's officials will endeavor to satisfy him that they mean to enforce the laws.—*Providence, R I., Journal, Aug.* 22

CHICAGO AND THE WEST.

Celebrated Case of Illegal Chickens.

CHICAGO, Ill., Aug. 28.—We have had something of a *cause celebré* in illegal prairie chickens here this week, in which one or more sportsmen and club members, a well-known restaurant keeper and our new warden, Harry Loveday, all figured in conjunction. The facts of the case are these: On Aug. 7 Mr. C. S. Wilcox, of Chicago, a member of the Diana Shooting Club, the Audubon Club, etc , and well known in Chicago sporting circles, went to Kinsley's restaurant with a friend and ordered what is during the months of July and August technically known as "owl." This "owl" was served in the German department of the restaurant, which is under the charge of William Werner. The latter afterward stated that the "owl" was served without his knowledge. Soon after eating this bird, Mr. Wilcox repaired to the billiard hall of Mr. W. P. Mussey at 106 Madison street. Here he met Mr. Bob Clark, manager of Kinsley's restaurant, and to him remarked, in the presence of others, that he had just been to Kinsley's, and had eaten the toughest prairie chicken he had ever eaten in his life. In some way word of this came to the ears of Warden Loveday, who caused the arrest of the steward of the restaurant. The case came up for trial before Justice Prindiville on Wednesday morning of this week, in spite of Mr. Wilcox's repeated later assertions that he would not appear as a witness in this case. He was, however, brought into court by subpœna, and came represented by an attorney. When asked if on such and such a date he had been served with prairie chicken at Kinsley's, he refused to answer, on the ground that he might thus incriminate himself. The justice explained to him that he would not be incriminating himself at all, but Mr. Wilcox still declined to answer, whereupon the justice fined him $5 for contempt of court. Asked if his companion, Mr. B. Dicks, was at the same time served prairie chicken, Mr. Wilcox again declined to answer and was again fined $5 for contempt of court. It was not, however, necessary to collect these fines, for at this juncture Mr. Werner, representing the restaurant, stated that he was tired of the whole business, and was willing to plead guilty. He was thereupon fined $10 and costs. Mr. Werner afterward in some wrath remarked that it is the sportsmen who eat most of the illegal game. This case has attracted much comment so much that perhaps further comment than a mere statement of the facts would be unnecessary here.

This Sheriff Shot Illegal Chickens.

Mr. Charles E. Johnson, Sheriff of Peoria county, Ill., is an officer of the law, and he is fully acquainted with the provisions of the law. Yet early in the month of August this man, unworthy to be called an officer of the law or representative of the people, was unable to restrain his impulse to go chicken hunting. He did so, and was successful in killing a few birds. Word of this came to Warden Loveday, who at once caused the arrest of Sheriff Johnson. He was tried on Aug. 17, in his own county, and fined $15 and costs. This is one of the most singular cases of game law violations yet to be recorded The illegal work was done right in the neighborhood where lives President Fahnestock, of the Illinois State Sportsmen's Association. We have yet to hear of a single conviction obtained this season through the efforts of this body, although we are told that protective work is soon to be taken up by the Association. It would seem that there are some conspicuous heathen very near at home in Peoria. Warden Loveday cannot be complimented too highly upon his determination in going after and bringing to justice this unworthy sheriff, this executive of the law, this officer who is himself a criminal. Peoria county cannot too quickly rid itself of the slur which will remain upon its reputation so long as such a man remains in office.

Caught by the Law.

At Eau Claire, Wis., Aug. 23, a prominent citizen by the name of Asigal Wyman was tried and convicted of killing three prairie chickens on Aug. 8. He was fined $10.

Seizure of Game.

Members of the Neligh Gun Club, of Nebraska, last week boarded a passenger train and took from the express car something like 300 prairie chickens, which were billed through to Chicago. The birds were shipped from Clearwater, Neb. Legal proceedings will be at once instituted against the express company, and efforts will be made to locate the market shooters. Three-fourths of the birds were not half-grown. If this action of the Neligh Gun Club be treason, let us have the more of it.

Mixed Bag.

A hunting party of Helena, Mont., composed of Judge Henderson Smith, E. S. French, R. P. Barden and Fred. Naegle, last week went out hunting and made the mixed bag of two prairie chickens, two tame chickens, four rattlesnakes and a mule. There is no pent-up Utica in Montana.

Awakening Sentiment.

There is a curious awakening going all through the West in game law matters, as I have earlier mentioned, and newspapers all over the West continue to publish statements of arrests of game law violators, of encouragement for the wardens, and of condemnation of those who break the game laws. So far as I am able to determine from such reports received at this office, I am inclined to think that no State is more advanced than Minnesota in matters of game protection. A great deal of news comes in concerning the work of Agent Fullerton, of Minnesota The latter reports that he has 100 deputy wardens in the field this month, and he claims that there is no wholesale violation of the chicken law going on. He says that in Detroit and Anoka counties, once the scenes of continued illegal shooting, there is now next to nothing done in violation of the chicken law, so active have been the local deputies. Agent Fullerton says that it is a shame that the State of North Dakota opens its chicken season so early. He thinks the date should be Sept. 15. This also is the belief of every conservative shooter who knows anything about chicken shooting. If all our Western States stuck to Sept. 15 as opening day, and if all our wardens could enforce that law, there would be abundance of magnificent sport, and we should have a magnificent game bird assured to us forever.

Act of a Would-be Warden.

A rather odd case in game law matters came up at Minneapolis this week. Agent Fullerton had been asked to appoint Dr. Hedderly, of Minneapolis, as a deputy game warden, the latter coming highly recommended by many friends as the right man for the place. Mr. Fullerton made out a deputy's commission for Dr. Hedderly, and was about to mail it to him, when he received word from Deputy Warden Coffin, of Hennepin county, stating that he had just arrested Dr. Hedderly for shooting illegal chickens in Anoka county!

Warden Hedderly, let me introduce to you Sheriff Johnson, of Peoria county, Ill. It gives me pleasure to see gentlemen like you acquainted with each other.

An Indiana Protest.

Complaint is made in the *Review*, of Elkhart, Ind., that quail and ducks are already being killed near Goshen, in that State. On the editorial page of the paper there is the following statement, not an ignoble one to be seen on the editorial page of any paper: "Were there no law, humanity should come to the rescue of these young birds, scarcely half-grown and totally unfit for use, and without apology we say no one but a vandal will indulge in their destruction."

Arkansas Warning.

Many shooters of the State of Arkansas have announced their intention of going prairie chicken hunting on Sept. 1. This was the old opening date, but as the local press of the State is now announcing, there is a close season of five years on prairie chickens in the State of Arkansas, dating from 1893, so that it will be illegal to shoot this bird until Sept. 1, 1898.

Where to go for Chickens.

As has been earlier stated, the general tone of reports from Minnesota, North and South Dakota is to the effect that chickens will be more abundant this fall than they have been before for years. I am still inclined to think that the upper part of North Dakota will be as safe a country to go to as any, but am reluctant to give specific answer to many inquiries which have come in here, because no one can tell until after the season opens what the shooting will actually prove at any given point. The following letter, received from Carrington, N. D., is specific in its nature and may be of interest to readers of FOREST AND STREAM: "If you or any party from your section are contemplating a hunt into the Northwest this fall, will state I have had considerable experience hunting in the Northwest, and am acquainted with some of the best goose, duck and chicken fields to be found, and will render any assistance desired in locating parties thereon. Any information as to hotels, livery, game, etc., will be freely given on application.

"J. E. GALEHOUSE, JR.,
"Deputy State Game Warden."

News From the Shooting Fields.

The season opened in North Dakota, Aug. 20 On Aug. 21 the following dispatch was sent to the *Times*, of Minneapolis:

"Devil's Lake, N. D , Aug 21.—The game season opened here to-day, and before daylight the noise caused by shooting resembled the Fourth of July. It was not necessary to go

outside of the city, as a number of sloughs in the outskirts were literally covered with ducks. The market to-day is flooded with ducks and prairie chickens."

The Jamestown, N. D., *Capital* prints the following local chicken news in its issue of Aug. 21. It may be of service to many Eastern men who think they should be able to get off the cars anywhere in North Dakota, and at once fall to work shooting at innumerable coveys of chickens

"If all the hunters who left Jamestown Thursday night and yesterday morning had met with good luck there would probably be few chickens left in Stutsman county, but the majority of those who left so full of hope, promising untold quantities of birds to less fortunate friends compelled to remain at home, returned last night weary and dejected, with few chickens to show for their day's hunt. Chickens they unanimously report scarce and very wild, showing they had been hunted before the season opened. Ducks are plentiful, but the ponds are so full of water and the grass so high that it is next to impossible to get them after they are shot.

"Only two of what might really be called good bags were reported last night The list was headed by Ald Kuhn, Frank Taylor and Frank Dallair, who got sixty-one chickens, eleven ducks and about a bushel of snipe. They secured most of their game southeast of Wimbledon. John Clarke and D. E. Hughes follow next with forty-one birds secured near the city, at no time more than seven miles distant.

"Superintendent Wilson and Pierce Blewett hunted about three hours in the vicinity of Hobart, in Barnes county, and brought in a nice bunch of chickens.

"Mayor Fuller and Chief Mahony went out about 5 o'clock last evening and got seven chickens and one duck before darkness came on.

"M. L. Parker and Alex Gilfillan got eleven birds before dinner, and Chas. Klaus and Lou Niemeyer report a killing of sixteen birds.

"Geo. Game, H. B. Wood and E S. Rose managed to get a good early start, and by attending strictly to business got eleven birds.

"County Treasurer Halstead and Night Patrolman Cadieux hunted in the vicinity of Pingree and bagged eleven. They only run across two coveys, and were following up one of these in a tree claim when stopped by the owner.

"F. F. Montgomery, Dorm. Baldwin, William Hotchkiss and John Eddy traveled about forty miles—and got back.

"Among those who hunted in the early morning and came back empty-handed, or nearly so, were Alderman Durkee, who couldn't find the birds; Auditor Vennum and N. P. Agent Spurling, who got one chicken, and Chet. Hodge and Dan Sacho, who got a duck and one chicken."

The agent of the Minneapolis & St. Louis Railroad at Hazel Run, 140 miles west of St. Paul, telegraphs on Aug. 26 that the chicken shooting there will be good, and the sloughs are full of local ducks I think fair sport could be had in lower Minnesota on this line, or that of the Milwaukee & St. Paul, anywhere about 100 miles west of St. Paul.

It is still too early to give authentic news from Minn., whose opening day is Sept. 1. Wisconsin also opens her season Sept. 1, and there will be fair shooting in the lower part of that State, although the sooner has been much abroad in the land. Illinois, wisest of all these States, opens her chicken season Sept. 15, and in spite of the illegal shooting, will still be able to show in the cool days of the fall a few scattered coveys of big, strong, brown-backed birds, such as any sportsman may be proud to bring to bag.

It appears that the iniquitous side-hunt is not yet abolished in the land. At Sioux Falls, S. D., two companies of chicken hunters, fifteen on each side, have been organized to have a grand side-hunt on Aug. 31. The programme is a butchery, a banquet and a ball. The captains of the misguided men who are to assist in this unsportsmanlike proceeding are Messrs. F. P. Roberts and W. P. Saunders.

At Tacoma, Wash., on Aug. 18, A. Berens was arrested by Warden Kielmeyer for shooting quail out of season, and was fined $10 and costs. August is a sweet time of year for shooting quail.

Stanley county, S. D., last week decided to offer a bounty of $5 per scalp on gray wolves. These animals are coming out of the bad lands and destroying the young cattle on the Missouri River ranges.

Genesee county, Mich., has this year, since May 1, paid out on sparrow bounties $1,227.14. This accounts for 61,357 English sparrows. Yet there are others.

Personal.

Mr. F. C. Selous, an Englishman of considerable fame as a big game hunter, calls in Chicago this week on his way west to Wyoming. Mr. Selous hunted for twenty-three years in Africa, and killed a great many elephants, lions and other big game. He states that he killed 111 elephants in three years. This was some twenty-five years ago. Mr. Selous regrets that there are none of the American buffalo left. There were a few others ahead of him.

Mr. E. C. Carter, assistant engineer of the Chicago & Northwestern Railroad, leaves on Sept. 3 for a big game trip on the middle fork of the White River, Colorado. He takes with him a full battery of guns and a few caissons of ammunition. Mr. Carter has mildly lost a bear and believes that the best outfit with which to go in search of him is a big gun with a big bullet and a whole lot of Curtis and Harvey powder.

Mr. John F. Eberhart, of this city, a sportsman who has traveled in many remote regions of the country, is just back from a trip to the Rainy Lake country, where he had good fishing and saw abundance of deer.

Mr. H. S. Canfield is a sportsman and newspaper man whom I was fortunate enough to meet at San Antonio, Tex., so long ago as 1890. Mr. Canfield afterward joined the large staff of newspaper correspondents located at Washington, D. C. Then he did a year of newspaper work in New York. Now he is located in Chicago, and is doing some of the best special stuff our dailies here are getting. He strolled into the FOREST AND STREAM office this week, and we have about concluded we will go hunting somewhere together this fall if we have luck. San Antonio papers will please copy.

By the way, what has come over the spirit of the dream in San Antonio? Why do we hear nothing from Oscar Guessaz, Joe George or other representatives of the great undrowned and unhung contingent loose in the prickly star State? It would'st seem something might happen whereby shooters of the North could again get word from these irrepressibles. It would give me pleasure to announce a relief expedition sent out from San Antonio for the purpose of rescuing Mr. Canfield from his perilous position in the ice fields of the North.

No Guns for the National Park.

It is now contrary to regulations to carry any sort of firearms, sealed or unsealed, within the limits of the Yellowstone National Park. Orders to this effect were issued by the new superintendent, Col. Young, on Aug. 23. It is thought that these regulations will work a hardship on hunting parties bound for the Jackson's Hole country, who have been in the habit of going in via the National Park. Col. Young states that it was customary for some persons to remove the seal from their guns after they got away from the beaten trails, and that he intends to have no more of this sort of thing Tourists will be willing to have their firearms taken away if it can be establi hed that the poachers can all be caught and treated in the same manner.

Iowa Hunting.

Mr. O. B. Johnson, of Orion, Ill., writes me the following letter of inquiry: "Would you kindly inform me where I can find good chicken shooting in Iowa, within 200 miles of Rock Island, Ill.; also if I could find any ducks there about the first two weeks in September? Would I find such game in Tama county, Ia.?" I cannot kindly inform anybody where he has a cinch on good chicken shooting in Iowa or anywhere else, but Mr. Johnson ought to find fair chicken and duck shooting in the neighborhood of Ruthven, Ia. There are still some birds left in northwestern Iowa. In Tama county there might be a few prairie chickens, but I do not think that country so good as other parts of that State E. HOUGH.

1206 BOYCE BUILDING, Chicago

Rhode Island Association.

PROVIDENCE, R I., Aug. 20.—*Editor Forest and Stream:* A hammer-head shark 10ft. in length was captured a short distance off Matunick Beach a few days ago by Mr. G. N. Browning.

David B. Manchester caught a white eel off Wickford a few days ago, a variety rarely found in these waters

At the meeting of the Rhode Island Game and Fish Association held a few days ago many new and influential names were added to the large list of members, and renewed interest in the protection of birds and fish in this State was shown. Every member pledges himself to observe the law relating to birds and fish, and with the means at the disposal of the Association all others will be visited with the extreme penalty of the law in case of violation. Vigilant and active special constables have been appointed under the provisions of the charter of the Association in different sections of the State, and any violators will be rapidly detected and punished.

The Association voted unanimously to protect all song and insectivorous birds, as well as game birds, and will prosecute vigorously any violations of the law in this direction. They hope to abate the nuisance of those who, armed with guns, go forth to shoot at every bird that may come within range, and also to commit other depredations if opportunity offers. The pursuit of song birds by this class, mostly for the feathers, has been so continuous and destructive that it has become impossible for the farmer to raise crops without the use of poisons to destroy insects, which were formerly kept in check by the birds.

In the course of the discussion it was stated that in the neighboring State of Massachusetts a law has recently been enacted prohibiting the sale of parts of birds for ornament, and the wearer is said to be liable to arrest. The Audubon Society has been organized, whose members pledge themselves to protect song and insectivorous birds, and to wear no ornaments made from their plumage. The Rhode Island Association counts on the assistance of these members in their efforts to protect this class of birds.

Within a few weeks, Representative Lacy from Iowa introduced a bill in Congress to enlarge the scope of the Fish Commission so as to include birds, and providing that the Commission shall extend its jurisdiction so as to provide for the propagation and distribution of game and other wild birds of the United States. Under this bill it is expected that the different States will supplement national legislation in regulating and protecting after the birds are introduced. It is the intention of the Rhode Island Association to ask the Legislature at its next session to take action in the same direction, so as to have the Fish Commission of this State include all birds in their jurisdiction. United efforts of all lovers of birds cannot fail of success, and it is believed the day is not far distant when the farmers' and the true sportsmen's interests will be mutual. W. H. M.

A "Snipe Hunt" which Worked the Other Way.

JACKSONVILLE, Fla., Aug. 28.—*Editor Forest and Stream:* Your note in this week's issue about the snipe hunt trick prompts me to send you this amusing story, which is told in a current *Tallahasseean:*

St. Teresa has been the scene of many successful "snipe hunts"; that is, successful for the projectors, but awfully destructive to the patience of the "victim." They had one down there a few nights ago, however, that took a turn somewhat out of the ordinary rut. The reports that have reached this city state that J. S. Winthrop and State Attorney George W. Walker, of this city, and Hon. Flavius T. Christie, of Miccosukie, were the leaders of the party, and Thomas J. Hogan, of this city, was the victim selected "to hold the bag." Hogan was considered an especially good man for the part he was to act in the sport, for the reason that he only recently moved here from Memphis, Tenn, and the party never dreamed that "snipe hunting" was practiced in that far-off inland city, but the sequel shows they had reckoned far too recklessly. A torch was secured and the party set out up the beach, each member inventing and pouring into the willing ears of the "victim" miraculous stories of fabulous numbers of snipe that were frequently attracted in the way they proposed and made captives in "the bag." When they had reached a lonely spot, far off from the hotel, the torch was lighted and the "victim" stationed on the beach to "hold the bag." All the others started off toward the hotel "to drive the snipe." Hogan would not agree to hold the bag alone unless they would drive from the other direction. This they finally agreed to do, and all set out that way. As soon as they were far enough away they made a circuit around the "bag holder" and returned to the hotel through as vexing a piece of scrub woods as mortal ever trod. But the fun was worth it, so they thought. But imagine their surprise to find Hogan sitting in the parlor of the hotel, when they reached there, complacently holding his bag. When they left him he stuck his torch in the ground so it would continue to burn, and leisurely returned to the hotel in ample time to prepare the guests for giving the crowd the horse laugh when they returned.

New York Grouse Season.

ITHACA, N. Y.—Although sick and unable to get out for nearly a month past, I am able to write, by virtue of the kindly offices of some of my local FOREST AND STREAM friends, that a great many ruffed grouse are to be found in neighboring covers. The birds, however, are small and immature, and do not afford the sport they will later on. As expressed in these columns last year, I am fully convinced that the grouse season should not open prior to Sept. 15. I hope to get afield soon, and will then be able to report more definitely in regard to the grouse and woodcock supply, and where it may be found. M. CHILL.

Black Game and Capercailzie.

SHELDON, Vt.—*Editor Forest and Stream:* I have a recent letter from a trapper in Sweden saying that he will be able to deliver in October both black game and capercailzie in New York at 32 kro. and 40 kro. each. To encourage the importation of these peerless game birds I would on application give full particulars and place intending purchasers in direct correspondence with this Swedish gentleman.

N. P. LEACH.

[The Swedish crown is 26.8 cents, so the prices would be approximately $9 and $11.]

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

A SUNDAY FISHING STORY.

GREENVILLE, Me.—*Editor Forest and Stream:* In your paper of Aug. 21 the article headed "Sunday Fishing" recalls to my mind an incident which happened some twenty years ago, and which goes far to prove that fish seem to be hungrier and more greedy for the bait on the day set apart for divine worship than on the other days of the week.

The Judge, Mac and myself (the humble son of the Judge) had heard for some time tales of marvelous trout the habitants of Indian Pond—a sheet of water on the other side of Squaw Mountain, eighteen miles distant, to which the only approach was directly through the woods—there being no road or blazed line to the same. The only person who had fished this pond in those days was our regular guide, Levi, a French Canadian, who never tired of dilating on the size and beauty of the fish in this pond, and who always compared unfavorably any large fish we might take in the well fished waters of this vicinity with the trout in these inaccessible waters.

We were all ardent fishermen in those days, and were more able to endure fatigue for the delight of feeling the thrill of a big fish on light tackle than we are to-day, and the reiterated accounts of the big fish in the far distant pond had their effect. We determined to take some of those fish and to cast our flies on those waters which had never been fished before except by Levi, who had caught what fish he needed for baiting his traps in the winter time, when he hunted on Squaw Mountain.

Accordingly, we started on Friday morning, early, with great anticipations. The day was overcast and the rain began to fall shortly after we had progressed. Over windfalls and through the forest primeval we laboriously made our way through swamps made more swampy by the rain, through underbrush which at every movement added to the downpour of moisture upon our unprotected shoulders. It is needless to write of the hardships of this journey, or of the condition in which we reached that b autiful lake which nestled in the mountains, surrounded on all sides by the hills, but we arrived there footsore and weary, tatters and rags, as the daylight was b coming dusk, and it was dark before we had built our bough camp and finished our meal of fried pork and potatoes.

The next morning after breakfast—menu same as the night before—we set to work to build a raft—a matter of a couple of hours' work, and once launched we prepared for the slaughter. But the fish didn't rise, and although tried with fly and bait assiduously, refused to be allured, much to the mortification of our guide. After whipping every corner of the pond, we returned to camp as darkness came on, disgusted and disappointed, without having had a sight of the much-lauded huge trout.

The next morning, Sunday, was the time for our return to civilization. The day was beautiful, and in order to more easily strike our trail, we determined to start from the other side of the pond. The Judge and Mac had taken apart their rods and were ready for the journey back. Probably because of natural disinclination to do any work before it was absolutely necessary, I had my 7oz. Leonard jointed and rigged as I had used it the day before, intending to disjoint it on the way over the pond. We had not progressed more than a few yards from shore when a splash made by a huge fish attracted our attention. It was the work of a moment for me to make a cast in the direction of where the fish rose. The Judge and Mac both protested, requesting the sinner to remember the day, but such a rise overcame all scruples. As the raft stowly neared the spot where the trout rose another cast was made, and with a sudden rush the hungry fish had taken the tail fly and the reel sung as he made a wild rush for freedom. This was interesting to the man at the other end of the rod, but the Judge and Mac still protested and begged the wicked one to remember the day and refrain. How that fish did play, And when it was finally brought to net what exclamations of wonder on his size. Another cast was made, a flash of silver and gold and the reel whizzed and the rod bent, and again the fight was on. A sudden murmur from Mac, "I can't stand this if it is Sunday!" and the Judge's protest, 'Don't you sacrifice your principles, even though the boy does catch a few fish." But Mac paid no attention to the admonition, and with fingers trembling with excitement was busily engaged in putting his rod together, and at the first cast had hooked a monster. The Judge began to look interested, and when at the next cast another 3-pounder rose, heaved a sigh of resignation

and got his rod out with alacrity and was soon trying to believe he had miscalculated the day of the week, and was catching them as fast as he could cast. What fish! Moosehead and vicinity have produced large trout, but never was such a string of fish caught which ran so uniformly large in size as these. We took twenty-one trout that day, averaging a trifle over 3lbs. each, the largest tipping the scales at 5½lbs.

I have not the space to write of our journey out and how we got lost, and how Mac climbed to the heights of a tall spruce to get the lay of the land; nor of how we were obliged to wear our rubber coats when we reached the settlement to cover the remains of our clothing, which literally had been torn from us by the bushes and undergrowth; nor of the envy with which our fish were regarded by the village fisherman, Ivory, the keeper of the hotel, who had been fishing every day for years, but who had never seen such fish as these.

Levi has long since gone to his account. The Judge is now an old man, and his fishing days are over, while Mac and I are rapidly passing the middle age period, and business cares and responsibilities prevent the devotion of time to the gentle art as in those days; but although it may be unorthodox to say it, we do believe that trout will rise to the fly with singular avidity on the seventh day of the week, and that the catch on Indian Pond many years ago beats the record in this vicinity.

T. N., Jr

MEN I HAVE FISHED WITH.

LIII.—Harry Prichard.

Two Prichard brothers, Tom and Harry, came from England and started to make and repair fishing tackle in Fulton street, New York, so long ago that the nearest date I can fix for it is the one so dear to our childhood: "Once upon a time." They are not recorded in the Chinese "Book of the Lily," which was written at the beginning of all things, and so must have come to New York after that period; but it was very long ago. The little shop upstairs was kept busy by anglers who knew of their skill, and also by some of the large fishing tackle houses, which found it more convenient than to send small jobs by express to their factories; and so the brothers found plenty of work to their hands while they lived.

The little shop was a place where one might drop in at any time and feel sure of meeting some of the old-time anglers of the city, and the talk would run on the nearby trout streams, rods, ferrules, flies, the prospect of a run of weakfish, the tides, the last big catch of sheepshead at the wreck of the Black Warrior, and such other things as are discussed where anglers most do congregate. There is no such place in New York city now, and never will be until an anglers' club is formed. I meet anglers occasionally in the different fishing tackle emporiums, but they are there on business and not for social talk, as was the case at Prichard's. We needed such a place then and we need a club now.

Of Tom Pritchard I knew little; he was the eldest, wore gray muttonchop whiskers and attended to business; therefore, as Dame Juliana Berners says, "I write the less of him." When I first knew Harry, some thirty years ago, he must have been a boy of about fifty years old, as convivial as opportunity offered and always ready to tell a story, the impediment in his speech increasing as he neared the climax, when his jaws would work but refuse to deliver a sound until he pressed his fists into his hips and yelled the finale, and this added point to all his yarns. As he put it: "I can s-s-s sing and I can w-w-whistle, but I'm a s-s-sinner if I can t t-talk." Frank Endicott once made Harry this proposition: "If you can't talk, don't try; you're too old to learn new tricks. When you've got a fishing yarn to spin, just sing the introduction and descriptive part, and when you get to the last of it—where we are all willing to strain our credulity to believe you—just 'whistle o'er the lave o' it,' as the Scotch song goes. This will be a great relief to you, and will leave much veracity to your credit with all of us."

Harry was the man who was fishing for black bass on Greenwood Lake when a drunken "guide" tried to bail out the perforated bait car which hung overboard, as has been related, but he had amplified the story with detail and climax until we enjoyed it as something of which we had never heard. But this is a digression.

"N-now Hi'll tell you a t-t-true s-s-story, an' Hi don't c-care hif you b-b-believe hit or not. You halways puts m-me down for l-l-lyin', hanyway, an' Hi d-d-do' know has hits hany use to t-t-tell you hanythink m-m-more, you wouldn't b-b-believe me, hanyway."

"Go on, Harry," said Endicott, "we always believe you when we are sure you are telling a truthful yarn, and we, as brothers of the angle, realize the fact that there is an angler's license as well as a poet's. Please unfold this truthful yarn; it will place a great balance to your credit."

"Harry," said I, "the trouble with you is your excessive modesty. You evidently never expected me to believe that you killed a 40ft. shark on a 16oz. rod while fishing for small fish in the waters of India, but your glowing account of your four hours' fight with the monster after it had dragged you from the boat, and how you reeled in and gave line while treading water, bore the stamp of authenticity. Then, too, your reeling the great fish in and getting on its back, drowning it by pulling off your boots and jamming them into two of the gill openings, suffocating the fish with hands and feet in the other gill slits while you awaited death when the shark sank, is in memory as distinct as when you told it. I do not doubt the slightest detail, and have often rejoiced at your opportune rescue by the native fishermen, and your restoration to your regiment in Her Majesty's service. Please don't think that we entertain doubts of the truthfulness of your stories, even if such doubts sometimes cross your own mind."

"T-t-that's good! You think Hi don't halways b-b-b-believe my hown s-s-stories. P'r'aps Hi don't b-believe 'em hev'ry time; hall Hi ask is for you to b-b-b-believe 'em."

"Let me explain," said I, "the funny man of the press has done much to injure the veracity of the angler. He has gone so far as to brand a palpable lie as a 'fish story,' thereby throwing discredit upon our guild. In his ignorance that a whale is not a fish he, in his skepticism, goes back many centuries, but now, Harry, let me go beyond the latter-day reporter, who has exhausted his wit upon the appetite of the goat, the disturbing influence of the mother-in-law, and the wholly ficticious accounts of the wealth of the plumber and the ice-man, into the question of the truthfulness of the fisherman. Is he less given to exaggeration than his brother who handles the gun? Is he more unworthy of belief than men who engage in other forms of sport or of business? I'll answer my own questions by saying that he is not, and in proof of this will point to the fact that I have even believed some of your stories."

"I move the previous question," said Mr. Endicott, "all this talk that Mather has shot off is irrelevant and not at all to the point. If Harry has a story to tell it should take precedence of all. Go on, Harry, and tell your story. I'll agree to believe a third of it and Mr. Scott and Fred will believe the other two-thirds. In that way the whole story will be believed without injuring our capacity for believing any stories that others present may inflict on us. Let her go!"

"Well, this here ain't much of a s-s-story, an' I don't care w-w-whether you b-b-believe or not, cause it's as true as I sit 'ere on this stool, an' that's no lie. Y' see hi was a-fishin' for p-p-pickerel up hon Greenwood Lake, hall by my lonesome, han I was a ketchin' s-s-small ones right fast han a keepin' c-c-count by sayin' that m-m-makes nine han' this un's t-t-ten, in that kind o' way ha 'avin' fun—."

"Hold on, Harry," said Endicott, "we want more detail. How big were these small pickerel, and what bait were you using?"

"Hi was b-b-baitin' with live minners, or k-k-killes has they calls 'em hin the salt-water. Hi hain't got h-h-hany of 'em left to prove they was my b-b-bait, but Hi'll hask you to t-t-take my word for 'em. The p-p-pickerel was a-r-r-r-runnin' hextra small that d-d-day, han' the first s-s-singular thing that struck me was their r-r-regular size, han' I m-m-measured 'em. Hi'm a s-s-sinner hif they wasn't hall just heleven an' a harf h-h-hinches long to a fraction; and I sez to mys-s-self, sez Hi, this here's hall one s-s-school, hall hout o' one litter, but they're b-b-big henuff to take 'ome,' so Hi fishes on."

"How many did you get on this remarkable day?" asked Mr. Scott.

"Hi'm a c-c-comin' to that hif you'll gi' me a c-c-chance. Y' see, Hi was hout for three days' f-f-fishin', an' Hi wanted to keep my f-f-fish halive till I left for 'ome; so Hi 'ad a fish car halongside, han' the p-p-pickerel were dropped into that as fast as Hi p-p-pulled 'em in. They was a-bitin' f-f-fast, an' about s-s-sundown Hi thought the car must be p-p-putty full, for Hi had counted f-f-forty-three, an' hi'd quit. One m-m-more took hold, han' has 'e was a-kickin' hon the bottom of the boat Hi takes a look in the c-c-car, han' what do you think Hi s-s-see?"

"Well, Harry," said Endicott, "as I have followed the story, I should say that you must have seen forty-three pickerel in a mass and nothing more, because you have not mentioned taking in snapping turtles and other monsters. What else could you have seen? There's nothing remarkable in your yarn so far, that you should preface it, as you did, with the remark that we might not believe it. As far as I am concerned, I am willing to believe not only the third, to which I agreed, but the whole story as well. What did you see?"

"N-n-n nothing!"

"But," said Mr. Scott, "you put the fish in the car; where were they?"

"Hin the b-b-boat. There was a slat hoff the b-b-bottom of that c-c-car, han' Hi'd been a-c-c-catchin' the same p-p-pickerel hall day, han' 'e———"

Harry's vocal organs gave out. We gravely shook hands, remarked upon the state of the weather and left him trying to finish the story.

We heard much of Harry's wonderful fly-casting about this time, and Mr. Endicott assured me that he had seen him cast wonderful distances in private, but had no knowledge of the number of feet cast because the distance was not measured. There had been no casting tournaments in the vicinity of New York city and only a few in the State, some of which I had seen, but the New York State Sportsmen's Association, called, I believe, the "Association for the Protection of Fish and Game," was to hold its annual meeting at Brighton Beach, Coney Island, in June, 1881, and after some days of trap-shooting, rifle and pistol shooting, there was to be a grand anglers' tournament, to include several classes of salmon, trout and bass casting, and I had been asked by President Abel Crook to superintend it. In those days, and for some years later, it was the rule to allow the shorter rods 5ft. of distance for each foot that their rod was shorter than the longest. In the salmon casting Reuben Wood, Ira Wood and Frank P. Denison all used the same rod, 17ft. 1in., and Harry used a rod 15ft. 3in. Harry actually cast 91ft., but his allowance of 9ft. 10in. made his record 100ft. 10in. Reuben cast 110ft., Ira 101ft. and Denison 94ft. Under the rule Harry won third over Denison. This rule of allowance was abolished by the National Rod and Reel Association a few years later, it being held that a man should use the rod which suited him best and stand by its actual record.

The absurdity of the allowance for short rods was shown in the trout contest, where Hier, 67½ft.; Endicott, 58ft.; Bryan, 45ft., and Elmendorf, 57ft., won the first five prizes in the order named, delicacy and accuracy adding some points, over J. S. Plumb and Major W. Holberton, who both scored 64ft. The judges reported Holberton perfect in style and accuracy, Bryan poor, Elmendorf fair, Endicott excellent, and Plumb good; yet Hier, with a 10ft. 10in. rod, won first over Holberton, whose rod measured 11ft. 6in., and was most perfect in delicacy and accuracy. It took us about three years to kill this absurd rule and make a man stand by his chosen rod and what he could do with it. The "amateurs," or those who had never won a prize, having had an innings, the veterans locked horns again with trout rods. In this contest Prichard cast 74ft. with a rod 11ft. 3in., but was beaten by Rube Wood by a foot with a rod 14in. shorter.

Several years of study of fly-casting tournaments lead me to believe that in distance casting there is a proper length of rod for every man, and that no fly rod should exceed 10½ft. A tall, long-armed man has no advantage over a short one, a strong man over a weak man, nor can a man cast further if elevated 10ft. above the water than if on its level. Because there are men who do not believe these statements, I am disposed to give my reasons for the faith that is in me, and then, if they choose, they can state their side of the case, and let it go to the jury.

My 10½ft. rod was a short one fifteen years ago. Now the average rod, in America, is shorter, because our tournaments, now unfortunately discontinued, developed the fact that longer rods did no better work; and if Major Holberton should choose a single-handed rod for distance casting to-day, it would no doubt be fully 2ft. shorter than the 11ft. 6in. which he used in 1881. In support of my second assertion, I will state the fact that poor little Thomas L. Prichard, nephew of Harry, about 5ft. 3in., weighing about 100lbs., and dying with consumption, made a good record in our Harlem Mere contest, in October, 1884, against the powerful 6-footer Reuben Leonard, who used to lay out his fly away beyond the rest and scoop the first prize. Some philosopher has recorded the fact that "the longest pole knocks the persimmons;" but "young Tom" Prichard was short of body and of arm, and his "pole" did not vary much from that wielded by the stalwart Leonard. I can't give the details, for they are in storage now, but if any fellow believes that casting a fly a long distance requires merely strength because many of the men who have achieved reputation in that line are strong, and challenges my statement, I will dig out the facts of that only contest where that poor dying boy, small and weak, made a record against athletes. He died some six months afterward.

My third proposition may not be so susceptible of proof, but while a man may throw a stone further from a housetop, he cannot cast a fly from it as far as if he stood in a boat at the level of the water. The conditions are different. The stone has weight, the fly has none. The stone receives its impulse from the hand, while the fly gets it from the spring of a rod which impels a line to continue its wave motion after it has dropped on the water, and to lay out a delicate gut leader of many feet after it is at rest. Draw your right hand over your left shoulder, with your body cast your elbow toward an objective point and then let your forearm unfold and then your wrist. You then get an idea of how the last third of the line and the leader reaches out after the elastic tip of the rod has done its work.

Like poor Joe, in "Bleak House," "I didn't go for to do it," but my confounded pen has a way of getting the ink in its "nibs" and before I know it I must follow the blaze back to the trail. If I can hark back correctly, this story was to be about Harry Prichard, but some thoughts on fly-casting tournaments led me astray; or rather, my pen went that way.

The Washington Gun Club, of Brooklyn, were to have a picnic, with games, at Lake Hopatcong, in the northern part of New Jersey, some forty miles from New York city, and I was an invited guest and judged the boat races and the fly-casting in the morning. Harry had prepared to spend the afternoon in fishing, and so we left the party, fished all the afternoon and took a late train home. At the Coney Island tournament Harry showed us a new mode of casting a fly, which was barred from practice by the rules of the State Association, which required the line to be retrieved after each cast, the makers of the rule holding that if a man should cast more line than he could lift from the water and put behind him for another cast it should not be counted. Harry's new mode was well known in England, but new to us. It consisted of reeling off some 60 or 80ft. of line in the water, and then by successive whipping, without apparent advancement, the line would roll out like a wave and the flies would be straightened out in good shape. The advantage of this cast is apparent when there are trees or other obstacles in the rear, which would prevent the line from being thrown behind. Harry taught me how to make this cast, but 40ft. was the best I could do at it; enough, however, for ordinary angling.

"Harry," said I, "such a commotion as this cast makes in the water at your feet would scare the trout away."

"That's j-j-just where you're w-w-wrong, me boy. The more s-s-splashin' you m-mak' the m-more hit brings the t-t-trout to see what's hup. When you goes a s-s-skitterin' for p-pike d-don't you s-splash in your b-bait han' make a fuss a s-s-skitterin' it hon the s-surface?"

"Yes, that's all right for pike and pickerel, but I've been taught to keep as still as possible when fishing for trout. I've even read of men who dropped their flies on the water as lightly as a thistle-down falls; but outside of books we never find such casting. I know some of the best fly-casters in the world—men who, in the tournaments and on trout streams, are marvels in casting delicately and accurately—but they can't do the thistle-down act. Ordinarily we lay the line out on the water, the middle striking first and the rest following and going beyond, making a ripple on perfectly still water, but which is hidden if there is a slight ripple."

"C-can't you m-m-make your flies 'light on the water f-f-first?"

"Yes, at 40ft. or less, but that's trick casting and of no use in fishing, for the line must come down on the water just after the flies do, and it makes as much disturbance of the surface as if cast in the regular way. It is done by making a high cast in the air and then checking the line with the rod; it merely serves to astonish those who have never seen it done."

"Now that's j-j-just the c-case with a line s-s-splashin' in the w-water, no m-matter hif you're a-fishin' for p-pike or trout. So long as you d-don't make hany noise in the b-boat or hon the b-bank, hits all right."

While I am not prepared to endorse Harry's theory, I must say that he took sixteen black bass to my fourteen that afternoon, and we were using the same fly, from different sides of the boat. Once, to prove his theory, he took a 5-cent nickel from his pocket, threw it into the lake some 30ft. away, then put his fly on the same spot and hooked a bass a moment later. Some months after this affair the late Francis Endicott and I were in our favorite *café* comparing the merits of cranberry sauce and currant jelly when served with venison chops. We seldom agreed upon any subject, and we did not upon this important one. We only agreed that it was pleasant to dine together, that Mrs. Vianest could cook a grouse better than a *chef* in New York, make a chicory salad with such a delicacy of garlic that the *chapon* could be eaten without alienating all our friends, and that a rib chop from a fat deer was the choicest bit of venison that roamed the woods, even if the old-time hunters fed it to their dogs or left it in the woods, while they wrapped the "saddle" in the skin and took it home. We had each put an elegant polish on the rib of our fourth chop when I started in on a fish story, and it was that which is related above.

Frank listened as he put the last bit of jelly on the last chop, and after placing the combination where he thought

t would best serve mankind, leisurely toyed with his napkin and said: "Yes, I knew Harry Prichard well. He was a good angler because he was a successful one. As you say his theories seemed to be queer, but his practice appeared to bear them out. I have fished for trout with him on Long Island and he slushed his line around in the water just as you describe it, but he caught his share."

"That's all very well," I rejoined, "but when a man tries to overturn all your beliefs and all the traditions of angling, I am disposed to listen to him, but expect him to prove his assertions. I can't take his *ipse dixit* with only the evidence of one half day's fishing with him, as proof positive that the more splashing you make in the water the more trout you attract to your flies. No, sir! One swallow may make a summer boarder think that he has struck the ideal fishing place, but I can't swallow all of Harry's fishing theories. I was taught to 'fish fine and far off,' and it will take much time and argument to make me adopt another course. One afternoon with Prichard can't disturb the teachings of a lifetime, even if he did happen to take more fish than I."

Mr. Endicott had finished his chop, and looking sadly over the last bone, said: "Fred, Harry Prichard in life was a good angler, if a noisy one. He had most of the qualities which Izaak Walton ascribed to a good angler, patience, perseverance and a love of nature in all her moods. Harry Prichard had all of these traits, and, Fred, my boy, you have them also; but Harry Prichard was honest and truthful, and I very much wish that you resembled him in these, as well as in the others."

FRED. MATHER.

A MINNESOTA CENTER.

ALEXANDRIA, Minn.—The hotel at Geneva Beach closed on Sept. 1 with the end of the outing and fishing season. I inclose a reduced township map of the vicinity, which will be a curiosity to those who have never seen the like. Within its limits are over 200 lakes which fairly swarm with game fish, including both kinds of black bass, rock bass, wall-eyed pike, pickerel, great northern pike, which run above 20lbs., and are usually classed as muscalonge, ring perch, croppies, two kinds of sunfish, bullheads and whitefish. The latter are taken only in nets. In my lifelong experience of fifty years as an angler I have never seen such redundant catches as are made in these waters. At an off hand estimate, 3,000 fish, chiefly large-mouth bass, with a fair percentage of small-mouths have been taken here by our guests since June 1. The principal bait used is live frog, and the methods of angling are still-fishing and casting. The average weight of bass brought in has been 2lbs.; none over 5lbs. Sometimes fish will bite in one lake and not in another on the same day, so that parties going out together will have varied luck. Last week two gentlemen from Kansas City brought in 100 black bass, averaging 2lbs. They were caught in Lake Ida. None of the other lakes gave returns that day worth mentioning. These gentlemen kept their boatman busy taking off fish from their hooks; first one and then the other. Not only were the big fish in schools, but hosts of fine individual fish, presumably of this year's batching, congregated in the vicinity. Swarms of minnows were observed, which perhaps served to attract them. At all events, such a catch is phenomenal in August, when most ponds are in "bloom." I have not observed the bloom in any of these waters.

Croppies are in great abundance and of large size in these Douglas county lakes, and afford daily pastime of a most exhilarating character to old gentlemen and boating parties of ladies, who never fail to bring in a goodly number. Croppies have been taking the hook without intermission from May to the end of August. Wall-eyed pike are in evidence. One young lady, Miss Grace Smith, a banker's daughter, of Ottawa, Kan., with her father and mother in the party, brought home from Victoria Lake four wall-eyed pike on Aug. 20 which weighed from 5 to 9¼lbs. Farmers take whitefish by the barrel in the fall, after harvesting is over. As the State law prohibits the sale of black bass, fish are something of a treat to those who don't go fishing themselves. One can hardly present a more acceptable present to friends than a box of black bass fresh caught.

Our hotel at Geneva Beach has been the recipient of 311 guests this season, representing thirteen States from Maine to Colorado. Missouri, Kansas, Iowa, Illinois and Minnesota have the largest representation. Chickens and ducks are flying. Ducks are constantly trading between the lakes. I expect James M. Green and Seymour Cunningham, of Washington, D. C., here any day after Sept. 1. Sportsmen can get what they want at the Letson House, in Alexandria. The proprietor is a director of the State Board of Agriculture, and a sportsman as well as a breeder of fine sheep and thoroughbred horses. I think he will be able to put sportsmen on to any game within reach. We have fine weather here up to Nov. 20. C. HALLOCK.

Chicago Fly-Casting Club.

CHICAGO, Aug. 22.—*Editor Forest and Stream:* Here is the record of our last contest. Please note the fact that Mr. Goodsell cast the fly 110ft. This is the direct result of the visit we received from Mr. W. D. Mansfield, of San Francisco, Cal.

	Long distance fly, feet.	Distance and acc'y, per cent.	Accuracy and del'cy, per cent.	Bait casting, per cent.
W. H. Babcock	79	76	82⅔	....
C. H. Chadwick	65	68	.....	79
L. F. Crosby	...	79⅓	81¾	86²⁵
B. W. Goodsell	110	89⅓	82½	75¹⁵
E. D. Letterman	...	82⅓	71½	84¹⁵
C. A. Lippincott	78	84	87¼	91
C. G. Ludlow	80	91	91⁵₁₂	78³⁵
G. A. Murrell	75	85⅓	82¾	91⁴⁵
F. N. Peet	98	90⅓	93¹₈	....
J. E. Strong	79	86	87⁵₁₂	89
M. W. Smith	...	81⅓	85⁵₆	95
H. G. Hascall	...	84⅔	.....	93¹₁₅

Holders of medals: Long distance fly, Goodsell; distance and accuracy, Ludlow; accuracy and delicacy, Peet; bait casting, M. D. Smith.

Cayuga Lake Fishing.

ITHACA, N. Y., Aug. 28.—Fishing at this end of Cayuga Lake has been decidedly "flat, stale and unprofitable" of late. At Union Springs, however, where all good anglers go, perch fishing has been phenomenal, large catches being almost daily reported. Pickerel have lately been running, and some especially fine ones have been taken. Probably Union Springs has furnished more satisfactory angling thus far this season than any other point along the lake.

M. CHILL.

CHICAGO AND THE WEST.

Kentucky Anglers.

CHICAGO, Aug. 28.—Advices from Frankfort, Ky., state that the local Kingfishers, Messrs. Chas. Furr, S. R. Smith, Frank Stagg and Edmond Rodman, have returned from a month's trip in the North. Messrs. George L. Payne and Frank Cannon will return this week. They report good success and a fine time.

The Cuvier Club, of Covington, Ky., met last Thursday for the purpose of incorporating as a working body, with powers to break up illegal fishing in the Licking River.

Indiana Streams.

State Fish Commissioner Sweeney, of Indiana, has this week started a campaign against the strawboard and paper mills, which have been polluting Indiana streams. He will proceed first against the Elton and Albany Strawboard companies on the Mississinewa River, and if he can obtain proper evidence will then go after divers other companies.

The upper Kankakee River, of Indiana, has this summer been offering exceptionally fine fishing. Mr. R. B. Organ, of this city, has been down a number of times and had fine sport with the small-mouth bass. On different days he took twenty-two, sixteen, seventeen, etc., to say nothing of a lot of pickerel. This was at Maksawba Club. At the same grounds Harry Booth took twenty-five small-mouth bass in one day.

Wisconsin Waters.

There are three camps of fishermen from Dayton, O., located on the Manitowish chain of Wisconsin, and all report fine success. Julius Wehner, fishing on Presque Isle Lake, on one day took twenty-one bass, one of 4½lbs. The next day he caught three, weighing 4½lbs. each. In Muscallonge Lake he took five bass weighing 18lbs.

Mr. J. C. Hahne, also of Dayton, O. is in camp on Pike Lake, west of Fifield, Wis. He reports the finest fishing that could be asked, a number of muscallonge weighing from 8 to 15lbs., and one weighing 25lbs.

Messrs. Porter and Shepard, of Dayton, O., who are also fishing at Pike Lake, Wis., on Thursday last shipped home to Dayton 100lbs. of muscallonge. I hope that these gentlemen carefully looked up the Wisconsin law, which I find forbids the shipping of any fish whatever, and only allows 20lbs., or two fish to be taken out of the State in personal charge. Other Dayton men in camp at Pike Lake, Wis., are E. S. Reynolds, Harry Loy and B. E. Mead. I trust each of these gentlemen will at least carefully read a copy of the *Game Laws in Brief* before rushing into print with the story of his illegal shipments of fish.

Colorado Fish.

There is a great circus out in Colorado over the fish law, which cuts off the supplies of the hotels and restaurants that profess to receive fish from private ponds. Commissioner Swan has arranged a plan by which all growers of trout may ship to market. Each merchant must send to the Commissioner a duplicate of the shipping bill, showing the amount of fish shipped and the names of the consignees. All such fish are to be shipped in uniform packages, and each package to be registered. In this way it is thought there will be no covert breaking of the law.

Utah Trout.

At Deseret, Utah, on Aug. 23, Deputy Warden F. H. Rudy arrested J. Burton, J. J. Acomb, Wm. Leader and J. M. Wood for seining trout in the Jordan River. It would appear, indeed, that Jordan is a hard road to travel.

Washington Warden.

Mr. Little, of Aberdeen, Wash., has been appointed by Gov. Rogers as State Fish Commissioner, succeeding Mr. James Crawford.

Minnesota Muscallonge.

Mr. R. B. Organ, of this city, will next week join Mr. Martin Whitcomb, of Minneapolis, for a trip to Park Rapids, Minn. They will go to Sand Lake, famous as the home of the "gray-spotted" muscallonge. They will, without doubt, reach magnificent fishing and should also find some wildfowl shooting before their return.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The Potomac Bass.

DR GEORGE W. MASSAMORE, assistant game warden, has just made an inspection of the bass-fishing grounds in the Potomac River.

Before the passage of the tri-State protective law the pot-fishermen were doing all they could to exterminate the game fish in their efforts to make profitable catches. Dr. Massamore finds a great change in the conditions. On Wednesday, Aug. 4, he started in a boat on the Potomac, twenty miles above Hancock, Md., and came slowly down the river to Harper's Ferry, reaching that point late Thursday afternoon of this week. On the trip he interviewed fifteen deputy wardens, all of whom said that the stringent law passed in the three States bordering on the river had proved effective. The people along the route had obeyed the law and no seining had been done or trot-lines used.

Many fishing parties from Pennsylvania have visited the banks of the Potomac, but they were invariably met by deputy wardens, who advised them of the new laws, and nets and trot-lines were discarded by the visitors, who found plenty of sport in fishing with rod and reel while the water was clear.

Dr. Massamore and Dr. W. S. Harban, of the Blue Ridge and Woodmont clubs, took a day's trial at the fish in the river below Shepherdstown. They caught thirty bass. The largest, weighing 4¼lbs., was caught by Dr. Harban. The largest Dr. Massamore caught was 2¼lbs. The general run of the fish was from 2 to 3lbs. The largest fish caught so far weighed 5¼lbs.

All along the route the information was that the bass were more numerous than in previous years.

An attendant of a fishing club said he caught from 400 to 500 small bass in the canal while fishing for bait minnows. The bass were put promptly back into the water. In netting minnows many large-mouth bass were caught. Dr. Massamore interpreted this to mean that this species of bass, as well as the small-mouth game bass, are increasing under the protective laws.

The canal waters also taught another lesson. In it were numbers of small bass. These, running up to 6in. in length, were of this year's spawn. Warden Massamore concludes that the bass find the canal waters suited for spawning, and that this adds another argument for the protection of these fish in the canal.

Some of the old attendants, and the oldest fishermen, advised the Maryland representative of the Game and Fish Protective Association that the fish were multiplying rapidly under the new law, and they predicted that the Potomac River would in a few years, be the river of rivers for fishermen.

MAINE TRIPS.

BOSTON, Aug. 28.—Fishing trips are the popular thing in Maine, and growing more and more so. If a merchant from Boston goes to Maine to see his trade, his clients, his friends or his relatives, he is pretty sure to be taken on a fishing trip somewhere, and fortunate is the visitor to that State who meets with the right sort; he is pretty sure of good fishing and a good time. Indeed, the boys are now laughing at a fellow drummer, who went down into Maine last week to see his sweetheart, and went on a fishing trip with her brothers. He got a good ducking and no fish. But somewhere at a taxidermist's he bought a stuffed trout of gigantic proportions, with the impression conveyed that he caught the fish. But the boys want to know how the hide had time to become so dry.

Mr. Alfred Kimball has just returned from a trip to Maine, ostensibly to look after his lumber trade. His shippers, F. M. Totman and H. E Totman, of Fairfield, took him on a fishing trip. They went to a pond in Albion, and had great sport with white perch, and doubtless a bass or two. To Mr. Kimball the sport was new, but all the more pleasing. Their guide, McIntire, proved to be a jewel that had not been contaminated by extra fees. He worked for their interests untiringly, first, last and all the time.

Mr. W. S. Bennett has recently returned from a bass fishing trip to the ponds in Winthrop, Monmouth and Readfield, Me. He is pleased with most of these ponds, and remarks that the bass, pickerel or perch fisherman can find many most desirable points for fishing at nearly all of the above waters.

The September fly-fishermen, for trout, are getting ready for the Maine waters. Perhaps the first movement in that direction will not be as great as usual, many outings being put off till the last week in September and first week in October, when a taste of trout fishing and deer hunting can both be enjoyed legally. SPECIAL.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Aug. 28.—Never within the past nineteen years has weakfishing on the beach direct, as well as in the bays and rivers, been excelled. While we usually get a run during September and October along the beach, thus early are they in, and taking the hook freely from the piers and the beach. Sixty-five fine fish were taken last night from the Asbury Park pier in little more than two hours, running large in size and in fine condition, I caught several of 4lbs. During the next two months the fishing should be all that the angler could wish for, as there is but one pound net with single pocket fishing in the vicinity, whereas in former years the ocean has been strung full of three and four-pocket nets. Bluefish are also abundant, taking bait and squid freely; every day now some are taken from each pier. In consequence, the market line men are happy, as they are reaping a rich harvest in consequence of the absence of the pound nets. Barnegat is alive with fish. Capt. Sears, an old-timer on the bay, told me last night he took during the past week several 7 and 9lb. weakfish in the bay; this is encouragement of a high degree and something rather unusual. I have arranged for an extended trip down the coast the coming month and hope to meet with some of the big fellows. As mentioned in last week's FOREST AND STREAM, the movements of the kingfish have been most peculiar, owing to the numerous storms doubtless. I find through correspondence that the bays to the north are alive with them and taking the hook readily. There is a matter I have spent considerable time and taken great pains investigating in relation to the kingfish, namely, their period of spawning. The past three years I have taken them from early June to late in September heavy with spawn. When and where is their period and place of spawning? Who of FOREST AND STREAM's readers can answer? It would be a gratification to know. LEONARD HULIT.

The Arkansas Pearl Industry.

LITTLE ROCK, Ark., Aug. 23.—*Editor Forest and Stream:* A new industry is developing in this country. It promises to rival Ceylon as a pearl fishery. The pearls are taken from the ordinary fresh-water mussels. At Bald Knob a company has been formed, and has leased the lakes and is using a dredge boat. They wash the mud as well as open the mussels, the theory being that the dead mussels shed their pearls in the lake. They have found some very fine pearls. An inmate of the Confederate Soldiers' Home at this place went to some stream near here, which he prudently keeps secret, and got pearls which yielded him $600. He has got his discharge and gone into the business. While on Cache River fishing, some ten days ago, with Judge Stebbins, we found the negroes all working the bars. They had a number of small pearls, but no valuable ones. The Judge found quite a large one, but it was defective on one side. Still, when set in a ring it made a very pretty piece of jewelry.

The president of one of the banks here has a beautiful pink pearl as large as a large buckshot, that came out of a lake on his place. The craze is not equal to the Klondike, but it will be pushed till it is seen what there is in it.

From present indications, unless the Legislature establishes a close season on mussels they will soon be extinct in this State. J. M. ROSE.

Fell into a Yellowstone Geyser.

LAKE HOTEL, Yellowstone Park, Aug. 25.—George Ernshaw, of Philadelphia, while walking into one of the pools in the rear of the Fountain Hotel yesterday, tripped on a stick and fell backward into one of the bottomless boiling geysers. He struck a ledge under 5ft. of water, and was slipping off its cone when he grasped a pole overhanging the edge of the pool, and with the assistance of those nearby was rescued. He was badly burned.

Dolly Vardens.

SAN FRANCISCO, Aug. 23.—Some friends of mine have just returned from a fishing excursion up near the Oregon line, and report great sport. One of the party landed a Dolly Varden weighing 14¼lbs.; another was caught weighing 12lbs., and several from 6 to 10lbs. Good fishing that, eh? P.

Fishing in Princess Bay.

Princess Bay, Staten Island, N. Y., Aug. 26.—The fishing here is excellent—the best it has been for five or six years. Anybody can go out and bring in thirty to one hundred weakfish, besides lots of sea porgies, snappers (young bluefish), and oftentimes bluefish weighing from 2 to 4lbs. which will give a man a good tussle and sometimes carry away his tackle.

A. L. H.

The Kennel.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

SCHOOLING THE DOG.—XII.

The remarks on pointing in previous papers should make clear that any attempt to train a dog to stanchness before he has had some experience on birds is wasted effort. There is no arbitrary juncture at which to begin the training to stanchness. The circumstances and judgment of the trainer must be the sole guides in the matter. However, it may be said that in a general way, when the dog has learned to readily distinguish the scent of birds, and can locate them more or less readily, the trainer may begin to teach proper stanchness.

It is a mistake to permit the dog to become habitually riotous. While such may add to his enthusiasm and industry, it makes a great deal of unnecessary, extra labor in schooling him.

Again, the dog's disposition should be taken into consideration. If he is timorous and shows indecision, he should be permitted to have much more freedom than if headstrong and riotous.

As remarked before, the dog, in time, learns methods of capture by drawing and pointing which admirably serve his own purpose. The trainer purposes to so control the dog's efforts that they will serve the purpose of the shooter. His first efforts to establish stanchness will have no perceptible effects on the dog's manner of work. He will be quite as riotous, and likely will recognise the trainer as a disturbing, obstructive element and will seek to evade him accordingly, although still working out his own plans. But perseverance on the part of the trainer will gradually bring the dog to submission.

A timid dog, or even one of an ordinary, mild disposition, may require gentle schooling, gradually inducting him into what is required. By experience and the ob ervation of the application of means to ends, dogs of a deferential disposition may readily accept working to the gun, instead of working independently for their own pleasure and profit. However the case may be, the trainer should note it and govern the schooling accordingly. His judgment should determine whether mildness or severity are required. This juncture will try his patience, persistence and art.

The headstrong, riotous dog, which never ceases so long as there is a hope of flushing or chasing, generally needs punishment to make him properly stanch. Kindness should be observed at all other times

He is, perhaps, so desperately intent on the pursuit that a few whippings do not serve to check him in the least, though they may make him wary of his trainer. He may be quite as riotous when punished, and also he may refuse to come near his trainer when ordered to come in. In such case, put a check cord on him, and also if need be a spike collar. When he rushes on the birds the trainer then has a means to hold him directly in check. This part should not be done two violently, nor overdone.

Remember that a dog can be broken from pursuing anything. The same method employed to break him from pursuing sheep, rabbits, chickens, etc., will break him from pursuing birds. The purpose is to maintain his interest in the pursuit of birds, but at the same time have a heedful consideration of the purposes of his trainer. With the punishment properly applied as to time and quantity he will draw on the birds, but will be fearful of flushing them. If he is punished so much that the pursuit either ceases to be a pleasure to him or seems to him to be a forbidden act, he refuses to draw to the birds and avoids them. He is then what is technically termed a blinker. If the trainer has been so unfortunate as to bring this about, he has much more to overcome than before he began the training at first. He is absolutely powerless to teach anything further till the dog voluntarily resumes hunting, which may be a matter of days or weeks, even if the most liberal opportunities are offered When a dog has acquired the habit of blinking it is better to put him in other hands. His teacher is so associated with birds and painfulness, that it requires a long time for his memory and confidence to properly readjust to the desired conditions, all of which goes to show the need of careful judgment in teaching.

When the dog will show a hesitancy as he draws near the birds, the trainer should impress on him the need of great caution. He affects the greatest caution in his own manner, and every motion forward, deliberately taken, expresses the greatest concern to avoid flushing. He keeps his eye constantly on the dog, and his slightest movement forward is instantly checked, either by raising the hand and looking sternly at him, or by giving him a word of caution; if he break in in spite of all this effort on the part of the trainer, the whip should be applied accordingly as he needs it, always keeping in mind that more than is needed may bring on disaster—that is, blinking.

If the birds flush and fly away, the trainer should give no thought to them. The dog should be taken to the place where he should have remained, and there kept till his purpose to pursue is entirely given up.

The great obstruction to correct training at this juncture, is that the average amateur trainer is far keener to shoot and kill than the dog is to pursue. The trainer is excited, shoots, breaks shot, and then riotously attempts to control the dog—the last act of all, instead of it being his first act, and giving it, moreover, undivided attention. He is then really teaching the dog bad tricks. He adds to the dog's excitement, sets a bad example which the dog is naturally ready to copy, and adds greatly to the task of training.

The dog is readily sympathetic in such matters. If the trainer will start out quickly and excitedly in an open field when there is no game birds near, the dog will charge eagerly and excitedly about, looking keenly for the object he imagines is to be pursued. If the trainer, when on game, cannot control himself, he cannot expect to control his dog; nor should the dog be given a beating for what the trainer led him into.

Some dogs may take to pointing quite readily. If the instinct is strongly developed and the dog is of a deferential disposition, stanchness may be established with very little effort. With such dogs the trainer should avoid insisting on more stanchness than is necessary. If they are rigidly required to stand stanchly they may point too far away from their birds, or may stand stanchly after the birds have run away from the point, or may acquire a general over-cautiousness which is more harmful and annoying than would be more decision and accuracy, even if some errors resulted therefrom.

Taking pointers as a class, they point much more readily than setters, and have the instinct more uniformly present one dog with another. They are also much easier taught to back, and indeed they sometimes will back in preference to pointing if running with a confident, resolute competitor. It is a very faulty trait in competition, since the resolute dog is making all the showing as a finder, though his competitor if working alone, might show equal or greater ability.

The matter of teaching a dog stanchness on point is generally a work of weeks before it is properly completed. He not only must learn that he is not to flush the bird, but he must have the experience necessary to learn the shooter's purpose, and how to so direct his effort as best to subserve the interests of the gun. If the dog is rattle-headed, or naturally idiotic, or entirely deficient in any love for his trainer, he may never get past the perfunctory stage. The matter of brains and good intention are quite as important factors on his part as they are on the part of his teacher.

Bernard Waters.

FIELD TRIALS AND FIELD TRIAL JUDGES.—IV.

In our last paper on this subject the need of keeping the dogs and handlers on a consecutive course was touched upon. In laying out a course for a certain heat, it must not only be laid out with reference to giving the two dogs immediataly concerned a good consecutive course, but it must be with a view to giving such course and at the same time giving it with reference to other courses for other dogs.

Field trial clubs rent their grounds, and have a certain defined territory in which they have all the needed rights. Generally, the grounds are ample for the needed purpose; but it does not require much thought to perceive that if they were worked irregularly back and forth, or the choice parts worked out first, that either the dogs which run later would have to cross courses already worked out and where the birds consequently were disturbed or scattered or driven out, or they would have to work on the poorest remaining ground. The judge, therefore, must approximately apportion his ground to be used for the day's competition so that each brace will have a trial on unworked ground, and the choice and bad parts of the ground be equitably divided so that the brace will have chances as near alike as intelligent effort will make possible. With all this effort there will be many features of the competition which the judge must take into account and which will need to be adjusted by himself. For instance, one dog in one heat might point three bevies within 100yds.; he receives the encomiums of the spectators. Another dog might work intelligently and industriously throughout his heat and not find a bird; in one case the fine showing was due to the accidental advantage that there were three bevies to point, and in the other that there were no birds at all. All these things the green judge has to learn. The trained judge has them at his fingers' ends.

Besides thus laying out the courses for each beat, he must keep the handlers and dogs going to take the best working advantage of the course without any sudden turnings here and there, or any indecision which results in a general letting down of effort. The next greatest affliction in the way of a judge who is intent on being everywhere at the same time, right or wrong, is the one who has no idea of going anywhere. He doesn't know where to go; he is weak and indecisive, and the competition lags and drags in consequence. A man who is judging, yet who doesn't quite know what is to be judged or how it is to be done, would best stay elsewhere than in the judge's saddle.

By keeping his course planned out a half mile or mile ahead, or still further if need be, the competent judge will avoid pocketing the trials in big fields surrounded with wire fences, or between swamps, or on the banks of a river, or wherever there is a possibility of doing so. He takes bridges, fords, gateways, so that they all come in proper sequence in the course, if he plans aright; if he doesn't, he may use half the time riding back over ground to adjust his thoughtlessness, his oversight and his incompetency.

He, if he is skillful, directs the wagons containing the waiting dogs to be sent to a designated place, where he forecasts that the heat will end, there to await its ending; and he makes his estimates so accurately that the course, the time and the opportunities, as he has combined and planned them, make a successful trial between the two dogs in the heat. He knows that to attain like or better results he will have to use more ground with less opportunities from working it in the late morning and midday hours than he will either in morning or evening, owing to the difference in temperature, scenting conditions and habits of the birds. He makes his estimates so skillfully as to time, opportunities and area of ground as he has planned them, that he generally makes a successful trial of each brace of dogs, and has some definite data on which to form his conclusions. He keeps in mind what each individual dog does from heat to heat, so that he may accurately know which dogs to reject and which to retain. He has also a fairly accurate knowledge of the relative merits of the good ones kept in the competition. If he is alert, competent, and attentive to his duties, there is no question in his mind as to the direction to be taken, the place to await the ending of a heat, the time approximately at which certain dogs will be called to compete; nor is there any rul ing on any part of the competition but what he can answer promptly and accurately.

Every few minutes there will be something or other submitted to him to rule upon, and if he is incompetent he cannot conceal it. His indecision makes itself manifest, and if he rules wrong his error makes it still more manifest. If he rules so as to mar the equity of the competition—which he can easily do—he provokes dissatisfaction. The more incompetent he is the more ruling he will be called on to do, for his own errors beget troubles and disarrangements.

The would-be judge may be bravely impartial and promptly energetic when talking informally over imaginary trials in his circle of friends around the fireside, but when confronted with men who are sternly in earnest and each party thinks he or they are right, the matter has an entirely different aspect. Many a man is a moral coward under such circumstances, and shows pitiful weakness and indecision. He is then in a constant state of unpleasant apprehension, and feels not only that he doesn't know just what should be done, but that there are many eyes on him keenly observing that he doesn't know what to do and that they know he knows that he doesn't know. After a judge's first trial is over he confesses that he knew very little about it in a useful, practical way when he began. The ready judgment, which as a spectator who saw but little but ventured on great conclusions, is from him gone forever. He knows that a man at the rear never can form any just conclusions excepting as between the very best and the worst dogs; ones whose general class qualities are so widely distinct that a close watching of details is unnecessary. A man who is but a few yards behind the judges will lose much of the work; for a horseman passing in front of him will obscure and hide a large field, and in cover, 2 or 3yds. to the rear makes a great difference in what one can see of the dogs' work and what one cannot see. The green judge, with his furious riding out of place; his entire ignorance of planning a course; his change of mind with every passing circumstance; his close attention to irrelevant details or incidents of the heat; his unskillfulness in bringing out the best effort of the dogs and the general hitching and lack of coördination, mark the green judge before he is well started. When he has run a series through, he doesn't know which dogs are the best; for, as he has run them in a broken, fussy way, they have all run much alike. He has managed to keep the dogs broken up in their work, and managed to keep himself largely out of place by galloping more or less furiously after such dog as disappeared for a moment from sight, this act being much to the alarm of the dog's handler, who knows that a dog trained to range to a man on horseback will cast still further away under such circumstances, and generally much wider than he will range to a man afoot.

Brunswick Fur Club.

Roxbury, Mass.—It has been deemed advisable to change the date of the coming foxhound field trials of the Brunswick Fur Club from the week of Oct. 24 to that of Oct. 17. The Derby will be run on Tuesday, Oct. 19, and the All-Age Stake on the three following days. Interest in these trials is widespread and the outlook for a week of splendid sport was never better. Further particulars will be given in the Forest and Stream at an early date, and the secretary will be glad to answer inquiries at any time.

Bradford S. Turpin, Sec'y.

POINTS AND FLUSHES.

Under date of Aug. 21 Mr. Thomas Johnson writes us as follows: "I enclose a clipping from to day's Winnipeg *Free Press*, from which you will note the Western Canada Kennel Club intend holding trials again this year. 'The entries for the field trials of the Western Canada Kennel Club are coming in rapidly, and that the trials will be a success now only depends on the will of the clerk of the weather. Some doubt is held as to whether birds are sufficiently plentiful at the Glenlea grounds, where the trials were at first to have been held, and it may be found necessary to change to La Salle, where good accommodation can be had and always plenty of birds. The committee are now investigating the different grounds, and will be in a position to announce their selection definitely early in the week. Mr. Frank Richards, the well known American handler, has kindly consented to act as judge. Dogs winning a first or second place are eligible to compete for the valuable champion cup of the Northwest Field Trials' Club to be run for at Morris in the week commencing Sept. 6. A capital chance for the Irish setter men to show the capabilities of their dogs is in the fact that in these trials the Irish Setter Club of America offer a special prize of $25 for the Irish setter first winning first or second place in any club's stakes. As the Western Canada's trials come first this season, the Irish setter men should make a good try for the coveted prize. A meeting of all interested will be held at the Clarendon Hotel on Monday next at 8:30 P. M. Entries close Thursday, Aug. 26, and may be made on application to W. H. Thompson, Hon. Secretary, Customs House, Winnipeg.' Although this club is amateur in the best sense of the term, its membership is composed of the most influential men we have here, and sterling sportsmen. It was thought that the Northwestern Club should not recognize them in its champion event, but we decided we were out for the encouragement and development of field dogs, and we should offer all the encouragement in our power to such organizations, as we feel that to such clubs—who are the primary of semi-professional clubs—and where we shall eventually draw members who will supersede those who are always willing for new blood to take a hand in keeping up the strength of more matured field trial organizations."

A meeting of the American Spaniel Club was held on Friday, Aug. 20, at No. 13 West Eighteenth street, New York. Upon motion the action of the executive committee of July 16, 1897, in suspending absolutely Messrs. R. Toon and C. Thomas from membership in the club, was approved; and, further, the executive committee was directed to call the attention of the secretary of the American Kennel Club to certain violations of the rules by the said Toon and Thomas, and to request him to proceed in the matter. The executive committee was authorized, in the event of the American Kennel Club changing the terms of the various classes, to alter the terms of the Spaniel Club's classifications so as to conform to the A. K. C. requirements. The question of the definition of the term "parti-colored spaniels" was discussed, and the executive committee was requested to define this term.

With his letter advising us of the changed date of the

Brunswick Fur Club's trials (to week of Oct. 17), Mr. Turpin says: "Your readers who attended the early beagle trials of the A. B. C. will be interested to hear of the death of my Belle Ross, winner of first prizes in '90 and '91. She was a charming companion both at home and in the field, and her sweet voice will be sadly missed in the fall hunting."

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

THE BOON OF THE WHEEL.

BICYCLE riding is considered mostly as being a pleasure, exhilarating and wholesome, it is true, but nevertheless a pleasure which serves only to while away the present moment. Not a few people look upon it as a capricious fad, one which holds its devotees by the force of novelty or spectacular display or ill-regulated taste for the unconventional.

Those who ride the wheel know that, besides the immediate pleasure of the moment, it imparts beneficent healthful effects which are permanent. The office man, whose brain is a-weary from mental toiling with words and figures, finds an immediate relief in the wholesome change which the wheel affords in new and fresh scenes of changing landscapes; and pure air is an added benefit. The man whose sedentary life in office or home brings on a thousand little bodily ills, and a few great ones, the commonest of which is that degeneration of the organism politely termed "getting stout," but in reality a fatty degeneration of the organism—though many people believe that the accumulation of fat is a sign of vigorous health—owes a lifelong gratitude to the bicycle. The fat person is always thick of wind, easily fatigued, disinclined to exertion and lacking in stamina. All the symptoms indicate that physical exercise is necessary. There is no medical treatment which is a cure for it. Anti-fat nostrums are a delusion and a fraud, A special diet may afford partial relief, but, the cause still remaining, the fatty habit continues.

To fat people the bicycle is a friend whose loyalty never falters. By regular riding the fat is quickly worked off, all the muscles of the body are hardened and strengthened, all the organs are made healthy and vigorous, the appetite becomes regular and keen, and sweet, wholesome sleep takes the place of the wearisome restlessness of the night, or of the insomnia which is so laden with disaster if permitted long to hold sway.

The fat man, short of wind and heavy of foot, finds after a short period of regular riding that he has recovered his elasticity and lightness of movement; his wind is equal to any reasonably active exertion, and with the absence of fat many bodily discomforts disappear. With a sound and active body come a clear, normal mind.

A sedentary life may not produce fatty degeneration in all men, but it is certain to have its ill effects nevertheless. There may be a general constitutional degeneration, though nothing may be distinctly specific. Irritableness, peevishness, pessimistic standards or unhappy apprehensiveness are common traits of the man who has an active brain in an idle body. He cannot ride a wheel and have dyspepsia or blues if he lead an otherwise sensible life. Setting forth on his wheel, he is independent of all other forms of transportation, whether it be of horse, steam or electricity. He can, in a short time, shift the scene from brick walls and city streets to the most secluded scenes of hill and valley bedecked with nature's verdure.

But to gain the benefits of bicycling, it must be conducted with reasonable regularity as to time, and good judgment as to its practice. To ride once a week, or every day of one week and none of the next two or three weeks, cannot be of much physical benefit. It may give some pleasure, but the bodily training and invigoration are not thereby attained.

Women, in particular, ride with bad judgment until such times as they have had several unpleasant experiences from over-exertion. On an all-day ride, they rush in the beginning and become greatly wearied long before the end of the run, or they rush a long hill and arrive at its top blown and tired where, if they had taken it with sensible deliberation and steadiness, they would reach its top without distress or weariness. The wheel is one of the greatest benefactors if used aright; its abuse may result in harm, as may the abuse of every other good thing in life.

Care of a Wheel.

ON returning from a ride the wheel should always be cleaned. If mud has collected on the frame or wheels, it should be wiped off with a moist sponge and thoroughly dried with a soft piece of cloth. It is well to keep a woolen cloth or a partly worn soft towel for this purpose only. The bright parts should be frequently rubbed off with a piece of chamois skin, and occasionally, when needed, with putz-pomade. The sprocket wheels and chain should be kept free from dirt and grit by frequent cleaning with a stiff brush and then wiped off with a dry cloth. Oil the chain with any good lubricant—"3-in-1" is excellent—and see that it works into all the joints of the chain; revolve the rear wheel rapidly for a few seconds, and wipe all the superfluous oil from the surface of the chain, and finally apply stick graphite lightly to inside of chain, spreading it by revolving the rear wheel.

The bearings and hubs should be oiled once a week, or at the end of every 100 miles of riding. The oiling should be thoroughly done, and the wheels revolved in order to properly spread the oil, and all the superfluous oil should be rubbed off the exposed parts. After oiling, the oil caps on wheel hubs should be carefully closed, to prevent dust from forcing its way into the bearing. If, when lubricating your wheel, any oil should happen to drop on your rubber tires, wipe it off at once to prevent their being injured by its action. Keep your tires properly inflated. The most satisfactory results will be secured from tires that when pinched with thumb and fingers yields just enough to give the idea of slight elasticity. After inflating tires do not screw on caps or valves too tight; turn them to the full extent of the thread, but no further; extreme tightening will wear the rubber and cause a leak. As to punctures of the tires, they can be best cared for by the professional repair man, by whom, when it is possible, they should be treated.

Before starting out for a ride, carefully examine the nuts on the axles, seat post, saddle and handlebars, to see that they are all in place and tight. If through carelessness you run into a stone wall or fence, or tumble into a ditch, and do damage to your wheel, do not blame the manufacturer or make cursory remarks about the mechanism of your cycle.

Don't lend your wheel.

Yachting.

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co, 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

SEPTEMBER.

1. Royal Nova Scotia, open, handicap, Halifax.
M 2-3-4. Duxbury, Davenport cup, special races for second class, Plymouth Bay.
4-5-6. Buffalo, cruise, Lake Erie.
S 4. Seawanhaka Cor., fall race, schooners and 43, 36, 25, 20 and 15ft. classes.
M 4. Savin Hill, Savin Hill, Boston Harbor.
4. Burgess, club, Marblehead, Massachusetts Bay.
4. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
4. American, 3d club, Newburyport.
4. Beverly, 4th open sweeps, Wenaumet, Buzzard's Bay.
4. Cohasset, club, 15-footers, 14th cham., Cohasset.
4-5. Cor. San Francisco, outside cruise, Drake's Bay, San Francisco
4. Larchmont, 51ft. and smaller classes, Larchmont, Long Island Sound.
4. Royal Nova Scotia, knockabout class, Halifax.
6. Larchmont, fall regatta, all classes, Larchmont, Long Island Sound.
6. New York, Y. R. A. annual, New York Bay.
6. Fall River, club, Mount Hope Bay.
6. Cor. Marblehead, cruise, Massachusetts Bay.
6. Gravesend Bay, special, New York Bay.
6. Pacific, annual, San Francisco Bay.
M 6. Lynn, Lynn Bay.
S 6. Norwalk, annual, all classes of catboats.
6. Cohasset, club, 15-footers, 15th cham., Cohasset.
6. Taunton, 2d cham., Taunton, Mass.
6. Beverly, 3d open, Wenaumet, Buzzard's Bay.
6. American, sweepstakes, skiffs, Newburyport.
7. Roy. Canadian, Prince of Wales' cup, all classes, Toronto, Lake Ontario.
7. Absequan, Cricket and 15ft. classes, Atlantic City, Absecon Bay.
9. Miramichi, Watt cup, Newcastle, N. B.
9. Cor. San Francisco, interclub regatta, San Francisco,
10. Taunton, ladies' day, Taunton, Mass.
M 11. Chelsea, Boston Harbor.
M 11. Y. R. A. rendezvous, Hull, Boston Harbor.
S 11. Riverside, fall race, 43, 36, 30 and 25ft. classes, and 30 and 25ft. classes of cabin catboats.
11. Winthrop, club, Winthrop, Boston Harbor.
11. Roy. Canadian, skiff class, Toronto, Lake Ontario.
11. Beverly, 5th cham., Wenaumet, Buzzard's Bay.
11. Burgoss, cham., sail-off, Marblehead, Mass. Bay.
11. Columbia, annual, open, Chicago, Lake Michigan.
11. Larchmont, schooners (Larchmont cup) and smaller classes, Larchmont, Long Island Sound.
11-12. Cor. San Francisco, cruise, Marin Islands, San Francisco.
S 18. American, fall regatta for all classes.
18 Queen City, 22ft. class, Toronto, Lake Ontario.
21. Absequan, open, Atlantic City.
25-26. Cor. San Francisco, cruise, Dillon's Point, San Francisco.
25. Buffalo, closing cruise, Lake Erie.
25. American, closing race, Newburyport.

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Francisco.

AS THE conditions now stand, all yacht clubs, in the United States or abroad, are at liberty to file challenges with the Royal St. Lawrence Y. C. up to Sept. 18. On that date the club may select any one of the challenges which may best suit its wishes. If no challenges are received by that time, the first one received later takes priority of all others. There is little doubt that the Seawanhaka C. Y. C. will challenge again, but we should prefer to see some new club in the fight next year, in order to make the contest more interesting. A challenge from a British club would, in this respect, be preferable to one from this side of the St. Lawrence. It is reported this week that C. F. Adams, 2d, who has just sold his fast Rooster to Melbourne McDowell, will build next year, and that a challenge will be sent from the Quincy Y. C. Mr. Adams, now Mayor of Quincy, Mass., is a member of the Quincy Y. C.

The International Races.

AS matters now are in yachting, the up-to-date racing machine, whether of 90ft l.w.l. or 20ft. racing length must be accepted for just what she is, and judged accordingly. If she serves the one definite end of providing sport for the moment under existing conditions and of keeping alive to a certain extent the interest in yacht racing; it matters little what else she is or is not; whether she demonstrates a new and useful principle in naval architecture, or whether she only proves over again the familiar fact that extreme speed alone under "plain and simple rules" always produces an extreme type of craft of limited usefulness. To the great body of intelligent and progressive yachtsmen it would be gratifying in the extreme to feel that the construction of a new and successful yacht, such as Vigilant, Defender, Meteor II., Niagara, and downward to the little fellows, Ethelwynn, El Heirie and the two Glencairns, meant a substantial gain to the whole sport of yachting, and beyond that to the noble science of naval architecture; that a material step had been made in naval science. That this is far from being the case is only too plain; speaking generally, the increase of speed that has undeniably been attained within the past five years is due in part to the discovery of a new method of evading the measurement of the loadwaterline and in part to the mechanical tricks of hanging a bigger lump of lead lower down than ever before, or of carrying a bigger ballast crew further out to windward. The improvement of form in this time has been very slight, and accompanied by serious drawbacks in the lessening of internal room; the improvements in construction may in the main be classed as quite as small, the very great reduction of weight operating to seriously shorten the life of the vessel.

It is too late now for vain regrets that timely steps were not taken six years ago to protect the comparatively good and useful yachts of the day from the invasion of the fin-keel, and for the present, at least, there is nothing but to recognize that the racing of machines, even in limited numbers, is better than no racing at all, in keeping alive a general and popular interest in yachting as a national sport. That much should, and might be, done for the correction of existing evils, is becoming more and more apparent every year, and we hope that some positive step may be made this season. For the present, however, we have but the racing machine, and that in the very smallest class but one; and it may be worth while to look at the latest and fastest examples of the type, the competitors in the late series of international races.

Now that the destiny of the cup for the present year is decided, the excitement over, and the yachts practically set aside on the shelves of yachting history, most yachtsmen are ready to forget them and to turn to some new sensation; but it would be a great pity if the infinite labor of the designers and the liberal expenditure of money on both sides served no better purpose than the mere four days of racing. However distant the results may be from the abstract standard of an ideal yacht, it is not to be supposed that so much skill and intelligence as the designers of Glencairn and Momo have displayed are to be entirly lost to yachting.

Before considering the present challenger and defender, it will be interesting to look back at their predecessors of 1895 and 1896. The first challenger, Spruce IIII., was an excellent representative of a type long established in England. While, perhaps, not the fastest of the home class in that year, she was fully qualified as a fair representative, an up to-date craft, built for the American challenge by one of the successful designers and builders of the class, and for a yachtsman who had grown up in the half-rater class, and who had sailed in it persistently year after year with considerable success. The first defender, Ethelwynn, was produced in a hurry to meet the exigencies of the case, an experiment in that the class was entirely unknown here, and she was sailed by a crew unused to the size and type. In length and sail area the two were close together, both being of low power, the ratio of the square root of the sail area to the L.W.L. being about 1.00. Spruce was of greater displacement, and considerably heavier in construction; but Ethelwynn was very strongly and heavily built as compared with the winner of this year, though so much smaller She had a strong keel, her planking was thicker and her frames larger than those of Glencairn II, and her hollow mast was of the same diameter, though intended for less than one-half of the sail area Though light as compared with existing small boats, her rig and fittings were nearly as heavy as those of Glencairn II. Spruce IIII. was of heavy construction, with an outside oak keel, heavy oak tabernacle, and an abundance of wood throughout; her rig also, in spite of the bamboo spars, was heavy. The two had somewhat similar sail plans, both jib-headers; but while Spruce had the so-called English lug rig, with a long yard, Ethelwynn had the simple leg-o'-mutton rig, with pole mast. Spruce had a reefing batten and hand gear, while Ethelwynn had not. Neither boat was designed for a ballast crew, Mr. Brand, though a very tall man, was not particularly heavy, and his paid hand was stoutly built, but of moderate weight. One of Ethelwynn's crew, the helmsman, was well under the asssumed weight. Her best work was done in strong breezes with a crew of two very light men, if we remember, under 140lbs. each; and from this performance in the last two races, we have no hesitation in saying that with the same handling in the whole series, she was capable of winning three straight races,

Both of the contestants in 1895, in spite of some difference in beam, were of much the same type, with moderately full lines forward, but still with V-sections and a V-waterline forward. The two competitors of 1896 were of a very different type. Though they differed materially from each other, they both showed plainly their relationship and common origin in the scow type as developed in the general racing of the class in the previous season. The common point of resemblance lay in the use of a very full waterline and level lines, especially forward, thus materially increasing the length of useful waterline when the boat was heeled to an extreme angle; this degree of heel being reached deliberately by placing the crew to leeward in light winds.

Apart from this basic principle, the starting point of Mr. Crane in El Heirie and Mr. Duggan in Glencairn I., and marking the two as distinct from all previous boats of the class, there were material points of difference. In El Heirie, Mr. Crane, with but the one boat to experiment with, wisely enough adhered to the accepted elements of the preceding year—about equal L.W.L. and square root of sail area. In Glencairn I., however, Mr. Duggan was able to profit by a series of experiments begun early in the fall and pushed as soon as the boats could be launched in the spring, the result being that he abandoned the V-section of the old boats, condensing his l.w.l. to 12ft. 6in.; and at the same time he proved that he could successfully carry the extra area of sail, a total of nearly 300sq. ft., to which he was entitled. As compared with El Heirie, Glencairn I. was about 1ft. 9in. shorter on the measured l.w.l., with 9in. more extreme beam, and some 50sq. ft. more of sail. While both were of good construction and quite strong, Glencairn, though much larger in body, was the lighter, with a single skin and no keel; she was also lighter in spars and rigging. The displacements were not widely apart, neither carried any ballast other than a moderately heavy plate board.

Next to the disparity in L.W.L. and sail area, the great point of difference lay in the depth and contents of the hulls. El Heirie showed her relationship to the scow type in her low freeboard and absolutely straight sheer line, with parallel deck lines, square transom and shovel nose. Glencairn I., on the other hand, disguised her scow features by a good freeboard and lively sheer, a conventional deck line sweeping in from the point of greatest breadth to the stem and transom, the latter being fairly near to the usual shape; her bow was very full, but the appearance when afloat was not materially different from other modern small craft. Neither yacht had a bowsprit, and each had a shoal watertight cockpit draining into the well. El Heirie had the ordinary gaff mainsail and a jib set on a club; Glencairn I. had a gunter mainsail, jib headed and set on a long yard, the same rig as Spruce IIII., but with different details. While each was heeled to her working angle by the crew to leeward in light weather, and each carried sail in a breeze by the hard hiking of the crew, neither was designed specially to profit by a heavy crew. Mr. Crane and his brother, who together sailed El Heirie, are both of no more than the average weight, and Mr. Duggan and Mr. Shearwood, of Glencairn I., are also about the average; each crew came about to the assumed limit of 300lbs.

This time there were three straight races, Glencairn I. winning each day and taking the cup to Canada. This contest was very interesting from the fact that Mr. Crane and Mr. Duggan was each working independently on the same idea, and that a new one in designing; the success of El Heirie in the trial races, out of a fleet of twenty-nine yachts, showed how cleverly her designer had handled the question; but he had not attempted at the same time to experiment in the direction of greatly increased power. Mr. Duggan, on the other hand, instead of designing but one yacht, began practically with the form and power of Ethelwynn early in the winter, and after studying the whole subject in the course of a number of designs, came to the conclusion quite early in the season, that with a certain new form of hull the measured L.W.L. might be materially shortened with no loss of power or fine lines; and also that this nominally shorter hull might be made to carry the larger sail area to which its decrease of L.W.L. entitled it.

The very early date at which Mr. Duggan began his designing, the completion of the boats during the winter and their readiness by the time the weather was fit for racing, and the thorough preliminary trials, beginning on May 9 and continuing through a series of sixteen races, in which he was represented by no less than seven yachts fighting against those of other designers, altogether resulted in a course of evolution probably unprecedented in yachting; it not only left Spruce IIII. and Ethelwynn very far behind, but in the important factor of power, at least, placed the

challenging yacht very far ahead of the best of the new defending fleet, large as it was.

It was this superiority in power, more than anything else, the big rig of Glencairn I., and her designer's ability to handle it perfectly, that took the cup to Canada, but it brought about another result, in that Mr. Duggan himself was one of the first to recognize the extreme to which sail as compared to length had been forced in the course of his experiments, and to suggest the placing of a limit to a competition which, already unwholesome, must become worse rather better if left unrestricted.

The carrying out of this suggestion by the limitation of the sail area to 500sq. ft. in the new 20ft. class, in which the challenge of the Seawanhaka C. Y. C. was finally made, together with the remarkable success of the later Duggan 15-footers Sothis, Anita and Glencairn I. against the best American boats, El Heirie, Riverside and Vesper, materially simplified the problem for 1897. The question of power, the controlling factor in 1896, was entirely eliminated; in spite of much silly nonsense that has been written about the extreme limits of variation of L.W.L. and sail in this class and under the Seawanhaka rule, it was practically settled that all designers would work as closly as they possibly dared to the maximum sail limit, 500sq. ft. with its corresponding l.w.l. of 17ft. 6in. Further than this while a wide diversity of types have been seen in the class this year, from the extreme scow Skate to the conventional waterlines of Asthore, and the full-bodied Duggan boats, it has happened that both Glencairn II. and Momo have the same midship section, practically identical with Glencairn I.

The two, Momo and Glencairn II., are remarkable alike for their close resemblance in some important points and their wide divergence in others. In length and sail area there is a small difference, some 9in. more length for Momo and an excess of 33sq. ft. of sail for Glencairn; this is probably due to causes beyond the control of the designers. There is always a possibility, one might almost say a certainty, that these lightly-built boats will change their keel contour in the course of some weeks of sailing, and this may result in a material lengthening of the measured L.W.L., owing to the very flat angle between the water and the line of keel at each end. Then, too, there is a certain variation to be looked for between the calculated weight and the actual weight after some period of immersion; and the best trim is only to be found by steady trial, possibly calling for a little longer or shorter L W.L. than that in the design. There is also the weight of centerboard, several different ones being usually tried. While Glencairn II. came out just within the allowed 17ft. 6in. l.w.l., with the heavy board for which she was designed, Momo, in final racing trim in fresh water, proved to be so much longer and so near the limit that her heavy, bronze board could not be used, and she was obliged to carry a much lighter one of steel plate. With all the final difference, however, it is probable that the two designers started out with the same L.W.L., sail area and displacement.

The midship sections, as already stated, are also practically the same, both closely resembling that of Glencairn I. In the case of Glencairn II., Mr. Duggan had already experimented with various modifications of an enlarged section of Glencairn I., with a variation in beam from 7 to 9ft., with accompanying variations in the round of the bilge, flare of the topsides, etc. The final result in Glencairn II. was a section of 8ft. beam, very similar to the original one. In the two boats designed by him, Al Anka and Momo, Mr. Crane kept quite close to the section of Glencairn I.; so that the resemblance between the challenger and defender as finally selected was remarkably close. In Momo the turn of the bilge was a little longer and easier and the topsides flared a little more, these characteristics not being confined to the middle body alone, but extending throughout the boat.

Though so similar in many respects, there were some material points of difference; in the first place, Glencairn II. had a full 2in. more freeboard from end to end than Momo, with a little more sheer, and while the bow of Momo was abruptly snubbed in, that of Glencairn was carried out fair until the two deck lines met at the stemhead. This made some difference in the over all lengths of hull which altogether amounted to over 2ft. 6in., and with the added freeboard and the extra crown to the deck made the hull of Glencairn very much larger and more buoyant in a sea than that of Momo. In their arrangement both were open below, without bulkheads, but Glencairn's cockpit, about 6×4ft., was also open, the only floor being of slats laid on the timbers and cross floors a few inches above the garboards. There were at the mast several plank floors about 10in. deep and without limber holes, which acted as bulkheads in confining to the bow any water which once found its way there, as through the hole made in the first race.

Momo, like El Heirie and Glencairn I., had a watertight cockpit—a mere depression of the deck to hold sails, the boat being practically flush-decked, like the extreme scows, and with no place for the crew except in a reclining position that is very fatiguing when long continued. It is almost absurd to speak at all of ease and comfort on these small racing machines, but there are degrees of discomfort, and the man on Momo, with a wide crowned deck at some little distance above the water, is better off than the man on Skate, with a flat, flush deck that is practically awash when not standing on edge. Similarly, with added depth of hull and a deep cockpit, as in Glencairn II., there is an occasional opportunity to bend the knees by taking the ordinary sitting position.

The sail plans of the two boats presented an interesting contrast, the differences in nominal rig that appeared in the two former races no longer existed, both yachts had the conventional gaff mainsail, with throat and peak halyards. The proportions of the two sail plans were, however, radically different. That of Glencairn was of about the normal proportions for the sloop rig, rather long on the base and of moderate height; Momo, on the other hand, had a very short base and much greater height, the gaff being longer by 3ft. and peaked higher. This cut of rig is distinctly of advantage in light weather, where a little air may be caught aloft; and also in racing on narrow waters surrounded by trees and high ground, where the wind is broken by banks and trees. It was well known to American canoeists fifteen years ago, having been imported from the Thames, where it was developed by Mr. E. B. Tredwen, one of the most successful racing canoeists of the day. In the heavily ballasted Pearl canoes, sailing on the narrow Thames with trees on each side, the rig proved very successful; but it was speedily abandoned after trial on New York Bay and the St. Lawrence River, being replaced by a much lower and longer rig.

Within the past two years the same shape of rig has been developed on the Boston knockabouts, and it has proved superior to the ordinary rig. The reasons for this are so plain that the experience in the knockabouts does not of necessity offer reliable grounds for the general adoption of the rig. In the modern knockabout, a purely racing craft, the original cruising restriction of no bowsprit is still retained, the C. E. being thus thrown very far aft in a sail plan of the ordinary proportions. At the same time the deadwoods fore and aft have been ruthlessly cut away until the lateral plane is really that of a fin-keel. With this short lateral plane and a sail plan whose C. E. is abnormally far aft, the boats are unmanageable; as a matter of necessity, the after sail has been cut off to make the boats steer, and in order to make up the allowed area, the height of the sail plan has been materially increased. In this way the C. E. of the narrow and lofty sail triangle is brought into a reasonable relation to the C.L.R. of the short deep fin. At the same time, the knockabouts, with 3,500lbs. of lead in the bulb, 21ft. l.w.l. and 7 to 8ft. beam, have only the same sail area, 500sq. ft., as the 20-footers, thus having ample power to counterbalance any elevation of the weight of rig.

We cannot say how strongly Mr. Crane, with all of his Boston experience, has been influenced by this evidence from the knockabouts, which as far as it goes has been all one way, the narrow and high rigs on several other Herreshoff boats have placed them all ahead of his new Fly with a broad and low rig this season; it would seem, however, that he has accepted this result on its face. It is still a matter of opinion whether one rig, and if so which, has any advantage over the other when not specially favored by unusual conditions, as just instanced, but for the 20ft. class in the present races we believe that the rig of Glencairn II. is decidedly superior to that of Momo. These races were to be sailed on quite open waters; the surrounding shores were low, and the winds, especially the prevailing W. and S.W., had a clear sweep. The great over all length which was optional if not absolutely desirable for other reasons, and which might be supplemented with a bowsprit, made it possible to distribute the sail so as to obtain a proper balance of centers without excessive height; and on the other hand, with the large sail plans carried and the absence of depth and fixed ballast, it was most desirable to reduce the height of the top weights.

Until it is proven that there is an advantage *per se* in the narrow and lofty as compared with the broad and low rig, in open waters and free from arbitrary restrictions, it would seem that the moderate proportions of Glencairn's sail plan were better than the extreme of Momo's. Against the decided lowering of weights in the one, there was only the possibility of catching a current aloft in a drifting match for the other.

In the first two contests, as already shown, there was no attempt to design for a ballast crew, the most that was done was to endeavor to fit the displacement and dimensions to the two men who were decided on for the crew. In the case of Spruce IIII., Mr. Brand had the young sailor man who had already been in his employ for several seasons; Ethelwynn's owner invited a friend, a skillful helmsman, but a lightweight, to sail with him; the Crane brothers, both of only average weights, sailed together in El Heirie as a matter of course, and similarly Mr. Duggan took with him in Glencairn I. his old companion in scores of paddling and sailing races, Mr. Shearwood.

In the new 20-footers, however, the crew was from the first considered in a new light, as so much shifting ballast; this consideration having much influence on the design. Mr. Duggan, of course, sailed his own boat and kept his old mate, Mr. Shearwood, with him, but in selecting the third man, for mainsheet, he chose a heavy-weight, Mr. Paton, of 240lbs.; at the same time an old yachtsman and good all-round sportsman, who worked his passage well in all the races of the season. Mr. Crane, while also starting out to sail himself in the boat of his design, started by picking out two of the heaviest of his friends, old football men, who were also good sailors. Both Al Anka and Momo were designed to carry the weight of Messrs. Stackpole and Shaw to windward. Under the letter of the rule and its previous construction, this was perfectly proper and permissible; but the picking of men for weight above all other qualifications introduced a new and certainly a most undesirable principle in the 15 and 20ft. classes.

A great deal has been said about the unusual weather in which the races were sailed and its effect upon the result, and some have gone so far as to attribute the defeat of Momo solely to the accident of abnormal weather. This is very far indeed from being the case, as a closer examination of the races will disclose. The weather was unusual and very different from the light weather which has prevailed in most of the races of the 15ft. class in two seasons at Oyster Bay, as well as on Lake St. Louis. At the same time, it was not so much that three out of the four races were sailed in a chance storm as that the whole season, on the coast and on the St. Lawrence, has been marked by much rain, cool weather, and generally strong breezes. It very often happens that after a blow of several days there follows a prolonged calm; but on the Saturday and Sunday after the last race there was still plenty of wind about Lake St. Louis. From the general tenor of the criticisms on the weather, it might be inferred that Mr. Crane had designed a light weather boat for the average racing conditions, and that Mr. Duggan had designed a heavy weather boat for exceptional conditions which he was lucky enough to realize. This is by no means the true state of the case. No one knows better than Mr. Duggan the average light weather conditions which prevail on Lake St. Louis. He last year won both there and at Oyster Bay in a boat of exceptionally high power. There was nothing to induce him to go in for a heavy weather boat this year, and, as a matter of fact, Glencairn II. was designed to have much less power than Avoca, the latter, after several races in exceptionally heavy weather, showing more power than her designer considered necessary. The trial races of the class were sailed in very light weather, and showed Glencairn to be the fastest of a fleet that had sailed through the season in all sorts of weather.

Glencairn is in every sense a high-powered light weather boat, intended for the average conditions of Long Island Sound and Lake St. Louis, as shown in many seasons of racing. The difference between her and Momo, as nearly as we can estimate it from such sources of information as have been available, is this. Both designers started out with the same intention, of producing first of all a light weather boat, but Mr. Crane, while under-estimating the value of heavy weather qualities in case of an exceptional day or two, over-estimated the value of certain light weather features, such as low freeboard, short overhangs, and lofty rig.

The value of low freeboard in racing has been an open question for the past three years, and many have believed that there was a material gain in speed from the total absence of freeboard and sheer in such craft as Question and Skate. That this was largely Mr. Crane's belief last year was shown in El Heirie, with a comparatively low freeboard and no sheer. While being by no means positive in the matter, in the absence of direct proof, we have still believed and hoped that the advantages, even in extreme racing, were on the side of the conventional yacht form, with moderate freeboard, shipshape and sightly sheer, and good ends, as opposed to the "Barndoor" type of rectangular flat slab. In the 15ft. class last year the scows were represented by Willada and Hope, the yacht form by Glencairn I., and the compromise by El Heirie. In the new 20ft. class, the scows are represented by Skate and Keneu, the yacht form by Glencairn II. and her six sisters, and the intermediate type by Momo. Momo is decidedly further from the scow and nearer to the yacht than El Heirie, but so far as the hull goes, it is through, the predominance of the scow features, the lower freeboard and blunt fore end, that she is termed a light weather boat in comparison with Glencairn II.

Whether or no Mr. Crane was right in his estimates of the necessity of certain heavy weather features and of their disadvantages in such weather as might confidently be expected, it must be admitted that he has dealt successfully with the problem of design from a purely light weather standpoint, and that he has been in very hard luck in striking a succession of reefing breezes. Momo has proved herself a very fast boat in light weather, and might, under different conditions, have made a much better showing. At the same time, after watching the trial races of both fleets, at Oyster Bay and later on Lake St. Louis, and all of the final cup races, we doubt very much whether Momo would have taken more than two out of five races in any wind heavy and steady enough to carry the boats over the course at a speed of five knots. In the first race, in which the course was sailed in less than this speed, we are of the opinion that if Glencairn had crossed the line even with Momo without accident, it would have been seconds either way at the finish. The work of Glencairn in strong breezes has distracted attention from her performances in light weather; but taking her work in the trial races, and at times in the cup races, and giving due weight to the splendid handling which turned a defeat into victory in the last race, we doubt whether the real result of the races, the possession of the Seawanhaka international cup for the coming year, has been seriously affected by the presence of heavy rather than light weather.

There is one lesson of the races which should not be overlooked or buried under any plea of exceptional weather; even in this racing class, the majority of the races both on the Sound and the St. Lawrence being in light weather, the boat with moderate freeboard, sheer and bulk of body has beaten the extreme slab, and the former in turn has been beaten by a boat of still more wholesome design.

The present races have brought to the surface one point which has thus far been passed over by all parties by common consent, though its importance has been recognized from the first by many. The possibilities of a purely ballast crew under the existing method of measuring with a nominal weight of 150lbs. for each member of the crew have been discussed since the first arrangements were begun for the races of 1895, but thus far no action has been taken. The matter is a difficult one to deal with, and the general feeling has been that in the 15ft. class it would not pay to carry a very heavy man, as he would almost of necessity be unfitted for the work of handling light sails; this work requiring an exceptionally active man, and one whose weight when forward would disturb the trim as little as possible. This was all very well in the 15ft. class, no very heavy men appeared in the crews; but in going to a larger size the factors of the problem were somewhat changed. The value of the whole crew as mere shifting ballast became greater, there was more room for the big man to work than on the 15-footer, and there was allowed an extra man, presumably a heavy-weight, who, while tending main sheet, could shift fore and aft and thus balance the weight of the man who was working about the deck. It was just as true as ever that the work of setting light canvas, to say nothing about the matter of walking in safety on a 5-16in. deck, required a light and active man; but some skippers at least considered the weight to windward as of greater value than the extra dexterity about the deck.

The matter was brought to an issue by the withdrawal of Mr. Crane from his own boat in order to make way for a stranger of greater weight in a heavy weather race. While this is in itself no violation of the letter of the rule, it is at the same time in that doubtful category of things which, while not directly prohibited, may be done just once before they are made the subject of restrictive legislation, as was the case with Vigilant's ballast crew in 1893. There is no question of Mr. Crane's legal right to make this substitution, but we regard it as most unfortunate that the final decision of the question should have been forced in this way, and really to no good purpose. This is one of those open questions which may and always should be discussed and decided in the abstract and out of the racing season, and which, if forced to the front by one side or the other in concrete form during the races, is almost certain to provoke ill-feeling.

The members of the Royal St. Lawrence Y. C. since they first challenged in 1895, have shown a spirit that is conspicuous even among the highest class of sportsmen for a rigid observance of the spirit of the rules, without referring to the letter. In the course of two seasons of hot racing, and of long discussions between the two clubs over details, they have shown every desire to keep these contests on the highest possible plane. There is no denying that the substitution of an outside man for mere purposes of ballast has awakened a great deal of feeling on their part against the Seawanhaka C. Y. C.

Another question of a somewhat similar nature, but not so serious, had already arisen over the claim by Mr. Crane of the right to name two helmsmen for Momo. This, too, is more a matter of usage than of law, and it is not necessary to argue it now from its strictly legal aspect. The main points are that it was contrary to the general usage of yacht racing, that it had not been done before in the races for the Seawanhaka cup, and that to recognize it now would be to establish a precedent that might give trouble in the future. Though this point, we believe, was not advanced by the Canadians, it is plain that in races as hard and tedious as these sometimes have proved, the boat equipped with two good helmsmen to relieve one another would be at a decided advantage over one in which only one man was accustomed to the steering.

Perhaps the fairest way to consider these two allied questions is to look first at the ordinary customs of yacht racing and then at the possibilities which would be opened by the full recognition of Momo's two claims. The ordinary usage in yacht racing, and especially in the previous races for this cup, is that one man shall steer a yacht through a race, and that the crew shall be made up of the same persons as nearly as possible in each race; as a rule it is in every way desirable that one good man perfectly familiar with the boat shall have the helm, and that he shall have under him men whom he knows well and who are familiar with their several duties. There is usually nothing to prevent another from taking the helm for a short time, or in the event of injury to the helmsman, and it is of course often necessary to take a substitute for an absent member of the crew.

In the 20ft. racing, however, the conditions are somewhat different from those which maintain through the racing fleet at large, or even in the ordinary small classes. There is a very strong temptation to pick men for their weight above all other considerations; in fact, as the case now is, a man of under 150lbs., even though a good helmsman or hand, might as well make up his mind that there is no berth for him in the winning boats of the class, and that he must be content perforce to sit on the stringpiece and watch the racing. Of course, such a personality as that of Mr. Duggan must always be worth more than any weight of mere beef in a boat; but it is plain to see that, unless some restriction is placed, next year's boats will be manned, like Skate, by men who are big and heavy, as well as good yachtsmen. There are none too many now who are capable of doing such work as Mr. Crane or Mr. Duggan have done this year, of designing, superintending, working up and finally sailing a racing 20-footer, and the number of these who are also heavy enough to qualify as valuable ballast is very much smaller.

The man of average weight cannot be left ashore entirely after he has designed and worked up the boat; he must be carried, but his deficiency as ballast must be made up if possible. If it be conceded that two helmsmen may be named and the crew changed at will, the result under the strain of international competition is perfectly evident. In the first place, the owner or designer who desires to sail in his boat will find a pair of heavy men, one of whom is a good helmsman, and who will be formally named as such, with the owner. The two will change places at the stick at will, the lighter one doing the deck work and sail handling. If one happens to be specially good at a start and the other more skilled in taking a boat to windward, so much the better. With this crew the boat is fitted for heavy weather, but she has, we will suppose, the additional option of changing her crew at will, so a couple of skillful lightweights are picked out, to be carried in light weather, the heavy men taking a rest ashore. This may be considered an extreme view of the case, but such action would be quite legitimate under the two claims made by Momo, and in the present type of boat

it would probably pay in nearly all cases. If one side were thus provided with two helmsmen and a double crew, the other would be compelled to go to the same extreme. It is almost certain that the two questions will be brought up by the present holders of the cup with a view to a definite understanding of the existing rules, and, if necessary, to further restrictive legislation. Looking at the matter in the abstract, and with due regard to the best interests of the sport, most yachtsmen will agree with us that it is in every way desirable that each yacht shall be steered by one man and manned by one regular crew, and that the present premium on mere weight of crew be removed.

The first race, of Aug. 14, offered a most conspicuous instance of the hasty and superficial judgment of even old and expert yachtsmen. When looked at carefully in all its aspects, the victory of Momo was a very simple matter, meaning little at all. On her part she had shown up excellently in light weather, her mainsail was in perfect shape and there was no question, though she had nothing close beside her, that she was pointing and footing and working out well to windward; off the wind her speed was still more perceptible. That Glencairn was in trouble was no fault of hers, it was but the chance of war, and by all yachting usage Momo had scored one of the necessary three races, though it is most probable that Mr. Crane would have declined to take it. The work of the whole day, as far as she was concerned, was such as to encourage her crew and to send them off in Monday's race in the best possible spirits.

Beyond this the race showed nothing as to the relative merits of the two boats. On the side of Glencairn, it was known after the race, though not in detail during its progress, that her tiller had fouled and finally broken; that she had run wild and fouled a markboat; that she had a hole in her side, below the water on one tack, and that her new rudder failed to steer her. Added to all this, Mr. Duggan crosssd the line with the certainty that his boat was disqualified, and that the best he could do would be to make a show at racing for the benefit of the many interested spectators. That Glencairn was beaten two minutes in two miles under such conditions meant nothing at all. What was of far more importance in the eyes of those who really cared to see, was that in the last leg over the same distance a couple of hours later, after her helmsman and crew had recovered from the confusion of the breakdown and foul, she made better time than Momo by 36s. Of course the two were far apart, Momo was in no way pushed, and the conditions varied a little; but still there was plenty to show that the boats were not materially different in such weather.

The one fact that seemed to strike everyone was that Momo had beaten Glencairn nearly four minutes in the first round; no one seemed to attach any importance at all to the really important fact that Momo had made but 25 seconds in the entire third round. Subsequent events corroborated the fact that Momo is faster off the wind than Glencairn, though not to the extent indicated in this first race of 30 seconds to the mile; but all we have seen of the two, first and last, goes to show that to windward, in any sort of a working breeze, Glencairn will make up a part of this gain, and that the rest will be lost in superior handling on Glencairn.

The effect of this race on the experts of the press was very amusing. The cup was already safely back at Oyster Bay, Mr. Duggan was on the verge of nervous prostration as the result of his defeat, and w uld probably break down before Monday's start, and all was over but the shouting. Even among the yachtsmen of both sides this same hasty judgment was visible; some of the St. Lawrence men were ready to bid a long farewell to the cup without waiting for Monday, and some of the visitors were correspondingly elated. A look at the hole in Glencairn's side, at the two parts of her tiller with half of a broken bolt in each, and at Mr. Duggan, coolly and unconcernedly at work as soon as the boat was hauled out cutting off the fore part of the rudder and riveting up the edge, showed just how much the whole business amounted to as a reliable measure of the merits of the two boats.

The published comments since the race are quite as wide of the mark; one journal proclaims editorially that Glencairn II. is only a copy of Momo, designed from the descriptions of the latter prematurely published during the early races; another authority denounces Momo as a mere enlargement of El Heirie, and accuses Mr. Crane of ignoring the lessons learned last year. Very few of the accounts which we have read do equal justice to the two clever amateurs who have pitted their wits against each other for the second time.

A New Knockabout Class.

THE Seawanhaka Cor. Y. C. has just issued the following circular:

NEW ONE-DESIGN RACING CLASS.

During the past few years there has been developed in Boston and its vicinity a very large class of boats known as knockabouts, which combine highly satisfactory cruising qualities with high speed and absolute safety. While several designers are represented, the restrictions governing their design and construction are such that the boats are very even in speed and the racing has consequently been very keen and exciting. The Herreshoff one-design 30ft. special class has also been conspicuously successful for two years and the interest in racing in this class is keener this year than last, which tends to prove that the "one-design" idea is well calculated to arouse interest in the sport. Impressed with the experience in these classes, several members have decided to construct knockabout boats for next season's racing, all from one design and by one builder, and they are anxious that the number constructed shall be as large as possible, both for the effect upon racing and to reduce the cost.

Several builders have been invited to submit designs, and the purpose of this circular is to invite all who may be interested in the matter to meet at the Oyster Bay club house on Saturday, Sept. 4 (the day of the autumn race), at 8 o'clock in the evening, when designs will be submitted and the details fully discussed, with the view of placing an early order for as many boats as practicable. It is hoped that from ten to fifteen will be ordered, and in that event the cost should be very moderate.

The boats will be 21ft. on the waterline, will have a cabin and cockpit, each about 8ft. in length, and will be well adapted for cruising as well as for racing.

Believing that the establishment of this class will especially contribute to the success of racing in our own waters at Oyster Bay, the race committee will encourage it by the giving of frequent races, and desire to aid in the movement in every practicable way, and will be glad to furnish any additional information in their possession to any who may be interested.

Western Yachting.

MINNESOTA INTERLAKE CONTESTS.

CHICAGO, Ill., Aug. 28.—The annual interlake contests between the Minnetonka and White Bear fleets offer interesting features this week. As a result of the trial races on Minnetonka, the three boats chosen to send to White Bear for the championship races were: Wizard, sloop; Gladrene, one-rater; and Tartar, cat. After the departure of these boats for White Bear, interest in the races between remaining boats at Minnetonka fell off.

On Aug. 26 the interlake regatta sailed on White Bear Lake was a frolic for the yachtsmen of the White Bear club, who won everything in sight excepting the cat race, where the redoubtable Tartar carried off the only victory for the Minnetonka Y. C. The boats and crews were as follows:

First Class Sloops—Wizard, Minnetonka, Capt. Alf. Pillsbury; W. D. Morse, Dan Raymond, R. P. Woodworth, John Pillsbury, Frank Morse. Akela, White Bear, Capt. Milton Griggs; P. C Gotzain, Eugene Ramaley, F. M. Douglas, Don Bunn, C. H. McGill. Both of these boats were designed by Peterson, of Minnetonka, and built in his shop at Excelsior.

Catboats—Tartar, Minnetonka, Capt. Wm. Peet; Campbell, Sweeney, C. L. Mendel, D. W. Knowlton, David Tenney, Willie Rolph. Aurelia, White Bear. Capt. J. M. Welch; Archie McLaren, Sidney Dean, W. H. Yardley, Sam Bunn, Lance Bement.

One-raters—Gladrene, Minnetonka, Capt. F. J. Hopkins; W. G. Gale, Gale Merrick, Sidney Wolcott. Witch. White Bear, Capt. Fred R. Bigelow; H. Van Vleck, T. L. Wann.

The regatta committee in charge is composed of Tracy Lyons and L. P. Ordway for White Bear, and C. B. Eustis for Minnetonka. These gentlemen have full charge of the races, and in all matters their decisions will be absolutely final.

The dimensions of the six competing boats are as follows:

	Sail area. sq. ft.	L W L	Length over all.	Beam.
Akela	698.3	22ft. 11in.	36ft. 4in.	9ft. 4in.
Wizard	704	22ft. 9in.	38ft. 7in.	8ft. 7in.
Aurelia	679.07	22ft. 9in.	31ft.	9ft 6in.
Tartar	565	22ft. 10in.	32ft.	8ft. 6in.
Witch	347 41	17ft. 2in.	23ft.	7ft.
Gladrene	348	17ft. 10in.	25ft. 6in.	7ft.

The following was the sailing time:

FIRST CLASS SLOOPS.

Akela	2 04 43	Wizard	2 06 34

FIRST CLASS CATS.

Tartar	2 15 20	Aurelia	2 15 25

ONE RATERS.

Witch	1 51 38	Gladrene	1 56 42

On the following day, Aug. 25, the White Bear men clinched their victory by decisively beating the Minnetonka boats in each one of the events, sloop, cat and one-rater, the following being the time:

SLOOPS

	Start.	Finish.	Elapsed.	Corrected.
Akela	2 25 00	4 06 39	1 41 39	1 32 29
Wizard	2 25 00	4 14 07	1 49 07	1 39 39
CATS.				
Aurelia	2 20 00	4 16 42	1 56 42	1 45 47
Tartar	2 20 00	4 20 56	2 00 56	1 43 57
ONE RATERS				
Witch	2 30 00	4 01 16	1 31 16	1 31 16
Gladrene	2 30 00	4 03 20	1 33 29	1 33 29

A big banquet was given the defeated yachtsmen by their victors, and the White Bear men showed themselves as well able to entertain their guests as to sail their yachts. Some sixty-odd gentlemen sat at table.

THE FELKER CHALLENGE CUP.

In 1885 Mr. C. W. Felker, of Oshkosh, Wis., made donation of a challenge cup to be sailed for annually by Lake Winnebago yachts as a perpetual challenge cup. This year the deed of gift was amended by Mr. Felker in such way that hereafter the competition shall be open to all yachts of the United States. Minerva, of Fond Du Lac, has won the cup three different years. During the last twelve years winners of this cup in the annual regatta have been as follows:

Aug. 29, 1885—Cutter yacht Hattie.
July 17, 1886—Sloop Pinafore
July 30, 1887—Sloop Carrie Morgan.
July 28, 1888—Sloop Minerva
Aug. 9. 1889—Sloop Minerva.
July 25, 1890—Sloop Marguerite.
July 25, 1891—Sloop Carrie Morgan.
July 16 and 29, 1892—Sloop Carrie Morgan.
Aug. 29, 1893—Sloop Marguerite.
July 28, 1894—Sloop Minerva.
Aug. 10, 1895—Sloop Nirvana.
Sept. 12, 1896—Sloop Corona.
Aug. 21, 1897—Sloop Corona.

MATCH BETWEEN FOX LAKE AND DELAVAN.

Early in September there will be a match race sailed for a cup trophy, between the winning boats of the season respectively for Fox Lake, Illinois and Delavan Lake, Wisconsin. This is in 1-raters, and will bring together Mabelle, cup winner for 1897 at Fox Lake, and El Capitan, leader in the Delavan races. The race between these will be sailed on the course customary at Delavan Lake. Mabelle was modeled and built by Mr. Albert Church Bower, of Waukegan, and is owned by the Bald Eagle Club of Fox Lake. Theodore Poekel, of Racine, designed and built El Capitan for her present owner, Mr. F. D. Montgomery. The race will be for a $100 cup.

COLUMBIA Y. C. OF CHICAGO.

At the club regatta of Columbia Y. C., Aug. 21, following was the time in the different classes:

CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Vanenna	2 20 20	4 28 18	2 17 58	2 17 58
Charlotte R.	2 08 15	Withdrew.		
CLASS B				
Blade	2 06 20	4 47 30	2 41 10	2 41 10
Genevieve	2 07 50	5 25 00	3 17 10	3 16 16
CLASS C.				
Wizard	2 10 20	5 54 12	3 42 52	3 42 52
Arline	2 06 20	Disabled.		
Myrine	2 07 05	Did not finish.		
CLASS D				
Atlantic	2 11 20	3 45 15	1 33 55	1 33 55
B	2 11 30	4 08 50	1 57 20	1 50 13
Microte	2 13 05	3 45 35	1 32 30	1 28 40
Vanity	2 12 05	3 50 25	1 37 40	. .. ..
Atom	2 11 40	Capsized.

Blade and Vanenna are fin-keels, both designed by Myers, and interest always arises when they sail together, Vanenna giving Blade a goodly time allowance. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Vigilant and Navahoe.

THE regular racing of the 30-footers at Newport for two seasons promises to develop into a permanent and organized system of racing about this summer resort which, though long known as a great yachting center, has seen comparatively little racing apart from the annual cruise of the New York Y. C. The racing owners, mostly in the 30ft. class, have organized an association, and races were given last season. They have recently arranged for a special match, for a $250 subscription cup, between Vigilant and Navahoe, to be sailed on Saturday, Sept. 4. The race is in the hands of Messrs. H. B. Duryea, R. N. Ellis and Woodbury Kane, who have announced the following conditions: Start, at 11 A. M., upon a range between two marks flying an American yacht ensign. One gun, start. Yachts to pass from the northward to the southward in starting and from the southward to the northward in finishing.

No. 1—Warning signal, a blast of the whistle of fifteen seconds duration will be given and a white flag, with the number upon it, denoting the course as numbered below, will be hoisted.

No. 2—11:05 A. M., preparatory whistle blown and white flag with letter G thereupon hoisted.

No. 3—11:10 A. M., start. Whistle blown and blue flag hoisted.

Should the condition of weather render expedient the postponement of the start, code flag B will be hoisted, and subsequently the warning signal will be given, only upon the even hours and half hours.

Should it be deemed advisable, the committee may declare the race finished with the completion of one or more rounds, in which case the hoisting of code flag B will indicate that the race is to be terminated with the round then being sailed.

RECALL SIGNALS.

1. Navahoe.
2. Vigilant.

MARKS.

Mark 1—At the northwesterly end of starting line.
Mark 2—At the southeasterly end of starting line.
Mark 3—Narragansett Pier Life-Saving Station bearing west, distant 1¼ miles. Whale Rock Light bearing northeast by north, distant ⅛ mile.
Mark 4—Beaver Tail Light bearing northeast by north; distant 1⅝ miles. Brenton's Reef Lightship bearing east, distant 1⅞ miles.
Mark 5—Brenton's Reef Lightship bearing northwest by north, distant 1⅝ miles.

COURSES.

No. 1—From a starting line around mark No. 4, thence around mark No. 5, thence to starting line around mark No. 1; all marks to be left to port. Yachts must keep to the westward of Brenton's Reef Lightship and the Butter Ball Bell Buoy, both going and returning. Three times around.

No. 2—From starting line around mark No. 5, thence around mark No. 4, thence to starting line and around mark No. 1; all marks must be left to starboard. Yachts must keep to the westward of Brenton's Reef Lightship and the Butter Ball Bell Buoy, both going and returning. Three times around.

From the starting line around Beaver Tail Bell Buoy, leaving it to port; thence around Brenton's Reef Lightship thence around Beaver Tail Bell Buoy, leaving it to starboard; thence to starting line and around mark No. 1, leaving it to port. Three times around.

No. 4—From starting line around mark No. 3, thence around mark No. 5, thence around mark No. 1, leaving all marks to port, keeping to eastward of Beaver Tail Bell Buoy and westward of Brenton's Reef Lightship, both going and coming. Three times around.

No. 5—From starting line around mark No. 5, thence around mark No. 3, thence around mark No. 1, leaving all marks to starboard, keeping to westward of Brenton's Reef Lightship and eastward of Beaver Tail Bell buoy, both going and coming. Three times around.

No. 6—From starting line around Beaver Tail Bell Buoy, thence around mark No. 5, thence starting line and around mark No. 1, leaving all marks to port, and keeping to the westward of Butter Ball Bell Buoy. Three times around.

No. 7—From starting line around mark No. 5, thence around Beaver Tail Bell Buoy, thence to starting line and around mark No. 1, leaving all marks to starboard, and keeping to the westward of Butter Ball Bell Buoy. Three times around.

New York Y. R. A. Regatta.

THE New York Yacht Racing Association will hold its ninth annual regatta on Monday, Sept. 6, open to yachts of the following clubs, constituting the Association: Audubon, Hudson River, Newark, Bayonne, New Jersey A. C., Pavonia, Columbia, Jersey City, Tappan Zee, Yonkers Corinthian, New York A. C., Yonkers, Gravesend Bay, Kill von Kull, Tower Ridge, Greenville and Nyack Boating Association.

The conditions are:

Only boats numbered according to Article II. of the by-laws of the N. Y. Y. R. A. may compete, and all boats appearing with association numbers or Y. R. U. of Long Island Sound up will be timed, even though no previous notice is sent in. But those desiring to participate are requested to send in notice to secretary of committee early, in order to facilitate the work of the judges.

The turning marks or buoys of all courses are to left on port hand in turning.

Course 1—From start line to and around Craven Shoal Buoy (black and red horizontal stripes), located E N.E. distance ¾ mile from Hoffman Island; thence to and around Swash Channel (red) Bell Buoy, located 1¼ miles N.W., ⅝ W. from Romer Shoal Light; thence to starting line. (Once around is 11 miles. See classification list for how many times it is to be sailed over.)

Course 2—From start line to and around Black Can Buoy No. 13, located ¾ of a mile S. by E. from Fort Tompkins; thence to and around Black Can Buoy No. 11, located about ¼ of a mile E.N.E from Swinburne Island; thence to start line. (Once around is 7 miles; see classification list for how many times it is to be sailed over.)

Course 3—From start line to and around a mark designated by a red and white flag placed about 150ft. west of the end of the Government Dock, situated at the southern limits of the Fort Hamilton slope; thence to and around the moored Street Department scow, located about half-way between Coney Island Point and Ulmer Park, thence to start line. (Should scow be removed a red and white flag mark will be placed there. Once around is 3⅛ miles; see classification list for how many times to sail over course.)

The classes and courses are:

Schooners—Class A, all schooners 40ft. and over.—Twice over Course 1 (22 miles). Start Signal, white flag.

Cabin Sloops and Cutters—Twice over Course 1 (22 miles).—Class B, all 62ft. and over 53ft.; Class C, all 53ft. and over 45ft.; Class D, all 45ft. and over 38ft.; Class E, all 38ft. and over 32ft.; Class F, all 32ft. and over 27ft.

Class G, all 27ft. and under; Class H, all yawl-rigged yachts. Three times over Course 2 (21 miles).

Open Jib and Mainsail—Three times over Course 2 (21 miles).—Class 1, all 32ft. and over 27ft.; Class 2, all 27ft. and over 23ft.

Class 3, all 23ft. and under, twice over Course 2 (14 miles).

Cabin Cat-Rigged—Class 4, all over 23ft., three times over Course 2 (21 miles). Class 5, all 23ft. and under, twice over Course 2 (14 miles).

Open Cat-Rigged and Half-Raters—Class 6, all 32ft. and over 27ft., and Class 7, all 27ft. and over 23ft., three times over Course 2 (21 miles).

Class 8, all 23ft. and over 20ft., and Class 9, all 20ft. and over 17ft., twice over Course 2 (14 miles).

Class 10, all 17ft. and under, and Class 11, all half-raters, three times over Course 3 (10 miles).

Hobe Sound Y. C.

HOBE SOUND, Fla., Aug. 18.—The fifth race of the Hobe Sound Y. C.'s prize series was sailed to-day. The wind was light from the S.E., and the time was slow. Sprogie outfooted and outpointed everything in her class, but lost first place on time allowance.

Juanita went over the course alone in the second class, but was disqualified. Her skipper evidently didn't know port from starboard, for he passed every buoy wrong, and finally wound up by tying a knot in the starting line. He said he didn't tie any knot in any line, for some one had taken down the starting line and he could not find it.

FIRST CLASS.

Start, 2:33:	1st round.	Finish.	Elapsed.	Corrected.	Points
Wenonah	0 41 23	0 43 00	1 24 28	1 11 42	3

Ogden Goelet.

MR. OGDEN GOELET, of New York and Newport, an old member of the New York Y. C., died on board of his new steam yacht Mayflower, at Cowes on Aug. 27. Mr. Goelet, who was about fifty-one years of age, had been in delicate health for some time past; in fact it was partly on account of his health that he has spent so much of his time afloat for years past. At the same time, the news of his death was most unexpected by yachtsmen.

Mr. Goelet built the cruising schooner Norseman in 1881, at Poillon's in Brooklyn, and shortly after joined the New York Y.C. The following letter from him is most interesting, as from it originated a series of races which has become historic:

No. 425 FIFTH AVENUE, Feb. 1, 1882.

Charles A. Morton, Esq., Secretary New York Y. C.:

DEAR SIR—I beg to offer the following prizes:

One $1,000 cup, to be sailed for by the schooners of the New York Y. C.

One $500 cup, to be sailed for by the sloops of the New York Y. C.

These prizes to be competed for at Newport on the same day during the month of August next, and at any date during that month which may be selected by the flag officers. The course to be decided by the regatta committee. The race to be sailed under their supervision, according to the rules of the club, and with time allowance. Very respectfully,

OGDEN GOELET.

This offer has been repeated every year down to the present time. After using Norseman for many years, she was sold and renamed Alsacienne by her new owner, Mr. Goelet retaining the old name. He then had under charter for several seasons the English steam yacht White Ladye, surrendering her this summer to take possession of the magnificent new Mayflower, which Mr. Watson has just completed to his order. He had spent a few weeks on this yacht about Cowes and the other English ports, and was just preparing to sail for New York. The body will be embalmed and brought to this country on the Mayflower.

Mr. Goelet always gave liberally to yachting, and did much of late years to encourage the Mediterranean racing. He was part owner in the 54-linear rater Samphire.

Pewaukee Y. C.—Pabst Cup.

PEWAUKEE, WIS.

Saturday, Aug. 21.

SEVENTEEN yachts got away in the start of the Pabst challenge cup regatta sailed on Pine Lake to-day. The Pewaukee Y. C.—the challenging party—had five, and the Pine Lake Y. C. twelve yachts in the race.

The start was made at 2:35 P. M. in a light S.W. wind that, after the yachts had completed the first round, failed entirely, and, as the course was not completed within the two hours time limit, the executive committee declared the race off, and set Saturday, Aug. 28, as the date for resailing it.

ERNEST E. WHITE.

American Y. C. Open Regatta.

NEWBURYPORT.

Tuesday, Aug. 17.

MASSACHUSETTS Y. R. A. RULES.

THE annual open regatta of the American Y. C. of Newburyport, was sailed on Aug. 19 in a two-reef breeze from the west, the times being:

FIRST CLASS.

East Gloucester Y. C. Open Regatta.

GLOUCESTER, MASS.

Friday, Aug. 13.

AS A a part of the general festivities of "Gloucester Day," the East Gloucester Y. C. sailed an open regatta on Aug. 13, under the Mass. Y. R. A. rules. There was a fresh west wind, some of the boats carrying a single reef. The times were:

FIRST CLASS SLOOPS.

	Elapsed.	Corrected.
Ida J., F. Peckham	1 40 00	1 11 17
Asahi, E. D. R. Thayer	1 42 51	1 14 36

Witch, J. H. Higgins	2 08 40	1 35 55

On Aug. 14, the same fleet raced at Squam in a moderate southerly wind. The first class yachts Little Peter, Ida J. and Harbinger mistook an outside boat with a flag for one of the markboats, and were disqualified for sailing a short course. Little Peter was disabled for a time by the fall of her throat halyard block. The times were:

Forty-Six Foot Class, Special Race.

MARBLEHEAD—MASSACHUSETTS BAY

Monday, Aug. 23.

ON her way home from the New York Y. C. cruise, Wasp put in at Marblehead, now the home of three of her old mates in the former 46ft. l.w.l class, Gloriana, Barbara and Milicete. A special match was made and sailed on Aug. 23, the course being 16 miles to windward and return, from off Marblehead around the can buoy off the Londoners. There was a fresh N.E. wind and plenty of sea all the way. The four were started in the old way, crossing the line:

Wasp	11 15 10	Gloriana	11 16 56
Barbara	11 15 56	Milicete	11 16 21

Wasp housed her topmast, but sent it aloft again after a time when off Eastern Point. The windward mark was turned:

Wasp	2 30 49	Gloriana	2 55 30
Barbara	2 40 20	Milicete	3 08 10

The run in was made under spinakers, the final times being:

	Start.	Finish.	Elapsed.	Corrected.
Wasp	11 15 40	5 18 11	6 03 11	6 03 11
Barbara	11 15 55	5 35 00	6 20 00	6 16 40
Gloriana	11 16 56	5 54 06	6 39 06	6 37 36
Milicete	11 16 21	6 05 19	6 51 49	6 48 37

The 30ft. Class.

THROUGHOUT the month the racing of the 30ft. class has kept up steadily at Newport, and with results varying sufficiently to keep alive the interest in the class. On Aug. 10 a sweepstakes race was sailed in a S.E. wind over an 8-mile triangular cour e, the times being:

	Finish.	Elapsed.
Wa Wa, J. A. Stillman	5 19 15	2 04 15
Carolina, P Jones	5 20 30	2 05 32
Veda, C. Vanderbilt, Jr	5 21 45	2 06 45
Mai, O. G. Jennings	5 21 49	2 06 49
Esperanza, A. S. Van Winkle	5 23 58	2 08 58

The race of Aug. 11, over the same triangle and in a light S.E. wind which finally freshened from the west, resulted:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 27 10	2 17 10
Veda, C. Vanderbilt, Jr	5 28 09	2 18 09
Wa Wa J A. Stillman	5 28 48	2 18 48
Mai, O G. Jennings	5 33 37	2 23 37
Esperanza. A. S. Van Winkle	5 35 45	2 25 45
Carolina, P. Jones	5 37 10	2 27 10

The Jamestown course was sailed on Aug. 12, the wind being from N.W. to S.W. The times were:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	4 43 45	1 46 45
Esperanza, A. S. Van Winkle	4 43 59	1 46 59
Wa Wa, J. A. Stillman	4 44 12	1 47 12
Carolina, P. Jones	4 44 58	1 47 58
Dorothy II., H P Whitney	4 45 14	1 48 14
Mai, O. G. Jennings	4 47 15	1 50 15

The Dyers Island course was sailed on Aug. 13, in a fresh S.W. wind. The times being:

	Finish.	Elapsed.
Vaquero III., H. B Duryea	5 34 24	2 18 24
Wa Wa, J. A. Stillman	5 36 02	2 20 02
Puck, E D. Morgan	5 38 36	2 22 36
Esperanza, A. S. Van Winkle	5 42 24	2 26 24
Dorothy II., H. P. Whitney	5 43 30	2 27 30
Veda, C. Vanderbilt, Jr	5 44 13	2 28 13
Mai, O. G. Jennings	5 45 12	2 29 12

The Dyers Island course was again selected on Aug. 14, the wind being south, for the race for the Belmont cups offered at the time of the New York Y. C. cruise. Before the start Veda fouled Hera and put her bowsprit through the latter's side, disabling her. The times were:

	Limit.	Corrected.
Esperanza, A. S. Van Winkle	5 32 10	2 32 10
Vaquero III , H. B Duryea	5 33 11	2 33 11
Dorothy, H. P. Whitney	5 36 32	2 36 32
Wa Wa, J. A. Stillman,	5 38 19	2 38 19
Carolina, P. Jones	5 39 10	2 39 10
Puck, E. D Morgan	5 40 20	2 40 20
Veda, C. Vanderbilt, Jr	5 41 17	2 41 17
Mai, O. C. Jennings	5 45 21	2 45 21

On Aug. 17, a race over a triangular course was sailed in a strong west wind, the times being:

	Finish.	Elapsed.
Carolina, P. Jones	5 03 20	1 43 20
Dorothy, II., H. P. Whitney	5 03 52	1 43 52
Wa Wa, J. A. Stillman	5 04 12	1 44 12
Hera, R. N. Ellis	5 04 32	1 44 32
Veda, C. Vanderbilt, Jr	5 10 30	1 50 30

The race of Aug. 18 was for a cup offered by Mr. R. N. Ellis, of Hera. The triangular course was sailed, starting in a S.W. wind, which shifted to the east. Hera lost a little at the finish through the presence of a steam yacht in the course, and Carolina again won, the times being:

	Elapsed.
Carolina, P. Jones	2 31 13
Hera, R. N. Ellis	3 31 32
Dorothy II , H. P. Whitney	2 34 06
Puck. E. D Morgan	2 36 03
Wa Wa, J. A. Stillman	2 36 20
Mai. O. G. Jennings	2 37 48
Veda, C. Vanderbilt, Jr	2 38 15
Vaquero III . H. B. Duryea	2 38 56
Esperanza, A. S. Van Winkle	Did not finish.

The race of Aug. 19 was sailed in a light S. wind and fog. The triangular course was sailed. Hera was well up at the finish, but missed the line in the fog. The times were:

	Finish.	Elapsed.
Dorothy II , H. P. Whitney	6 13 07	3 03 01
Hera, R. N. Ellis	6 13 14	3 03 14
Carolina, P. Jones	6 16 58	3 06 58
Musme, J. M. McDonough	6 18 07	3 08 07
Wa Wa, J. A. Stillman	6 19 20	3 09 20
Esperanza, A S Van Winkle	6 19 30	3 09 30
Mai, O G. Jennings	6 20 41	3 10 41
Vaquero III., H. B. Duryea	Did not finish.	
Puck, E. D. Morgan	Did not finish.	

The race of Aug. 20 was for a cup offered by Mr. C. Vanderbilt, Jr., who chose the Brig Ledge course, 25 miles, the wind being strong N.W. Vaquero finished first, but was disqualified for fouling Wa Wa and Esperanza; the times were:

	Finish.	Elapsed.
Wa Wa, J. A Stillman	5 39 42	2 42 42
Dorothy II , H. P Whitney	5 42 52	2 45 52
Carolina, P. Jones	5 44 20	2 47 20
Hera, R. N. Ellis	5 44 40	2 47 40
Esperanza, A. S. Van Winkle	5 44 58	2 47 58
Mai O G Jennings	5 48 30	2 47 58
Musme, J M McDonough	5 50 02	2 53 02
Vaquero III., H. B. Duryea	Did not finish.	
Puck, E. D. Morgan	Did not finish.	

On Aug. 23 the fleet sailed over the Dyers Island course for the cup given by Mr. A. S. Van Winkle, owner of Esperanza. The wind was N.E. The times were:

	Finish.	Elapsed.
Vaquero III., H. B Duryea	6 01 04	2 39 04
Dorothy II., H. P. Whitney	6 02 18	2 40 18
Wa Wa, J. A. Stillman	6 03 07	2 41 07
Veda, C. Vanderbilt, Jr	6 04 40	2 42 40
Carolina, P. Jones	6 05 06	2 43 06
Puck. E. D. Morgan	6 05 14	2 43 14
Musme, J M. McDonough	6 06 27	2 44 27
Hera, R N Ellis	6 05 41	2 44 41
Esperanza, A. S. Van Winkle	6 07 42	2 45 42
Mai, O. G. Jennings	Did not finish.	

The race of Aug. 24 was for a cup offered by Mr. Henry Walters, of the steam yacht Narada. The course was a triangle, sailed in a strong N.W. breeze and heavy sea. Before the start Puck was in collision with the steam launch Beatrice, knocking a hole through her side. Hera fouled another yacht and withdrew. Vaquero broke the jaws of her gaff. The times were:

	Finish.	Elapsed.
Dorothy II., H P. Whitney	5 18 44	1 56 44
Veda, C. Vanderbilt, Jr	5 19 20	1 57 20
Esperanza, A. S. Van Winkle	5 19 37	1 57 37
Wa Wa J. A Stillman	5 20 31	1 58 31
Puck, E. D. Morgan	5 22 57	2 00 57
Musme, J M. McDonough	5 24 27	2 02 27
Carolina, Pembroke Jones	5 26 21	2 04 21
Hera, R. N. Ellis	Did not finish.	
Vaquero III , H. B Duryea	Did not finish.	
Mai, O. G. Jennings	Did not finish.	

On Aug. 25 a race was sailed for a cup offered by Mrs. E. D. Morgan, the wind being light from the south. The times were:

	Finish.	Elapsed.
Puck, E. D. Morgan	6 49 40	3 49 40
Hera, R. N. Ellis	6 52 49	3 52 49
Dorothy II., H. P. Whitney	6 53 50	3 53 50
Vaquero III., H. B. Duryea	6 53 58	3 53 58
Musme, J. M Macdonough	7 00 01	4 00 01
Veda, C. Vanderbilt, Jr	7 00 03	4 00 03
Carolina, P. Jones	7 01 09	4 01 09
Wa Wa, J. A. Stillman	Did not finish.	
Mai, O. G. Jennings	Did not finish.	
Esperanza, A. S. Van Winkle	Did not finish.	

The race of Aug. 26 was a sweepstakes, started with a S.W. wind over the Dyers Island course. The wind shifted to W. and made the race a reach both ways. Mai, when in second place on the return, took the ground on Rhode Island and had to be towed off. The times were:

	Finish.	Elapsed.
Wa Wa, J A Stillman	5 58 02	2 18 02
Dorothy, H. P. Whitney	5 58 58	2 18 58
Veda, C. Vanderbilt, Jr	6 00 45	2 20 45
Carolina, P Jones	6 03 10	2 23 10
Musme, J M. McDonough	6 03 28	2 23 28
Hera, R N. Ellis	6 03 43	2 23 43
Esperanza, A R. Van Winkle	Did not finish.	
Mai, O. G. Jennings	Did not finish.	

On Aug. 27 a race was sailed for a cup offered by Mr. E. D. Morgan, owner of Puck. The wind was S.W. and the course was out to Bishops Rock, then around a buoy off Beavertail and back the same way. Hera led over the course, with Vaquero second, the latter lost some time by grounding off Mackerel Cove. The times were:

	Finish.	Elapsed.
Hera, R. N. Ellis	6 19 09	3 19 09
Vaquero III., H. B. Duryea	6 22 44	3 22 44
Puck, E D. Morgan	6 23 47	3 23 47
Wa Wa, J. A. Stillman	6 26 31	3 26 31
Esperanza, A. S. Van Winkle	6 28 45	3 28 45
Musme, J M. McDonough	Did not finish.	
Dorothy II., J. P. Whitney	Did not finish.	
Mai, O. G. Jennings	Did not finish.	
Carolina, Pembroke Jones	Did not finish.	

The prize on Aug. 28 was a cup offered by Mr. James Stillman, Sr., one round only of the 8-mile triangle being sailed in a light wind. The times were:

	Finish.	Elapsed.
Carolina, Pembroke Jones	4 49 19	1 34 19
Puck, E. D. Morgan	4 52 07	1 37 07
Hera, R. N. Ellis	4 56 16	1 41 10
Esperanza, A. S. Van Winkle	4 07 04	1 42 04
Musme, J. M. McDonough	4 58 19	1 43 19
Vaquero III., H. B Duryea	4 58 42	1 43 42
Dorothy II , H. P. Whitney	5 00 03	1 45 04
Mai, O G. Jennings	5 07 28	1 52 28
Wa Wa, J A. Stillman	5 08 14	1 53 14

Esperanza protested Puck for fouling.

Huguenot Y. C. Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, Aug. 21.

Y. R. U. RULES.

THE Huguenot Y. C., of New Rochelle, sailed its third annual regatta on Aug. 21, with a good fleet of starters and in a fresh S.W. breeze. The race was a lively one throughout, but the most exciting incident occurred just after the start. Mr. Arthur Iselin was present in his 15-footer, Hope, a younger sister of Question, one of the narrow boats with a flat deck and no freeboard, there being but a small well for the sails. With him, as crew, was a lady, Miss Elizabeth Emmett, of New Rochelle, who by good luck is an expert swimmer. While balancing on the weather deck edge, the boat being heeled to a strong angle, Miss Emmett fell over to windward. Seeing the accident, Mr. Nelson Vulte, who was steering his 15-footer Fiddler, leaped overboard to help Miss Emmett. She asked him whether he was in the race, and on receiving an affirmative reply, told him to go back to his boat, as she could take care of herself. She swam about, declining aid from other boats, until she was picked up by her own ship, which withdrew from the race in order that she might go ashore for dry clothing. Mr. Vulte joined his boat, but came in for a late finish. The start was timed.

Preparatory 1:45; 1:50, Acushla, Eurybia, Coya, Sunrise; 1:55, Houri, Onaway, Wahneta, Kit, Skimmaug, Priscilla; 2:00, Keneu, Shark, Idea, Win or Lose, Punch, Rob Roy, Adele, Bogie; 2:05, Trilby, Yola, Sora, Dorothy, Fiddler, Hope, Narrioch, Cleophe, Willie B.

The first round was timed:

Kit	2 32 00	Edwena	2 49 05
Skimmaug	2 35 30	Yola	2 50 23
Onaway	2 37 20	Adele	2 51 20
Houri	2 37 40	Rob Roy	2 51 35
Keneu	2 38 15	Bogie	2 51 40
Shark	2 38 50	Sora	2 52 33
Idea	2 40 50	Dorothy	2 55 30
Wahneta	2 41 00	Narrioch	2 57 10
Priscilla	2 42 40	Willie B	2 57 45
Win or Lose	2 44 00	Fiddler	3 01 30
Punch	2 44 15	Acushla	3 01 50
Presto	2 44 20	Surprise	3 02 20
Trilby	2 48 30		

The second round was timed:

Kit	3 06 10	Trilby	3 30 00
Eurybia	3 11 23	Yola	3 34 52
Skimmaug	3 11 39	Rob Roy	3 37 57
Shark	3 17 03	Sora	3 38 41
Houri	3 17 30	Adele	3 38 56
Onaway	3 18 04	Narrioch	3 42 54
Coya	3 20 27	Fiddler	3 53 57
Idea	3 20 28	Willie B	3 54 56
Priscilla	3 24 11	Dorothy	4 00 47
Wahneta	3 25 05	Surprise	4 14 58
Win or Lose	3 25 58	Acushla	4 15 13
Punch	3 27 20		

Coya lost her topmast and her class was called at the end of this round. Keneu lost her mast while leading her class in the last round. The final times were:

	Length.	Elapsed.	Corrected.
SLOOPS—43FT. CLASS.			
Eurybia, C. Pryer	40.02	1 21 23	1 21 23
Coya, F. J Grace	36.00	1 30 27	1 26 38

Narrioch, A. L. Townsend	18.11	1 37 54	1 35 16

The winners were: Eurybia, Acushla, Skimmaug, Houri, Shark, Trilby, Kit, Win or Lose, Punch, Sora.

Adele protests Punch for fouling a mark. The regatta committee included Messrs. E. B. Hart, Jr., R. T. Badgley, and Howard Horton.

Quincy Y. C.

QUINCY, MASS.—BOSTON HARBOR.

THE Quincy Y. C. sailed its second race of the handicap series on Aug. 14 in a light S.W. wind, the times being:

	Elapsed.	Corrected.
Arbutus, Hall & Merritt	2 07 10	2 07 10
Vexer, W. H. Shaw	2 10 07	2 10 07
Princeps, J. L. Whiton, Jr	2 10 12	2 10 12
Supero, C. H Alden	2 32 36	2 17 36
Tantrum, Whittemore & Johnson	2 26 15	2 21 15
Dorothy, F F Crane	2 26 25	2 21 25
Stella Manning, E. B. Glover	2 34 15	2 24 15
Evelyn, Dr. H. A Jones	2 29 37	2 29 37
Moondyne, A. J. Shaw	2 34 05	2 34 08
Thisbee, H. W. Robbins	Withdrew.	
Toot, A. J. Cavanagh	Withdrew.	
Don, E. C Pierce	Withdrew	
Elsie, G. M. Keating	Withdrew.	
Helen, R. W. Sawtell	Withdrew	
Kitty, J. A. Evans	Withdrew.	
Alice, T. A. Walters	Withdrew.	
Scylla, G H. Holden	Withdrew.	
Jennette, C. E. White	Withdrew.	

The club arranged a series of three open races, which were sailed on Aug. 19, 20 and 21. The first day brought a calm, only two classes finishing, as follows:

	Elapsed.	Corrected.
THIRD CLASS.		
Cleopatra, H. M. Faxon	3 24 50	2 57 52
Tacoma, Prior & Goodspeed	3 30 30	3 03 08
Omene, W. P. Barker	3 35 52	3 08 54
Nancy Hanks, P. W. Maglathlin	3 37 14	3 09 28
Sphinx, A. Keith	3 39 06	3 10 52
Enigma, G. F. Maybury	3 40 05	3 10 52
FOURTH CLASS.		
Fantasy, Wm. Allerton	3 24 29	3 54 13

A special resail was arranged for Saturday at 10 A. M., for the classes which did not make a race.

On Friday there was a reefing breeze from the west, a fine race resulting. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Little Peter, H. Moebs	24.05	1 14 10	0 48 00

Westhampton Country Club Annual Regatta.

WESTHAMPTON BEACH, L. I.

Saturday, Aug. 14.

THE Westhampton Country Club sailed its annual regatta, open to all members of the South Side yacht clubs, on Aug. 14, the course being a 10-mile triangle. The wind was fresh from N.W. at the start, but moderated throughout the race to a light breeze at the finish. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS A.				
Bess	3 05 00	5 21 03	2 16 03	2 16 03
Niad	3 05 00	5 22 33	2 17 33	2 16 27
CLASS B.				
Thetis	3 08 00	4 57 05	1 49 05	1 48 28
Tyche	3 08 00	4 56 20	1 48 20	1 48 08
Isolda	3 08 00	4 55 13	1 47 13	1 47 13
CLASS C.				
Halcyon	3 11 00	5 04 55	1 52 55	1 52 34
Cecelia	3 11 00	5 00 26	1 49 26	1 47 41
Namonia	3 11 00	5 01 00	1 50 00	1 50 00
Mazie	3 11 00	5 02 58	1 51 58	1 51 05
Lorona	3 11 00	5 06 46	1 55 46	1 56 11
CLASS D				
Oolah	3 14 00	5 06 57	1 52 57	1 52 57
Defender	3 14 00	5 15 22	2 12 02	1 58 16
Wyvern	3 14 00	5 08 14	1 54 14	1 51 36

In Class A the Bess won, with Niad second; Class B, Isolda first, with Tyche second and Thetis third; Class C, Cecelia first, and Pauline and Namonia tied for second place; Class D, Wyvern first, Oolah second, and Defender third.

Niad protested Bess, Mazie protested Cecelia, and Defender protested Wyvern; no protests being upheld.

Canarsie Y. C. Officers' Cups.

CANARSIE—JAMAICA BAY.

Sunday, Aug. 22.

ON Aug. 22 the Canarsie Y. C. held a race for open catboats in two classes, 20ft. and 18ft., the prize for the former being a cup offered by Com. C. F. Herx; and for the latter one offered by Vice-Com. F. Maier. The course was a 10-mile triangle and the times were:

	Elapsed.	Corrected.
20FT. CLASS.		
Tam O'Shanter, C. Nelson	2 06 41	2 04 15
Lottie, D. J. Brindsley	2 04 28	2 04 28
Comet, J. Dunoeff	Withdrew.	
The Caddie, E. Karr	Withdrew.	
18FT. CLASS.		
So So, D. J. Brindsley, Jr.	2 11 36	2 11 36
Meteor, C. F. Herx	2 10 23	2 10 21

Corinthian Fleet of New Rochelle.

THE special race of the Corinthian Fleet of New Rochelle on Aug. 25 was a failure, only Vencedor and Shark being present to start. The 20-rater Jessica went in to make a race for Vencedor, and of course was badly beaten. There was a fresh S.W. wind and some sea. The times were:

	Length.	Elapsed.	Corrected.
CUTTERS—51FT. CLASS.			
Vencedor, H. M. Gillig		3 18 15	3 18 15
Jessica, J. M. MacDonough		3 46 00	3 46 00
SLOOPS—20FT. CLASS.			
Shark, Rouse and Hoyt	20.00	2 09 58	2 09 58

YACHTING NEWS NOTES

The Huntington Y. C. annual regatta, set for Aug. 28, was postponed indefinitely on account of the lack of wind.

A special race of the Larchmont Y. C. will be sailed on Saturday, Sept. 4, open to yachts in the 51ft., 30ft. and 25ft. classes. The fall regatta of the Larchmont Y. C. will be sailed on Monday (Labor Day), Sept. 6. The preparatory signal for the start will be made at 11:30 A. M. sharp, on both days. The judges' steamer, Luckenback, will leave the club house at 10:30 A. M. each day, and will carry a limited number of members. Tickets (at $1 each) can be had upon application to the regatta committee at Larchmont. Trains leave Grand Central stations at 9:02 A. M.

Bedouin, cutter, J. Murray Mitchell, has been chartered through Tams & Lemoine to John F. Adam, S. C. Y. C. Varuna, schr., has been chartered through the same firm to R. C. H. Brock, of Philadelphia.

Alcedo II., steam yacht, George Washington Childs Drexel, arrived at St. George's, Bermuda, from New York, on Aug. 6, with a part of her coal on fire. The bunkers were emptied with difficulty, on account of the intense heat, and an air space was built around the boilers. The yacht sailed on Aug. 10 and reached Southampton on Aug. 25.

Fleur de Lys, schr., George Lord Day, arrived at New York on Aug. 19 from Southampton, with her owner on board, after a passage of thirty-one days. On Aug. 16 a seaman, Hans Carlsen, thirty-four years of age, was washed from the bowsprit and drowned.

Messrs. Theodore C. Zerega and George A. Cormack, who have been cruising with Mr. R. S. Palmer since last spring on board Yampa, schr., returned to New York a short time since by steamer. Yampa is still about the Channel with Mr. Palmer on board.

Canoeing.

A Power Canoe.

ONE of the novelties of the late A. C. A. meet was a power canoe designed and built by J. H. Rushton, of Canton, N. Y., who was present with her. This little craft is built from the moulds of an ordinary 16×30 canoe, but built up about 2in. deeper and carried out aft into a neat counter, her length over all being 18ft. The engine is a Wolverine, Jr., using naphtha, about 10 gallons being carried in a tank in the bow. The cockpit seats two persons comfortably, one forward and one abaft the engine, which is amidships. The weight is about 500lbs., along each side is fitted a wide mahogany wearing strip, the under side of which is hollowed so as to give a hold for the fingers, the boat being thus lifted by four men. She runs very smoothly and makes from 6 to 7 miles per hour. She seems to be not only a curiosity, but a very interesting and serviceable little craft.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

ATLANTIC DIVISION.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Aug. 22.—The following scores were made by the members of the Cincinnati Rifle Association, at their range to day, Four Mile House, Reading Road. Conditions: 200yds., off-hand, at the Standard target. The final contest for the gold medal, presented to this Association to be shot for by the members, took place to day, resulting in Mr. Wm. Hasenzahl as the winner. Three were tied, having won it four times, and in the fifth round the above gentleman won. He was followed very closely by Mr. Trounstine, he being but two points behind. Mr. Hasenzahl is one of our best shooters, and he feels "very much prouded" over the result of the match, which was shot under handicap rules. The above medal was kindly presented to this Association by Mr. W. Milton Farrow.

Self-Loading Pistol.

MAUSER, the famous German small arm maker, has invented a self-loading pistol on the principle of the Maxim gun. The *Engineering Magazine* says that "the general arrangement of the arm is that of the modern magazine guns, on a smaller scale, the principal difference being in the sliding breech-block and firing mechanism, the force of the recoil throwing the block back and at the same time compressing a long spiral spring, which returns it after the cartridge has been fed upward. So long as the trigger is drawn back the firing continues, while, if the trigger be released, the weapon remains loaded and cocked, ready for action upon the next pull of the finger. The cartridges are fastened together in charges of ten, which can be very quickly loaded into the magazine. The pistol is also made for twenty cartridges at a loading. The rapidity of fire is, of course, the great point, and, it is stated, eighty shots a minute can be successfully fired. No attempt is made to cool the barrel, as is done in the Maxim gun, but no ill effects appear from this omission. A ten-shot pistol of this type was fired 2,200 times as rapidly as possible, without being cooled or cleaned, and operated perfectly without apparent injury, while no appreciable wear upon the parts was visible after 10,000 shots."

Calumet Heights Gun Club.

CALUMET HEIGHTS, Ind., Aug. 22.—Rifle contest.

Class A, 200yds., standard American target, off-hand:

Davis	4414333455—36	Patterson	0170252731—28

Oct. 29-30.—GRAND RAPIDS, Mich.—Tournament of the Itasca Gun Club. Dr. W. P. Brown, Sec'y.

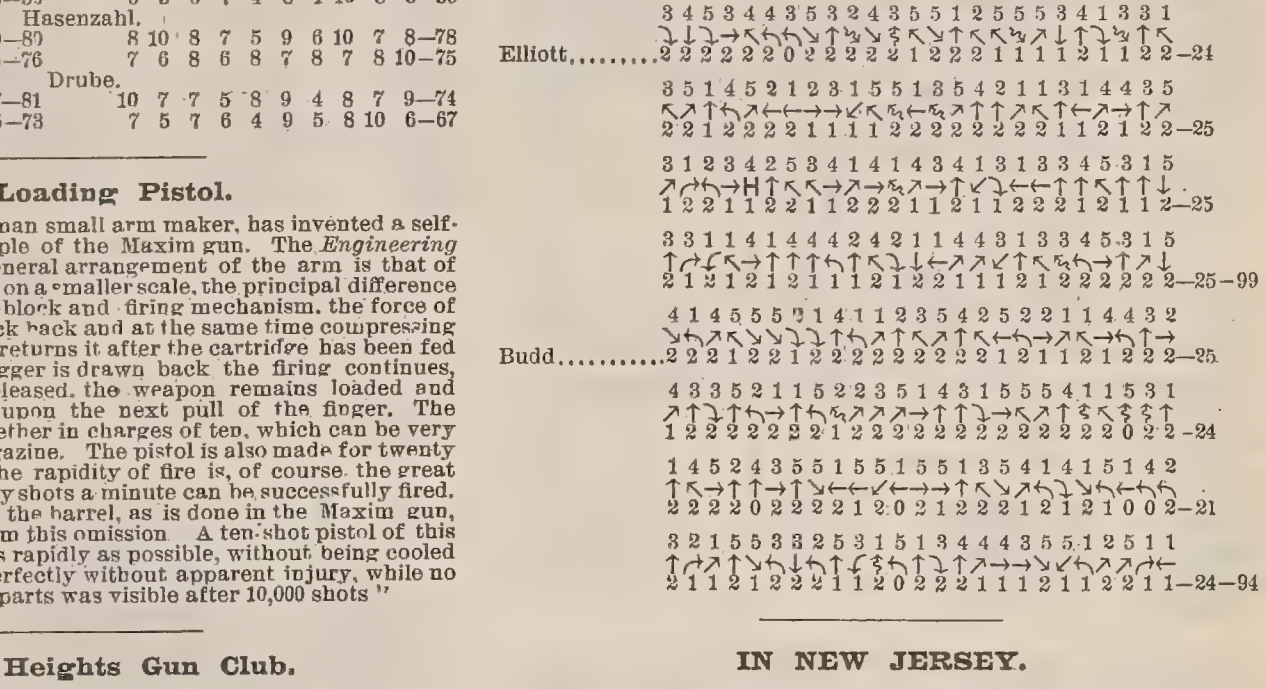
The Elliott-Budd Match.

THE championship contest for the Du Pont trophy was shot on the grounds of the Eau Claire Gun Club, Eau Claire, Wis. The match began at 2 o'clock P. M., on Aug. 28. Mr. John Watson, of Chicago, was referee, and he conducted his office flawlessly. A number of the Eau Claire Gun Club's members were present to assist, and there was also present quite a number of spectators, ladies and gentlemen.

The grounds were well equipped for shooting purposes. The weather, however, favored high scores. The afternoon was warm, a mild breeze blew toward the score, and the sun shone clear and bright. The birds were quite a good lot, far better than the high scores would seem to indicate. There was a soft bird now and then, but they averaged up well; and once in a while there would crop out a fast bird, the kill of which would evoke the applause of the audience. But it was a most difficult juncture for a bird to become really hard, for with two such masters of the gun at the score, it was rarely that a bird could get far before it was killed.

The city of Eau Claire has a population of 18,000, and its lumber interests are something enormous. It has fine residential districts, homes up to date in architecture and land landscape, and there is a wealth of trees scattered through the town. The resident sportsmen were generous in the bountiful courtesy extended to the visitors. All were taken on drives through the city, Messrs. Budd, Watson and your reporter being especially favored by a ride behind Mr. Ralph Rust's fast pair of steppers. Mr. Eddie Bingham represented the Du Pont Co.'s interests at the contest.

Both men went to the score with methodical deliberation, and yet with resolution. Elliott lost his seventh bird, and then stuck to his opponent tenaciously, who seemed determined to hold the advantage he had gained. Budd got as far as his forty-seventh bird without a miss. This bird, hard hit, died out of bounds. When he lost his fifty-fifty and sixty-first birds, it was apparent then that he could not win if Elliott held his wonderful form. The latter was shooting with perfect confidence, and his judgment and precision were marvelous. On the last 50 birds he clearly outclassed Budd, though the latter shot gamely to the finish. Both men used their second barrels freely, no chances being taken with any birds which seemed to have any life at all.



The contest was conducted with the most punctilious fairness, and no sportsmen in the world are deserving of more praise for their care in this respect and for their gentlemanly conduct in all matters pertaining to the match than are the sportsmen of Eau Claire.

Some unpleasant circumstances preceded the shoot. Mr. Budd, who arranged for the contest to take place on the Eau Claire grounds, and this, I am informed, with Mr. Elliott's sanction, conceded that the gate receipts, if any there were, should go to the club. Mr. Elliott objected to the arrangement some days previous to the shoot and after his arrival, and informed the club that he would not shoot unless he had half the gate receipts. Everybody was in uncertainty until near the last minute as to whether he would shoot or not, he being undecided, and no doubt a great many spectators remained away on account of the common rumor circulating to the effect that there would be no contest. Such an afterthought should never have been broached in connection with an event that is so fully covered by written conditions to which both parties had assented when the match was made, and which did not contemplate a matter of gate receipts.

All in all, it was a contest worth seeing, and it is doubtful if Elliott's performance could be equaled by any shooter in America under the same conditions.

Elliott killed 99, Budd 94.

IN NEW JERSEY.

SHOOTING AT ELKWOOD PARK.

Aug. 27.—The shoot for the Monmouth cup was held at Elkwood Park Long Branch, to-day. Phil Daly, Jr., won the cup, his being the only straight score. Four men tied for second place with 14 each, and Fred Hoey withdrew on the sixth round, after missing 2 birds. The conditions were: 15 birds, 50yds. boundary, $15 entry, three moneys. A number of sweeps were also shot, the scores of which follow:

Event No. 1, Monmouth cup race: Daly (29) 15, Gagnon (26) 14, Templeton (30) 14, Welch (30) 14, Dolan (29) 14.

Shoot-off for second: Ballard 10, Templeton 10, Gagnon 10, Dolan 9, Murphy 9.

No. 2, miss-and-out: Hoey 3, Dolan 3, Daly 2, Welch 1.

No. 3, same: Dolan 9, Welch 9, Daly 8, Templeton 8, Hoey 5.

No. 4, match, 6 birds $10 a side: Dr. Gagnon 5, Fred Hoey 4.

Aug. 28.—The principal event to-day was the shoot for the Pennsylvania Club cup, which was won by Fred Hoey with a straight score, after an exciting race with Ballard, Murphy and Welch. Doland and Toland withdrew; the former on his 16th round, after killing 13 birds, and the latter on his 15th round, with 11 kills. After the cup race, some sweepstake shooting was indulged in as follows: No. 2, 10 birds, $10 entry; No. 3, miss-and-out, $5; No. 4, 10 birds, $25; Nos. 5 and 6, 10 birds, $5; Nos. 7, 8 and 9, miss-and-out, one barrel only, $10. The scores:

A Great Match at Long Branch.

Aug. 25.—What was probably the most exciting live-bird match ever held in this vicinity, was shot to-day on the grounds of the Hollywood Gun Club at Long Branch. The match was at 50 birds, $2 entry; $3 to first, $2 to second. Three of the four shooters, Dr. Gagnon, Edgar Murphy and Fred Hoey tied with 45 kills each, while Phil Daly, Jr., the other contestant, finished but two birds in the rear. Dr. Gagnon led at the 25 mark, and at the 49th round he had 45 kills to his credit. Murphy had finished his score with 45, Hoey had 44 and another bird, and Daly had 43 and another bird. It looked, therefore, at this stage of the game, like a Gagnon victory; but the doctor's 50th bird, an incomer, escaped. Hoey then killed his 50th bird, making the match a three-cornered tie. As no agreement relative to ties had been made, the match was not shot off. Murphy's best run was 21, Dr. Gagnon's, 27; Hoey's, 23; and Daly's, 24. Dr. Gagnon and Phil Daly had large handicaps; the former standing at 25yds., and the latter at 20yds. Murphy and Hoey shot from the 30yds. mark. The score:

E G Murphy (30)	2212221 1 2212222202222 2222222222222222222 2222 2 222222	—45

Cook County League.

CHICAGO, Ill., Aug. 29.—Cook County League shot to-day. Four clubs qualified. Scores: Garfield—A Class 139, B Class 127. Eureka—A Class 129, B Class 119. Calumet Heights—B Class 131, C Class 96. Garden City—B Class 119. Weather windy, air hazy. Next League shoot Garfield grounds, Sept. 11. Garfield A Class team leads season average at date.

E. HOUGH.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Western Traps.

CALUMET HEIGHTS GUN CLUB.

CHICAGO, Ill., Aug. 29.—The fire in the woods near Calumet Heights club on Aug. 15, as mentioned in last week's FOREST AND STREAM, broke up the sport of shooting for the day, though small actual damage was done to the club property. On Aug. 22 the weather was good, and there was good attendance, sixty-six persons being present, a number of members riding out from the city on their bicycles over the hard sandy beach. The following are the scores of the last two shooting days:

No. 1, club shoot:

Class A.

Lamphere	1011111110111111101111111—22

AT KANSAS CITY.

At Kansas City, Aug. 24, the Pastime Gun Club held its August medal shoot at live birds, with the following results:

A Lincoln	2111112112101 22—14	Reno	1012222212212 22—14
Livingston	1200110110100 12— 9	Mallory	1012212222111 22—14
J L Beiderman	0121211212211 12—14	Higdon	0011022010010 10— 7

The Metropolitan Gun Club held its regular target shoot in Kansas City, Kan. The following scores were made out of a possible 25: Bryant 24, Rooney 22, Bruce 21, Wing 19, Smock 16, Gregory 14, Larson 14, Laidlaw 14, Estep 13.

The Kansas City Gun Club made the following scores at its weekly shoot, Aug. 15:

Halliwell	2122211211211 12—15	F J Smith	1000012212212 12—11
Fletcher	1211211212211—15	R Jarrett	0110000110212— 8
Glasner	1221122021211 1—14	Beeman	1210100111212 1—12
Curtice	2222222222022 22—14	Von Quast	2111202011211—11
Longfellow	2211112112010 20—12	Walden	1121011011020 1—10
Hubbard	1212122010101 212 12		

AT ST. PAUL.

The St Paul Rod and Gun Club drew a good attendance at its tournament Aug. 23. Many were present from adjoining States, and the entries ran as high as forty six. Twenty-five men shot out the programme. High average men for the day were in the following order;

One, J P. Burkhard; 2, H. Hirschy; 3 L. V. Rodecker and York; 4, Doring and E. Novotry; 5. Wild Rice and Bennett; 6, Parker; 7, Holt; 8, Murray; 9, Wallace; 10, Daily; 11, Miner; 12, Faber; 13, McAndrews; 14, Elton; 15, Merry; 16, Short; 17, Danz; 18, Trix; 19, Baldwin; 20, Wright; 21, Fon.

The main event of the day was the championship contest for the silver cup presented by the Minnesota Game and Fish Protective Association. The cup was won by John Pfister, of St. Paul, who scored 23 out of 25, unknown angles.

AT OMAHA.

Scores at the weekly shoot of the Omaha Gun Club Aug. 21 were as follows in the club shoot, and in the team race between Omaha and Council Bluffs:

Squirrel	1111111111000 1101010—14	Ekalb	1111011111011 1111111—18
Nason	1100001101 000101111—11	Parmelee	1110111101111 1111111—18
Randleit	1010111111111 1101111—17	Smead	0110111101111 1111101—16
Johannes	1001101111111 0111111—16	Townsend	1111100111111 1110111—16
Saulsbury	1010111011101 1111111—16	Kenyon	0010110010110 1110001—10
Dickey	0011100010001 1101011 11	Searles	1111011111111 1111111—19
Loomis	1111110110111 1111111—18		

Match race, 25 targets:

Omaha.

Jahannes	1110111111111 0101011111111—21
Ekalb	1010111001110 1101111111111—20
Smead	1111111111110 1111111111101—23

Council Bluffs.

Crabell	1110111111111 1111111111101—23
West	1111111110111 0111011101110—20
Randlett	1111111111111 1111101111111—24
Hardin	1111111111010 0111111111110—21
Beres'im	1110111111110 1111111111—23—111

AT DULUTH.

Central Gun Club, of Duluth, Minn., held its third medal contest Aug 20. The two scratch men, Wojeck and Nelson, complain that the handicaps are entirely too liberal, Wojeck failing to win with the fine score of 24 out of 25. The following was the record:

Lengthy	19+6—25	Field	20+3—23
Wojeck	—24	Nelson	—22
Greener	21+2—23	Duchess	18+4—22
Bowstring	17+6—23	Warren	20+1—21
Loud	21+2—23	Ben	12+6—18

At the conclusion of the medal shoot several special events were shot off. The first, at 25 birds, was won by Lengthy with a score of 22 Warren was second with 21. Event No. 2, at 10 birds, was a tie between Wojeck and Greener with 9 each. Finn won the next event, 10 straight. The final event, at 10 birds, was a tie between Wojeck and Nelson, with 9 birds each.

AT MINNEAPOLIS.

At Minneapolis, Minn, Aug. 19, the Minneapolis Gun Club had a fine attendance of shooters and spectators, scores in regular events being as follows:

Club badges, 10 singles and 5 pairs:

A Richter	1111101101	10 11 11 10 11—16

Mrs. Shattuck won badge.

AT SEDALIA.

Sedalia Gun Club, of Missouri, held a little shoot Aug. 21. Scores, 15 birds: John Linabary 6, McClure 10, Roberts 9, Kerr 9, C Linabary 12, C. O'Connell 2, Letts 14, Lucy 12, Kinzie 6 and Raymond 5 Ten birds: Linabary 5, McClure 7, Roberts 6, Kerr 2, C. Linabary 9, Joe Roe 9, Letts 7, Lucy 5, Kinzie 8.

A special shoot between Letts and C. Linabary, 15 birds, resulted in a victory for the latter by a score of 12 to 11.

A second 10-bird match resulted: Allspaugh 4, Raymond 0, C. Linabary 9, Lucy 7, McClure 5, Letts 9, Roberts 4, Kinzie 4.

AT LINCOLN.

Lincoln Gun Club, of Nebraska, held its club shoot Aug. 19. Scores, 20 targets: Dr. Eaton 18, Randall 18, Dales 12, Clyde 18, Hagan 15, Troyer 14, Simpkins 16, Bain 12, Carmony 10, Latshaw 18.

AT PEORIA.

Peoria Gun Club, of Peoria, Ill., held its annual meeting Aug. 24 for the purpose of electing officers and transacting other business.

Arrangements were also made for the *Herald* trophy shoot, Sept. 10. A large entry list is expected and fully 1,000 live birds will be used in the matches. The officers elected were as follows: G. N. Portman, president; A. N. Keith, vice-president; W. E. Weber, secretary and treasurer; Board of Directors, J. J. Campbell, J. M. Brown, W. Bordeaux, M. E. Wilson, E Giles; E. Giles, captain of the range.

CLUB SCORES IN DIFFERENT STATES.

At Winterset, Ia., a live bird shoot was held Wednesday of last week. Scores, at 10 live birds, three events:

Davisson	0021020211—6	1201101011—7	0100111 10—4
Stolley	0120012001—5	0020010211—5	1201020 0 —4
Bevington	2022012111—8	1021201122—8	11111221 —8
Goshorn	1110212010—7	1212101012—8	22110001 - 5
Ely	0201001000—4	... .	.....
Embree	0100222101—6	0202000 0 —2	.....
Pratt	0002111 1 —5	.....	.....

Shoot-off: Bevington 1, Goshorn 0, Stolley 0, Davisson 0.

The Recreation Gun Club, of Tomahawk, Wis., held a shoot Aug. 20. Scores, 25 targets: Dr. Dodd 22, A. J. Olson 15, A Howen 15, A. Zastrow 12, R. C. Thielman 11, A. M. Pride 9

At Aitkin, Minn., Doc Spalding, the County Treasurer, won the last club shoot with 22 out of 25 targets.

Pontiac Gun Club, of Illinois, held its weekly shoot last Thursday. Scores, 25 targets, unknown angles:

M. Lommatsch 19, H. Lommatsch 18, Priestman 18, Brinkman 17, Gleason 17, Talbott 16, Stroud 15, Dr. Daly 13, Opperman 12, Kavanaugh 12

At Lexington, Ky, the U. S. Gun Club, composed of post office employes, held its weekly shoot Aug 21 at Loudon Park. Frank Reynolds won the annual club championship trophy, this being his third win in the competition. In a sweep at 25 birds the following scores were made:

Frank Reynolds 22, Joe Coyle 20, Irving Forbing, of Mt. Vernon, O., 19.

At Watertown, Wis, a live-bird shoot was held Aug. 22, with the following scores:

John Bullock	1010001111	C H Gardner	1111010011
Adolf Scheck	0000001101	H Krahmer	1110111100
William Will	0101000010	R Woelffer	0110110010
Hubert Springer	1101100010	W Bittner	1010011111
August Hein	0110011000		

At Calumet Lake, Aug. 22, A. B. Schlavek defeated J. Devorak 22 to 19 at 25 targets, unknown angles, unknown traps.

COMING EVENTS.

Terre Haute Gun Club, of Indiana, has out a neat programme of its second annual tournament, Sept. 8-9. Teams are expected from Indianapolis, Ft. Wayne, Logansport, Brazil, Crawfordsville, Indiana Mineral Springs, Kokomo, Lafayette, Petersburg, Peru and New Albany.

The Capital Gun Club, of Des Moines, Ia, will hold an amateur tournament at Des Moines during State fair week, Sept. 14, 15 and 16. There are ten target events on the programme daily at 15 targets, and special high average prizes are offered daily. W. E. Kessler is the manager of the shoot.

A personal letter from Mr. Elliott states that he has no word from Mr. Grimm in regard to the challenge for the Cast Iron badge, although forty-nine days have elapsed since issuance of the challenge.

E HOUGH,

1206 BOYCE BUILDING, Chicago.

Arkansas Championship.

LITTLE ROCK, Ark., Aug. 27.—Shooting matters are rather quiet in Hot Springs; in fact there has been no trap-shooting done there since the tournament last February This is why John J. Sumpter, Jr., has been virtually off the shooting map, though the other day he blossomed forth in another rôle. At the present time, a very important and close series of ball games are being played between teams representing Little Rock and Hot Springs. The Hot Springs club had the misfortune to have some of its players crippled by accident, and was compelled to fill their position with some local amateurs. Sumpter, who at one time was a crack college player, was prevailed on to fill the gap. The game was closely contested, but Sumpter did nothing to distinguish himself except to fan out every time he came to the bat and to make an error on one of the two chances he had in the field. In the ninth inning he had another turn at the bat. The score at that time being a tie and two out. John had already made two ineffectual attempts to locate the ball, and looked in a fair way to duplicate his past performance, when the opposing pitcher evidently became over confident and handed him an easy one. This he met squarely on the trade mark, and sent it sailing far out into the deer pen where it was lost in the shrubbery, while John made the circuit of the bases with what proved to be the winning run. The final score of the game being Hot Spring 5, Little Rock 4.

That night, of course, John owned the town, as he did when he killed 25 straight in the Eastman Hotel handicap last winter, and won first all alone; he is the pride of all the sport-loving people of the Vapor City.

The race for the individual championship of the State occurred on the local club grounds to day, the contestants being George W. Clements, of Pine Bluff, and H. C. Conner, of this city. The latter, it will be remembered, won the trophy in open competition at the recent State tournament at Pine Bluff, and under the conditions governing it is subject to challenge every sixty days. Clements was the first to avail himself of the opportunity, and to-day's match was the outcome.

The race was close and interesting from start to finish, and eventually resulted in a win for the Pine Bluff man by 1 bird, the final score being 44 to 43.

Conner was the first to miss, as he lost his 7th—by no means a hard one. Clements followed suit on his 10th, a similar one, and a little later lost his 16th. Conner evened up matters when he lost his 21st, but Clements lost his 22d and 24th in rapid succession. These were extremely acute and difficult left quarterers that dropped with a perplexing rapidity. At the end of the first string of 25 the score stood: Conner 23, Clements 21.

Conner started his last string of 25 rather poorly, missing his 1st, almost a straightaway, and then his 5th, which once more made the race a tie. From then up to the 40th round they kept along neck and neck. Conner now lost his 41st and 44th, and of course, virtually the race. Clements broke the first 20 straight in his final string, but lost his 46th and 49th. This, however, landed him a winner by 1 bird, as Conner also lost his 45th.

The conditions of the match were 50 targets, unknown angles, challenger to put up $10 against the trophy, winner to take money and trophy, loser to pay for the targets.

Clements	1111111110111110111110101—21	
	1111111111111111111101101—23	44
Conner	1111110111111111111101111—23	
	0111011111111110110111101—20	—43

Thibault and Fletcher also shot 50 targets each, their score to count against that of Conner and Clements. The price of the targets being involved in this. This resulted in a tie, as Fletcher scored 44 and Thibault 43. The tie was shot off in the next 15-bird sweep, Conner and Clements then winning by 29 to 27.

All the trophies belonging to the Association are at present in the possession of the Pine Bluff club. A very creditable showing for a club that two years ago was scarcely on the map. The club being composed almost entirely of young men, no doubt will remain a factor in State events for a long time to come.

There were a number of sweeps shot before and after the race, the scores made in these are shown in the table appended:

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.	Av.
Conner	14	14	14	14	15	13	15	14	11	..	13	150	137	91.3

Portsmouth Interstate.

MANAGER ELMER E. SHANER sends us the programme of the Interstate Association tournament at Portsmouth, N. H., Sept. 15 and 16. By way of preface, we are told that Portsmouth, the only seaport, is a busy little city of 10,000 inhabitants, situated midway between Boston and Portland on the main line of the Boston & Maine Railroad, Eastern Division, and is also connected with the Southern and Western Division of the railroad. Situated on the banks of the beautiful Piscataqua, opposite the Navy Yard, it has a harbor unrivaled along the coast. The location is admirable; the scenery and drives magnificent. Colonial in style, it charms all newcomers with its quaint old mansions and quiet streets, while elegant modern residences are also plenty, and the people hospitable, genial, and fond of sports.

The gun club organized a few years ago is composed of genuine lovers of trap-shooting, and the welcome extended to all visiting sportsmen is cordial and sincere. The bicycle park will be used for the tournament in preference to the regular shooting ground, as being more convenient and easier of access. The club is desirous of doing everything in its power to make certain the success of the tournament, and feel no doubt that a visit to the quaint old city itself will alone repay the visitors. Headquarters for sportsmen during the tournament will be the Langdon House, Vaughn street; $2 per day.

All matches at bluerocks. On each day seven matches at 15 birds, $1 entrance, and three at 20 birds, $1 50 entrance.

All purses will be divided by the Rose system into four moneys at the ratio of 5, 4, 3, 2. Price of targets included in all events. Shooters may enter for price of targets (2 cents) in any of the events. Guns and ammunition forwarded to Hoyt & Dow, Congress street, will be cared for and delivered at the shooting grounds free of charge.

Shooting will commence at 9:30 A. M., sharp, each day. Further information relative to the tournament will be cheerfully furnished by W. I. Philbrick, Sec'y, Portsmouth, N. H.

St. Paul Gun Club.

ST. PAUL, Minn., Aug. 22.—We take pleasure in extending to the shooting fraternity throughout the Northwest a cordial invitation to shoot with us on Sept. 7, 8 and 9, at the State Fair Grounds during fair week. It has been demonstrated that an amateur shoot will bring together a larger aggregation of sportsmen than could be obtained otherwise. We have adopted the 2 and 4yds handicap system which we hope will meet with approval. Bluerocks will be used in all events. First and second days matches at 10, 15 and 20 targets with $1, $1.50 and $2 entrances. Third day three-men team shoot and State diamond badge event, 50 bluerocks, $6 50 entrance, with a valuable list of merchandise average prizes added.

Ten and 12-bore guns 16yds. rise in first event each day. Winner of first money handicapped 2yds. in next event, 20yds. limit. Price of targets included in entrance money.

High guns take choice in average prizes. All events at unknown angles except pair shooting. American Association revised rules with above exceptions.

H. C. LAWRENCE, Sec'y.

In the Land of Maple Sugar.

THE INTERSTATE AT MONTPELIER, VT.

FOR some reason or other, either because it is the last tournament that we have attended, or because everything has turned out just as we expected, the Interstate Association's tournament at Montpelier, Vt., Aug. 25-26, seems to us to have been a most extraordinarily pleasant and successful shoot The home club (the Montpelier Gun Club) is more than satisfied with the result of its efforts; Manager Shaner, on behalf of the Interstate Association, assures us that he never had a pleasanter task upon his hands than the running of this shoot; the visitors, without a single exception, were most favorably impressed with everything that went to make this one of the best tournaments of the season of 1897.

In our columns of "Drivers and Twisters" during the past few weeks, we have claimed many things for the Vermont Interstate: it is, therefore, naturally somewhat of a pleasure to note that the shoot itself more than justified every claim we made. Had the weather for the thirty-six hours prior to the opening of the tournament been a little more favorable, the number of entries would have been materially increased. As it was, however, the entries were sufficiently numerous to make the cashier do some lively hustling to keep even with the game.

THE STEAMBOAT SQUAD.

The "steamboat squad" that came from New York was a solid delegation. The crowd consisted of nine men from New York and vicinity, an addition of one being made when the boat train from Albany on Tuesday morning, Aug. 24, reached Sandy Hill, N Y. The party that left New York on the steamer Adirondack, Aug. 23 was as follows: Capt A. W. Money of the American E C. & Schultze Powder Co., Lim'd; Ed. Taylor, of the Laflin & Rand W-A Powder Co; H. P. Collins, of the Du Pont Powder Co.; U. M. C. Thomas, of the U. M C Co.; Ferd Van Dyke and J H. Cameron, of the Winchester Repeating Arms Co.; John J Hallowell, late of Tucson, Ariz., but now a resident of the State of Pennsylvania at Bethayres, near Philadelphia; M A. Beers, one of the crack shots of the Bridgeport (Conn.) Gun Club and the trap editor of FOREST AND STREAM.

When this party left New York rain had just commenced to fall; it fell all night, and kept on falling with a delightful persistency all day on the 24th. When the boat train for Lake George arrived at Sandy Hill it was just about as gloomy and wet as one could imagine, but Guy R. Clark was on hand and joined the party, making No. 10 in the squad. The mountains that surround Lake George, and which help to make it one of the most beautiful lakes in the world, were wrapped in clouds that gave no hope of better things for that day. It was a case of stay under cover or get wet, and consequently the trip, which should have been most delightful, became rather tedious.

Burlington, Vt., the scene of the Interstate Association's tournament in Vermont one year ago, was reached about 5 P. M., the crowd being met on its arrival by Jim Denning, secretary of the Lake Side Rod and Gun Club, and by two other members of the same club—Messrs. W. L. Stone and E. E. Morgan. The party put up for the night at the Hotel Burlington, where it was the guest of Mr. Stone, the vice-president, we believe, of the Lake Side Rod and Gun Club. Several of the party had made the hotel their headquarters during the shoot of 1896, and Mr. Delaney, the proprietor of the hotel, had evidently not forgotten them, judging from the warmth of his greeting. Leaving Burlington at 7:30 A. M. on Wednesday, Aug 25, the party reached Montpelier and the shooting grounds in time to commence the programme at 10 A. M. prompt. It may be of interest to mention that on this trip to Montpelier from New York three steamers and five trains were required to cover the 350 miles or so between New York and Montpelier!

THE MONTPELIER GUN CLUB.

The Montpelier Gun Club is composed of a set of live members who, when they undertake anything, apparently don't do things by halves. It has grounds about two and a half miles from the city, with a little depot called The Shoot, located on the suburban line of steam cars that run between Montpelier and Barre. A path leads to the grounds from this depot, a little backwater of the Winooski River being crossed by means of a suspension bridge, light, but strong, and of novel construction. The total distance between the depot and the grounds may be about 200yds., not more A small, but conveniently constructed club house, accommodates the members at their club shoots, but on this occasion the tent of the Interstate Association was erected to furnish additional accommodation for the members and their guests.

The grounds and the traps face about northeast, but the background is a poor one, resembling in some degree that at Oil City, Pa. As Fred Gilbert said about that one, so it may be said about the one at Montpelier; "There's none of that nasty blue sky to bother one." Still the grass grown hills in front, and the woods to the right, were not quite so destructive to averages as they threatened to be at first sight. Of course, so many events being at known traps and angles had much to do with the good totals rolled up by some of the shooters.

When it came to unknown angles, there was nothing soft about them. Under the charge of Stillman Lawrence, the chief trapper, and a dandy at the business, the targets were lined up and down the screens, straightaways being so rare as to almost scare one when they did show up. The targets were thrown fully 50yds., so it can easily be imagined that it was not easy shooting. In speaking about the unknown angles after the shoot was over, Manager Shaner expressed himself as follows: "I never saw a harder lot of unknown angles thrown from any set of traps during my career as manager of the Association."

The poor background, with a few isolated trees in the middle distance, made the work of the referee uncommonly severe, as the closest attention was necessary in order to accurately decide losses and breaks. Yet Henry Kelton managed to stand up and give his decisions during the whole of the two days of the shoot without a really solid kick being registered against him during that time. So good was his work, and so readily did the shooters appreciate this fact, that Mr. Kelton was warmly congratulated by several of the visitors at the close of the shoot. Referees like Mr Kelton are mighty scarce, and the Montpelier Gun Club should look to it that Mr. Kelton does not jump the game when next it holds a shoot.

THE OFFICIALS.

We have mentioned Messrs. Kelton and Lawrence as having contributed largely to the success of the shoot. But there were others, of course, who also did their share to make things O K. Among the number were Messrs. G. B. Walton, secretary of the club; J. G. Brown, Dr. H A Fiske, etc. All these gentlemen were untiring in their efforts to make things run smoothly and to entertain the club's visitors. In the cashier's office, Mr. A. G. Eaton, cashier of one of Montpelier's banks, ran things by himself and covered everything in his department in a manner that surprised us, as we know what it is to handle entries and make payments in a crowd of forty or more shooters

On the blackboard the scores were chalked up by Harry M. Graves, the manifold scores being in charge of J. G. Walton, a member of the Sherbrooke (Can.) Gun Club and a cousin of Secretary Walton of the home club. Ned Wheatley was the puller, and he caught on to the work he had to do with ease. Pulling, blackboard work and manifold scoring were satisfactorily provided for by the home club.

Another official, also a member of the club, must not be forgotten; this was W. E. Stoddard, the caterer, who provided lunch and trimmings of a temperance nature in a tent that was well patronized during the shoot.

LOCAL MEN SHOT WELL.

It is always a source of pleasure to note that local men shot well to the front in any tournament On this occasion both F. A. Standish and C O. Barrett, both members of the local gun club did very well; Standish was one of the kingpins on the first day, while Barrett, barring a break in event No 9, was away up on the second day. Standish's work was remarkable on the first day, but the strain was too much for him, and he fell down on the second; two days' continued shooting, with the practice work on the afternoon of Aug 24, which was done in heavy rain, putting a heavy strain on a man who shoots at the most but one day a week, and then only 100 shots or so. Barrett is an old campaigner and shot far better on the second day than on the first He lost 5 targets in event No. 9, and those 5 targets would have landed him in third place.

THOSE WHO WERE PRESENT.

Among the visitors besides those referred to above as the "steamboat squad," were: Ben. H Norton, of the Hazard Powder Company; Col. A G. Courtney and E D. Fulford, of the Remington Arms Company; O. R. Dickey, of the Parker Gun Company; B Leroy Woodward, of Campello, Mass.; E B. Wadsworth (Puck), of Boston, Mass.; E A. Worthen, C E. Worthen, W. S. Phelps, J. S. Denning and E E. Morgan, members of the Lake Side Rod and Gun Club, of Burlington Vt.; J. G Walton, C D. White, T. M. Craig and J. F Markell, of Sherbrooke, Can.; A. W Westover, Sutton Junction, Can.; E C. Ellsworth, of Cambridge, Vt., a gentleman whose initials would hardly lead one to suppose that he was the representative at this tournament of the Gold Dust Powder Company; R Ward, St Albans; B A. Eastman, W. H Eastman, Houghton, Griffin and Reynolds, all of the Barre, Vt., Gun Club; Hawkins, of Calais; Pudsey, of Shelburne etc.

The home club was out in force: G. B. Walton (Stub), Barrett Standish, Brown, W. A Briggs, C. H Ferrin and his son, W G Ferrin, a good shot for a sixteen-year-old; Stoddard, D. M Shepard, C E. Towne, A. A. Stratton, Dr. Fiske; a total of eleven shooters in all.

We must now leave it to the separate reports for each day, together with the tables of scores and general averages, to tell the balance of the story, outside of a few notes that will bring this article to a close.

GENERAL AVERAGES.

The general average table shows a hot fight for first place, Dickey coming out on top, as usual, but by a very narrow margin, 2 targets out of 330 shot at separating him from Leroy and Banks, who tied for the next two positions. Puck, who shot steadily on both days of the shoot, was just 3 targets short of an average of 90 per cent., but won fourth place. Fulford and Barrett tied for fifth and sixth places, Van Dyke pulling up into seventh place by dint of his good shooting on the second day. Standish felt the strain of the pace on the first day and dropped down on the second, but landed in eighth place. Hallowell just beat out U. M. C. for ninth place, 1 target separating them. C. E Worthen and Beers were the others who broke better than 80 per cent Twenty shooters shot through the entire two days' programme, their records being as follows:

	First day.	Second day.	Total.	Shot at.	Av.
Dickey	166	147	313	330	94.8
Leroy	166	145	311	330	94.2
Banks	163	148	311	330	94.2
Puck	156	138	294	330	89
Fulford	162	131	293	330	88.7
Barrett	152	141	293	330	88.7
Van Dyke	151	141	292	330	88.4
Standish	161	125	289	330	87.5
Hallowell	149	135	284	330	86
U M C	147	136	283	330	85.7
Worthen	136	132	268	330	81.2
Beers	145	121	266	330	80.6
Money	141	122	263	330	76.6
Brown	136	126	262	330	79.3
Courtney	133	128	261	330	79
Morgan	128	115	243	330	73.6
Stub	117	119	236	330	71.5
Collins	121	109	230	330	69.6
Phelps	107	115	222	330	67.2
Briggs	95	99	194	330	58.7

THE CROWD AT MONTPELIER.

First Day, Aug. 25.

After the unpropitious weather of the previous thirty-six hours, everybody expected that to-day would be all right. The weather bureau guessed so, and managed to save its reputation by the skin of its teeth. Early, very early, in the morning the sun came out, but not liking the looks of things, turned back again. While the "steamboat squad" was on its way to Montpelier, the sun came out again and cheered us all up. From that time until night closed, it was alternately cloudy and bright, with an occasional sprinkle that fell from clouds heavily charged with water. The evening closed with a sunset that augurs well for the morrow.

The feature of the day was the record made by F. A. Standish, a member of the local gun club, and a resident of Montpelier. We remember Mr. Standish very well from his shooting at the Burlington Interstate just one year ago At that tournament he shot well at times, but at others he dropped back again into a novice's gait. But this year and to-day, he astonished everybody by his showing at the traps. Starting off with a straight in the first event, he lost three out of 20 in the next event. He then struck a streak that looked certain to carry him away up to the top, breaking 102 out of the next 105, giving him a total of 134 out of 140 shot at. In the ninth event he lost 4, but picked up again with a 19 out of 20 in the last event. He thus finished with an average of 95.7 for 175 targets shot at, and held third place in the daily averages.

Dickey and Leroy both shot too well for any of the others to catch up to them, although both had a stern chase during the greater part of the day with Standish in the lead. They tied for first average with 166 breaks out of 175, an average of 94 8. Banks landed fourth, one target behind Standish, Fulford taking fifth place with a single break less than Banks's total. Their averages were 93.1 and 92.5, respectively. Fulford's comparatively poor start of 44 out of the first 50 handicapped him rather heavily, but he made his usual strong finish

Of the others, Puck was a fraction less than two breaks below 90 per cent., while Barrett and Van Dyke tied with 86.8 per cent. Neither of these two men shot anywhere near up to their form, Van Dyke's average being due entirely to his ill health and the fatigue caused by the trip from New York in damp and chilly weather.

The average entry list for the ten events was 33 8, a most satisfactory showing. Had it not been for the late start in the morning (which, by the way, was due to the courtesy of the home club, who wished to accommodate the New York contingent) this number of entries would have been increased by additional shooters in Nos. 9 and 10. It is, however, rather hard to get away from the grounds, trains running only every hour, so several shooters drew out their entrances and left so as to get back home in time for supper

During the day a total of 5,940 bluerocks were trapped in the ten events on the programme. The traps, Elmer Shaner's pets, worked a little rough at first, owing to their having been out all the day previous in the heavy rain, when 2,300 targets were thrown in practice shooting. A broken arm on one of the traps, too, delayed the game while a new trap was being placed in position. The life of a bluerock expert trap, when cared for as Manager Shaner cares for his, may be judged by the fact that this is only the second broken arm that has happened to his traps in four years of service! Once the traps got well started to-day, everything went on smoothly and without a hitch.

The table below shows the angles and the number of targets in each event, and also gives the relative positions of the shooters in order of merit:

SCORES OF AUG. 25.

Events:	1	2	3	4	5	6	7	8	9	10

Second Day, Aug. 26.

A lovely day was dealt out to us to day. The sun was warm, and as soon as the heavy dew that fell during the night had been dried up by the rays of the sun everything was perfect, both overhead and underfoot.

An early start was made with the programme. The previous evening we had smiled when Mr Shaner said he would start at 9 prompt, but start he did, right on the dot. This gave shooters who wanted to get away early a chance to shoot out the programme and catch an early train. The first six events were disposed of before a stop of half an hour for lunch was made The next three events were soon disposed of, and the handicap, with thirty two entries did not take long. Four extras were shot: 20 targets, known angles, $2; 25 targets, expert rule, $2.50; 10 pairs, $2; 15 targets, reversed order, $2. In the expert rule event Dickey took first money with 24; Van Dyke and Hallowell divided second with 22; Money and Banks split third money with 21, Barrett and Standish taking fourth on 21. Six other entries didn't get a place. In the pairs, Banks and Barrett divided first on 15 each; the targets from Nos. 2 and 3 in this event were puzzlers; if you took No. 2 first, you couldn't see No. 3 easily; if you took No. 3 first, it was a case of "Where's No. 2?" The reversed order event with seven entries was a good example of the beauties of the "old system," all extras, except the 20 known angles, being divided on that plan. Barrett took first alone with 14; Money, Dickey, Hallowell and Standish, divided second with 13; Banks scooped third alone on 12, and drew out more than his entrance, while the 13s got back about 80 cents each out of the $2 they put in.

First average for the day was hotly contested. Banks won it finally by one target, breaking 15 straight in No. 9 to Dickey's 14. Leroy was third, very close up. Van Dyke and Barrett tied for fourth and fifth places with an average of 90.9 each. Puck again showed up well with 89 per cent. to his credit.

The entries for the day held up remarkably well The total number of entries for the nine programme events, outside of the handicap race, was 254, an average of 28 2 This number brought the average number of entries for the two days, nineteen events altogether, to a fraction over thirty-one for each event. Without having any data to hand, we would say that this total compares more than favorably with any Interstate shoot held this season.

A total of 6,302 targets were thrown during the day, making the total for the two days and the practice afternoon just 14,542 targets, an excellent showing. The traps worked as well as ever, and an enjoyable day's shooting was brought to a close by a ride back to Montpelier in a carryall, furnished free of charge by the Montpelier Gun Club.

The story of to-day's shoot will be found in the following table:

SCORES OF AUG. 26.

Events:	1	2	3	4	5	6	7	8	9			
Angles:	K	K	U	K	U	K	U	K	U

THE HANDICAP EVENT.

This event, the last on the programme, had thirty-two entries. The conditions were: 25 targets, handicap 25 to 33, $2.50 entrance, known angles, $30 added by the club, five moneys, Rose system. Fulford ran 25 straight, but had lots of company in first place when all the handicaps were shot out. Below are the totals, the score furnished us not showing each man's handicap allowance. Fulford had 1 extra target allowed him, but he didn't need it.

First place, with a highest possible of 25, was held by Fulford 25, Money 23+2=25, Beers 22+3=25, Courtney 23+2=25, Collins and Brown (each) 20+5=25, Ward 22+3=25, B. A. Eastman 20+5=25, Towne 22+3=25, Pudsey 21+4=25, W. G. Ferrin 19+6=25.

The 24s were: Van Dyke (scratch) Hallowell 22+2, Leroy (scratch), Puck 23+1, C. E. Worthen 20+4, W. H Eastman 20+4, W. E. Stoddard 18+6=24.

The 23s: Banks (scratch), Barrett 22+1, Standish 20+3, Morgan 18+5, Fiske 20+3

The 22s: Dickey (scratch), Clark 18+4.

The 21s: U. M. C. 19+2, Stub 15+6, Cameron 17+4.

Those who got out of the money, just three out of thirty-two, were: Briggs 15+5=20, Norton 13+5=18, and Stratton 14+4=18.

NOTES.

Ed Taylor was taken sick on the trip to Montpelier, the damp weather having a bad effect on him. He managed to shoot in the first event on the first day, but after that had to retire to the hotel, where he tried to get himself in trim for the second day. On that day, ill as he was, he wouldn't give in, but put his gun together and rolled up a straight 15 in the first event.

On the first day's programme U. M. C. beat out Captain Money by 6 targets, and he didn't let the Captain forget that fact during the evening. The result was the wager of a hat on the next day's scores. U. M. C. won again, and this time by 136 to 122. He will get a hat a size or two larger than usual.

Dickey with his Parker and Leroy with his L. C. Smith, both of them using E. C. powder, managed as usual to get to the top of the heap and carry off first honors for the Bay State. Dickey won first general average, breaking 94.8 per cent. each day. Leroy broke 94.8 on the first day and 93.5 on the second day. Neither of them lost many targets either! Dickey lost 17 in two days out of 330, Leroy losing just 2 more

Ferd Van Dyke's work on the first day was most disappointing to all. He was far from well, the wet weather having given him some trouble. On the second day he shot at times in his old brilliant style, pounding out 20 straight in No. 2.

F. A. Standish's work has been mentioned elsewhere. He shot a most remarkable gait on the first day, and made the visiting experts hold their breath many a time, while they rooted for a straight for him. A total of 134 out of 140 shot at, shows that he got more than one straight in the eight events. He lost three targets in No. 2 event, but made two 20s, one 19, two 15s and two 14s in the other seven events. In No. 9 he dropped to 11 out of 15, but pulled himself together in No. 10, and ran 19 out of 20. He thus finished with 164 out of 175, an average of 93.7.

C. O. Barrett is Montpelier's most reliable shot. Barrett has been shooting for many years, and has always held well up to the front. He shoots quick and in good time, but does not snap his birds by any means. He centers them though, and that's what tells after all.

E. A. Worthen, who was last year the president of the Lake Side Rod and Gun Club, and who probably holds the same position this year, was accompanied by his son, C. E. Worthen, who shot along through the programme and made some good scores. We believe the Messrs. Worthen are related to our friend, Barney Worthen, of the Palmetto Gun Club, Charleston, S. C. If so, there is no wonder they can shoot, for that gift runs in the blood frequently, and Barney's about as warm as they make them anywhere in this country.

Jim Denning, of Burlington, came along as a rooter for the men of his club. He rooted also for us in a way that helped materially when we needed that last target occasionally. Yet that "last target" got away once or twice, notwithstanding Jim's best efforts.

Ben Norton and Guy Clark shot a series of matches in the sweeps on the second day, just to give them a little amusement. Clark did not come out second best, but Norton laid the blame of the whole matter on a certain prominent hoodoo, yclept rabbit foot. Ben is popular in Vermont and made lots of friends for Blue Ribbon.

A. A. Stratton, a member of the home club, is an expert amateur photographer. On the first day he photographed a group of the shooters, making one of the clearest and best negatives of the kind we have ever had the pleasure of looking at.

Referee Harry Kelton can look back upon his work at the Montpelier Interstate with pleasure and satisfaction. He was earnest and painstaking, using good judgment in his decisions, and favoring no one.

R. Ward, of St. Albans, Vt., joined the party from Burlington on the morning of Aug. 25. He was picked out of the crowd by a couple of euchre sharps, who tried to catch him on the "poker bet" game. Mr. Ward reads the papers and knows better than to be caught, but he played euchre all the same. Hence the sharps lost much valuable time and some little temper. It may be some satisfaction to him to know that those gentlemen did not waste the whole week, as we saw them make what we believe was rather more than a fair share of expense money on four sevens against a couple of ace high straights on the morning of Aug. 28.

Stillman Lawrence, the head trapper of the Montpelier Gun Club, is a man over seventy years old, at a guess. He and two of his sons took charge of three traps during the shoot. When the interval for lunch was announced on the second day, father and two sons set off across lots at a fast trot, and kept trotting until out of sight up the hill. Not one man in ten of those who witnessed the spurt could have equalled the gait of "the father of nineteen children." Mr. Lawrence is in a class by himself in more ways than one.

The Sherbrooke (P. Q.) Gun Club sent a delegation of four men to this shoot—Messrs. J. G. Walton, White, Craig and Markell. Sherbrooke can, and does, give good shoots on her own account, and gets plenty of support from Canadian and the frontier gun clubs on the United States side of the border.

The day after the shoot we asked Secretary Walton how he and the club felt in regard to the Rose system. He replied somewhat in these words: "We are more than satisfied with it, and feel sure that had we used the old system for dividing purses, our entries would not have kept up to the figure they did. The bulk of the money would have gone into the hands of too few shooters. The cashier's book shows that the money was distributed around."

While on the trip from Caldwell, N. Y., to Burlington, Vt., the eyes of the bachelors of the "steamboat squad" were gladdened by the presence of a blue-eyed member of the gentler sex. She was promptly christened "The Lady of the Lake," and was popularly supposed to be a mascot of the highest quality.

The suspension bridge which spanned a body of water that lay between the railroad track and the shooting grounds was remarkably light in appearance, but was strong enough to support the weight of Col Courtney without danger of collapse. We caught the Colonel with our camera while he posed in the middle of the bridge, standing in the attitude of Liberty Enlightening the World. In his upstretched hand he held a Remington sign, the insignia of his office. After the capacity of the bridge for weight carrying had been tested in this severe manner, it was named the "Bridge of Size."

H. P. Du Pont Collins was as much at home in Vermont as in the land of terrapin and canvasbacks. His good nature was unvarying, and if he didn't break every target, it was always his fault, not that of the gun or powder. His example might well be followed by others we wot of.

M. A. Beers, of Bridgeport, Conn., was not in form, and was bothered somewhat by his gun, which refused to cock occasionally. At times he shot in form good enough to please anybody, but as a rule he was clean off, and his work at Montpelier cannot hold a candle to what he can do at home

W. L. Stone, of Burlington, Vt., was one of the delegation from the Lake Side Rod and Gun Club that met the "steamboat squad" on its arrival in Burlington. He conducted the squad to the Hotel Burlington, and took upon himself the rôle of host without giving us a moment's warning.

Members of both the Lake Side Rod and Gun Club and the Montpelier Gun Club assured us that they would support well an Interstate tournament in their State in 1898, if the Association thought fit to hold one in Vermont next season. The Association has done much to help on trap shooting in Vermont, and the members of the above clubs are disposed to feel very kindly toward the organization. Applications for tournaments are in order at any time, but they will not be acted upon until the Association's annual meeting early next December.

FOREST AND STREAM has many friends up in Vermont and in the Province of Quebec. So many kind words were spoken to us by residents of those portions of the continent of North America that we are bound to be on hand in 1898 if there is a tournament up there, and if we are still in harness. EDWARD BANKS

Waterville Tournament.

WATERVILLE, Me., Aug. 24.—I enclose complete scores of the shooters who took part in the annual tournament of the gun clubs of Maine, held under the auspices of the Waterville Gun Club in this city Aug. 18 and 19, also an account of the organization of the Maine State Shooting Association, which may be of interest to your readers.

The largest number of shotgun experts ever assembled in Maine began breaking targets on the grounds of the Waterville Gun Club Wednesday. Teams were present from Portland, Bath, Richmond, Gardiner, Lewiston and Waterville, there being over fifty entries in several of the different events. The only out of the State crack who was there was Leroy, of Massachusetts, who shot in his usual good form.

The wind was high all through the shooting and cut down the scores badly. The greatest interest for the day of course centered in the team match in which seven teams competed. Portland entered two teams. The result of the team match follows:

Waterville.		Gardiner.	
Wyman	43	Files	35
Honesty	42	Libby	39
Getchell	43	Harrington	31
Green	47	Whitmore	44
Preble	41—216	Douglass	34—183
Portland.		**Bath.**	
Adams	40	Thompson	33
Randall	43	Bates	42
Neal	37	Merrill	43
Arthur	48	Jones	36
Wilkes	40—208	Lord	39—193
Lewiston.		**Portland No. 2.**	
Hunnewell	45	Dennis	38
Cobb	38	Mayberry	24
Berry	41	Williams	35
Merrow	42	Darton	47
Herbert	39—205	Gray	34—178
		Richmond.	
Henry	26	Rowe	34
Webber	41	Ray	42—174
R F Cobb	31		

The club was favored again Thursday by beautiful weather, and the crowd of shooters was as large as on Wednesday. There were over fifty men facing the traps in many of the events on both days—a record never made before at a shoot in Maine.

The visitors professed themselves delighted with their treatment at the hands of the home club, and declared they were coming to the State tournament to be held here another year.

The big event of the day of course, was the match for the individual championship of Maine, held last year by Major W. E. Reid, of this city. This was at 50 birds per man, and occupied several hours to work it off.

There were four members of the Waterville team in the first squad to face the traps in this event, and on the first string of 25 birds they broke 24 apiece. Dr. Rowe, of Richmond, broke 25 straight, while G. R. Hunnewell of Lewiston, missed but one bird in his first 25, and that because his "safety" was not shoved into position. Arthur Randall, of Portland, pulled out 23 out of his first 25, and followed it up in his second string by breaking 25 straight, winning the championship. It is a well deserved honor, as Mr. Randall is one of the best shots in Maine, having already won several cups offered for high gun at various shoots throughout the State. His victory was a decidedly popular one

Major Reid broke 46 out of 50, the same number that won him the championship last year. He was suffering from indisposition, and showed good pluck in doing so well as he did.

Scores were made in the individual championship event, showing the number each man broke out of a possible 50: Wyman 44, Honesty 46, Preble 45, Libby 44, Green 44, Davison 37, Adams 40, Arthur 48, Neal 44, Wilkes 44, Thompson 42, Darlton 46, G. W. Cobb 40, Herbert 39, Rowe 43, Ray 44, Hunnewell 46, Greenwood 24, Mayberry 40, Dennis 43, Williams 44, Bates 42, Jones 38, Harrington 36, Lord 8, Gold Dust 44, W. Getchell 34, Parsons 31, Merrill 32, Corson 32, Blake 38, Connor 31, Howes 34, Webber 38 Honey 26, Coombs 34, P. F. Cobb 39, Stobie 42, C. Getchell 37, Thayer 33, Barton 33, Soule 25, Shaw 37.

The shooters didn't bother to get away on the early train on Thursday, the most of them staying to shoot the programme out.

The shooting was fully as fast and of as good quality as it was on Wednesday, and a larger crowd of people from the city were up on the hill to see the fun.

One of the most interesting events of the afternoon was the special contest for five prizes not included in the programme list of merchandise prizes. The first of these was a Winchester .38-55 rifle, offered by Hanson, Weber & Dunham, and that stayed at home, being won by Chester Getchell with 21 out of a possible 25. Arthur Randall carried off the shell case offered by the same firm as a second prize. Leroy, of Massachusetts got the lamp; Wesley Getchell, of this city, won a can of E. C. powder, and the clock went to Williams, of Portland.

The visitors were very much pleased with Waterville, and many of them took occasion to say to members of the local club that they would surely be on hand for next summer's tournament.

The shooters who remained in the city after the close of the second day's programme of the State tournament met at Preble's studio in the evening to take steps looking toward the organization of an association to have a general oversight over trap shooting matters in general in Maine and for such incidental purposes as will tend to furnish better sport for the shotgun lovers of the State.

The plan of forming such an association was first broached in a letter written to the secretary of the local club by Mr. S. B. Adams, of the Portland Club, some time ago, in which he suggested some of the advantages of such an association, and that a move be made toward forming it while the shooters were here at the tournament.

The meeting was organized by the choice of Mr. Adams as chairman and E. T. Wyman as secretary. The chairman briefly outlined the purposes of the proposed organization, and on motion of Mr. Neal, of Portland, it was voted to form an association of Maine gun clubs. It was also voted that the officers of the Association should consist of a president, vice-president, secretary and treasurer and an executive committee consisting of the above officers, ex officio, and a member each from the clubs not represented by any one to the three offices named before

Major W. E. Reid placed in nomination for president the name of George E. Thompson, of Bath, characterizing Mr. Thompson as one of the leading sportsmen of Maine, interested in the best manner in trap-shooting and kindred sport. Mr. Thompson was elected by acclamation and accepted the office in a neat speech, pledging his best efforts to the success of the Association, and counseling the members to each take a particular interest in the organization. E. T. Wyman was chosen secretary and treasurer, and G. R. Hunnewell, of So. Danville, vice president. S. W. Whitmore, of Gardiner, was made a member of the executive committee from the Gardiner club, and E. P. Neal from the Portland club. It was voted to name the organization The Maine State Shooting Association.

Following are the full scores of all the shooters:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

Haverhill Gun Club.

HAVERHILL, Mass., Aug. 28.—This being the last shooting day of the Haverhill Gun Club before the State shoot of Wednesday next, it was naturally thought that members would be desirous of a little practice in order to be in condition for work on that day. The result, however, was the same as on most of the regular practice days so far this summer—a few on hand, a large majority absent.

Below I hand you the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	10	10	10	20	10	20	10	15	15	10	10	10	10	10
George	9	7	8	17	7	15	2	11	11	8	6	10	9	5
Stevens	8	7	8	16	9	17	..	..	..	..	..	..	..	..
Webster	8	6	6	13	4	16	5	9	8	6	8	9	4	7
Miller	5	8	7	15	6	13	6	12	8	8	8	9	5	7
Leighton	..	..	..	13	6	17	4	11	11	6	6	..	..	..
Dr Stansfield	..	..	..	..	..	..	..	..	..	..	..	4	6	2

Events 1, 2, 4, 6 and 12 were known traps and angles; events 3, 7, 8, 9 and 13 were known traps, unknown angles; events 5, 10 and 11 known angles, reverse pull, and event 14 at 5 pairs.

GEO. F. STEVENS, Sec'y.

Mount Kisco vs. Transits.

NEW YORK CITY, Aug. 26.—On Aug. 21 there was a match shoot at Mount Kisco between the Mount Kisco Rod and Gun Club and the Transit Rod and Gun Club, of New York city.

The members of the Mount Kisco Club did everthing possible to give the visitors a good time, and the New Yorkers came home feeling that they had had a most enjoyable day. After the captains of the two clubs had spent about one minute in discussing rules, etc., the shoot began and moved without a single hitch or kick of any sort. The scores follow below:

Transit Rod and Gun Club.

Thompson	0101111111101111010010011010—20

H. B. LOOMIS, Sec'y

ANSWERS TO CORRESPONDENTS.

A. D. M., Bradford, Me.—My two-year-old pointer bitch seems to be all in good health, except that on her neck she was troubled for six or eight weeks with what I call boils. They come to a head and break with a bloody, mattery discharge. I have been giving a spoonful of sulphur once a day for the past week. Ans. Apply equal parts of zinc and Ichthyol ointment and give compound sulphur tablets. (Weyeth's or Park Davis's.)

PUBLISHERS' DEPARTMENT.

Virginia Hot Springs.

(From Town Topics.)

AFTER a brief visit to Virginia Hot Springs, I am quite prepared to believe the wonders that are told concerning that picturesque region. Even the tale of a grinning darkey, who informed me that a cripple of years' standing had that morning, after a brief course of the baths, "frowed away his crutches," did not sound a bit improbable. Aside from the curative qualities of the Springs, which are famous, I believe, the world over, the region itself should, I think, serve as an invitation to invalids to forget their bodily woes and stimulate the healthy into a new enjoyment of life. I have traveled far and witnessed much impressive scenery in my time, but the lofty Virginia hills contain an element of grandeur and beauty that is as invigorating to the senses as the rarefied air to be found at their summit.

I have always maintained that the most gratifying human condition is to be found in a combination of civilization and the wilderness; in a tempering, so to speak, of the beauties of nature with the comforts of home. It is like a pleasant page from an extremely agreeable fairy tale to climb 2,500ft. up the sides of giant hills in the railroad train that runs from Covington to the Springs and find a luxurious modern hotel perched amid a nest of even taller hills that go towering up for 1,500ft. more. The recreations of the place are of a kind to harmonize with the scenery. There are well trained horses to ride and drive. There are golfing grounds for admirers of that pastime. There is a well-built casino, where an excellent orchestra discourses dance music in the evenings. Then, when one turns away from these artificial attractions, there is the endless panorama of the mountains, with their variegated coloring and majesty of outline, forming a picture quite charming enough to compensate the traveler for the all-night journey from New York.

I noticed at the Springs an apparent scarcity of invalids. This, I suppose, is due to the fact that it is impossible to remain an invalid long after testing the efficacy of these waters. Three generations of people, I am told, have testified to it, and as many more will doubtless follow their example. The treatment of the worn-out and debilitated consists in a combination of baths and administration of the mineral waters, though as a resting place for people afflicted with no mental or physical ills at all I do not exactly see how the Springs could be improved upon. The New Homestead, as the aforesaid mountain hotel is called, is a gem of its kind; the scenery, as I have hinted, would enrapture any artist in the land, and the waters seduce the decrepit into indulgence in athletics. No wonder the Virginia Hot Springs are growing more and more popular with people of fashion, and no wonder the officials of the Chesapeake & Ohio Railway are inclined to boast of their beautiful garden in the Virginia hills. In their place I should do the same thing.—*Adv.*

Tour to Gettysburg, Luray and Washington.

THE Pennsylvania R. R. Co. has arranged for a most delightful seven-day tour to the Gettysburg Battlefield, Caverns of Luray, and Washington, to leave New York Sept 9. It will be in charge of one of the company's tourist agents, and will cover an intensely interesting section of the upper South. An experienced chaperon, whose especial charge will be unescorted ladies, will accompany the trip throughout. Round-trip rate, including all necessary expenses during the entire time absent, $27 from New York, $26 from Trenton, and $24 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents, Tourist Agent, 1196 Broadway, New York, or address Geo. W. Boyd, Ass't Gen'l Pass. Agent, Broad Street Station, Philadelphia.—*Adv.*

Good Chicken Shooting

will be found at numerous points along the Northern Pacific Railway this fall notwithstanding the heavy summer rains. Present advices are to the effect that in the vicinity of Fergus Falls, Perham, Detroit, Sauk Centre and Little Falls, in Minnesota; and Wahpeton, Pembina and Valley City, North Dakota, chickens will be a good crop. At Aitkin, Little Falls, Perham and Detroit, partridges will be plentiful. Ducks will be found in large numbers all along the line. Season opens Sept. 1. Chas. S. Free, Gen. Pass. Agent, St. Paul, Minn.—*Adv.*

Olive Green

and Royal Red are the colors of the new "Florida Limited" being built by the Pullman Company for the Florida Short Line, Pennsylvania, Southern, Florida Central, and Peninsular & Florida East Coast Line. This train will commence service between New York and St Augustine early in January and will be operated upon the most perfect schedule ever announced from New York to the Royal Palms. The Limited will be composed exclusively of Pullman latest dining, drawing-room, sleeping, compartment and observation cars. Full particulars call on New York office, 271 Broadway.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 11, 1897.

VOL. XLVIX.—No. 11. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

CURLY CHIEF.

A FEW days ago there died in Oklahoma, full of years, a good man whose name will be familiar to some of the readers of FOREST AND STREAM. This was Curly Chief, the chief of the Kit-ke-hahki tribe of the Pawnee nation.

Curly Chief was one of the famous "Seven Brothers" of the Kit-ke-hahki tribe, and by his bravery, shrewdness and rare common sense, very early took a prominent place in the councils of the nation. Brave to the utmost limit of daring when bravery was needed, he was as wise as brave, and as kindly and gentle as wise. Those who have slept in his lodge, and eaten of his food, and listened to his stirring war tales of the olden times, or to his accounts of the marvelous doings of the Indian priests in the buffalo days, will not easily forget the time spent with him. He was loved and venerated by the Pawnees, and respected by all who knew him.

It was Curly Chief who told the story of the first coming to the Pawnee territory of the white man sent out by a Government far to the eastward, to make a treaty with the Pawnees, and to get permission for the whites to pass through their country.

To win the Pawnees' good-will, this man had brought with him many presents, such as blankets, guns, flint and steel and knives. When he had told the Pawnees the purpose for which he had come, the chief pondered for a time and then spoke, saying that the Pawnees required none of these things which had been brought to them. He said: "We have our buffalo and our corn. These things the Spirit Father gave us, and they are all that we require. Look at this robe. This keeps me warm in winter. I need no blanket."

The white men had brought with them some cattle, and the chief of the Pawnees said: "Lead out a heifer on the prairie." They did so, and the chief, stepping near, shot her through behind the shoulders with his stone-pointed arrow, and she fell down dead. The chief turned to the white man and said to him: "Will not my arrow kill? I do not need your guns." Then, with his stone knife, he cut off a piece of fat meat, and when he had done this, he said: "Why should I take your knives? The Spirit Father has given me something to cut with."

Then he took fire-sticks and kindled a fire and roasted his meat, and while it was cooking he spoke again, and said: "You see, my friend, the Spirit Father has given us all that we need—buffalo for food and clothing; corn to eat with our dried meat; bows, arrows, knives and hoes; all the tools that we need for living, for cultivating the ground, or for killing meat. We do not want your presents, and we do not want you to come into our country. Go back to your own."

But in time a treaty was made between the Pawnees and the Government, by which permission was given to the whites to pass through the land, and swiftly following the permission came changes.

At the time of his death Curly Chief was over seventy years of age, so that his memory went back to a time when indeed the wild Pawnee hunted free and uncontrolled. To him it must have seemed but as yesterday when the buffalo blackened the plains, and when the joys of a successful warpath were the keenest pleasures that he knew. His memory went back to those early days before emigration had cut deep roads across the plains, or ever the route to Taos was laid out, or the Santa Fé trail opened. He had seen all those marvelous changes which have taken place west of the Missouri River during the last two generations, and had beheld his people, once free wanderers over the whole broad land, curtailed little by little of their liberty, and now at last made citizens of the United States.

We who are civilized people, who live esssentially as our fathers lived, who are accustomed to new ideas, to new discoveries, to the swift march of modern progress, cannot comprehend what such changes as they experienced meant to these simple people. New methods were constantly shown to them, new ideas continually thrust upon them; and so rapidly did these changes succeed one anther that they merely confused the savage, who comprehended them not at all. For every human mind the process of adjustment to new conditions is deliberate, and above all others the primitive man is conservative and slow to change.

Thus in the span of life of this man were wrought tribal changes, new modes of living, altered surroundings and conditions, such transformations as usually come to a race only in the slow succession of generations. With this Indian of the West it was as if centuries had intervened between his childhood and his age.

In Curly Chief's earlier life the rare white men seen by the Pawnees were wandering trappers, who came to-day and to-morrow were gone, or who took an Indian wife and remained to become a part of the tribe. Much later he witnessed the rush of emigration to California, and the building of the forts for the troops. Then he saw his people restrained—gathered together and kept on a reservation, and later still he sent out his young men in the service of the Government to fight against the hostile Sioux, Cheyenne and Arapahoe. Following that, he beheld the extermination of the buffalo, their replacement by cattle, and the settling up of the country.

Then came the removal of the Pawnees to the Indian Territory, their decimation by wasting illness, and later by the operation of the severalty act they were forced into citizenship, and thus destroyed as a tribe and as a nation.

All these things Curly Chief had witnessed, and it is not difficult to imagine something of the deep and hopeless sadness with which he must have beheld the decadence of his people and their change from a condition of limitless freedom and of absolute mastership of the soil to that of a mere remnant, overwhelmed, broken and lost among the hordes of an alien race.

THE UNITED STATES FISH COMMISSION.

THE old project has been revived of transferring the United States Fish Commission to the control of the Agricultural Department. The scheme, we need not say, does not originate with the friends of the Commission, who are best informed as to its work in the past and most sincerely concerned for its future; for the change would be one which could not fail seriously to affect the character of the Commission, and to detract from its efficiency and public benefit.

As now constituted, the Commission is an independent and non-political institution. Congress made it so in the beginning, at the earnest insistence of Professor Baird, who saw in such independence, freedom from political control and direct accountability to Congress, the only possible conditions under which the great work it was to undertake could be accomplished most economically and most efficiently. The history of the Commission from the initiative under his direction has justified most abundantly Professor Baird's wisdom and foresight in this. The Commission has accomplished a work of vast magnitude; it has been of invaluable service to the country, increasing the yield of the fishery resources by millions of dollars, and it has done this and done it so well, for one reason because absolutely free to do the best work in the best way and with the best men, without political interference.

To take from the Commission its independence would be to make wreck of so much of its usefulness as lies in its long-standing immunity from interference and outside dictation. To put it into the Department of Agriculture would completely and disastrously change this very essential condition of good work. This in itself is a consideration sufficient to forbid the carrying out of any such project.

THE PENNSYLVANIA SITUATION.

THE fishcultural interests of Pennsylvania have been menaced by the failure of a legislative appropriation for carrying on the work; but there is reason for hope that the required funds may be forthcoming for tiding over the most important interests. As told in our angling columns, there will be a convention in Harrisburg on Wednesday of next week to take action upon the suggestion made by Gov. Hastings, that the fish protective societies of the State should advance the funds for use as required, upon the understanding that the Legislature shall refund the money at the next session.

GREEN TURTLE EGGS.

THAT Florida man told of in our correspondence to-day who instead of making into an omelet the green turtle eggs he had taken on the beach, kept them until they developed into infant turtles and then committed them to the sea, set an example which might well be followed by all Florida turtle eggers. Indeed, to some such practice must the State come if it is to preserve its important and valuable green turtle resources.

The Florida green turtle fisheries in the past have been worth many thousands of dollars annually, but of recent years the catch has decreased with alarming rapidity, until now the pursuit is becoming unproductive and profitless. An investigation recently made by the United States Fish Commission elicited almost universal testimony to this effect.

In Tampa Bay and tributary waters, where in 1890 the fishery was important, the turtles have been killed off and it no longer pays to follow the fishery. The same story comes from Cedar Keys, Key West, Biscayne Bay and other points: over fishing, depleted supply, diminished catch and deserted breeding grounds. The turtle, Key West people complain, no longer deposits its eggs on the Key, but has been driven by the eggers to distant and inaccessible keys; and this has ruined the egging industry. The industry is one which deserves to be ruined, for it is ruinous in itself; from the very nature of the case it could not be otherwise.

The nesting time of the green turtle in Florida extends from April to July. Coming ashore on the sandy beach, the turtle selects a spot above high-water mark, digs with its flippers a hole in the sand one or two feet deep, deposits from one hundred to two hundred eggs, covers them over, and then smoothing the surface to conceal the nest, returns to the deep. In a few weeks the eggs hatch and the young take to the water. The mother turtle visits the shore two or three times in a season, and thus lays from three hundred to six hundred eggs a year.

Bears and men hunt out the turtle nests and take the eggs. The bear is a dumb brute and knows no better; but man can be taught, though it may take time to teach the lesson. Robbing turtle nests of their eggs is in the effect precisely like robbing birds' nests or taking trout from the spawning beds; if the eggs are destroyed, the stock of mature birds and fish and turtles must fail. With the turtle as with other species, the eggs are in themselves, as food or commercial products, of such little value in comparison with the grown turtles, that it is simply inconsiderate and wasteful folly to take them. There is no sentiment about this; it is only a question of the conservation and profitable using of a great natural resource. Florida turtle egging should be numbered among the lost arts.

GUIDES AND GUNS IN THE YELLOWSTONE.

THERE is a misunderstanding on the part of the public regarding Colonel Young's order respecting the carrying of arms in Yellowstone Park by hunters who are going into the territory south of the Park for big game. The order simply provides that hunting parties going through the Park shall carry sealed arms and provide themselves with a registered guide. Any guide of good reputation on registering at Fort Yellowstone, Mammoth Hot Springs, will be authorized by Colonel Young to conduct hunting parties through the Park, where their objective point is the Teton country, Jackson Lake or contiguous territories beyond the boundaries of the Park.

There are some fourteen reliable guides who have already registered and are in position to conduct hunting parties through the Park to the hunting grounds referred to. The order will therefore in no manner interfere with hunting parties who may desire to make this trip during the fall months. In fact, Col. Young states that he will go even further, and in case of responsible parties who desire to go through the Park to meet their guides or pack train, will furnish a small escort thoroughly familiar with the roads and trails to accompany each party to the south, east or west boundary line, according to their destination.

Why "lynx-eyed," when we mean acute of vision? Is the lynx so much further and clearer and sharper-eyed than other wild creatures that it should be the proverbial paragon of sight? We would like to hear from Antler, Corporal Lot Warfield, Lew Wilmot, and some of the other authorities.

The Sportsman Tourist.

THE ANGEL OF THE GUARD.

THE names selected for places throughout much of Spanish America are taken from the calendar of saints or other religious authority without much reference, as a general thing, to any local appropriateness. Sometimes one can perceive a strained relation between the name and the place. On the east side of the Peninsula of Lower California, at or near the 29th parallel of north latitude, is a secure and extensive harbor, called the Port of the Angels. This harbor, which at the present day has few angels left, faces northeast, and its entrance is protected by a chain of islands about three leagues distant from the inner shore, while seven or eight leagues beyond lies a mountainous land-mass, stretching forty-five miles from northwest to southeast, somewhat west of the center of the Gulf. This large island was perhaps regarded as a sentinel outpost to ward off storms from the quiet waters within, and was called for that reason "The Angel of the Guard."

For many months I had been trying to visit this island at the invitation of an old friend of mine, who had found interesting antiquarian remains there. In March last past I finally succeeded in making time enough for a short voyage, and while certain circumstances conspired to render my examination imperfect and my expedition a partial or total failure (as the reader may choose to think it), yet I have decided to translate into ordinary English a few notes taken during the trip in the hope that some future inquirer may find guidance. This, indeed, may be the first halting steps toward great discoveries of buried cities and records that rival the Chaldæan tablets. Is it not written in the chronicles of stream and forest how on the nettle of a rough experience may bloom the flower of the fairest luck?

The theory formed by my friend Don José about the Angel of the Guard (or Guarda Island, as it is called for short), from personal observation and reading, was somewhat as follows: A long time ago geologic conditions were changed by a catastrophe. (The "catastrophe" offers to some geologists the same resources that the universal solvent gave to the ancient chemists.) Previous to this "catastrophe" the Colorado River had washed the shores of the island, and its fresh waters had, somewhat exceptionally, begotten a humid climate and varied flora. At this time the Aztecs, who had previously landed in New York, had halted in their wanderings on this spot and constructed fortified roads, stone houses and sepulchral monuments. They had also left a coin, which he, Don José, had found and given to the American Consul, a coin with an inscription variously pronounced to be Greek, Hebrew and hieroglyphic. This medal opens up vistas not only in the history of metallic money, but in the ethnological relations of the Aztecs that will be tempting to specialists, but perhaps misleading for amateurs.

After the "catastrophe" the Aztecs, deserting the now arid island, moved south, while later certain cunning and secretive Jesuits probably found fertile spots and precious mines, which they hid in silence. The theory seemed to me improbable, but my friend had gathered some interesting facts and we decided to follow them up.

Starting from Guaymas on the sloop Ometepec of 23.91 tons register on March 12, we landed at the Port of the Angels on the morning of the 17th. The distance between the two points in a straight line is 160 miles, and the Ometepec is a good sailer, but the moods of the Gulf of California are wayward and sometimes provoking. From about the month of October to the early part of April the prevailing winds come from the northwest. These are varied by occasional "terrales" or land breezes, when you are near the coast, and also by light, variable breezes, with frequent dead calms. The northwesters at times take on a character of great violence, blowing from two to eight days continuously. These winds are called "collas," and raise short seas of considerable height. When the "colla" blows all small sailing ships run before it for the nearest shelter. For the rest of the year breezes from the opposite quarter prevail, but during a portion of this time, that is, from July to September, the storms known as "chubascos" may come at any moment. These are not cyclones such as lately devastated Altata and La Paz, but sudden and formidable blasts, striking like a gunshot and ending in a few hours.

The gulf, then, has possibilities of delay and disaster lurking around it at all seasons, and when you consider the extreme economy, in the way of ancient cordage and wounded spars with which the smaller boats are rigged, you are surprised that the percentage of wrecks is not even more considerable. As a matter of fact the little brown crews count many good seamen, though a man of Northern birth is forced to look with suspicion on a race of sailors who call a gafftopsail an "escandalosa."

The run from Guaymas gave me a chance to learn several interesting things from my friendly companions. Three points of interest in the natural history of the rattlesnake were brought out.

An intelligent fellow passenger told me of the method used by the "churea," or road runner, to capture the snake.

The "churea" is a bird common in our southwest, with long legs and a sharp beak, as large, perhaps, in the body as a meadow lark, but standing much higher, and trusting almost entirely to its speedy legs, rarely flying.

The "churea" in its rambles, frequently finds the rattlesnake asleep. He then looks about for a "cholla" cactus, and plucking sections of this plant, which seem like vegetable sausages surrounded by needle-like thorns with small but efficient barbs, he builds a wall of these around his unconscious victim. When the wall is done, the churea hops lightly over and deals the snake a vicious peck in the head. The snake, lashing about in confusion, impales himself on the cactus, first on this side and then on that, while the bird continues his attacks on the head, until the reptile is killed and dinner is ready.

Reputable observers told me that they had seen this performance, though I confess I had never heard of it before.

The captain then said that it was a matter of common belief that when the rattlesnake went to drink he took out his poison bags and laid them on top of a clean stone, restoring them to their natural place after his thirst was satisfied. If, however, while he was drinking, any intruder should steal or remove the bags, the snake on his return would break himself to pieces in despair. No one professed to have seen this curious performance, and indeed no one claimed to have seen the rattlesnake drinking. I rather think that when you find the snake slaking his thirst the poison will be found on a clean stone near by.

An old and rather pointless tale that seems of Indian origin was told by an old sailor from Guayaquil. Two rattlesnakes near Esmeralda in Venezuela were together, when one of them was killed. The survivor at once searched for and found an herb which would restore his comrade to life. He was carrying this back when, for some reason, his attention was diverted, he dropped his burden and the herb was picked up by a countryman who found that the plant had the strange property of breaking open padlocks. Fernando, who told about this, said he had frequently seen the herb break open padlocks, but he had never been able to find another plant like it.

Many other interesting things were told me on this voyage; for instance, about the musical fish who swims under the strip between San Blas and Mazatlan, giving free concerts as he goes; about wonderful wrecks and rescues; about the sharks of two kinds, tiburones and the still more terrible tintoreras, who infest these waters to such a degree that no native dares to go in swimming. But I must pass these over, and touch lightly on the "bufeo." Don José, who first urged this expedition, told me that among other terrors of the deep the bufeo took a high rank; that he was a local monster who grew to a length of 12ft. or more, had blow-holes, a horn and large teeth, and that he would attack canoes and eat men. I prepared my camera for this animal, but never saw one. I did, however, succeed in depriving him of some of his terrors. The bufeo has no horn, and his ferocity is not well proven. He is a large marine animal of the porpoise kind, with two blow-holes in his head, and probably identical with the species that the sailors call blackfish. So much for careful inquiry and comparison.

On March 17, then, the Ometepec cast anchor in the Port of the Angels, and we went ashore. There is a storehouse on the beach, and one or two other houses, while seven miles inland, up a broad, sandy valley, at Las Flores, curled the smoke of the hacienda, the mill and leaching works of the San Juan mine, while the mine itself lays ten or twelve miles further over the range.

Don José urged me to rest five or six days at Las Flores before going further, but my time was too short for that. I found and engaged a flat-bottomed, sloop-rigged boat—the only conveyance I could get—about 30 or 35ft. long, capable of carrying four or five tons, and made arrangements for a captain and two men to get the boat—which had been hauled up and was not yet fully rigged—in trim so as to start for Guarda Island the next night. Then I rode on to Las Flores to get water casks and make other needful preparations.

The people at Las Flores proved to be of the very elect—friendly, hospitable and helpful, past finding out. Mr. Richard Daggett, the manager of the mining enterprise, universally known as El Dick, not only entertained me, but he gave me a man from his leaching tanks who knew something of the island and proved to be my main reliance; fitted me out with tools and water kegs, and then, after supper, when the next day's plans were cut out and the work was over, I got out of him some stirring incidents in his earlier seafaring career, and one of these episodes I will give you now:

The bark Eden, of 312 tons register, but carrying 500 tons of cargo, was bound from Tien-Tsin, the port of Pekin, to Hong Kong, laden with beans. In leaving Tien-Tsin it was necessary to beat for a long distance down the Gulf of Pechili, and it was particularly desirable to reach the islands strung across the mouth of the gulf in daylight because the navigation is then much less perilous. Mr. Daggett, who was mate of the bark, noticed that she shipped a good deal of water plunging into head seas, but thought little of that at first. He was impressed, however, with the belief that the boat rolled and staggered in an unusual way, and finally decided to call the captain. The captain sent him forward to summon the Malay crew, and for some reason he took his way along the lee side of the ship, where there was already a good deal of water, rather than the comparatively dry, weather side. About amidships he tumbled over the chain hatch. This is an iron cover, weighing several hundred pounds, which should close the chain-hold, a vertical wooden box reaching to the bottom of the ship between the mainmast and the main hatch, and meant for stowing the chain cables when the anchors are not in use. The hatch had worked off, however, and the water shipped over the bows had rushed in until there were 9ft. of water in the hold.

Mr. Daggett at once reported to the captain so as not to frighten the Malays, and they too, working for the most part under water, managed to stow the cable over again and put on the hatch.

Then the crew was called, but when they found that the ship was full of water they decided that the vessel was lost anyhow and that they would take no further trouble in the matter. The captain and the mate therefore provided themselves with whips, as the occasion demanded, and placing themselves one on each side, watched over and inspired the efforts of the Malays until the ship was comparatively dry.

Then they squared away southward, but after a day or two of warm weather the wet beans began to swell to such an extent as to threaten to burst the decks. The hatches had to be taken off and the spoiled cargo gradually shoveled out until, on their arrival at Hong Kong, there was only about enough of the load left to show the nature of their misfortune.

Early in the morning of March 18 I left Las Flores for the beach and put in the day in necessary preparations—buying provisions, filling my ten water kegs, ballasting our crank vessel, getting a license from the proper official and other details of the kind. Toward midday Pancho Zuñiga, who had been lent to me by Mr. Daggett, came in and helped, and later on a drunken Indian arrived with a note from Don José, who could not join me, recommending him as a good tracker of ancient and abandoned trails. This Indian, Timoteo, had lost one hand in dynamiting fish. It was surprising to learn of the number of fatalities and maimings that had been caused by this custom. The people along the beach are such poor fishermen that they live in the midst of plenty without a fish to eat. There is not even a fish line for sale at the local store. Occasionally they harpoon a turtle and occasionally they throw a cartridge, but to catch fish in a legitimate way is quite beyond them, altogether too much work.

At about 7 o'clock in the evening the pango (for that is the name for these flat-bottomed craft), after several attempts to start, had collected her full complement of freight and passengers, including the captain and two men, the drunken Indian, Pancho and myself, and we raised the anchor and tacked out of the harbor. At about midnight we passed the harbor islands and bore off with a free sheet for the south point of Guarda, with a strong northwest wind.

The boat leaked a good deal, enough in fact to wet most of our chattels, and was difficult to pump, because the pump was in the middle and the water was swashing from one side to the other, according to the tack we were on, but shortly after sunrise we rounded the point and slid into a calm on the east side of Guarda Island. The shallow water near the land was beautifully clear, and fish and turtles could be seen now and then in the depths while whales were spouting placidly in the distance. The captain went off in a dory with his harpoon, and after a great many attempts captured two female turtles. These were the ordinary green turtles called "tortuga," or locally "cahuama," for the "caret" (pronounced by the Mexicans "carré"), with the valuable shell, is found further south. We killed one turtle, or rather we cut it up, for the poor thing seemed to retain its vitality for an unreasonable time, and boiled the eggs. There were about 300 eggs (I counted sixty and estimated the rest), and after they were boiled in salt water they could be eaten by a hungry man, but they had a flat, oily taste of little interest, and we started in to cook some of the meat.

A turtle has no meat on its upper shell, though it does have some dark green fat called callipash (from "Carapacho") by epicures, which some people profess to like. On its lower shell the turtle has some yellow fat called callipee and about an inch of meat. This meat with the flippers, especially the front flippers (for the hind ones are small), and a rather inferior liver constitute the edible parts of the turtle. It is certainly not bad provided the animal be fat, but I fancy that it requires all sorts of fanciful condiments if it is to merit high praise. The most curious part of the turtle's anatomy is the heart. This reptilian organ has but three valves in place of the four which mammals possess, but on opening a turtle you find that each valve has the shape and apparent function of a separate heart. One is about 2½in. long and the other two say 1½in. long each in a turtle whose upper shell measures 30in. in length.

In the afternoon, as the calm continued and the tidal currents, engendered by a daily rise and fall of some 12ft., were drifting us backward, we cast anchor and I went ashore. I climbed a volcanic scrap-heap of a hill some 200ft. high and saw upward of twenty piles of rough rocks dotted around like bunches of irregular haycocks. Most of these piles were on the ridge overlooking the sea, though some were on the landward slope near the tops, and none of them seemed to exceed 3ft. in height.

These were the first traces of aboriginal work I had met, and will be further described later on.

Toward night, as the tide turned, we raised our anchor and started north. A short distance ahead of us lay an islet called *Corral de las Víboras*, or Rattlesnakes' Enclosure, which at low tide is almost connected by a rocky bar with Guarda Island, about a mile away.

This islet consists of a rough square of lofty hills with a harbor on the west side nearly inclosed by great curving dykes of boulders, absolutely secure, for boats small enough to get in, from seas raised by any wind. Late at night we succeeded in pulling slowly around the islet—arousing on our way a band of sea-lions who barked at us and rattled noisily on the stony beach—and cast anchor in the quiet lagoon.

[TO BE CONCLUDED.]

THE CHESTNUT RIDGE

And Along Its Foot.—V.

THOMAS ASHE, an English tourist, in the year 1806 visited what was then our western country. In the month of October in that year he crossed the Allegheny mountain range on his way westward. He traveled alone, on horseback, and proceeded to Pittsburg by the road built by the army under General Forbes in 1758. This road was for half a century or more the great thoroughfare between the East and the West through Pennsylvania. When somewhere in the Chestnut Ridge region he had some strange experiences. Upon his return to England, Mr. Ashe published a volume descriptive of his tour, valuable in a way, though his sad addiction to drawing the long bow casts a shadow upon many of his statements. His book has become somewhat rare; my copy is the Newburyport reprint, 1808.

Charmed by the delightsomeness of the way, this gentleman dallied along and was overtaken by nightfall on the mountains, where he was obliged to remain until morning, although "wolves, panthers, and tiger-cats were at hand" to devour him. It was here in the solitude of the mountain top that he witnessed a remarkable exhibition of celestial fireworks. "The heavenly vault," he says, "appeared to be all on fire; not exhibiting the stream or character of the aurora borealis, but an immensity vivid and clear, through which the stars, detached from the firmament, traversed in eccentric directions, followed by trains of light of diversified magnitude and brightness. Many meteors rose majestically out of the horizon, and having gradually attained an elevation of 30°, suddenly burst, and descended to the earth in a shower of brilliant sparks or glittering gems. This splendid phenomenon was succeeded by a multitude of shooting-stars and balls and columns of fire, which, after assuming a variety of forms, vertical, spiral, and circular, vanished in slight flashes of lightning, and left the sky in its usual appearance and serenity." I venture to say that the like of this has never been seen by any other mortal. I can only add as a corollary to this wonderful account, that our traveler elsewhere in his book informs us that whiskey on the Pennsylvania border was then to be had for two shillings a gallon, and no doubt a pint flask was regarded as indispensable in a journey across the Alleghenies.

The next morning Mr. Ashe descended the mountain, and having reached an inn where he found "the landlady civil and the husband sober," he determined to remain a day or two to recuperate after his wonderful night upon the mountain. While here he borrowed a gun and sauntered out into the forest. In the course of his woodland ramble he sud-

denly came upon a huge bear. The creature fell from a tree not twenty yards distant, and at once rose upon his hind feet. "He was in the act of looking up to the branch from which he had slipped," writes Ashe, "when I fired, and lodged a ball in his groin. He staggered, and leaned up against a tree; but, recovering a little from the pain and surprise, he deliberately stooped and picked up a quantity of clean leaves, which, with the greatest precaution, he stuffed into the wound, and this stopped the flow of blood." This was certainly a surprising surgical operation. Ashe was about to fire again, but his heart relented at this conduct on the part of the bear. The animal made no demonstration whatever against his enemy, quite unlike what might have been expected; but, attempting to climb the tree again, the blood rushed forth afresh, and he fell to the ground, uttered a deep groan, and immediately expired. "He was a very large animal," says Ashe; "his tusks being 5in. long, and his paw 15 by 5in."

The most famous town on the line of the road between Carlisle and Pittsburg is Ligonier. A fort was built here by General Forbes, and named Fort Ligonier, in honor of Sir John Ligonier, afterwards Lord Enniskillen, one of the heroes of Blenheim, Ramilies, and Malplaquet. The place was fiercely assailed by a body of French and Indians under De Vetri, in October, 1758, in retaliation of the premature and disastrous attempt by Major Grant upon the French at Fort Duquesne a short time previously. The attack was unsuccessful, and the enemy was beaten off with severe loss. Nearly five years later, the fort was repeatedly assailed by the savages in the uprising known as Pontiac's war, but never with success. Even during the dark days of the Revolution the fort was maintained here; so that the little town of Ligonier has a stirring history behind it.

Three or four miles north of Ligonier, on the crest of the Chestnut Ridge, near the public road between that town and Derry, on the Pennsylvania R. R., is a tract of land once the property of the famous but unfortunate Gen. Arthur St. Clair. When I first knew the place, nearly forty years ago, it had the appearance of having been long abandoned, and the clearing was in an advanced stage of the way to its former wilderness condition. Gen. St. Clair had filled many and high positions, both civil and military. He was with Amherst at the taking of Louisburg; was a lieutenant under Wolfe, at Quebec; was a major-general and one of Washington's most trusted friends in the Revolution; was appointed Governor of the Northwest Territory in 1788; was general-in-chief of the United States Army, and was most miserably defeated by the Indians near the Wabash in November, 1791. This was the end of his public career. His star hastened to its setting. St. Clair's defeat was the most calamitous that the white men have ever received from the Indians. All his former services and successes seemed forgotten in a moment, and only reproaches and taunts were to be his future portion. Scurrilous songs were sung all through the Western country, perpetuating his humiliation.

"'Twas November the fo-urth, in the year of 'Ninety-one,
We had a sore en-ga-ge-ment near to Fort Jefferson;
St. Clair was our com-man-di er, which may remembered be,
For there we lost nine hundred men in the Western Terri-to-ree."

St. Clair withdrew from the public gaze as far as possible, and sought seclusion in the loveliness of the Chestnut Ridge. As if to complete the crushing ruin of the man, his wife became a raving maniac and his son the oppressor of the fallen hero, his father. It was a sad ending of an adventurous and useful life, and may be read in Frank Cowan's "Southwestern Pennsylvania in Song and Story." St. Clair died in the year 1818, and is buried in the cemetery at Greensburg, where his grave is marked by an unostentatious monument. Truly, "what shadows we are, and what shadows we pursue!"

Only a few miles distant from the St. Clair tract is a cavern in the side of the Ridge, which is called the Bear Cave. It is called by this name, I suppose, on the principle that the man called a certain box his "tool chest," because it never had any tools in it. I never heard of any bears being found in or about the Bear Cave. But it is famous in that region, and is every year visited by curiosity seekers. It is scarcely a cave at all, but only a vast crevice or series of crevices, opening out one from another, and forming a labyrinth that would have puzzled Theseus himself. Parties are reported to have penetrated this great fissure to the distance of a quarter of a mile without reaching the end. In a little book, "The Valley of the Conemaugh," published over thirty years ago, the author sums up his description of the Bear Cave in these words: "There have been many stories circulated in that vicinity about spacious apartments, magnificent with natural decorations, of beautiful altars, and columns, and other wonderful formations that have been discovered in this cavern, but upon our visit we saw nothing of the kind—nothing in the main but a long, tortuous maze with blackened walls and uneven floors; dark, yawning chasms that seemed to have no bottom, and gloomy side passages into which if one should wander he might never return."

There is a legend that once upon a time a party of Indians ran a white man into this cavern. The entrance was then only a narrow opening under a rock. The white man did not seem to be awed, and one of the Indians attempted to crawl in after him. But the man had a keen-edged dagger which he at once plunged into the neck of the savage, killing him instantly. He then took him by the shoulders and drew him into the cave. Another Indian, seeing how easily his comrade had entered, followed his example, and received a severe wound. He withdrew, yelling. The rest knew better than to make any further attempts of that kind, but sat down at the door of the cave, determined to starve their victim out. But the man, following the course of a small stream of water, which in wet weather flows through the cave, found an exit and made his escape, leaving his enemies awaiting him a mile away. This is fiction doubtless; but in real life it has been paralleled in part by the heroism of Mrs. Merrill, of Kentucky, as we may read in Howe's "Great West," who killed, with an axe, five Indians that crept in one after another through a hole they had cut in the door of her cabin. Truth sometimes outdoes fiction

T. J. CHAPMAN.

PITTSBURG, Pa.

FOREST AND STREAM is fair, clean and good all the way through; but you will pardon me if I say that now and then I go down into my trunk and bring up an old copy of FOREST AND STREAM and look longingly at the picture on the first page, and then look at the picture as it is now printed, and shake my head and feel sad. I would not give the knowledge that I have received in FOREST AND STREAM of the geography of the Northwestern States for all that the paper has cost me.

GILMAN K. BALL.

OLD TIMES ON THE TRINCHARA RANGE.

In Two Parts—Part One.

IN the early seventies, when the Indian who lived near Camp Supply, I. T., felt the need of a little recreation, he would saddle his best horse, and in the company of a few kindred spirits slip out west toward the Rockies, without going through the ceremony of bidding adieu to the agent, and give the Texans, Americans, Mexicans and Ute Indians a little touch-up and a gentle reminder of old times by running them around, killing a few men, stealing horses, and occasionally basking in the smiles of the Mexican women, who were not proof against their winning ways and the good greenbacks of Uncle Sam with which, strange to say, they were sometimes liberally provided. A wild Cheyene is a man, gentle reader, in every sense of the word, seldom pious from a white man's standpoint, but still more seldom a fool.

We, Don Gordo Jones and I, were camped on the Jimmy Hunt Cañon, in Los Ammas county, Col., at an outside ranch owned by Thomas A. Perley and myself. Don Gordo was as big as Falstaff, and as jolly. He had been a hunting companion of Kit Carson, and was as good a man as I ever saw for a frontier chum. He would swear like a pirate, but somehow it didn't sound wicked when Jones swore. With his bright blue eyes and long hair and flowing white beard, he always reminded me of an old lion. He lived on San Francisco Creek, where it joins the Purgatoire; and I used to hire him for companionship—for he wouldn't work much. God bless him. He is long gone over the divide, but his memory is still green in the hearts of the men that loved him.

We were pretending to take care of the cattle that belonged to Perley and me, and really were having a very nice time hunting and riding around after mavericks, and we always played seven-up after each meal to see who should wash the dishes. I generally washed them, for Don Gordo was an artist with cards, but we both enjoyed it.

We had as a partner in our joys a dog, curly-tailed, blue-bodied and white-headed, with blue ears. He was a kind of a cross between—well, I guess it was just a cross between two dogs. He looked like a sausage on four legs, but generally ran on three, and I never saw a respectable sausage do that. His name was Perro (pronounced Paro, and meaning just "He-dog" in Mexican). He belonged to Mrs. Virginia Jones, wife of Don Gordo. Mrs. Virginia was one of the ugliest-looking old Greasers that I ever saw, but she was a good woman, kind, hospitable and virtuous, and Jones loved her, but he didn't like Perro, and Perro would follow him like Mary's little lamb.

I have often seen a broad grin overspread Mrs. J.'s leathery visage when Don Gordo started from home on an expedition—and they were many—and she would say, *Cuidado su Padrecito perro mio*—("Take care of your little father, my dog").

Then Gordo would shake his fist at Perro and hurl an imprecation at the "Mexican cur," while Perro would sit at a respectful distance looking wise, with one ear cocked up, and watching Gordo, with his head turned sidewise. But the minute Jones started the dog would, too, and he would make camp promptly when we began to unsaddle.

But all bright things must end, and we were awakened one night at about 2 A. M. by the trampling of a horse at the door. Jones rose up in his blankets, pointed a Sharp's .50cal. rifle at the door, and cheerfully inquired:

"Who's there?"

"It's me, Sol Mays, boss," said an unmistakably African voice. "I has a letter for Mr. Dick."

In five minutes Sol's horse was eating corn out of a *morale* (Mexican, nosebag), and he himself was before the fire eating a big chunk of beefsteak and some sour dough bread, and drinking coffee blacker than it ought to be for any one who had even a suspicion of nerves or anything frailer than a cast iron stomach. Then, while he was eating, I read Lew's letter:

DEAR DICK—The Indians from the east have broke loose again and are south of the Ratons. They will be this side of the mountains soon. They are killing men and raising hell generally. Look out for them. Yours, J. W. LEWELING.

I read it to Jones, whose early book education had been neglected, but who was a professor when it came to anything that was needed on the frontier, such as hunting, trapping, fighting, or running away discreetly. He smiled a gentle smile, and said that he wasn't going to follow Lew's advice and look outdoors for 'em just that minute, for it was very dark, and he "didn't want to find an Injun nohow."

"What are you doing down here, Sol?" asked Jones.

"I come down to get Boss Lew's horses and take 'em to him, and I think he is so worked up he will put 'em under his bed."

It was evident that Solomon was not much pleased with the expedition and was disposed to be mildly sarcastic.

"There is good grass down in Lew's pasture here, and if I was him I'd leave 'em here, instead of taking them up to Trinidad and starving 'em to death," said Jones.

"No," said Sol, "I'll do just as the boss told me to. I am goin' to get 'em to-night and start back." And suiting the action to the word, he began to gird up his loins by re-strapping the belt that answered for suspenders and a pistol belt. I put a loaf of bread, a big chunk of boiled meat and some salt in a flour sack and gave him some matches; and in a moment I heard the horse grunt and start as he mounted and prodded it with his big Mexican spurs.

I replenished the fire and Jones rolled a cigarette. "What had we better do, Jones?" said I, for I knew he was a general, while I was a private in business like this.

"My idea is to put all our horses to-morrow in the cañon where Sol is going to take Lew's from, all but our two horses to ride; and go up to the home ranch by way of the Picketwire Cañon."

Picketwire is American for Purgatoire in Mexican. It is a cañon 2,000ft. deep, with a small river in it, and plains Indians don't like to fool around in deep, rough places.

So the next morning at daybreak we got the horses and put them in the little deep cañon pasture which Lew's horses had just vacated. Then we stopped up the gap and started gaily for camp, to get grub and go home.

When we had ridden about a mile from the house, which was below us in a shallow cañon, Jones stopped his horse with a sharp jerk on the bridle, and said: "They have got our house." I looked and saw a big smoke pour up at the *jacal* (pole-house) where we lived.

"Is it Indians?"

"I guess so," said Jones, "and I ain't goin' to see."

We headed, without a word, for the going-down place into the Purgatoire Cañon, and—went. For the next hour I was busy sending my willing pony down steep places, through between big rocks, down, down, down, till at last we were at the bottom of the Purgatoire with Jones and his little dog, and not a bite to eat and no breakfast. I rode all day and Jones wouldn't let me kill a calf; he said that the Indians would hear us if we shot off again; and told me that if I got too hungry we would eat the dog. The dog seemed cheerful and trotted along behind and I grew awfully hollow. Jones was fat and I believe could have existed on his own tallow for a week. He tormented me by telling how good dinner would taste on the morrow. When it got dark we had to camp, for the trail up the Purgatoire cannot be followed with any comfort in the night. At daybreak I woke up. My stomach felt awful. Jones was asleep. I got my horse. Looked all around to see that there was no one in sight, and then shot a calf that was inspecting us, with a small bunch of Texas cattle about 100yds. away. Jones jumped up and swore when he saw what I had done. We saddled our horses, cut off a hindquarter and some ribs from the calf, and rode an hour as fast as we could. Then we got under a ledge of rocks and built a fire of dry sticks; and how I did eat burnt calf's ribs, and chunks of meat scorched a little in the fire. After cooking the rest after a fashion, we went on to the going-up place, which was about five miles from the ranch, hid here till night, went up a fearful path and sneaked in home in the dark, and found ten men well armed and forted up. We ate and slept the sleep of the just, and were safe; but the outside ranch which we had left was gone, burned by Indians, so I thought. I had packed everything out before we left, however, and hid it up the cañon in a little cave; and so I didn't feel very bad at all, except about the stove which I had left in the house. Don Gordo went home the next day to San Francisco Creek, to take his family up to the settlement on Purgatoire, and I rested.

Natural History.

THE WAYS OF SNAKES.

Editor Forest and Stream:

A few days since a friend gave me a copy of the FOREST AND STREAM, and the several articles in it concerning snakes interested me very much. Having been born and raised in a "snaky" locality, where game and fish and birds abounded, and the hand of remorseless man had scarcely began to despoil the beauties of nature, my opportunities for observing the habits and antics of the lower animal life were extensive, and a decided penchant in that direction made me the more willing and anxious to improve such occasions.

I have seen numbers of blacksnakes in all kinds and sizes of trees, but never yet have I seen one either going up or coming down. So far as I am able to judge they have three motives for climbing trees One is to get into a hole for the purpose of hibernation; there can be no doubt of this as I have found them in hollow trees cut down in midwinter. The next is for the purpose of "shedding." By crawling through the various forks and branches they are enabled to rub and loosen the skin so that it more readily comes off. I have seen dozens of snake sheds hanging in trees to one anywhere else The shed is a curiosity, covering the snake entirely, even its eyeballs, being a perfect transparent mould of the snake. The old saying, "As blind as a snake during dog days," thus had its origin and is absolutely true as regards blacksnakes.

The next and meanest and commonest incentive to their climbing is their weakness for feasting on the eggs and young of birds; and the old ones, too—if they can catch them. Undoubtedly, they are the greatest known enemy to birds—not only to those which nest in trees, but those which nest on the ground, such as prairie chickens, quail, larks, etc. The bad boy isn't in it with a blacksnake.

It was no rare occurrence to see them in all parts of barns—from the basement to the haymow. They have one redeeming feature, and that is, they make it hot for rats and mice.

For this reason there are few farmers who would molest a "barn blacksnake." The rodents give him a wide berth, and he can and does go everywhere they do—follows them into their holes and swallows them unceremoniously.

Some years ago I was living in a large, two-story frame house—a rather old one. Several swallows had built nests up under the projecting roof of the gable. One morning there was a great disturbance and excitement among them. An investigation revealed the presence of a large blacksnake, which, with head and part of its body projecting from a crack in the weather-boarding, was making heroic efforts to reach a nest. A long cane fishing pole was hastily procured, a fishhook tied to its end, and the snake was promptly snaked out and down and dispatched, to the great relief of the little birds. It was mysterious how he got there, and still more so how he knew the nests were there.

I once owned an intelligent shepherd dog, and he was an inveterate deadly enemy to snakes of all kinds. He was the only dog I ever saw that would make a special business of hunting and killing snakes. The probable cause of it was that he had been bitten several times by rattlers, and suffered severely under the best treatment I could give him. On one occasion I was riding along a fenced railroad track. The weeds had not been cut, and it was an ideal snake paradise. I heard Shep give several long, peculiar barks, and at once knew he had found a snake It was raining at the time, and I was loth to get down; but thinking it might be a rattler, I hurriedly hitched my horse, jumped the fence, and discovered Shep going around and around a large blacksnake, which was in a cone-coil, very much like the bygone beehives made out of straw twisted into a rope. His head was following Shep around. It was quite evident that the dog was trying to get the snake to make a strike, when he would pounce upon and kill it. He had learned this from experience. Said I, "Take him, Shep," and he instantly grabbed him. When he pulled it away, a live rabbit, about half grown, was discovered thickly covered with slime from nose to the middle of body. It was unhurt, and after making several efforts, got on its feet and skipped. In the meantime Shep was shaking the snake, making it pop almost as loud as a whip cracker, and shook two more rabbits out of it as large as, and no doubt of the same family as the other.

This was the first time I ever knew how a snake swallows

a rabbit. I do not yet know how the rabbits are got into the cone-coil uninjured. (Obviously these three were in it at the same time.) It is quite plain that the snake adjusts its coil to hold the animal tight, in an upright position. Its head is then put down from the top, on the inside, and the rabbits "slimed" with its tongue. To see the relative size of a half-grown rabbit and the snake's head and mouth one would think the act impossible. The snake then gets its mouth over the rabbit's nose and by pressing down, and at the same time forcing the rabbit up with the coil, the feat is accomplished. The rabbit is smothered to death at the beginning. The act is aptly illustrated by grasping a vial in one hand and forcing a small rubber nipple over its neck with the other. It could not be done in any other way.

The "glass snakes" sometimes spoken of were very common at that time, and were called "jint" (joint) snakes by the negroes, who said that if the broken pieces were put together they would grow.

Another very rare and beautiful snake, of a light green color, very slender and effeminate, was occasionally seen running through and over the tops of bushes and small trees where they were in clumps. It's the most agile of the snake tribe, and travels thus with amazing swiftness, going rapidly from one limb to another, which were as far apart as half the length of its body. They are usually 2 to 2½ft. long. I have never seen one on the ground.

While hunting wild strawberries I once came near a brownish-colored snake, known as the "prairie snake." It attracted my attention by a peculiar singing, hissing noise, in response to which twenty or twenty-five little snakes, about 5in. long, came from all directions and went down her mouth one after another in an incredibly short time, when she "pulled her freight" for high grass.

Many years ago a neighbor of mine saw a hawk quickly descend to the ground and rise up with a rather small snake in its claws. The snake was wriggling violently, and within a short time succeeded in wrapping itself around the hawk and interfering with the action of its wings, when both fell to the ground and were killed by him.

By the way, what has become of the "forked-tail hawk"? I haven't seen one for over thirty years. They were plentiful at that time, and subsisted entirely on snakes. Are there any now anywhere?

Another. Rattlesnakes and blacksnakes are implacable enemies, and, contrary to what one would invariably believe, the blacksnake always comes out victorious. It has been my fortune to witness two encounters between them. In both instances the rattlesnake was in a coil, and the blacksnake was going around him like the shepherd dog, and at a safe distance. Just as soon as the rattlesnake struck and uncoiled the blacksnake was upon him, and, commencing at his neck, rapidly encircled and crushed him to death. The act in both cases was almost instantaneous, and the blacksnake left his dead enemy almost as quick.

G. R. MORRIS.

MONTANA.

MORAL SENSE UNDER A SEARCHLIGHT.

Editor Forest and Stream:

I do not think your correspondent, N. D. Elting, reasons from a sound basis while discussing the moral sense of brutes. Is it fair to assume that brutes lack moral sense because they commit sins against man, or the property of man? Would it not be far more logical to leave man out of the question and study brutes by themselves? In such a study, if it was found that brutes conducted themselves toward each other in a manner indicating a moral sense, why not give them the benefit of the doubt?

Your correspondent assumes that man is morally responsible and that brutes are morally irresponsible. Man, I suppose, is responsible to man, not to brute. Why not brute responsible to brute, and not to man?

Take the case of the mouse. Your correspondent writes: "Shall we say it was conscious of the sin of thieving?" The question, to my mind, is not one of consciousness, but of the ability of the mouse to sin against man. Mankind reasons after this fashion:

The mouse steals from the farmer's crops corn and wheat, which is a sin punishable by death. The farmer steals from nature's crops the fruit and nuts of the mouse, which is not a sin because the victim is not human.

A man goes into the Rocky Mountains. He is waylaid, slaughtered and devoured by a grizzly. That is positive proof that the bear lacks moral sense.

Another man goes into the mountains and slaughters and devours a beautiful gazelle. But that don't count.

Passing through the city, I saw a savage bull dog rush out and fasten to the throat of a bird dog. The crowd gathered, and the bull dog's jaws were pried apart and the victim released. The bull, with eyes the color of the blood that dripped from his jaws, started homeward. Just before he reached his master's gate, another bird dog met him on the sidewalk. The dogs put their noses together for a moment, wagged their tails, and separated.

Why didn't the savage bull fall upon this bird dog? Simply for the reason that they were neighbors, and the fierce brute was under a moral obligation to keep the peace with his neighbors.

"Oh!" I hear someone exclaim, "Why then did he attack the first bird dog, if he possesses a moral sense?"

Well, I am willing that his acts be judged by the acts of human beings, and I will stand by the verdict.

Nations fasten to each other's throats, and the press of each country urges on the conflict. Even the man in the pulpit eulogizes the heroism of the murderers on his side.

Poor Cuba has a bull dog at her throat, and two shameless administrations of this free country have not had enough moral sense to pry apart the jaws of the fierce brute. I will put these things in the scale opposite the bull dog.

During the thirteen years that I have lived in the woods I have seen evidence enough to convince the most skeptical that all wild things possess a moral sense. From my notes I glean the following:

A song sparrow, every spring and fall, takes possession of my cabin dooryard. He is a tyrant and a fighter, and other birds, from catbirds down, are afraid of him. If birds come into the yard while he is eating, he threatens them in a low, fierce, muttering tone for awhile, then darts at the nearest and the dooryard is filled with feathers.

One of my chickadees came home with a broken leg and I expected the sparrow would make short work of him. To my surprise, the fierce little fighter, after driving all other birds away, hopped about the wounded chickadee, talking all the time in an undertone, without a harsh note. The chickadee seemed unconcerned, and from that first day until the sparrow left in migration the two were the best of friends.

The same sparrow returned one spring and brought with him a male linnet, a bird that does not visit my dooryard. As usual with most birds, they arrived a week before the females. The song sparrow immediately preëmpted the dooryard and drove away every bird but the linnet. A week later the female sparrow arrived and with her was the mate to the linnet. The two linnets were allowed the freedom of the dooryard. They were invited guests and respected as such. They had become acquainted with the sparrows down South. Were told of a dooryard full of hemp seed and invited to return with their new friends and see for themselves.

If the actions of this little sparrow do not denote a moral sense, what do they denote? HERMIT.

GLOUCESTER, Aug. 25.

BELLEVUE, Ia., Aug. 31.—*Editor Forest and Stream:* Having been a more or less constant reader of FOREST AND STREAM during the past six or seven years, I have noted with interest the various arguments *pro* and *con* concerning the dog and other lower animals as compared with man—the higher animal. And while pleased with the very able manner in which the many friends of the lower animals have sustained their cause, I have been pained to observe that there is a certain point at which, with few exceptions, they deflect from the straight line of legitimate reasoning, and cheerfully assign to the higher animal (their own species—man) a something which they as cheerfully deny to all other species.

An incident first—then we shall proceed. The writer once owned a small mongrel dog—part Italian greyhound—known as Ab-Sid. He was an exceedingly intelligent animal, capable of doing many of the things which we call "tricks," and seemed to understand nearly everything said to him. I will take one incident in his career as especially appropriate in illustrating my point. Having purchased a tame black rabbit as a pet, I at once proceeded to establish, if possible, friendly relations between Ab Sid and the newcomer. Although the dog was a persistent hunter of wild rabbits, I experienced not the slightest difficulty in making him understand that the black rabbit was an exception to the rule; in fact, I simply told him so at the outset, and never was obliged to reprimand him for any exhibited hostility to the new pet. They soon became excellent friends, and woe to the cur that attempted to interfere with the rabbit, for Ab-Sid considered himself the latter's especial champion. Nevertheless Ab-Sid was jealous of the rabbit, and at the same time detested crackers as food—until after the occurrence which I am about to relate. Being desirous of ascertaining what the rabbit preferred to eat, outside of green stuffs, I one day brought to my office a small sack of crackers, and before giving them to the rabbit, offered one to the dog, which he promptly refused, as was his custom. I then gave a handful of the crackers to the rabbit, which he proceeded to munch with great satisfaction. Upon this Ab-Sid, who had been an interested spectator, arose, walked over to where the rabbit was eating, pushed him away from the heap of crackers and hurriedly gulped down every one of them himself. He then sneaked off to the furthest and darkest corner of the room, with head and tail hanging, and the most sheepish expression on his face that I ever saw a dog wear. He knew he had done wrong, and without a word of reproval from me. The dog's actions most certainly evidenced a moral conscientiousness, a capability of understanding the fact that in depriving the rabbit of the crackers which had been given him and converting them to his own (the dog's) use he had committed a despicable act, of which he was heartily ashamed afterward.
